—Ginn & Heath's Harvard edition of Shakspere in twenty volumes has reached vol. xviii., and their edition (also edited by the Rev. H. N. Hudson, Professor of Shakspere in Boston University), called "Annotated English Classics," has just had 'Othello' added to it.——The "Geoffrey Crayon" edition of Irving's works, now publishing by G. P. Putnam's Sons, is continued in the 'Spanish Papers,' which is fitly accompanied by an engraving of the author after the drawing by Wilkie at Seville in 1828.——It would seem as if the last aid to the scholarly use of the Revised Version of the New Testament had been furnished in the Clarendon Press edition of the original Greek text, into which the readings adopted by the revisers have been scrupulously incorporated (New York: T. Nelson & Sons). It cannot be denied, however, that symmetry calls for a corresponding edition to match the Revised Version in which the American Committee's preferred readings have the place of honor in the text.——As already promised, Mr. Paul Barron Watson's Bibliography of the Pre-Columbian Discoveries of America appears in the current *Library Journal*. It fills 18 pages, and is divided by nationalities mainly, as Discovery by the Chinese, the Northmen (who naturally have the lion's share), the Arabs, etc. Under the Welsh head, the references to Catlin might be increased.——The *Publishers' Weekly* for August 27 publishes an exhaustive index to its own articles and notes on Literary Property during nine years and nineteen volumes, by Thorvald Solberg. This is but a section of the bibliography which Mr. Solberg has undertaken.——The same journal gives lists of the forthcoming publications of the Geological Survey and of the Bureau of Ethnology, the former embracing chiefly mining reports of the highest value, and the latter grammars and dictionaries of the Klamath, Dakota, and Ponca languages; together with lists of the Hayden Survey reports, and of Wheeler's, and of publications authorized by Congress and the Departments, alphabetized. Here the most important entries are a revised edition of Hayden's Atlas of Colorado; a new volume of the Medical and Surgical History of the War; seven volumes of the Official Records of the War of the Rebellion; and the Acts of the Continental Congress. The prices are attached in most cases.——The Reference Lists of the Providence Public Library for the past three months have for their topics Abraham Lincoln, the Relation of Erasmus to his Time, Mme. de Staël, Comets, Deep-Sea Phenomena, the French in Tunis, Dean Stanley, the Centenary of Kant.——Macmillan & Co. have issued an important supplement to their regular catalogue, including not only their own publications, but also those of the Oxford Clarendon Press and the Cambridge University Press.——We have received from Richmond, Ky., a small pamphlet reprint of an

article on Cassius M. Clay, from the Nashville *American*. Mr. Clay is called "A Pioneer Emancipator," not undeservedly. His singular career is well worth studying. The *American* says: "No knight of the period of chivalry ever maintained his honor with more determined courage than he his opinions. . . . He had previously had a difficulty with Maj. Sam. F. Brown, of Fayette County, whom he literally cut to pieces with a bowie-knife."——We learn from the *Athenæum* that the third and concluding volume of Dickens's letters is in press, and that a newly-revised and cheap edition of Blader's 'Biography and Typography of William Caxton' is in preparation by Messrs. Trübner.——Westermann & Co. send us Part I. of a French edition (Baillière) of Brehm's 'Insects,' profusely and beautifully illustrated. The letter-press is none too attractive, whether because of the tax on paper or not we cannot judge.

—The first two numbers of a new weekly publication called *Fiction* have just appeared. As its name implies, it is to be devoted exclusively to fiction, all of which is to be original and of such a nature as never to give offense in the most scrupulous household. Each number contains instalments of two serials and one novelette, and never fewer than two complete short stories. All the stories in this number are anonymous, which we regard as a disadvantage in a periodical devoted to fiction, whatever may be said in favor of such a course in political and critical journals. So many mediocre stories are written every day that those who have time to read only first-rate stories, or those whose taste may differ from that of the editors, are desirous that the names of the authors should be printed as a signal of warning or attraction, as the case may be.

—Naworth Castle is the chief subject of the gossip, entitled "A Glimpse of the Cumberland Border," with which Miss Rose Kingsley begins the September *Lippincott's*, though she has a good deal to say of the wall at Birdoswald built by "the renowned Emperor Hadrian." More novel, though of hardly closer texture, is a paper of a similar nature, in which Mr. J. W. Davis describes Sylt, the largest of the North Frisian Islands off the coast of Schleswig at present, though "slowly but surely the encroaching sea, like a monster serpent, is tightening its coils about its helpless victim." Both papers gain something from the rather hap-hazard illustrations that accompany them, which is more than can be said of Dr. Oswald's chapter on "Bats" which follows, and which is in real need of pictorial elucidation. Sherwood Bonner's new serial, "The Valcours," opens well. The time is the present, of which some of the actors are not aware (the scene being Virginia), and the author has a good deal of humor—which elements afford a promising prospect. With the exception of Mrs. Champney's "A Pretty Kettle of Fish" (post-revolutionary bric-à-brac), the stories and sketches are stupid. A story like "Frant" is enough to taint an entire magazine. Marianna Gibbons collects an agreeable lot of anecdotes about Nantucket, the quaintest of all old places, now getting veneered with watering-place newness. Mr. Maurice Thompson writes about "The Haunts of the Grayling" for sportsmen, and Mr. Edward C. Bruce a chapter called "A Dish of Vegetables," which every one will find pleasant and instructive chat about garden products from a writer who admits that man cannot live on vegetables alone. Men have to eat meat occasionally, says Mr. Bruce: "Festivity is a moral need not otherwise to be fully met A perpetuity of beans is absurd."

—The *International Review* for September has an excellent table of contents, of which Mr. Henry Carter Adams's paper on "Payment of Public Debts" is perhaps the most noteworthy article. Mr. Adams argues, against the policy of a permanent public debt, that the State by payment will convert its creditors from "proprietors in an annuity" into holders of "free capital," to which they must turn their thought and labor if they would still receive an income from it; that the payment of the debt will not diminish the actual capital of the country, like the payment of a debt by a private person, but will release that amount of capital, which may then be turned to promoting the industries of the country; and, above all, that the great gain to the country will be "the attention and care of the previous bondholders" and the binding of "their interest to the present." Mr. John Codman contributes as good a defence as possible, no doubt, of "Mormonism," praising the industry and frugality of its devotees, the patience of the first settlers of Salt Lake City, their power of quickly converting into self-supporting citizens the most unpromising element of the foreign emigration, and their knowledge of and obedience to the precepts of the Bible. As to polygamy, the young people know its evils and can't be preached into it. The "Spain of To-day" of Mr. Wm. J. Armstrong reviews recent Spanish history from the abdication of 1868, with sketches of the leading men of the period. Some of "The Difficulties of Prison Reform" are found by Mr. A. S. Meyrick to be the general indifference of the public, State instead of General Government control, lack of a proper system of penitentiary statistics, sentimental regard for the criminal, and, more than all, political influence. Curiously enough, Mr. Meyrick disclaims a regard for civil-service reform elsewhere, while insisting on it where he has examined the grounds of its necessity. Rev. Charles F. Thwing gives statistics in regard to "The Endowment of Colleges," Mr. Wm. C. Langdon contributes an interesting biographical sketch of "Baron Bettino Ricasoli: the Italian Old-Catholic Statesman," and M. Auguste Laugel furnishes some extremely agreeable reading in the literary article of the number, though it is the first of two or more papers on Victor Hugo.

—Mr. Arthur Tilley, in the current number of *Macmillan's Magazine*, makes a careful examination of "Two Theories of Poetry," one of which, he says, is maintained by Mr. Matthew Arnold, and the other by Mr. Swinburne. The former holds, according to Mr. Tilley, that poetry should be serious, and that its function is "to be the mirror, not of one man's soul, but of the life of all men reflected through that soul," which is Mr. Tilley's expansion of the now celebrated phrase "a criticism of life." Mr. Swinburne, on the other hand, insists on "strong emotion, perfect workmanship, spontaneity—singing power is implied by the two latter." Mr. Tilley thinks Mr. Arnold would agree with this so far as it goes, but would insist in addition on "high qualities of mind and soul." Therefore, here is the difference between the two theories, Mr. Swinburne holding that "any emotion will suffice for poetry, provided it be deep enough to be sincere." The latter's ideal poet is "an impassioned rhapsodist, standing on a lofty sea-lashed rock, with his hair streaming to the wind, communing with the mighty forces of nature, and pouring forth wild musical words in praise of the eternal truths of liberty, fraternity, and equality." Mr. Arnold's is a different being, whose characteristics Mr. Tilley sets forth sympathetically, one of them being, we take it, the "possession of all his faculties," in familiar phrase. "On the whole," the essayist agrees with this, and more cordially, we infer from what follows, than his expression seems to indicate. But, as an English reviewer of his article severely says, he gives no new reasons for doing so, and perhaps the essay is mainly valuable because it recalls the fact that people do really differ about the "function" of poetry, as about everything else.

—To the ordinary reflecting person, we suppose, the notion is an odd one that there is a "school of criticism" which esteems poetry a mere equivalent for music—the music of the present, that is to say, which represents only emotions and images and stops short of ideas. It is, however, the fact, as every reader of the London *Academy*, for example, knows. Mr. Swinburne may be set one side, of course; he and Mr. Rossetti illustrate so well the beauty of form and its value in poetry that their insistence in prose upon its exclusive value need not count; but it is a curious circumstance, worth bearing in mind as one of the literary phenomena of the time in England, that critics of intelligence, who never have written and never could write a line of really Swinburnian form, are, possibly for that reason, convinced that poetry resides in form altogether. Nor is the belief due solely to the ambiguity of such an arbitrary term as "poetry," which some persons apparently use to express what they best like to hear read (say), though they are willing to admit there is something more important in literature; it is a distinctly held tenet that expression is independent of thought, though dependent on emotion, and that inspiration means sibylline contortions rather than clairvoyance first of all. We intend no speculation as to the causes of this phenomenon, which could only occur in people who, being inapt for it by nature, take their sensuousness so hard that they must make a credo of it; but it may be suggested in passing that the Swinburnian poetry is not altogether responsible, and that the vogue of Mr. Tennyson—so much greater than that of Mr. Browning, for example—and the frequent contrast between the value of his form and that of his inspiration, has had its influence in assisting the confusion of persons too serious to found any intellectual canon upon empty and exclusively sensuous minstrelsy. Another source is undoubtedly the widespread intellectual levity which experience shows to be perfectly consistent with the most serious temperaments. At first blush it certainly seems as if the only "two theories of poetry" possible were illustrated by Mr. Carlyle, who despised Homer when a young man and afterwards said that he read nothing else; or were to be respectively referred to the two periods during which St. Paul testifies that he thought differently, having in the second "put away" many cherished conceits of the first.

—Our forefathers have sometimes been unjustly credited with preterhuman foresight in choosing for our national holiday a date sure to be associated with fine weather. On the other hand, the proverbial heat of the Fourth of July is apt to be remembered against them to their disadvantage, as the cold of December 21 against the Pilgrims. In the diary of the meek and gentlemanly Tory, Thomas Vernon of Newport (just reprinted as No. 13 of the Rhode Island Historical Tracts, by Mr. Rider), the eve of July 4, 1776, in the town of Glocester, R. I., where he was then confined on parole, is set down as "the most remarkable cool that I ever knew in July, the wind continuing at northwest; I was very fearful there would be a frost in the night"; and the next day, the 4th itself, "a very clear, cool morning, the wind still continuing at northwest," so that raking hay in the afternoon was very tolerable. On the 5th there were

showers, "with thunder and sharp lightning and some hail." What is perhaps singular is that the great event of the 4th, the Declaration, passed unnoticed in the Diary, as if the news of it, when it arrived, made little impression on a neighborhood nevertheless intensely patriotic, and a household greatly given to reading the newspapers. Still the Diary is all but wholly personal, abounding in details of the weather, of each meal, walk, and nap—the noonday punch, the nightcap pudding-and-milk, the capricious civility of the women folk, the poor fare, so that for vegetables Vernon and his fellow exiles planted their own radishes, lettuce, and spinach immediately on their arrival. Alluding to the radishes, "I can't help observing," says he, "that not one of the family ever tasted or saw one before, but they liked them much." Some of the ex-postmaster's pastimes were "making a snuff-mill, our snuff being almost expended," and making powder-horns and horn tinder-boxes. Mr. Rider's notes are characteristically thorough and helpful, and he has added a borrowed chapter on the Vernon Family and Arms, and a contributed one on the genealogy of the family of Richard Greene, of Potowomut, a large farmer who entertained Vernon handsomely, living "in truly baronial style." The well-known Vernon house in Newport, so often pictured, was the residence of William Vernon, whose political sympathies were signally opposed to those of his brother Thomas.

—An architect who is going to put up an apartment house in this city announces that he intends to give it "an Indian name," as he thinks that "New Yorkers are tired of English names for their apartment houses." The difficulty of finding names not only for apartment houses, but for hotels, streets, new towns, and, above all, country places, has been for a good while a serious one; but for some reason Indian names, though an obvious resource, have made less headway than might have been expected. It is not because they are in themselves necessarily unpleasing to the ear. Many Indian languages furnish names full of liquids and smooth vowels (which is the only general euphonic test that can be applied), though, curiously enough, in Maine, where geographical Indian names have been retained to a marked degree, they are generally harsh and disagreeable to the ear. One reason, we presume, why the proprietors of hotels and apartment houses select English rather than Indian names is, that what they like to get is not so much a euphonically agreeable as a high-sounding name, which will dignify and ennoble their house. Such names as Westminster, Westmoreland, Buckingham, undoubtedly give a "guest," as he is pleasantly called in the language of hotels, a much greater sense of dignity and importance than he could possibly acquire by staying in the "Niagara," the "Minnehaha" or the "Cayuga." In Boston some complaint has been made because, in naming the streets in the new part of the city, the authorities have chosen several names associated in the mind of the reader of history with acts of a character far from noble or worthy of remembrance. But the indignation has been confined to a small number of old-fashioned persons, and most Bostonians, as they walk through Arlington, or Berkeley, or Clarendon street, or still more if they build houses in them, feel that their lives are made more "full" than they could be by such streets as Winter or Summer, or even Beacon.

—Professor Raphael Pumpelly has assumed charge of a novel enterprise in the interest of the Northern Pacific and Oregon Railway and Navigation Company's lines, now under one control. He has been charged with making a thorough survey of the territory tributary to these lines from the Pacific Ocean to Lake Superior, and from British America to the district tributary to the Union and Central Pacific lines. The work, which will be organized for a term of years, contemplates mapping the country "on a published scale of four miles to the inch," in order to show the geological structure, the distribution of minerals, of the different varieties of soils, of plants and animals, and the climatic conditions. For the thoroughness and high scientific quality of it the director's name is a guarantee, but he has also associated with him a number of trained men from the United States Geological Survey, including Mr. Wilson, the able topographer of the Fortieth Parallel Survey. The classification of the lands of the railroad companies according to their fertility and their mineral and timber resources, will, of course, furnish a rational guide to the extension of branches, and will have a wholesome effect in turning immigration into remunerative channels. The bulletin which the survey contemplates publishing will thus be eagerly consulted. Meantime, the Signal Service will welcome the new meteorological stations to be established in the pre-eminently weather-breeding sections of the Continent. In every way the country at large will profit by this nominally private enterprise, which anticipates the national exploration of the great northwest territory.

—The fourth volume of the 'Beiträge zur Entdeckungsgeschichte Afrika's,' published by D. Reimer in Berlin, contains the results of the observations made by Herr Otto Schütt during his travels in the southwestern valley of the Congo. A little more than a year ago Herr Schütt received an appointment from the Japanese Government, which prevented him from preparing for the press the contents of his African journal. This task was accordingly put in the hands of Herr Paul Lindenberg, who has executed it in a satisfactory manner, although of course he could not supply those little finishing touches based on reminiscences which the author doubtless would have added. Herr Schütt's primary object was to prepare accurate maps of the regions traversed, and this, as Dr. Kiepert has truly observed, requires the full attention and energies of the traveller to such a degree that the route-maps of botanists, zoölogists, missionaries, and other men who pursue other objects at the same time must be necessarily much less perfect. Especial value, therefore, attaches to the beautifully-printed maps appended to the volume. There are three of them, two of which illustrate Herr Schütt's route through the Congo valley, while the third comprehends his observations along the lower Quanza as well as Dr. H. von Barth's travels in the regions of the Bengo and Lucalla. These maps have had the benefit of being revised by Dr. Kiepert in accordance with hints from Herr Schütt. By the use of continuous and of dotted lines those river courses which came under Herr Schütt's personal observation are distinguished from those on which he merely reports by hearsay. From the fact that the preparation of an accurate map was Herr Schütt's principal aim, it must not be inferred, however, that the contents of his journal are of inferior interest. There are numerous valuable remarks relating to climatic conditions and to the flora and fauna of the regions traversed. The notes on the manners and customs of the natives, though they contain little that is absolutely new to anthropologists, yet, like all anthropological writings, constantly bear witness to the fact that truth is stranger than fiction. Like his predecessors, Herr Schütt suffered more annoyance from the difficulty of securing carriers, and of making them obey him, than from any other source. An amusing account is given of the curious custom called Quituch, by which a negro is entitled to demand compensation of another if he can prove that the other intended him any serious harm. One native, for example, says to another: "You resemble a person whom I formerly knew." The second replies: "Where is the man who, as you say, resembles me? You say he is not here? Fetch him to me! Impossable, you say? Then he is dead, and your wish is that I might die too. For this you must pay me so and so much." And pay he must. But now comes his turn. He says to his adversary: "You have taken such and such a sum of money from me. But it is all I have, and you therefore desired that I should die of starvation. I therefore demand of you double the sum I paid."

TAINE'S JACOBIN CONQUEST.—I.

Les Origines de la France Contemporaine. Par H. Taine, de l'Académie Française. La Révolution. Tome II. La Conquête Jacobine. Paris: Hachette; New York: F. W. Christern.

The Jacobin Conquest. By H. Taine. Translated by John Durand. New York: Henry Holt & Co.

TAINE'S 'Jacobin Conquest' strikes a deathblow at the Revolutionary tradition. Not a century has passed since the convocation of the States-General startled Europe with the opening of the Revolutionary drama, yet every intelligent student knows that the events of an astounding era are already hidden from view by clouds of misconception, of legend, and of mythical invention. That this is so is due to two causes: first, to the rapidity with which one fearful crisis followed another, so that contemporary observers were too much dazed by the shocks of a moral and political earthquake to note accurately the phenomena passing under their eyes; and, secondly, to the fact that when a new world emerged from the chaos caused by the destruction of the old order, all parties saw past events through the mist of their own interests, prejudices, and passions. To the Legitimists and the older Tories the murdered King and Queen were little less than saints, martyred by a nation of ruffians. To Imperialists all that was good in the Revolution was summed up in the achievements of Napoleon, while every one who opposed their hero was either a reactionist or a bloodthirsty Jacobin. The Republicans, again, found, according to their various shades of Republicanism, representatives and heroes in Lafayette, in the Girondists, in Danton, or (astounding as it seems to Englishmen) in Robespierre, and interpreted every transaction of the Revolution so as to vindicate their own principles and the character and foresight of their special idols. Nor did these opposing versions of history correct each other so much as might have been expected. The opinions of Royalists who refused to admit either that the *ancien régime* had any faults or that the Revolution achieved any good results, could not weigh with any cool critic; and the opinions of Imperialists or Republicans, though they might differ in many respects, almost inevitably rested upon certain common assumptions. They each and all considered the Revolution, and even the Revolutionary excesses, to have been the work of the whole French nation; they each supposed that all France was inspired with a sort of passionate enthusiasm; they all held that "greatness," if it were only greatness in crime, was, so to speak, the characteristic of all the men and parties who played a prominent part in the great melodrama which, however fearful some

of its scenes, however disastrous some of its calamities, was yet filled with the triumphs and the glory of France.

The Revolutionary era, in short, was, according to the Revolutionary tradition, an age of heroes. The meannesses, the pettinesses of human vanity and human self-interest, had, it was thought, little influence at a period of moral revival and of political exaltation. The horrors of the Reign of Terror might, it was felt, be the work of demons, but were too gigantic, too tragic, to be the result of the miserable petty passions which sway common men at common times. Moreover, as a matter of fact (and this is a point to which Taine hardly pays sufficient attention), the Revolution did triumph over stupendous dangers. How was it possible not to believe that the men who routed, or seemed to have routed, the allied forces of Europe were not leaders of Titanic power? Nor was this the belief only of Frenchmen concerned for the honor of their country. The author whose pictures give most Englishmen their only vivid impression of the scenes of the Revolution, shared in the main the belief in the truth of the Jacobin version of French history. Carlyle detected some special errors which were the fruit of imagination or mendacity. But, take it all in all, he accepted what we have termed the Revolutionary tradition. The whole movement seemed to him a tremendous protest against shams; the uprising of a whole people to assert, if not their belief in eternal truths, at least their resolution to have done with lies and falsities. He mocks at every idea that the crises of the conflict were to any extent the result of intrigue or contrivance. His bitterest sarcasms are aimed at what he pleases to consider the delusion of the Girondists, that their lives were in danger. He has no words of contempt too strong for the men who refused to grasp the blood-stained hands of Danton, and even uses expressions which suggest that the massacres of September were the result not of a plot, but of preternatural suspicion engendering insane panic. Everywhere he sees in the uprising of the people the influence if not of divine yet at least of demoniac inspiration. And the view of Carlyle has been dramatized, popularized, or vulgarized by Dickens in the 'Tale of Two Cities.' England and America, no less than France, have thus in the main adopted the Revolutionary tradition. Taine now comes forward, and not by the force of declamation (for he is neither an eloquent nor a striking writer), nor by the effect of original theories (for his speculative power is extremely limited, and his constant tendency is to mistake a platitude for a principle), but by the weight of accumulated facts which are certainly true as far as they go, and have not before been grouped together, shows that the accepted tradition is at the very best but a one-sided statement of the truth, and, like other traditions, involves so much perversion or concealment of undoubted facts that, if not an absolute myth, it is assuredly not to be taken as genuine and authentic history. On four main points at least every candid student who reads Taine with care must, in our judgment, admit that the legend requires revision.

First. It is assuredly not the case that France as a whole was at any period between 1789 and 1815 Republican in sentiment. We suspect Taine to be right in the assertion that Lafayette and Constitutionalists of his stamp were the genuine representatives of intelligent public opinion. But whether this was so or not is of course, to a certain extent, a matter of judgment, on which equally competent authorities will to the end of time be at variance. What is certain (for here we have to deal with ascertainable figures) is that a very small proportion of Frenchmen—far smaller than one has hitherto supposed—really took a part in moulding the destinies of their country. Nothing is more curious than the statistics, too long to quote, by which Taine shows that at each successive series of elections a smaller number of electors voted. The elections for the Legislative Assembly did not represent the country. The elections for the Constituent Assembly represented it still less. Large classes—nobles, priests, and others—were in many cases avowedly excluded from voting. In hundreds of cases the voting, not protected, it must be remembered, by the ballot, had hardly the appearance of freedom. The tyranny of local clubs, consisting of precisely the kind of men whom Mr. Forster calls "village ruffians," made the performance of civic duties by any one who did not share the opinions of such clubs a matter requiring great boldness and energetic civic virtues. But respectable Frenchmen towards the close of the eighteenth century were even more than at present deficient in individual initiative, and in the kind of political bravery which can only be acquired by training in the contests of political life. The Constitution, moreover, framed by the National Assembly was, as Taine points out, pre-eminently unsuitable to a nation not yet accustomed to the labors and responsibilities of freedom; for it required constant attendance at constantly repeated elections. Inhabitants of any of our great cities know well enough from experience what this means. Our rich merchants are not prone to sacrifice their business in order to attend primaries or conventions. But the laziest American citizen is, it may be safely assumed, tenfold more energetic in the discharge of political duties than was an ordinary French landowner or shopkeeper in 1791. Taine, indeed, explains with an elaboration which to Americans seems quite unnecessary how it was that well-to-do Frenchmen, finding the discharge of public services always irksome and constantly dangerous, practically retired from political life; and how it happened that the duties which rich men would not discharge were taken up by the loafers and scoundrels who found both pleasure and profit in the constant attendance at clubs which met and drank in taverns, and took care to place their members in every office worth holding. Nothing is more striking, indeed, in the whole of Taine's book than the curious details of this half-spontaneous, half-involuntary retreat of the well-to-do Frenchmen, who, with the majority of the nation on their side, constantly yielded to the pressure exercised by a minority who had the advantage of knowing what they wished for, and of perfect freedom from scruples as to the means by which they attained their ends.

Secondly. Taine makes clear to demonstration that the supposed enthusiasm for freedom on the part of the mass of Frenchmen had little or no existence. The *ancien régime* was, according to every account which can be trusted, detested by the country, and there was undoubtedly a great deal of fervent zeal roused in support of the National Assembly and its work; but Taine's facts make it, to say the least, highly probable that the majority of Frenchmen were satisfied with the triumphs achieved by that Assembly, and would have been glad to support the constitution which it had framed. But neither in this nor in any other matter did the majority ever succeed in having its own way. The 'Jacobin Conquest' is the history of the defeat of the nation by a minority which, if it did not consist wholly of the ruffians and scoundrels whom Taine is a good deal too ready to identify with the whole body of Revolutionists, certainly contained as large a number of rogues, blackguards, and jail-birds as ever made up the rank and file of a fanatical faction. For the proof of this we must refer our readers to Taine's details of the movement throughout France. At Avignon, at Marseilles, at Lyons, smugglers, bandits, convicts, pickpockets, and cutthroats undoubtedly did, however you explain the fact, ride for a time rough-shod over the judges, constables, and officers who generally send such gentry to the jail or the gallows, and the party who most freely used such associates won the victory. In spite of electoral pressure, the wish of France made itself heard in each Assembly. In the National Assembly, in the Legislative Assembly, in the Constituent itself, what was the moderate party of the hour—"the Right," to use the French expression—had the majority, and in each case the majority were defeated, though in the last struggle which Taine narrates—the contests between the Girondists and the Jacobins—the victorious minority, hated in Paris itself, did not number in the capital which was its stronghold more than ten thousand men. The Revolution illustrates the evils resulting from the government of minorities. The fact, whatever be its explanation, is well established and deserves attention.

Thirdly. The success of the minority was not the effect of some incomprehensible decree of fate or of any unaccountable or mysterious influences; it was, Taine at least contends, the result of combination, audacity, and intrigue. In this matter we are not defending, but stating, the conclusions of our author; but that, within certain limits, these conclusions are true we can scarcely doubt. He follows, in fact, an authority better than himself, and does little more than summarize the results of Ternaux's fragmentary work, which, had it been completed, would have made an invaluable monograph on the Reign of Terror. The transactions on which readers would do well to fix their attention are the massacres of September. The butchery and its effects in terrifying Paris are thus summarized by Taine:

"For six days and five nights the massacre went on without interruption. There were 171 murders at the Abbaye, 169 at La Force, 223 at the Châtelet, 328 at the Conciergerie, 73 at the Tower of St. Bernard, 120 at the Carmelites, 79 at St. Firmin, 170 at Bicêtre, 35 at La Salpêtrière. Among the slain were 250 priests, 3 bishops or archbishops, generals, magistrates, an ex-minister, a princess of the blood royal, persons bearing the most illustrious names in France. Side by side with these are victims of another class—a negro, women of the people, children from the streets, convicts, and paupers. There is not a man in Paris, great or small, who does not from this moment feel the knife at his own throat. The terror is the greater because the band of murderers is increased. Fournier, Lazowski, and Bécard, captains of assassins and robbers, have returned from Orleans with 15,000 cutthroats. On their way they have strangled M. de Brissac and M. Delessart, and 42 other prisoners accused of treason whom they have snatched from the courts. Then, to finish 'emulating the example of Paris,' they have killed 21 prisoners arrested on suspicion and taken from the prisons of Versailles. On their arrival at Paris, they are thanked by the Minister of Justice, congratulated by the Commune, and feasted and embraced by the sections. Every one knows that these villains are ready to begin their work anew."

The time for which the massacre lasted would, were other proof wanting, be fatal to the theory of its being an outburst of unpremeditated fury. But we now know what perhaps Carlyle did not when he wrote his history—details as to the sums which the murderers were paid, the way in which their work was done, the leaders who arranged the massacre, which throw a new light upon what will always remain the most disgraceful scene of the Revolution. The massacres were planned by the Minister of Justice. Danton boasted with undoubted truth that he was their author, and we know what was their

object. They were neither more nor less (as is distinctly shown by Ternaux) than a great electoral dodge. The object of the slaughter was to keep the Commune in power and to ensure the return of Jacobin members for Paris. This was its aim, and the aim was gained. The clearing of the prisons was Danton's *coup d'état*. He must bear the responsibility for his crime, shared, indeed, with the other Jacobins who, like Robespierre, advised acts which they had not the courage to perpetrate, as truly as Louis Napoleon must bear throughout all ages the responsibility for the crime of the 2d of December. The two *coups d'état* are worth bringing together; they were each meant to quell opposition by force of fear, and each, to the disgrace of France and Paris, succeeded.

Fourthly. The Revolutionists and the Terrorists perpetrated great crimes on a huge stage before the eyes of the whole civilized world. They were, further, the standard-bearers of democracy in a world-wide struggle, of which the tumults in Paris, and even the whole Revolution in France, formed only a small part. But they were not men of extraordinary capacity or far-seeing statesmen. The statesmanship of the Girondists, to whom, because of their many weaknesses, history has scarcely yet done full justice, may be measured by the fact that Brissot, Roland, and Madame Roland passed among them for great statesmen; the capacity of the Jacobins may also be measured by the fact that their chief, Robespierre, could never devise any better mode of dealing with opponents than sending them to the guillotine, and that the very names of the leaders of the faction would, with one exception, be now absolutely forgotten were it not for the atrocious crimes which have procured for a few of them an eternity of infamy. Who knows anything about Fournier, Lazowski, and Bécard? Who can tell us a single fact about Momoro, about Panis, Robert, Fréron, Legendre, or Collot-d'Herbois? Of Marat himself the world knows and cares to know nothing but the fact of his assassination and his insane thirst for blood, which makes even moderate men doubt whether in his case assassination was a crime. The one man who has any claim to the reputation of greatness is Danton. It is a little difficult to judge fairly even of his talents. That there was something in Danton which impressed those who came across him with a sense of force can admit of no doubt. Taine himself shows that, while he detests every part of Danton's policy, he has an admiration for his capacity as a ruler of men. "The head manager," he writes, "is of another sort and another cut. Danton is a real leader of men. His past history, his position in the Ministry, his popular cynicism, his manners and language, his power of initiative and of command, his ungoverned strength both of body and of mind, the physical ascendancy gained by his cold but absorbing will—all these qualities have fitted him for his terrible office." But, after all, his statesmanlike capacity remains problematical. How could any man endowed with foresight have failed to see that the massacres of September were a fatal blunder? How came it that a true leader of men, unhampered by scruples, was caught off his guard and fell a victim to the cowardice and cunning of Robespierre?

McCLELLAN'S PENINSULAR CAMPAIGN.

The Peninsular Campaign of General McClellan in 1862. Papers read before the Military Historical Society of Massachusetts in 1876, 1877, 1878, and 1880. Printed by the Society. Vol. I. Boston: J. R. Osgood & Co. 1881.

THE nature of this book is to some extent peculiar. It consists of papers of unequal length and unequal merit, prepared either by committees or by single members of the Society, and read before it at various times between 1876 and 1880. Taken together, they make up a somewhat fragmentary history or criticism of the entire campaign to which they refer.

The first paper, which is by far the most valuable of the series, was prepared by a committee consisting of Mr. John C. Ropes, Gen. F. W. Palfrey, and Capt. W. E. Perkins. It discusses the general subject of McClellan's plans: What were his plans? what were their advantages and defects? what authority had he to execute them? and how much was he interfered with in their execution? These are fundamental questions which have been much debated and written upon, but we do not remember to have ever seen in print so concise, so closely reasoned, carefully worded, and thoroughly conclusive a statement of the subject as is given in the twenty-five pages here devoted to it. The committee find, as to plans, that McClellan had two: to land at Urbana, cut off Yorktown, and advance to Richmond behind it; or, to land at Fort Monroe, capture Yorktown by "a combined naval and land attack," and "fight a decisive battle between West Point and Richmond, to give which battle the rebels will concentrate all their available forces." As to their merits, the Urbana plan "would have been a very hazardous undertaking," and, all things considered, it "was absurd." The Fort Monroe plan, *since a decisive battle had to be fought*, and since Fort Monroe and Fredericksburg were about equidistant from Richmond, offered no advantages over the direct route "except such as may perhaps result from the nature of the ground"; but the committee "hesitate to pronounce" that "the almost impenetrable thickets of the Wilderness . . . were more to be feared than the swamps of the Chickahominy." As for the theory that, by moving to the Peninsula, a blow was struck at the enemy's base or rear, it was wholly fallacious; for while the army was moving to and up the Peninsula the enemy would have time to move over to meet it, as in fact he did. The idea of a movement by the south side of the James was only hinted at by McClellan, and not as a part of his Fort Monroe plan; it was impossible when the plan was decided on, because he did not have control of the James, and when he did have such control it was not attempted. Moreover, the Peninsular plan "either uncovered Washington or divided the army"; it "necessarily involved a serious opposition from the President and Cabinet"; and it relied upon the assistance of the navy at Yorktown to an extent far beyond the power of the navy or the assurances of the Navy Department.

Having discussed the merits of the plans, the committee find that McClellan was authorized to carry out the movement via Fort Monroe provided certain clearly specified conditions were complied with; and they

"regard it as established beyond question that Gen. McClellan did not propose [purpose] to comply with the requirements of the President; and they cannot regard the detention of Gen. McDowell's corps at Washington as an interference with any plans which Gen. McClellan was authorized to carry out. Nor can we avoid the impression that this failure to comply with his orders was not due to an honest misunderstanding of those orders on the part of Gen. McClellan, but rather to a profound contempt for the Washington authorities, and a determination to get his army on the Peninsula without weakening it by what he considered unnecessary detachments."

The second paper treats of the siege of Yorktown, and is written by Gen. John C. Palfrey, who was an officer of engineers. It criticises the unnecessary slowness of McClellan's movements, but does not add much to our previous knowledge of the subject. As McClellan excused his slowness by what he considered the failure of the navy to co-operate with him, about one-half of this paper is devoted to an examination of the whole subject of naval attacks upon forts, every instance of this kind during the war being cited; from which "it seems that the navy was right in not attacking Yorktown, and that Gen. McClellan's opinion that it might have reduced it was ill judged." Of the final capture of Yorktown the author says: "Our bloodless victory, so long in winning, brought us nothing but disadvantage. In its loss of men, time, and money it was more like a defeat."

The third, fourth, and fifth papers treat of the battles of the campaign from Williamsburg to Malvern Hill; they are written by Gen. F. W. Palfrey, or by committees of which he was chairman. They are analytical rather than descriptive, and to a very large extent are taken up with quotations from official reports in the vain attempt to reconcile hopelessly conflicting statements. Beyond this there is little of narrative, but much of criticism, the nature of which may be inferred from a few extracts: "Curiously enough, there was always something for McClellan to do more important than to fight his own battles." "His pursuit was feeble and disconnected." "There is something in McClellan's history—a sort of incapacity of doing anything till an ideal completeness of preparation was reached—which cannot fail to engage the attention of those who study his campaigns." "It is not worth while to invade a country, and approach its capital, and move close up to the army covering it, to then find excuses for doing nothing more." "Had McClellan been where he should have been at the critical moment, etc. . . . His almost invariable absence from the battle-field." Finally, "I have said enough to show that I regard McClellan as a failure. He was not only a disappointment, but his 'tall talk' made him an aggravating disappointment." "And yet we ought not to regard McClellan with anger or with contempt. . . . He was in many respects a useful officer. . . ." But "it is not likely that he will have a place in history. His name could only find a place low down among the soldiers of all time."

The volume is concluded by a short paper by Gen. C. A. Whittier, entitled "Comments on the Campaign." It contains a panegyric on the Army of Northern Virginia, "the best army which has existed on this Continent," and serious reflections of the "mudsill" order on the Army of the Potomac. It rehearses the old and hackneyed apologies for McClellan, and the equally time-worn condemnation of his superiors; it gives nothing new, and is in flat contradiction to the remaining nine-tenths of the book. We suppose it is published as an historical relic of certain opinions of eighteen years ago, now seldom encountered. But even in those days a clever critic epitomized the Peninsular campaign by saying that "the plan was too rash and its application too timid." This is the sense of the present volume, as it probably will be that of history.

LEADER'S MARY QUEEN OF SCOTS.

Mary Queen of Scots in Captivity: a Narrative of Events from January, 1569, to December, 1584, whilst George, Earl of Shrewsbury, was the guardian of the Scottish Queen. By John Daniel Leader, Fellow of the Society of Antiquaries. Sheffield: Leader & Sons; London: George Bell & Sons. 1880. 8vo, pp. 644.

MR. LEADER has produced a very interesting book, and a real contribution to one of the most hotly disputed of all controversies. For although the limits of time to which his subject is confined exclude all direct discussion of the two principal charges against the Scottish queen—

her complicity in the murder of Darnley and in the Babington plot—yet the detailed account of her life during sixteen years of captivity, all crowded with intrigues and plots, cannot help to throw light upon her character and upon the circumstances which surrounded the events in question. Mr. Leader does not conceal his own opinion as to these. He says briefly (p. 11): "Without dwelling on the arguments adduced, we may conclude that the guilt of Darnley's murder was fairly divided between Mary and the Scottish Lords: in what they contrived she acquiesced, and both were too deeply compromised to play with success the part of innocence." He also asserts without hesitation that she was an accomplice of Babington (p. 620). Of the York Conference he says (p. 9): "Its real purpose was to supply Elizabeth with a much-needed pretext for Mary's continued detention."

Here is, indeed, the vital question, not of Mary's life, but of that portion of it treated in this volume: What right had Elizabeth to keep her in prison all these years? Most certainly, if there was no sufficient justification for this, it is unreasonable to censure Mary's plots and deceits in her efforts to regain her liberty. Even acquiescence in the Babington plot should not be condemned too severely after nineteen years of this treatment. Mr. Leader's narrative shows how at every step her professions of charity and humility were belied by uninterrupted scheming, not merely for her own liberty, but for the invasion and subjugation of England, the dethronement, and of course the death, of Elizabeth herself; and he often calls the attention of the reader to the duplicity and, to speak plainly, the perfidy of this course. But if Mary was unjustly imprisoned, as she contended, what else could she have done? As heirs of English liberties, we shudder to think what would have become of those liberties if a second Mary—a Stuart and a Guise as well as a Tudor—had held rule there, backed like the first by all the power of Spain, and with Scotland under her feet as well as England. Cecil and Walsingham were fighting the great battle of freedom and civilization, and they won; but they fought with weapons which no statesman of the nineteenth century would deign to use. They were the characteristic weapons of the age. If their antagonist used them as well as they, we cannot find fault with her, for she, too, was terribly in earnest.

At the same time, one cannot but acknowledge with pride the truth of Mr. Leader's defence of Burghley (p. 176):

"He was dealing, on his sovereign's behalf, for the safety of the kingdom, and against him were arrayed some of the subtlest minds of the age. His opponents shrunk from nothing, not even from assassination; but Burghley, it must be admitted, met treachery by treachery, and proved himself cleverest in the disreputable game. Had Philip or Alva been troubled with a Queen of the Scots, they would soon have removed the cause of discord; but political assassination does not commend itself to the English mind. In an age when intriguers shrank from no villany, Englishmen never stooped to assassination. While they used spies, and inflicted torture, they avoided the dagger and the cup."

There was a time, however, when even the English ministers were very near employing this weapon against Mary Stuart.

As Mr. Leader says, the casket-letters afforded Elizabeth's ministers "a much-needed pretext for Mary's continued detention"; but the real reason, which the pretext was to cover, was the conviction that Mary was the great enemy of their realm and their queen, and that, once in their hands, she must not be suffered to escape from them. If she had been merely an adulteress and murderer, that was a thing that did not concern England; the age was not so squeamish as to the character of its princes. Even in our own century, we know that Napoleon III. was the honored guest of Queen Victoria. But Mary was the rival and enemy of their queen. She was without question the heiress to the English throne, and in her own eyes was by right the occupant of that throne. This was what gave intensity to the rivalry. *Vita Mariæ mors Elizabethæ; vita Elizabethæ mors Mariæ;* and this alternative had been a necessary one ever since "she commenced her course of opposition to Elizabeth by quartering the arms and assuming the style of Queen of England, on the death of Mary Tudor" (p. 516). Elizabeth's position was a very perplexing one. As Queen and as a Tudor she could not quietly see a sister-queen deposed and put on trial by her own subjects. As woman, "she could not," she said, "put to death the bird that had flown to her for succor from the hawk." At last, however, as Mr. Leader says (p. 283), she

"recognized the necessity of confining, if not killing, the 'bird' that had flown to her for shelter, a recognition that ensured cheerless captivity for the Queen of Scots. Matters might perhaps have improved after a time, if she could have contented herself with her needle-work, her pet birds, and small dogs. But Mary Stuart's nature was too restless to be quiet, too unscrupulous to be nice in the choice of instruments. It did not fall to her lot to be every day mixed up in great plots, such as the conspiracy with Ridolfi, but, if great intrigues failed to present themselves, she devised little ones, even weaving the meshes around herself; and when fate brought her once again into large treasons, the eagerness with which she embraced the occasion showed that the opportunity, not the disposition, had been wanting."

Mr. Leader has given four portraits—of Mary, Norfolk, Shrewsbury, and Lady Shrewsbury. That of Mary is a full-length portrait, photographed from "the famous 'Sheffield Portrait' preserved in Hardwick Hall. The original is painted on an oak panel, and represents the Queen, in her thirty-sixth year, as anything but the beautiful woman traditionally described. She has also a very decided cast in the right eye, which the artist, with some skill, has rendered less obvious by representing her as looking towards the left." The other three portraits are copied from engravings by the Woodbury-type process.

The author, himself a Sheffield man, has taken pains to bring into prominence the length and importance of Mary's confinement in Sheffield—far longer in duration than that in any other place, but almost forgotten in the greater fame of Bolton, Tutbury, and Fotheringhay.

METTERNICH.

Memoirs of Prince Metternich. Edited by Prince Richard Metternich. Translated by Mrs. Alexander Napier. Vols. III. and IV. New York: Charles Scribner's Sons. 1881.

In the first two volumes of Metternich's 'Memoirs' we saw him (*Nation*, No. 763) as he was during the long years of the often disastrous but finally victorious grapple of Austria and of Europe with the great French conqueror. In the volumes before us we see him as he was in the years of Europe's general tranquillity, of Austria's hegemony among the great powers, of his own greatest prosperity and influence. He was then—in the years 1816–1829, a period intervening between the Congress of Vienna and the Revolution of July—the high-priest of conservatism and legitimacy, a guide of monarchs (deemed infallible by his own), the terror of Liberals, the most implicitly obeyed, most honored, and most richly rewarded of statesmen. If statesmen can be happy, he was then the happiest of the class. He had, with others, broken the power of Napoleon, and could claim for himself the greatest share in the achievement. The affairs of Europe, and of Germany particularly, had been settled at the great congress held under his auspices in the capital of his Emperor. At the congresses of Aix-la-Chapelle (1818), Carlsbad (1819), Troppau (1820), Laybach (1821), and Verona (1822) he dictated peace and order, reaction, repression, and intervention. He suppressed the insurrection of Italy by the arms of his empire, and the Spanish revolution through the intervention of France; kept Alexander of Russia in check whenever he sought to move in favor of Greece; and governed Germany, or rather kept her down, through the machinery of the Diet of Frankfort and the obsequious pusillanimity of Frederic William III. It was only in the affairs of Greece that the diplomacy of Canning and the Turkish war of Nicholas thwarted his policy. In everything else he was successful: peace was lasting, reaction triumphant, absolutism the rule, Austria the shining example, his own wisdom the beacon of salvation.

And no statesman ever believed more in himself, and in himself alone, than Metternich did. "My mind," he ejaculates in 1819, "conceives nothing narrow or limited; I always go, on every side, far beyond all that occupies the greater number of men of business; I cover ground infinitely larger than they can see or wish to see. I cannot help saying to myself twenty times a day: 'Good God, how right I am, and how wrong they are!'" Many talk as if they were giants: "follow them and you soon perceive that you have only to do with phantoms. . . All that moves this world at present is of a miserable character." And "this period will pass away like all human folly," with all the advocates of liberal institutions, such as the philosopher Krug, "a mere common babbler, without vigor or strength, who is hardly fit to keep a tobacconist's shop"; or Görres, with his "hollow threats and dark prophecies"; or Steffens, "a natural philosopher deeply entangled in all the false tendencies of the time"; or Capodistria, or Canning, the objects of so many invectives in the 'Memoirs.' "I am surrounded," he says in the same year, speaking of a diplomatic conference, "by people who are quite enchanted with their own force of will; and yet there is not one among them who a few days ago knew what he wants or will want. . . . I shall be victorious here as in Carlsbad; that is to say, all will wish what I wish, and . . . will go home in the firm persuasion that they have left Vienna with the same views with which they came." "The difficulties are great," he says in 1820; "but what strength of mind, what purity of conscience and calmness of judgment can accomplish will be accomplished." "The present," he remarks in 1821, "is not worth much. This is evident to me; and history has perhaps never displayed such a pitiable crowd of small personages, who only busy themselves with follies. Heavens! how we shall all be abused when the day of reckoning comes—and that day will come." Then, however, in that remote day, some worthy man will discover that in this time "one being existed who was less wrong-headed than his contemporaries," etc. And right-headedness is sadly needed: "One false principle," he tells the Emperor Alexander, into whose mind his teacher Laharpe had instilled so much of the poison of modern ideas—"one false principle, and the night will be upon us, and chaos will succeed that night." Alexander never fully appreciated these warnings, and when he died, Metternich wrote, "A new era is commencing. My spirit is transported by it, and sees." Shortly before, he had written, with an eye to Alexander's doings in the Greek affair, "At the present moment every one is wrong except myself." And Metternich called "self-conceit the most ridiculous of all peculiarities."

When Metternich's spirit was transported by the new era and saw, he expected Constantine, the most congenial of the sons of the half-crazy Paul I., to succeed his brother Alexander, and he saw this: "The Grand Duke Constantine has great parts; his heart is noble and in the right place; his political principles are most correct. . . . The bent of his mind has two objects: in politics, the support of the monarchical principle; and in an administrative point of view, the internal amelioration of the empire. I deceive myself if the *history* of Russia does not begin where the *romance* of Russia ends." The seer's eye seems to have been slightly dimmed at that moment by the irritation in which he had been kept for years by Alexander's erratic policy, a policy so often swinging towards liberalism, and inspired by Capodistria with a fickle Philhellenism. According to Metternich's estimate of him, Alexander "had a peculiar and deplorable inclination to go wrong." The Czar often allowed him "the honor of looking into his inner thoughts." They would understand one another "quickly enough as to the starting-point and the end to be arrived at." Then both would start, Metternich going "straight to the end proposed, the Emperor round about." Metternich would call to him "Stop!"; he in return, "Do but come with me"; and Metternich again, "Indeed, you have taken the wrong way." Yet Alexander would go on "further astray, full of vexation at being left alone. And this was especially the case in the Eastern question." Alexander, carried "astray" by his liberal romanticism, by Capodistria, Pozzo di Borgo, and Strogonoff, would surely have done something for the struggling Greeks, and thus, perhaps, exposed the world to a cataclysm; but he died before making up his mind, and Metternich sighed charitably: "If from the heights of Paradise things below can occupy one, Alexander comprehends me now better than he ever did on earth, and his soul ought to come to meet and support mine."

Metternich's soul, in the Eastern question, needed support indeed. Alexander's romanticism, it is true, no longer worked mischief on earth; Capodistria, the Byzantine spirit who constantly intrigued against the Porte, was without power with Alexander's successor, Nicholas; and Nicholas himself was "a prince such as . . . sovereigns ought to be." But Greece, mindless of the Austrian Chancellor's deep concern for the peace of the world and the legitimate rights of kings and sultans, was struggling on; the model Czar was unable to resist his people's religious sympathies with her cause; his Pozzo di Borgo—a man who was "always wrong"—worked cunningly at Paris against the influence of the Vienna diplomacy; and, what was worse than all this, Canning had deeply imbibed the poison of Philhellenism, and was capable of doing anything—of supporting both Hellas and Dom Pedro. Canning was Metternich's constant tormentor. Said the latter in 1826: "My situation is like that of one crucified: one arm is nailed to Constantinople, and the other to Lisbon; home affairs occupy the trunk; Mr. Canning is my crucifier, and the Hungarian Diet the sponge steeped in vinegar." And "the crafty and unscrupulous mind of Mr. Canning" led him "to accede to the wishes of the Emperor of Russia" in favor of Greece. Canning was a man "whom Providence had hurled upon England and Europe like a malevolent meteor." Fortunately for Metternich, there was this consolation: "Canning flies, I walk; he rises to a region where men dwell not, while I remain on the level of all things human. . . . His career is as brilliant as a flash of lightning, but as transient; mine does not dazzle, but it preserves what the other consumes." In 1827 England was delivered from this "great scourge," but in the track of the disappearing "malevolent meteor" flamed up the fire of Navarino, consuming the Turkish navy, a mainstay of European legitimacy.

Notwithstanding all this, Metternich violently protested against the supposition that he had "become a Mohammedan." He was firmly convinced that he was "a better Christian than Benjamin Constant, Hobhouse, Chateaubriand, the Abbé de Pradt, and all the rest" of the friends of Greece; that he was "more human than Lord Cochrane," and had "a hundred times more mind, understanding, and sense than M. Eynard." If he opposed all these Philhellenes, it was because they were guilty of "the villany of making religion and humanity a pretext to overthrow the regular course of things." This course of things, as Metternich, in September, 1827, explained to a representative of France, demanded: "1, that the Powers acknowledge the reëstablishment of peace in Greece to be the basis of the treaty [then proposed] in place of the former basis; 2, that the Sultan himself must carry out the pacification; 3, that the Powers show themselves as friends of the Porte and enemies of the revolution; 4, that there be no question of the abdication of the Sultan, or of a Greek government, a Greek flag, Greek fortresses, etc." These peremptory conditions of coöperation with France Metternich dutifully submitted to his master, the Emperor Francis, and the latter, as was always his wont, answered, "Received and noticed"; piously adding, "God grant that your interview with Count de la Ferronays may have the desired effect upon his court." It had not. God granted the battle of Navarino, which, with the Russian war of 1828–'29, had the effect of creating a Greek government, a Greek flag, Greek fortresses, etc.

It is needless to say that in regard to many points in politics, and many personages figuring in it, Metternich's vision was undimmed by the prejudices of his passionate, ever-combative, sleepless conservatism. Thus he knew the last Bourbon King of France tolerably well, when he wrote, shortly after his accession to the throne: "Charles X. is frank, loyal, amiable, chivalrous, and religious; but at the same time he is weak, accessible to insinuations, self-willed, and even violent in his prejudices." The following is better: "Man cannot make a constitution properly speaking: that is made only by time. Just as little is a charta a constitution as the marriage contract is the marriage. Let people write as much as they like—and the less will always be the better—and yet you will have nothing in your hand but a sheet of paper. England alone has a constitution, of which the Magna Charta is but a subordinate element. The English Constitution is the work of centuries, and, moreover, streams of blood and anarchy of every kind supplied the means." His "Confession of Faith," or "Secret Memorandum to the Emperor Alexander," written in 1820, shows both his powers of thinking and the overwhelming strength of his conservative prejudices in the strongest light.

But it is outside the field of politics, in remarks on countries, cities, and landscapes visited, on works of arts, on personal experience of every kind, on human frailty and human life in general, that the reader will find Metternich most worthy of being listened to with attention and some patience. He was an ardent admirer of scenery and good art, and, in spite of a great deal of frivolity, capable of much family affection and tender sadness. He tries now and then to be pathetic, and is sometimes touching. His frivolity often pierces through his mantle of religious decency and devotion to the Church. Speaking of Catalani, he says: "Assuredly, if the Holy Virgin mingles her voice with the songs of the blessed, she must sing like this woman." In reference to Bible distribution in England and the United States, he remarks, "The *maladie biblique* extends through both hemispheres." In Cologne he was shown, among other religious curiosities, "a small coat of Jesus Christ, such as we call in Vienna *ein Kinder-Röckerl*." In the same tone he writes of a procession of St. Januarius, which included "thirty-six busts of saints and *saintesses* in good solid silver, carried by lazzaroni clothed in a sort of mountebank livery," etc. Elsewhere he says: "I believe in the miracles of Jesus Christ, which I have not seen; Dietrichstein believes in Hohenlohe's miracles, which, he says, he has seen." He protests his veneration for the Bible; but though the champion of Catholic interests in European politics, and in Austria a defender even of the Jesuits, he reads it only in Luther's translation. And in the following, written in Rome, he further reveals his character as a Christian and philosopher: "I acknowledge that I cannot understand how a Protestant can turn Catholic at Rome. Rome is like a most magnificent theatre with very bad actors. Keep what I say to yourself, for it will run through all Vienna, and I love religion and its triumph too much to wish to cast a slur upon it in any manner whatever. In all this it is evident that Italian taste has much influence in the ceremonies; what pleases and excites laughter on this side of the Alps causes weeping on the other, and *vice versa*. One ought never to forget to make this allowance—looking on and keeping silence."

To-Day in America. Studies for the Old World and the New. By Joseph Hatton. New York: Harper & Brothers. 1881.

THIS is the latest English book about America, and is not the least remarkable. It has two prefaces. One is addressed "to the American reader," whom the author informs that "June, 1881, will forever be a red-letter month in the calendar of the United States," because Iroquois won the Derby; therefore congratulating himself that his book is "published at a time when this people, basking in the sunshine of success, must feel especially tolerant of English criticisms." The other instructs the British public that it will find "a few new ideas and many new facts in this work," and particularly "a sketch of Colonel Ingersoll, the remarkable representative and eloquent spokesman of free thought in America," who impressed Mr. Hatton as "an orator of great original power," "destined to exercise a strange and mighty influence on theological opinions in the United States," and "an important factor of American progress." The Colonel, Mr. Hatton is sure, will be a great novelty to his countrymen (and Mr. Bradlaugh's), whatever may be said about the rest of his book. Accordingly we find him treated at great length in a section beginning thus: "On Saturday 'Maud S.,' the famous trotter; on Sunday Colonel Ingersoll, the eloquent materialist. It seems to me that on Saturday and Sunday I was face to face with the two most characteristic outcomes of American civilization." And this is from a professed friend of America, who has already told us that "the Great Republic is marching on," and that he stands "upon the sidewalk of sympathetic neutrality and waches the mighty procession." He discovers unsuspected resemblances between Maud S. and Ingersoll. "What Maud S. is to the American trotting-track, Ingersoll is to the American platform." The mare's most marked trait was "an easy grace which seemed to discount her rapidity." "So it was with Ingersoll. He spoke without effort. . . . He was easy all the time; he spoke without effort,"

etc., just as Mr. Hatton writes, apparently. On the race-track Mrs. Hatton thought Maud S. "seemed cognizant of the general enthusiasm," but to Mr. Hatton she appeared "utterly innocent, altogether unaware of her beauty or the acknowledgment of it." How Ingersoll compared with her in this regard is not mentioned, but it is insisted that "both are the development of a special training," and both "representative of the practicalness of American life." "Godless Bob," as we are told the Colonel is called in Chicago, has also points of likeness to Sarah Bernhardt and to John the Baptist. He is "natural in the sense that Mademoiselle Bernhardt is natural in the interpretation of characters which suit her physique." As to the other resemblance: "There is no ignoring the Western orator, and John of the Wilderness stands upon a rock that centuries have not shaken." In respect to hell, the greatest thinkers of the age are with" Ingersoll: "Huxley and Darwin are with him; the scientists are with him, and his doctrine is as old as thought." If the great orator should go to England, however, he would have to "tone down the strong colors of his denunciation of the Bible"; but on the whole—

"Without for a moment pretending to endorse the doctrines of Ingersoll, there can be no doubt that he is doing an important work, and possibly a good work. One of the most enlightened of Chicago clergymen, in discussing the subject with me, took that view. A change is coming over the spirit of the churches. The Church of England must modify the damnatory clauses of its leading creed in the presence of the new movement represented by Ingersoll."

Mr. Hatton is right in terming the Ingersoll part of his book the novel portion of it. The rest is composed of well-known material, with a recognizable warp of platitude, such as: "Dignity requires the support of dress and surroundings. In America genius is dignity. In England officialism and uniforms fill the *rôle*"—unless, of course, it be contended that commonplace is always coherent and comprehensible, in which case we should agree that Mr. Hatton is probably fond of paradox. It would be useless to deny it after quoting the foregoing extracts, or the following examples of consecutiveness:

"If his [H. J. Montague's] impersonations were sometimes wanting in force, they never lacked earnestness. A rare quality, earnestness, it is absolutely necessary to success in any walk of life. Dickens said there was no substitute for it, and he knew."

"The oyster that seemed to Thackeray like a young baby was probably a large Saddle Rock. Saturn's infants were not so nice as those of Fulton Market, judging from the face the greedy god is making at them in the illustrations to the classics. New York cherishes the memory of Thackeray. At the Century Club," etc., etc.

But then there is commonplace too. There are statements to the effect that a murderer has numerous chances of escape in America against none in England; that "dining rooms and parlors are all arranged according to one pattern"; that "a dozen years ago a number of American artists agitated for the purpose of putting a duty of a dollar per square inch on oil-paintings"; that New York "has never accepted the immoral class of farcical comedy which French art has established in London"; that whereas five years ago, when Mr. Hatton was first here, the leading theatres were playing dignified plays, "to-day" (*i.e.*, June) "minstrels and buffoons hold the temples of the drama"; that the men are "never in too great a hurry to neglect any opportunity of being polite to women," but that the latter are "too apt to accept special courtesies as a right"; that the Detroit *Free Press* is "especially devoted to the invention and narration of amusing stories"; that "barriers of all kinds are regarded as an offence," and "you can 'walk right in' and 'interview' anybody in America from the President downward"; that the Salmagundi Club are "pioneers of American art"; that at the Philadelphia Exposition the English pictures were more popular "than those of all the rest of the world put together"; that American audiences are "more unsophisticated than English," and, evening dress not being *de rigueur*, "gentlemen 'down town' (in the city) can meet their wives at a restaurant, dine, and walk into the playhouse afterwards without any fuss"; and that Mr. Charles Dudley Warner is "an essayist as graceful as Lamb and far more humorous." To all readers of English books about America these and similar facts have long been notorious. Mr. Hatton, however, has written whatever came into his head in the order of its arrival, with great frankness and friendliness, and he was doubtless prepared to incur the loss of those excellences which depend upon distinct mental processes of one kind or another. His book has an individual flavor, and the only thing about it more than superficially puzzling is his persistent reference to the countrymen of Lord Castlereagh as "they" rather than as "we." There is certainly nothing Anglo-Saxon about such a sentence as this, which is equally good away from its context: "Not that I would for a moment intimate that he would countenance the thin kind of descriptive elaboration indulged in by a weak and flaccid intellectuality that leans in limp affectation upon a granny's stick."

Early Hebrew Life: a Study in Sociology. By John Fenton. London: Trübner & Co. 1880. 8vo, pp. 102.

We have often wondered that no person has taken up the investigation of the social organization of the Hebrews in the light of the recent discoveries in primitive sociology. Their tribal system is almost the first that occurs to the mind in illustrating the principles of tribal organization, and is at any rate the most generally familiar, from its connection with Christianity; and, for the same reason, the fulness and familiarity of their sacred books afford peculiar advantages for the investigation. Mr. Fenton has undertaken the work with excellent preparation, and has produced a very valuable treatise. There is a certain incompleteness about it, inasmuch as he has hardly touched at all upon the tribal organization—probably because this belonged to the political rather than the social institutions of the Hebrews. Still, one would have been glad to see this part of the subject treated with the insight and freshness that characterize the book. The author introduces his subject with a brief but very satisfactory sketch of the progress of early peoples through the nomad and pastoral periods to the agricultural. This part of the book is general in its character, the Hebrews being, however, taken into special consideration at every stage of the discussion. We will mention as especially good the account of the development of the house and village communities in section 15 (p. 24). It is to be noted that Mr. Fenton takes Mr. Morgan's "classificatory system" as the starting-point in the social organization—a freedom from English "insularity" quite in contrast to that of Prof. Hearn, who, in his 'Aryan Household,' never once, we believe, refers to any but English authorities. In this part of the work we find a very interesting discussion (p. 33) of the influence of *Yahwism*, or the national worship of Jehovah, in checking the disintegrating tendencies which were so disastrous in Greece.

The original portion of the work commences, we suppose, on p. 37, with a comparison of the Hebrew community with those of the different branches of the Aryan race, "taking the points of contact in this order: land, government, reciprocal rights and duties, survivals." Under the first head, as upon the Israelitish tribes, we are surprised at the brevity and what seems to be the paucity of material. The short section is, however, very good, as is the whole discussion. What is perhaps most striking here is the pointing out of what may be called the feudalization of the Hebrew state, and the identification of the "Shôfetim" with the German Barons on the one hand and the Roman Consuls on the other. The rise of "lordships," and the development of a species of serfdom in connection with them, may be easily noted here as a natural outgrowth in a community of this class. It culminated in the period of the so-called Judges. Taking the diverse development of Rome and Germany: "In Rome circumstances welded the entire community into one homogeneous body, whereas in Germany the comparative isolation of the towns resulted in the growth of numerous baronies," while the Roman magistrates "remained the servants of the city" (p. 56). He finds the Hebrew lords to be precisely analogous to neither—on the whole, "parallel to the barons of Germany," but not entirely independent of the "elders."

Chapter v., entitled "Survivals," is highly interesting, especially for the discussion of the year of release and the year of jubilee. The former of these, the "Sabbath of the land," he explains as a fallow, corresponding to that of the "three-field system" of the Middle Ages. "To have the whole tract fallow during one year of a series comes to the same thing in the end as having a fraction fallow during each year of the series" (p. 67). This is very true, as far as the land is concerned; but it is a very different thing in relation to the *morale* of the community. This objection, touching the enforced idleness of the entire community for a year, would perhaps be met by his view that the fallow was directly connected with the periodical redistribution of the land, which is known to have taken place in most early communities. The release of slaves at the end of seven years from purchase cannot have coincided with the release of the land; this "variable septennium," therefore, he considers to be connected with the "manorial villages," while the "absolute septennium" of the land belongs to the "pure village communities." The year of jubilee he regards as growing out of an attempt to revive the redistribution, which had fallen into desuetude in the "baronial" times. Seven years would, in this more advanced state of society, be too short a tenure; and he finds a curious parallel in the borough of Newtown-upon-Ayr, where the septennial redistribution was, in 1771, converted into a distribution once in eight periods; that is, every fifty-seven years.

A valuable commentary upon the forty-eighth chapter of Ezekiel will be found at p. 78; and the division of the ideal land of Judah sketched in that chapter is illustrated by a table occupying the whole of the following page.

New England Bird Life: being a Manual of New England Ornithology. Revised and edited from the Manuscript of Winfrid A. Stearns, by Dr. Elliott Coues, U. S. A. Part I. Oscines. Boston: Lee & Shepard. 1881. 8vo, pp. 324, 56 woodcuts.

The birds of New England are doubtless better known than those of any other area of equal extent in the United States, yet there has been hitherto no work relating especially to New England ornithology which adequately covered the ground. Information respecting the mode of occurrence and breeding range of many of the rarer species has so rapidly accumulated during the last five years, that a work epitomizing the scattered records would alone prove most wel-

come and serviceable. 'New England Bird Life' does far more than this; for not only are these records carefully collated and critically weighed, but the work is in every sense a manual of the subject of which it treats, concise and admirable in execution at every point. The editor's preface informs us that the author undertook the work several years ago, and having diligently revised his manuscripts from time to time to keep pace with the advancing knowledge of the subject, finally submitted them to Dr. Coues for final corrections, with permission to alter and emend at his discretion, even to the rewriting of portions. The editor in this way became not only equally responsible for the accuracy and completeness, but virtually a joint author, of the work. Mr. Stearns is too little known as an ornithologist to enable one to judge properly of his capabilities as an author; but whatever his shortcomings, if any, may have been, they are not evident in the work he has so discreetly entrusted to the supervision of a well-known authority. Those who are familiar with the editor's felicitous style, as displayed especially in his 'Birds of the North-West' and 'Birds of the Colorado Valley,' will not fail to recognize his touches on nearly every page, or his influence in the general execution of the work, which is certainly not that of a novice. The part now issued treats of the song birds, or *Oscines* (about one hundred and forty species), but the publishers announce that a second volume completing the treatise will follow as soon as practicable.

The fifty pages of introductory matter are about equally apportioned among "General Definitions," the "Preparation of Specimens for Study," the "Subject of Faunal Areas," and a bibliography of the literature of New England ornithology. The remainder of the book is devoted to descriptions and biographical notices of the species. The descriptions, though brief, are so discriminatingly drawn up that they well serve the purpose for which they were intended; the biographical sketches are masterly, concise, and apt; reflecting in a few well-chosen words the principal facts in the life-history of the species. Their geographical distribution, or the nature and manner of their presence, is made a prominent feature, and the information given in nearly every case fairly reflects the present knowledge of the subject. In a few instances statements are made, especially in reference to the breeding range of certain species, which demand qualification. This is doubtless due to the fact that the editor's personal acquaintance with the New England fauna is not extensive, and to a tendency on his part to risk conclusions based on general principles. The designation of the range of species by reference to faunal areas is uniformly adopted, and proves a most successful and therefore praiseworthy innovation. Too much stress, however, is perhaps laid upon the Carolinian aspect (faunally speaking) of portions of southern New England, for the occurrence of several of the test species within the area claimed as Carolinian is scarcely more than accidental, since they are at best merely stragglers, which have occurred as frequently hundreds of miles north of this area as within it. But these slight defects weigh little against the general excellence of a model manual of local ornithology. The fifty-six woodcuts are all from Dr. Coues's previous works.

New Testament, Revised Version. Oxford: Clarendon Press; New York: T. Nelson & Sons. $7.

New Testament in the Original Greek. Text revised by B. F. Westcott, D.D., and F. J. A. Hort, D.D. New York: Harper & Bros. $2.

GARDINER'S

English Histories

ENGLISH HISTORY FOR STUDENTS. Being the Introduction to English History. By S. R. Gardiner, Honorary Student of Christ Church, and Professor of Modern History at King's College, London. With a Critical and Biographical Account of the Authorities in English History by J. Bass Mullinger, M.A., St. John's College, Cambridge. 12mo, $2 25.

INTRODUCTION TO ENGLISH History. By S. R. Gardiner. 12mo, $1.

ENGLISH HISTORY FOR Young Folks, B.C. 55–A.D. 1880. By S. R. Gardiner. 16mo, $1.

"No manual of English history for children, lately published, can compare with this. Instead of being a collection of detached scraps of information of very unequal importance, interspersed with needless dates and names, it really is what the preface promises, 'the story of England's history.' . . . No event affecting the development of the English nation is passed over, while such as have left no lasting result are either omitted or only lightly touched on. . . . Not only will the reasoning powers of children be stimulated by the tracing of cause and effect, but their best sympathies will be awakened. . . . The simple language, the clear explanations of difficulties, and the excellent maps add to the value of the book, which is not only the work of a scholar, but of one who evidently sympathizes with the children for whom he writes."—*London Academy.*

"It is so freshly written, and with such an obvious mastery of the whole subject, that no one can fail to see its superiority over the general run of such text-books; and we have no hesitation, therefore, in recommending it to the notice of teachers."—*Educational Times, London.*

HENRY HOLT & CO., New York.

English Classics.

For Classes in English Literature, Reading, Grammar, etc.

EDITED BY EMINENT ENGLISH SCHOLARS.

Each Volume contains a Sketch of the Author's life, Prefatory and Explanatory Notes, etc., etc.

These volumes are thoroughly adapted for Schools in which English Literature forms a branch of study, or where a carefully-selected portion of some English Classic is selected for minute examination or for supplementary reading. The notes are unusually full and exhaustive, occupying in nearly every case half the book. Etymology is attended to throughout, the derivations of all the more difficult words being given.

In short, they supply the student with all the information necessary to a perfect understanding and just appreciation of the text, and incidentally communicate much useful philological and general knowledge.

1. The Prophecy of Dante. (Cantos I. II.) Byron ..... 32 pages.
2. L'Allegro and Il Penseroso. Milton. ..... "
3. Essays—Civil and Moral. (Selected.) Lord Bacon. ..... "
4. Prisoner of Chillon. Byron ..... "
5. The Fire Worshippers. (Lalla Rookh. Selected from Parts I. and II.) Moore. ..... "
6. The Deserted Village. Goldsmith. ..... "
7. Marmion. (Selections from Canto V.) Scott. ..... "
8. The Lay of the Last Minstrel. (Introduction and Canto I.) Scott. ..... "
9. The Cotter's Saturday Night and Other Poems. Burns. ..... "
10. The Village. Crabbe. ..... "
11. The Pleasures of Hope. (Abridgment of Part I.) Campbell. ..... "
12. Essay on Bunyan's Pilgrim's Progress. Macaulay. ..... "
13. The Armada, and Other Poems. Macaulay. "
14. The Merchant of Venice. (Selections from Acts I., III., IV.) Shakespeare. ..... "
15. The Traveller. Goldsmith. ..... "
16. The Queen's Wake. Hogg. ..... "
17. The Ancient Mariner. Coleridge. ..... "

Others in Preparation.

The above are bound with paper covers, and are sold at the following low price, at which they will be sent to any address in the United States, post-paid: One dozen copies for $1 20; 100 copies for $9; 1,000 copies for $80.

A sample copy sent by mail for examination, with a view to its introduction, on receipt of 10 cents.

Paradise Lost. Book I. (Containing Sketch of Milton's Life—Essay on the Genius of Milton—Epitome of the views of the best-known critics on Milton.) Milton. Flexible cloth. ..... 94 pages.

Price by the dozen, per mail, post-paid, $3.

A sample copy for examination, with a view to introduction, sent by mail, post-paid, on receipt of 25 cents.

The Nation.

NEW YORK, THURSDAY, SEPTEMBER 15, 1881.

The Week.

THE Republicans of Pennsylvania held their convention on Thursday of last week, and nominated General S. M. Bailey for State Treasurer. His recommendations are that he has a "fine war record," was one of the 306 Stalwarts at Chicago who voted for Grant to the last, and is a puppet of the Cameron ring. The Independents were badly beaten. The platform adopted is a curiosity in its way. It begins with the astounding statement that "as Republicans we are in favor of any proper and well-considered reform in the government of the nation, the State, municipality, or county"; which looks as if the whole trouble between Don Cameron (who is said to have "run" the convention from Coney Island by telegraph) and the Independents might easily be smoothed over, particularly as Don says that he courts "suggestions to any and all of these ends," and only asks that "in their advocacy well-established safeguards shall not be hastily supplanted by experiments." He does not say what these safeguards are, but declares that President Garfield's Administration has "set the right example in this direction," and particularly commends it for insisting on "faithfulness and honesty in every branch of the public service." In order that no mistake might be made about the matter, he added the following explicit statement:

"*Resolved*, That the Republican party has ever been progressive and reformatory, and while realizing that nothing in government is wholly right, we desire to be always brave enough to seek every avenue of approach to the right, to the end that all our people may enjoy the ever increasing blessings of good government."

Since the adjournment of the Convention the Hon. Charles S. Wolfe, who has long been a prominent opponent of Don's reformatory schemes, has announced his intention to run as an Independent candidate. He says boldly that he thinks it would be better for the State to have the Democrats carry it this year than to have boss rule perpetuated, and adds that he for one is tired of the "nonsense" of helping the Ring by first opposing it, and then, in the interest of harmony, submitting tamely to whatever it does. The Republican newspapers generally discountenance Mr. Wolfe's movement; they admit that he is a good man, but think that he has made a "mistake of judgment." All true Republicans, they say, will rally round the cause of Don and administrative reform.

Mr. Platt has been interviewed on the subject of Republican prospects in this State, and it appears that he takes a very cheerful view of the situation. He thinks that if the President recovers, New York, being, "like all other States," filled with "sympathetic people," will go Republican through sympathy, particularly as in the "interior of this State"—though why in the interior rather than on the seacoast, he does not say—they look upon the President as a "demigod." This naturally disheartens the Democrats, and will draw out thousands of voters who would otherwise stay at home. On the other hand, if the President should die, victory would be equally certain, because Mr. Arthur is a New York man, and this fact would also draw out thousands of voters and "give an overwhelming vote." Mr. Platt says that Mr. Arthur was nominated in order to give the ticket strength in New York, and it is therefore rather curious, as an illustration of the different views that may be taken about "strength," to find Marshal Payn, who was present at the interview, quoting Mr. Whitelaw Reid as saying at the time of the convention, "For heaven's sake, do not nominate that man Arthur. It will certainly lose us New York by 50,000 majority." Mr. Platt went on to say that he did not care to discuss the question of Mr. Arthur's cabinet, but thinks that inasmuch as "he would have a harder row to hoe than any preceding President," it would hardly be fair "to expect him to assume that burden of duty unless he could be surrounded by advisers whom he himself selected, approved, and confided in." Mr. Platt shares the feeling common among Stalwarts just now, that "individuals are of very little consequence." He thinks that "if the President, Vice-President, and the whole Cabinet were to die this moment, the machine would move on without the slightest interruption"; but what machine he refers to, he does not state.

The arrivals of foreign gold during the week have been large, so that the value of gold imports since August 1 has risen to $14,675,194 against $16,882,934 in the corresponding time last year. Nothing further has been done by the leading banks of Europe to check the flow of gold to this country, and it now looks as if the specie imports from August 1 to the end of the calendar year would much exceed the estimate of $25,000,000 recently made by well-informed bankers. The cereal harvests in Europe are turning out below the average, except in Russia, where the yield is enormous, and in Austria, where it is above the average; and it is evident that the foreign demand on this country for breadstuffs and provisions will be large. The only question is whether Europe will pay for these chiefly in our securities or in coin. Notwithstanding the large receipts of foreign gold, and the heavy disbursements of the Treasury, the New York banks only gained about $2,000,000 in their net reserve, which, however, is now about $1,000,000 above the 25 per cent. limit. The Secretary of the Treasury has not yet decided how many bonds he will buy with surplus revenue, or whether he will take the long 4 per cent. bonds or the 3½ per cent. bonds. General trade continues active and the percentage of profit fair.

The enormous volume of business doing is attested both by the Clearing House returns and the traffic reports of the railroads. The railroad war continues, and Mr. Vanderbilt is reputed to be personally directing the fight. Nevertheless, the course of prices of railroad stocks has been upwards during the week. At the Stock Exchange an old-fashioned "corner" was developed early in the week in the common stock of the Hannibal and St. Joseph Railroad Company, and the price of the stock was advanced from 96¼ to 225. The victims of the "corner" were generally able to pay, and a few of them did settle their losses promptly. Others applied to the courts, and obtained an injunction which blocks hostile dealings in the stock by the brokers of the clique, at least temporarily; and at the same time they took measures to force the company to permit the exchange of its $4,000,000 8 per cent. convertible bonds into common stock. What will be the outcome of the "corner," so far as its projectors and their victims are concerned, is not a matter of great public interest. All previous "corners" in Wall street have proved to be unprofitable to all concerned. Soon after the development of the Hannibal and St. Joseph "corner" a report was circulated that there was a "corner" in Ohio and Mississippi stock, and the price of this jumped from 38¾ to 60, but soon collapsed, the report proving to be a false alarm. The speculators who had outstanding contracts to deliver other stocks hastened to buy them, so that there was a heavy speculative demand for stocks a good part of the week. This had much to do with the rise of prices, which ranged from 1 to 7¼ per cent. outside of the stocks named.

The American Iron and Steel Association is publishing a series of tracts on the tariff, only one of which we have seen, but that one is enough to make one blush for the human mind. The author opens in this wise:

"Free trade is trade without let or hindrance. Between nations there is no free trade in all the world. Only within the boundaries of a nation does it exist. Freedom within, but restraint without, is the universal rule. Every analogy of nature supports the policy of free exchange between the inhabitants of a country, while it is denied between that and other countries. For instance, there is free exchange between the different members of the human body; and it would be worse than a nuisance, for it would be death, to protect the kidneys or the lungs from the blood, or the stomach from the liver; yet it is highly proper and beneficial to protect all these organs by suitable clothing from aggressive, injurious outside influences, and to protect that human body, as a united whole, against encroachment from some other human body. So it is with the body politic. Free exchange between its various parts is essential to its healthy development and even to its existence; but protection is needed against aggression and encroachment from foreign bodies politic."

To point out the absurdity of this analogy would be labor wasted, because anybody who does not see it for himself is not likely to be a fit subject for any process of ratiocination. It will serve our purpose better to remark that if protection be the national equivalent of clothing for the individual body, nothing but prohibition will do. At present the United States carry on enormous exchanges with foreign countries, and especially with England; or in other words, according to our Iron and Steel author, are in the position of a man walking about without his pantaloons, and with about half his person "ex-

posed to aggressive, injurious outside influences." That this is, from the protectionist standpoint, a very disgraceful state of things is plain enough. According to his own showing, the protectionist must, in common decency, advocate a prohibitory tariff, because he will find that if he goes half-naked the result will be just as serious as if he "protected" his kidneys or lungs from his blood, or his stomach from his liver.

Mr. Lyman Trumbull's standing as a constitutional lawyer is so high that his views on the inability question are an important contribution to the discussion of the subject. In a recent interview he expresses the opinion that the present condition of things does not present a case of "inability" as contemplated by the Constitution; that if the office of President should be assumed by the Vice-President, under this clause, he would still have to give it up the moment the disability was removed. He also thinks that "so long as his mental faculties are unimpaired there is clearly no inability to perform the duties of his office," or, in other words, that a mere physical inability, arising from some temporary cause like a wound or an attack of illness, was not what the framers of the Constitution had in mind. This he seems to push rather far. The great objection, as we have already pointed out in these columns, to letting the Vice-President take the office whenever a case of temporary inability occurs is, that he must necessarily surrender the office the moment the disability is removed. As long as there is any reasonable chance of this being the ultimate upshot of the matter, all practical considerations point to the advisability of making no change at all. The shifting of the executive from President to Vice-President and then back again might involve very serious consequences; and if the discussion thus far has made any one thing plain, it is that letting matters remain *in statu quo* has produced nothing like the trouble which would have been caused by making a change.

A committee of the Chamber of Commerce has presented to Collector Robertson certain resolutions, passed by the Chamber of Commerce at its last meeting in June, strongly urging the maintenance of the civil-service rules in force at the Custom House as beneficial in their working to the Government and the business community alike. Collector Robertson answered unequivocally that he intended to keep these rules in force and to continue the system of competitive examinations. We are glad to record this, and are sure Collector Robertson can render no greater service to himself in his official position than by convincing the public and especially the politicians in every possible way that his resolution in this respect is sincere and unalterable. As soon as this is universally understood, and nobody can hope that an exception will be made in his or his friend's favor, Collector Robertson will find himself effectually relieved of all that pressure for place which has hitherto more than anything else taxed the time, patience, and working capacity of high executive officers. He will find that an unyielding attitude on this point will secure him an immense saving of time, strength, and good humor, aside from the beneficial influence it will have upon the public service in his charge.

The plunder of the Chicago and Alton passenger train on Thursday seems to have been managed in much the same way as that adopted in the Winston robbery, except that the train was stopped by means of false signals instead of being "boarded" by "passengers." About two miles east of Independence the engineer's attention was attracted by the waving of a red lantern. He brought the train to a stop, when a gang of a dozen desperadoes immediately took possession, and proceeded to "go through" it. There appears, as usual, to have been no more efficient guard in the express car than a "messenger," who was easily disposed of. The contents of the safe were then secured, and after this six men took the passengers in hand and robbed them of whatever they could not manage to conceal. Altogether they must have got several thousand dollars. They informed the passengers that they were the "James" gang, but several of them have been arrested, and it turns out that they were plain farmers from the neighborhood—"scions of well-known families," according to the Chicago *Tribune*. At the time of the robbery a freight train was following the passenger train, and would in all probability have run into it and caused a terrible loss of life had it not been for the bravery of the conductor and brakeman. These two men had been warned that they would be shot down if they moved, notwithstanding which they ran down the track, amid a storm of bullets from the robbers, and stopped the approaching train. Considering how easy it is for a gang of robbers armed to the teeth to plunder an entirely defenceless train in this way, the only wonder is that it is not done oftener. A small, well-armed guard would make such raids too hazardous to be any longer attempted.

It is reported that Senator Lamar is going to make campaign speeches for the candidate of the regular Democrats for the Governorship of Mississippi; also that some of the leading men among the same regular Democrats are plotting against his re-election to the Senate, and that he is in great danger of being defeated. Mr. Lamar's defeat would be a loss to the Senate, but more especially to the South. There is at present no excess of ability among the representatives from that section in Congress. The South wants men whose political perceptions go beyond the narrow horizon of party interest; who comprehend not only the needs of the Southern people at home, but their situation as an integral part of the Republic after all the events through which we have passed; who appreciate the relation of the peculiar interests of the South to those it has in common with the rest of the country, and who have the courage, if need be, to put themselves in opposition to Southern prejudices when great national interests are at stake. Mr. Lamar belongs to that class of men. The courageous position he took on the financial question as well as on other occasions, in disregard of what was at the time current Southern sentiment, showed that he dared to be right at the cost of his popularity and even of his public position. In this way he has served the South better than all those whose speeches were sounding with devotion to their Southern homes and with admiration of the qualities of their people; for he has in his own person put Southern opinion abreast with the most enlightened and advanced opinion of the country, and made it respected.

Mr. William N. Armstrong, the Attorney-General of King Kalakaua, gives a flat contradiction to the stories that the King is going about the world to find a market for the Sandwich Islands, or that he has arranged to sell them to China under the sanction of a fraudulently imported Chinese vote. It appears that he has no constitutional authority to do anything of the kind, and indeed any publicist will see, when the thing is fairly put before him, that the Sandwich Islands constitution would be a queer sort of document if it really permitted such transactions. Mr. Armstrong very justly says that the King has no more right to sell his kingdom than President Garfield would have to sell the United States. It was probably owing to that blind popular prejudice and suspicion which even the most innocent kings cannot always avoid, that the design of putting the Sandwich Islands on the market was attributed to Kalakaua. The fact really is that the King started out on his travels for just the same reasons that plain citizens generally do. His reading and experience had taught him that there were other countries in the world besides the Sandwich Islands, and these he desired to see, to observe the manners and customs of their inhabitants, and probably also to study the different methods of "running" the various governmental machines by which the different countries are made happy and prosperous. It appears that emigrants are wanted in the islands, but Portuguese are preferred to Chinese. According to Mr. Armstrong, the King has had a "good time generally," the other kings making it pleasant for him wherever he went.

The result of the Tyrone election in Ireland, the first in which the Parnellites have tried their luck in the irreconcilable policy since the passage of the Land Bill, is a very hopeful sign. The Liberal candidate has been returned by a small plurality of 84, but then the Parnellite candidate, Mr. Rylett, a Unitarian Minister, only polled 907 votes out of a total of 7,159. This indicates pretty clearly that in the province of Ulster, at all events, the Land Bill is to have a fair trial. There is still another Parnellite candidate in the field in County Monaghan, a Mr. Kettle, now in jail under the Coercion Bill, and he refuses to be sufficiently discouraged by the result in Tyrone to withdraw. If there should be another failure in Monaghan, although it might not be fatal to Parnellism, which has its chief strength in the southern counties, it would be a very heavy blow to it.

A reporter of the *Herald* has had an interview on the Irish question with Mr.

Walter, the proprietor of the London *Times*, who has just arrived in this country. If Mr. Walter has been correctly reported, and his views are sound, the Irish question is one of extraordinary simplicity, and the trouble Mr. Gladstone and his colleagues have been giving themselves about it and the number of reports made on it by Commissions within the last fifty years, are fairly unaccountable. Mr. Walter says that "there is nothing on the face of the earth to prevent the Irishman from being happy, if he will only work and not get drunk"—showing that the stories told to the Bessborough Commission, and believed by that body, of his being made miscrable by the arbitrary raising of his rent, were fabulous. The land trouble, according to Mr. Walter, is also of the most trifling character. It consists simply in the fact "that there are more people in Ireland who require farms than there are farms for the people," which Mr. Gladstone calls the "land hunger," whereas its proper name would appear to be arithmetical miscalculation. It is needless to say that Mr. Walter looks upon the Land Bill as a most mischievous measure. What he thinks of its authors and those who voted for it and have made such a fuss about it, he was too modest or too polite to say, but he cannot think very highly of their intelligence as compared with his own.

Mr. Shinkel, the stroke of the Cornell crew, has been interviewed on the subject of the charge that he sold the Vienna race, and declares that the reports are "simply lies," and "the result of a trouble which took place among the crew before they started for Europe." A question then arose as to the selection of a captain, and Mr. Shinkel was chosen, or could have been chosen—we do not understand which—by a vote of three to two. The other candidate, Mr. Lewis, was not satisfied, and Mr. Shinkel therefore withdrew from the contest, or declined to serve as captain, and the moment he did this Mr. Lewis withdrew also, and the crew went to Europe without any captain. This, for all we know, may be a perfectly fair statement of the trouble about the election of a captain, but there does not seem to be any direct connection between it and the charge that Shinkel sold the Vienna race, nor is it easy to see what the fact that the crew in England were allowed to eat vegetables, fruit, and beef, and "drink freely of English ale" has to do with the present scandal. As to his fainting in the boat, he insists that he was not fit to row, and that he could not have done otherwise than "collapse" "if the whole world had been waiting for him." He says that the story of his declining either to admit or deny that he had sold the race when first charged with having done so, is wholly false, but that he did refuse to allow the crew to search his trunks, because he considered the suggestion an outrage. As to the mysterious diamond ring purchased by him in Vienna, he declares that he had $450 when he left this country, and the ring only cost $65. He admits that he gave £3 to "Commodore Chase," and told him that this was all he had, but says he did this merely to get rid of the Commodore, who had been borrowing money of all the crew. He is now going to Ithaca, and if he finds that the charges against him are "as strong as those reported in the New York papers" he shall retain an attorney and sue the crew for damages. He adds that his feeling for his classmates is one of "pity"—a natural feeling from any point of view.

The meeting of the Emperor of Germany with the Russian Czar, which took place at Dantzic on Friday, will, while giving occasion for many profound guesses, probably turn out to have been of real importance only in one respect. The present Czar of Russia has long been counted among the most decided and uncompromising representatives of the "Old Russian" sentiment, which is unfriendly to all foreign and especially to German influence. It was therefore supposed that his accession to the throne would mark the beginning of an anti-German tendency in the foreign policy of Russia, which might become dangerous to the peaceful relations of the two countries. The irritation of feeling between the Berlin and Petersburg Governments which followed upon the conclusion of the treaty of Berlin, seemed to render those relations still more precarious. The meeting of the two sovereigns, which appears to have been very cordial, has probably had the effect of strengthening on both sides the inclination to dispose of whatever questions may exist or arise between the two countries in an amicable spirit, and it may therefore be looked upon as a sign of lasting peace in that quarter. It is also probable that the two monarchs and their ministers have exchanged expressions of sympathy about the Nihilists and the Socialists, who trouble them respectively, and pious wishes as to their suppression. But inasmuch as they are already doing all that can be done, the conference is not likely to have any new and startling results in this respect. There will undoubtedly be great mystery about the subjects that have been discussed there, and that kind of mystery is usually best maintained when there is very little to conceal, as may be the case in this instance.

The revolt of the troops at Cairo is likely to produce serious complications in Europe, because it is almost certain to lead to more active interference in the Government by France and England than they have yet ventured on. Their interference thus far, through control of the finances and taxation, has taken place on the theory that the Khedive was master in his own dominions—or, in other words, that all that foreign Powers had to do in order to make changes in Egyptian administration was to compel the Khedive to obey them; and it was assumed that he could carry out any orders they gave him. It now clearly appears, however, that the army has got completely out of his control, and that he cannot be relied on to govern the country even under foreign supervision. There were signs of this two years ago, when the troops mutinied also. The discontent which then broke loose has not subsided, and the Powers will have to subdue the army if they mean to keep their control of the administration. England and France would of course have no difficulty in doing this, but it seems now almost certain that, if it were attempted, Italy, if not Germany and Austria, would insist on sharing in the enterprise, and of course they would not send troops to Egypt for the mere purpose of helping to restore order and to assert European supremacy. They would send them with the expectation of taking part in any subsequent disposition that might be made of the country, and in any prolonged military occupation of it. France and England, whose subjects hold the principal part of the Egyptian debt and who believe themselves—France on account of Algeria and her position in the Mediterranean, and England on account of the Isthmus of Suez—to have a stronger interest in Egypt than any other Power, would therefore have to make up their minds whether or no they would consent to share dominion with all the other Mediterranean states.

An amicable arrangement for this purpose between France and Italy would, in the present state of their relations, be very difficult. It is as much as they can do already to keep the peace. For England, too, the admission of France even to joint control of the Egyptian administration has been a bitter pill, and formed one of the most serious charges against the Beaconsfield Administration, before whose time England was generally acknowledged to be the legitimate protector of Egypt, and the inheritor of the country, so to speak, if the Khedive's government should be overthrown. The present military revolution, although accompanied by a reassuring circular to the foreign consuls, is in reality a revolt against foreign domination. The old Turkish official class, which the European administrators have displaced, is still strong in the army, and has never become reconciled to the new régime. Its demanding a "Constitution" is, of course, intended merely to disguise in European eyes the true nature of its attack on the Khedive. It in no way concerns or promises anything to the unfortunate peasantry, from whom is still wrung an enormous revenue, just one half of which goes to pay foreigners the interest on loans raised to enable the late Khedive to indulge in the wildest speculations and the most reckless extravagance.

The latest advices from Egypt hold out a prospect of a peaceful solution of the trouble through the submission of the army on condition of the formation of a new Cabinet by Sherif Pasha. The Mussulman notables summoned by the mutineers to Cairo seem to have disapproved of the mutiny, and to have perceived clearly that if persisted in it must lead to foreign occupation. The London *Times*, probably with a distinct foresight of the advantages France would have in case of a joint occupation, owing to her greater force of disposable troops, urges that in case the revolt has to be quelled from the outside the Turkish army should be called on to do it. Considering that the Egyptian army only numbers fourteen thousand, and is of no practical use, this last outbreak will probably lead to its abolition.

SUMMARY OF THE WEEK'S NEWS.

DOMESTIC.

THE President had a high pulse after his arrival at Long Branch last week, due not to the fatigue, but to the excitement of the journey, but on the following morning the effects of this passed away. Later in the day, however, owing to the excessive heat, the President manifested great weakness. On Thursday he was unmistakably better, and the sea air and cooler weather gave him more of an appetite than he has had at any time since the shooting. This was satisfied with solid food, and the pulse receded to 94—much lower than it had been for ten days. At this point Drs. Barnes, Woodward, and Reyburn withdrew from the case and returned to Washington, leaving Dr. Bliss and either Dr. Hamilton or Dr. Agnew in attendance at Elberon. On Friday the President requested to see members of the Cabinet, and Attorney-General MacVeagh and Secretary Blaine made him short visits. They were followed by Secretary Windom on Saturday, but this was the day for the usual weekly relapse, and absolute quiet was returned to, there being considerable increase of fever. Sunday was a still more unfavorable day, and the new complication of an abscess in one of the lungs was reported, and its effects magnified at once into symptoms of pyæmia. The Cabinet, whose members had been arranging for a trip to the White Mountains, gave over their plan, and Mr. Blaine's nightly despatch to Minister Lowell was far from encouraging. Monday morning, however, witnessed a decided change for the better again, the patient having passed an unusually good night, and the lung trouble being pronounced unimportant. On Tuesday he sat up in an invalid chair. Some of the States observed Tuesday, and others, including New York, Thursday of last week, as a day of prayer for the President's recovery.

Guiteau came near losing his life on Sunday afternoon at the hands of Sergeant Mason, one of his guard, who shot at him through the window of his cell, the ball grazing the prisoner's head. Mason was at once arrested and imprisoned at the Arsenal, where he expressed regret at the ill-success of his attempt. He observed further that he had "been very much worried in going out to the jail every day," and finally "got tired of it"; that it "wasn't worth while for officers and soldiers to go to guard this man, thing, or whatever he is"; that accordingly he thought it was his duty to kill him, and would rather have killed him than have ten thousand dollars. This was announced "without the least indication of braggadocio," says a reporter, who adds: "In fact, his manner was that of a blunt, honest, frank man. He is a good, honest, straightforward fellow, praised by all his officers and comrades as a first-rate soldier"—for other kinds of service than guard duty, it is fair to infer.

General McDowell telegraphed from San Francisco on the 5th instant that the Indian outbreak in Arizona appeared very general. Various murders of prospectors are reported. Everything was quiet at Fort Apache on the 6th instant. The Utes have all gone to their new reservation. Troops are being rapidly concentrated in the disturbed district.

General Hazen received the news on Monday that the Signal Service expedition under Lieutenant Greeley had arrived safely at Lady Franklin Bay. The despatch, coming *via* St. Johns, N. F., whither the steamer *Proteus* returned after landing the exploration party, is dated August 18, and reports all well. The United States steamer *Alliance* returned to Hammerfest, Norway, for coal on Monday, having reached a point 80 deg. and 10 min. north latitude on her run. She leaves for Spitzbergen on Friday, the 16th.

The death from yellow fever on Sunday of Dr. J. M. Green of the Marine Hospital Service, stationed at Key West, leaves a family unprovided for, and has directed attention to the fact that, though the service to which Dr. Green belonged is the first to come into contact with contagious disease, no provision has been made by Congress for the assistance of those whom a death may leave destitute.

Early last week large fires were reported in Michigan, and the number of lives lost and amount of damage done by them since then are appalling. On the night of the 5th instant the town of Richmondville, Sanilac county, was destroyed, eight persons being burned to death; and reports of widespread devastation began to come in from all sides of the central and eastern part of the lower peninsula of the State. On the next day Deckerville, Charleston, and Tyre were reported "wiped out," and Ashley and Minden partially burned. Hundreds of families lost their all, of course, and the number of deaths was estimated at thirty. Meetings were held for the sufferers' relief in all parts of the State. Friday's news was that the counties of Huron and Sanilac had been nearly burned over, that two thousand families were left destitute, twenty townships burned out, and two hundred lives lost. Fears of a consequent pestilence were expressed. Some rain had fallen, however, and had in great measure extinguished the flames. Later intelligence shows that these reports were not exaggerated, and that one thousand square miles of country were swept by the fire and from ten to twelve thousand persons made homeless. The loss of life and property by the fires of 1871 in the same district is said to have been much smaller. Incidents of the catastrophe as told in the papers are extremely pathetic and distressing. Relief commissions have been organized in various cities outside the State, Mr. Wm. Dowd being the treasurer of that in this city.

Fires due to the long-continued drought have been abundant elsewhere, but have been unaccompanied by any such fatalities. Near Cape Vincent, N. Y., the woods were burned in several places; the town of Lonaconing, Md., was nearly destroyed; and much of the Dismal Swamp in Virginia was burned over on the 7th instant, aside from the many fires from other causes. Thousands of acres in the Delaware valley of Pennsylvania were reported on fire on Friday. The fire continued the next day, when also the Ellice Swamp, near Stratford, Ontario, was reported burning, the destruction of property being "enormous." By Saturday the Pennsylvania fires were got under control; but in Canada they burned much longer.

The weather in this city and its neighborhood, and in the New England and North Atlantic States, has been extremely hot. In New England an atmospheric phenomenon was witnessed on the 6th instant, similar to one which occurred on the "Dark Day" of 1780. The air was full of vapor, and vision was limited to short distances. Colors were changed. The sun appeared like the moon, when it appeared at all. Schools were dismissed and factories closed in many places, and gas and lamps were universally lighted. Amusing instances of superstition are related, the "portent" being generally taken to refer in some way to the condition of President Garfield by those who attached a mystic value to it.

The American Social Science Association held daily sessions at Saratoga last week. Among the more noteworthy papers read was one by Mr. Charles Dudley Warner on "The American Newspaper."

The Democratic State Committee met in this city on Wednesday and called the State Convention to meet at Albany on October 11.

One of the most successful "corners" which Wall street has seen in some time, was effected in the common stock of the Hannibal and St. Joseph Railway Company during the week. The price was run up from $96\frac{1}{2}$ to $225 a share, at which point the "short" interest—Messrs. Sage, Gould, Hopkins, Connor, and others—appealed to the courts, after tendering preferred stock in vain, and obtained an order calling upon the "cornerers" to show cause why they should not been joined from compelling deliveries, and a preliminary injunction meanwhile.

The Minnesota Supreme Court has nullified the Constitutional Amendment forbidding the payment of the State railroad indebtedness except upon an affirmative popular vote, and has pronounced invalid the act of the last Legislature scaling the bonds fifty per cent., and creating a special tribunal to decide the validity of the amendment referred to. This leaves repudiation a question of the future.

Labor troubles in New Orleans last week resulted in a conflict between the police and the disturbers of the peace, in which a sergeant shot and killed a negro teamster after a fruitless attempt to arrest him. This produced a riot, and the Mayor of the city was obliged to call upon the Governor for the aid of the State militia.

A train on the Chicago and Alton Railway was stopped and robbed on the night of the 7th instant, fourteen miles from Kansas City, Mo., by sixteen masked men. The valuables and money taken from the passengers are variously estimated at $15,000 and less, and the amount obtained from the express safe at something like the sum mentioned. The outrage is alleged to have been perpetrated under the leadership of the notorious James brothers, and is conspicuous among others of the kind mainly for the bravery of a brakeman named Frank Burton, who ran down the track to flag an approaching train, amid a storm of bullets from the robbers' rifles, and thus prevented a serious accident by collision. Eight of the highwaymen have been captured, and some, it is reported, have turned State's evidence, and Governor Crittenden talks about expending the last dollar in the treasury to avenge the reputation of his State.

The Cramer-Malley examination has continued during the week at New Haven, but the proceedings have merely duplicated those of the inquest, and no new evidence, or, as in effect might be said, no evidence has been submitted, bearing directly on the cause of the victim's death.

Shinkel, the stroke of the Cornell Crew, has arrived here and gone to Ithaca, where he says he shall institute legal proceedings against his accusers if he finds they have really made charges against him "as strong as those reported in the New York papers." He denies all their allegations, and expresses "pity" for them. Meantime the Executive Committee of the Vienna Regatta has decided to investigate the matter, and to "send a request" to Mr. Chase, the Commodore of the Cornell Navy, to name the persons supposed to have bought Shinkel.

The steamer *Columbia*, bound from Chicago for a Canadian port, foundered on Sunday night off Frankfort, Mich., on Lake Michigan, and fifteen of her officers, crew, and passengers were drowned.

The celebration on the 6th instant of the centennial anniversary of the battle between the Americans and the British under Arnold at Groton, Conn., was attended by some thirty thousand persons. The exercises included as exact as possible a reproduction of the events commemorated (the burning of New London had to be omitted, of course), the military operations being followed with great minuteness; an oration by Senator Joseph R. Hawley; a poem by Mrs. Rose Terry Cooke; a short speech by General Sherman; music and fireworks.

Sidney Lanier, the poet and littérateur, died at Lynn, Polk county, N. C., on the 7th instant, of consumption; Senator Ambrose E. Burnside of Rhode Island, on the 13th, of a spasm of the heart; and Commander Kidder Randolph Breese, United States Navy, a nephew of President Harrison and son-in-law of ex-Governor Curtin of Pennsylvania, at Newport, also on Tuesday, of organic affection of the heart.

FOREIGN.

The most important foreign news of the week is the revolt of the Egyptian army and the rule of anarchy in Cairo, which, however, has as yet resulted in no bloodshed. The immediate cause of the outbreak was an order from Riaz Pasha, the President of the Council, transferring the Fourth Regiment of troops to Alexandria. They refused to go, and their commander, Achmet El Araby, sent word on Friday to Daoud Pasha, Minister of War, announcing that unless the Government instantly acceded to their demands of the dismissal of the Ministry, a Constitution, and an increased number of troops, they would march to the Abdin Palace and remain there until satisfied. A postscript to the document containing this threat declared that Riaz Pasha had sold Egypt to England. Daoud Pasha sought the Khedive at once, and the latter summoned his foreign advisers, who counselled him to take the initiative, and arrest the ringleaders of the mutiny. This the Khedive attempted to do, but found it impracticable. Mr. Cookson, the English Consul, and some of his colleagues then endeavored to convince the soldiers of the unreasonableness of their demands, but the latter remained obstinate. Finally the Khedive submitted the compromise of dismissing the Ministry and referring the other two demands to the Porte for decision. Sherif Pasha, Minister of Foreign Affairs under Ismaïl Pasha, the late Khedive, in 1878, was asked to take office as Premier, but at the present writing it is not certain whether or no he will do so.

Achmet El Araby informed a correspondent that he would guarantee the safety of all Europeans, "unless the Christian troops land, when a general massacre would follow." He added that he had back of him 15,000 Egyptian troops armed with Remingtons, six Krupp batteries, and 150,000 armed Bedouins—a statement which the correspondent probably gives for what it is worth. Intervention either by the Porte, or by England, or by England and France jointly, is, of course, talked of as an immediate necessity in order to restore order. The French press is decidedly hostile to Turkish occupation, owing to the state of affairs in Tripoli and Tunis. English journals, on the other hand, favor it, and are unanimously opposed to English or Anglo-French interference. The *Times* calls for the disbanding of the Egyptian army, whose "continued existence is incompatible," it says, "with the maintenance of order." Some of the French papers, in view of the Turkish intervention favored in England, express suspicions of English intrigue with the army. *La France*, for example, observes: "It is impossible not to remark how opportunely things occur when English interests are at stake." The *République Française*, however, hopes that such insinuations will be allowed to go unheeded, and the *Times* pronounces them too absurd on the face of them to be retorted.

The London *Morning Post* last week learned "from the most trustworthy source" that M. Roustan, the French Minister at Tunis, had returned to Paris for the purpose of informing the Government that the Bey was acting with the rebels, and would have to be deposed before the schemes of France could be carried out with any success. This intelligence was speedily denied, however, upon semi-official authority, and this week we have a statement inclined as far the other way, and purporting to have been made by M. Roustan himself to the correspondent who cables it. According to this, the French army of occupation does not consist of more than 26,000 men, which number will not be increased; a detachment from this force of 10,000 will be sufficient for the reduction of Kairouan; the definite occupation of Tunis is not so much as thought of for a moment; the sickness of the army has been greatly exaggerated; from the beginning of the campaign "only two or three hundred" lives have been lost from all causes; and, finally, the Bey is dealing loyally and honestly with France. These views are said to be shared by the French Government.

The negotiations between France and Spain looking to the payment by the former of an indemnity for sufferings of Spanish residents at Oran, Algeria, during the recent troubles, are to be continued, though since the counter-claim on account of French citizens affected by the Carlist insurrection, they have not been popular in Spain. The matter may finally be submitted to international arbitration.

The members of an incipient club of advanced democrats at Madrid, who contemplated an organization similar to those of the Conservative, Liberal, and Catholic clubs, were dispersed by authority of the Government last week, and some of them were summoned before a magistrate to answer for incendiary or advanced speeches. The party thus treated by Sagasta's Liberal Government won eleven seats in the Senate and sixteen in the Congress at the late election.

Prince Bismarck arrived at Dantzic on Thursday, the Emperor William and the Crown Prince on Friday morning; and later in the day the yacht *Derjava*, with the Czar on board, was signalled at the port of Dantzic, whither the Imperial party at once repaired, and embarking on the yacht *Hohenzollern* put out to sea to meet the Czar. The latter went on board the *Hohenzollern* and was saluted with salvos of artillery. A private interview between the two Emperors, lasting two hours, followed, and they dined together at Dantzic. The Czar left at eight o'clock. The Emperor of Austria had been invited, and sent a letter expressing sympathy with the object of the meeting. This is assumed in Berlin to have been the removal of any fears, founded upon rumor, that the Czar was less favorably disposed towards Germany than his father had been. The *Journal de Moscou* calls the interview "a natural consequence of the reckless conduct of France," but the French press exhibits no indication of having been impressed, or of considering the conference a reproof.

The famous Imperial yacht *Livadia*, built as an experiment in marine architecture for the Emperor Alexander II., has been condemned after repeated failures.

The weekly land meeting at Dublin on Friday was attended by Mr. Parnell, who made a speech protesting that he was not at all discouraged by the Tyrone defeat, which he ascribed to the influence of the Catholic clergy, who, he said, advised their congregations to vote for the Liberal candidate. Two years ago, he observed, he could not have delivered his recent Tyrone speeches and escaped with his life. The agitation, he concluded, was never in better condition. The receipt of contributions amounting to £1,289 was acknowledged. The Carlow branch of the League has instructed its delegates to the National Convention to demand fair trial for the Land Act. The Commissioners announce that they will have completed all arrangements by October 1st, at which time the provisions of the Act will become available.

A riot between two rival factions took place at Mitchellstown, Ireland, on the 6th instant. The police charged the combatants, and a *mêlée* followed, seven arrests being finally made. In a riot at Roscrea, Tipperary, between the soldiers and people, several were injured on both sides. Trade jealousy was the cause of an outrage near Knocknagree, Cork, where, on Sunday, forty masked men broke into the house of three brothers and left them for dead.

The Cambridgeshire election to fill the seat of Mr. Rodwell, Conservative, retired, resulted, on the 6th instant, in the return of Mr. James R. Bulwer, of the same party, without opposition. In Tyrone, where Mr. Parnell had made great efforts against the Liberal candidate, and where it was expected, in consequence, that the Tory candidate would be successful, Mr. Dickson, Liberal, was returned by a plurality of eighty-four. The defeat of the Land League is therefore described as "crushing," their papers having on the morning of the election "exulted anticipatingly," as a Dublin despatch says, over Mr. Dickson's defeat. This is the first time Tyrone ever returned a Liberal member. Mr. Kettle has issued an address from Kilmainham jail as the League candidate for the county of Monaghan.

Lord Derby made an address at Southport, in Lancashire, on the 7th instant, in which he expressed dissent from the views of those who believed that British agriculture was to be destroyed by American competition. The check to British prosperity he regarded as only a temporary fluctuation, and "there was no reason to believe the climate permanently changed." A conference called on the same day by the National Land League, at Westminster, and designed as a demonstration in favor of "fair trade," was very sparsely attended.

A meeting was held in Manchester on Friday by the master spinners and manufacturers of Lancashire, Cheshire, Derbyshire, and Yorkshire to protest against the action of cotton brokers engaged in assisting "the syndicate of speculators" who are attempting to create a "corner" at Liverpool. The entire trade was urged to stop operations for a week and to buy no cotton at Liverpool during that time.

The Wesleyan Ecumenical Council has been in session in London during the week. The Religious Tract Society gave a breakfast to 100 of the delegates, at Exeter Hall, on the 5th instant, and the Council opened formally on the 6th. Among the subjects of discussion have been "The Hand of God in the Origin and Spread of Methodism," "Methodism as a Power in the State" (dealt with chiefly by colored delegates), the system of itinerant preachers (the majority in favor of maintaining it being large), lay preaching, "Training Young People in Christian Homes and the Sunday School," "The Observance of the Sabbath and the Travelling of Ministers on that Day" (which latter was strongly condemned), "The Relation of Methodism to the Temperance Movement," and "Juvenile Temperance Organizations." As to the last general topic, it was declared by several delegates that many divines were not without reproach. All such one of the speakers wanted expelled from the ministry.

General Lew Wallace, the new United States Minister to the Porte, arrived at Constantinople last week, and presented his credentials to the Sultan, who asked that assurances of his sympathy might be conveyed to the President.

The Amir of Afghanistan is reported to have appealed to tribal animosity to assist him in crushing Ayub Khan. Between the Ghilzais and the Duranis, both of whom have been in effect neutral during the present struggle, an intensely bitter feud exists, and the Amir has induced the former to join him in recovering Kandahar, the rightful supremacy over which belongs to them, but is now held by the Duranis. The measure, though very successful in winning over large numbers of the Ghilzais, had, upon news of it reaching Kandahar, quite as favorable an effect upon Ayub's fortunes, the Duranis at once joining his standard to defend themselves against the Ghilzais, who, it is feared, will not be restrained from sacking the city if the Amir takes Kandahar. No engagement is reported as yet.

A Lima despatch, dated August 19, says that the National Assembly convoked by the ex-Dictator Pierola has met at Ayacucho and been formally opened by a speech from him, in which he reviewed the general condition of affairs, expressed regret that owing to existing confusion he was "unable to carry out necessary reforms in the public departments," and resigned his dictatorship, leaving Peru "conquered on the battle-field, but worthy of herself; sustaining her honor and her rights with energy; covered with wounds, but neither humiliated nor overcome." There is no news from the real, *i. e.*, the Calderon Government.

TUESDAY, September 13, 1881.

THE PRESIDENT'S "MULTITUDE OF COUNSELLORS."

THE retirement of three of the President's attending doctors, at his request, while conveying no sort of imputation on the value of these gentlemen's services, seems to furnish a fresh illustration of the unsafeness of the rule that "in the multitude of counsellors there is wisdom." The firmness with which this maxim retains its hold on the popular mind, in spite of the refutations of it furnished by nearly every man's individual experience, is very curious. Everybody who has had occasion to take advice as to what he should do in a given emergency, knows that the fewer persons he consulted the better he fared, or, in other words, that one counsellor was as much as he found useful. When we call in more than one about almost any affair of life, we all but invariably find ourselves in presence of a conflict of views. This conflict may be very slight, and may disappear under a little discussion and comparison, but it nevertheless has a distinct effect on "the native hue of resolution." It sicklies it o'er with the pale cast of thought. The man who is to act has his mind filled with objections which he had not thought of before, and cannot but wish he had never heard, even though the propounder has abandoned them in his hearing.

People are somewhat befogged in this matter by the success of parliamentary government, which is essentially a government of numerous counsellors. But then the great value of government by parliament lies not so much in the fact that it passes good laws, as that it passes laws which the community is likely to be satisfied with and heartily to obey. A despotic monarch who meant that the laws should please him, whether the community liked them or not, would be a great fool to have many counsellors. They would only worry and bewilder him, and, in truth, the councils which despotic monarchs summon about them as a matter of form, are seldom more than forms. The members are, and always have been, elderly toadies, who try to find out what their masters want and then urge it as an almost divine suggestion. The saying that councils of war never fight, is too trite for more than mention.

The practice of calling in an additional doctor, when the one already in attendance feels the case becoming grave, has, if the latter is a skilful and experienced man, somewhat the same reasons in its favor as parliamentary government. The appearance of Doctor the Second strengthens the nerves of the patient's family, and sometimes, though not always, those of the attendant physician. The patient himself is generally startled and alarmed by it. In ninety-nine cases out of one hundred it has not, as everybody knows, any influence whatever on the management of the case. The consulting doctor almost always approves of what the other doctor has done: seldom or never does he suggest anything new. But he makes the other doctor decidedly more comfortable in his relations with the family, and makes the family comfortable in the feeling that they have left nothing in reason untried.

In the President's case there was perhaps the parliamentary reason for summoning a large corps of physicians; that is, not only had the wound to be properly treated, but the American people, looking at the case through its newspapers, had to be satisfied that it was being properly treated. The fierce light, therefore, which was thrown on the sick chamber, was something which, perhaps, no one or two doctors could face and live. There had to be plenty of doctors, from various quarters, so that even if it was demonstrated by the press that any one doctor was a dunce, there might still remain a reserve of doctors to defend the treatment against the assailing medical editors. It must be admitted, too, that the plan has, on the whole, worked well. Dr. Bliss, or Dr. Reyburn, or Dr. Woodward might, if alone, have succumbed to the remorseless fire of their rivals the newspaper physicians; but no newspaper physician, except the one who practises in the columns of the *Herald*, has had the boldness to say that the whole staff of Presidential doctors were radically, fundamentally, and fatally mistaken about the case.

We are now reminded, however, that this sacrifice to public opinion must have caused the President himself no small inconvenience. Who that has ever lain on a sick bed, especially in hot weather, does not remember how few people he cared to see; how jealous he was of any encroachments on his little share of this world's light and air and silence; how little he liked being peered at or poked by any but two or three pairs of loving eyes and loving hands? And what must it have been for General Garfield to have his bed surrounded every time his wound was dressed, or his nourishment administered, in the full blaze of the Washington summer, by five, six, or seven stalwart men, each with his own opinion to defend and his own dignity to look after, and his own "professional delicacy" towards his colleagues to display. How often during the last five weeks he must have sighed for a room by the sea, with no attendants but his wife and one very small doctor with a mind fully made up.

Dr. Bliss, who has been all along chief in charge, has had, in addition to the right kind of experience and skill, the merit, from the parliamentary point of view, of knowing how to talk to the reporters. His diction is as rich as their own, and so are his fecundity and accessibility. Moreover, he has apparently reached that topmost height of professional enthusiasm at which wounds and symptoms not only lose their horror, but become personified as sentient beings, whose conduct the physician watches with interest not unmixed with admiration. When the doctor says "the glandular swelling is looking splendidly," and that he "never saw a similar swelling act better than that one has," he is clearly not thinking of a glandular swelling as an ill of the flesh, but as a wild horse beginning to obey the hand and will of the trainer, and move in the track he has traced. It must be said of the doctor, too, that he has kept up his heart better than anybody. If he has at any time given way to despair, it was but for a moment and in secret, and he has always been able to meet the reporter in the gate with a smiling countenance.

REMEDIES FOR THE "CORNERED."

THE corner in Hannibal and St. Joseph common stock, by means of which the quoted price of that security has been forced up from 57 or thereabouts to 225, has attracted much attention, and has produced a degree of excitement on the Stock Exchange not equalled by any other event of the year, except possibly the Funding Bill of last February. One of its immediate consequences has been the frightening of the "bear element" out of its recent serenity. The "short interest" has had command of the market ever since the President had his first chill some five weeks ago. The corner in Hannibal and St. Joseph, which came most unexpectedly into their range of vision, led them to imagine that other corners were forming or were already formed in other stocks, and drove them pell-mell to the other side of the market. Hence the rapid advance in prices on Friday and Saturday of last week.

It is perhaps well to explain to the uninstructed what a corner is. The "bear element" in the market consists of all those who think that prices of securities are higher than they ought to be, higher than the facts warrant, higher than they can permanently remain. In order to take advantage of the unwarranted "inflation of values," as they understand it, they borrow stocks and sell them at the high prices prevailing, expecting to be able to buy them in at lower prices before it becomes necessary to return the borrowed securities. For instance, A borrows from B 1,000 shares of Hannibal and St. Joseph, which is selling at 60. A pays B $60,000 cash, and agrees to return the stock on demand, when, of course, the money will be refunded to him. It is for B's interest to lend the stock, because he gets the interest on the $60,000 during the interval, or at all events more interest than he would otherwise have to pay for the use of the same money. Under ordinary conditions B, the lender of the stock, will pay A, the borrower, something for the use of the money, but if the particular stock wanted by the bears is scarce, it will be lent "flat"; that is, the borrower will receive nothing for the use of the money while the loan continues. In extreme cases the lender may even get a commission for the use of stock in addition to the interest on the money which it represents. If the market fluctuates while the loan continues, the borrower and lender settle with each other at the close of each day, so that the amount of money shall at all times be exactly equivalent to the value of the stock.

When the bears, or any portion of them, have discerned a weak spot in the market, that is, a security selling for more than it is worth in their opinion, they borrow and sell it liberally. Their selling has the same effect in putting down the price as though the stock were absolutely their own, and their expectation is that other holders observing a decline in the price will become alarmed and sell also, thus putting down the price still more and frightening still other holders. They intend, of course, to buy enough at the lower scale of quotations to deliver back what they have borrowed, pocketing the difference. It

sometimes, though rarely, happens that a few persons, discovering what the bears are about, and believing that they (the bears) are strong enough to stand a heavy loss without breaking, quietly buy up all of a particular stock that exists. In order that the price may not be forced up while they are themselves buying, they lend stock freely to the bears, and thus encourage the latter to sell. When they have secured all or nearly all of the particular stock that exists, they call in their loans. The bears are then compelled to buy, and since no stock or very little is for sale, the price can be forced up to any figure at which the cornering party choose to put it. This is what has happened in Hannibal and St. Joseph.

The suits brought by Mr. Weston and Mr. Hopkins against the members of the "pool" are, however, based upon facts tending to show not simply an ordinary "bull" operation, but also a conspiracy to defraud. The plaintiffs are persons who are under obligation to deliver certain amounts of the common stock of the railroad, or, in other words, are "short" of it. Under the rules of the Stock Exchange, their default, caused by the pool's controlling the entire body of stock in the market, and refusing to sell except at such prices as will secure it a good profit on the entire transaction, would be followed by a demand for delivery and a purchase for the account of the plaintiffs in the open market, they being charged with the difference between the price at which it is bought in and the face of their contract. This would obviously leave them in exactly the same position that compliance with the pool's terms would have done. They have therefore made the president of the Stock Exchange a defendant in these suits, and ask that the Exchange be enjoined from buying-in stock under the rules.

The most important legal feature of the whole transaction appears when we discover that the "pool" is stated to have been composed of several directors of the road, among whom were the president and the vice-president. The plaintiffs say that what these defendants did was to get up a conspiracy for the secret purchase and control of all the common stock of the road, or the right to require the delivery to them of an amount of stock equal to or in excess of this; that in aid of this conspiracy such of the defendants as were officers of the company, in violation of their duties as such, prevented the issue "of any additional stock or the conversion into stock" of the bonds of the company; and that they lent the stock which they controlled to borrowers (the bears) under an agreement that it should be returned at such times as should be fixed by them, the effect of the conspiracy being of course to make this impossible.

With regard to the conversion of bonds, the plaintiffs insist that under the charter of the road there were at the time of this conspiracy $8,000,000 of bonds which the officers were bound to convert upon call into stock; that bondholders did actually call for a conversion, but that the company, under the advice of its officers who were in the pool, refused to comply with the demand, although it was for the obvious interest of the company to transform an indebtedness bearing eight per cent. into common stock paying no interest. Besides this, it is said that the company was authorized to issue $4,000,000 stock and dispose of it in the market; that it needs the money which might be obtained by the sale of this stock, and that at the present quotations it is clear that the issue ought to be made; while it is also a fact that the president was empowered to issue this very stock in June last, and that the reason he has not done so is that the issue of the stock would break the "corner."

The plaintiffs are, as we have said, borrowers of stock, and they therefore demand that the defendants shall be enjoined from taking any proceedings against them other than an ordinary lawsuit to recover damages for the non-delivery of the stock borrowed. This exception is made partly because nothing could deprive the lenders of the stock of their right to resort to a jury, and partly because the borrowers think that a jury would relieve them in a measure, if not entirely, from their contracts. In a trial of this kind for failure to deliver stock, the lenders would ordinarily recover the difference between the value of the stock at the time of the loan, or the face of the loan, and its market value at the time fixed for delivery. But under the present circumstances they would contend with great force, supposing the facts to be established as stated in the complaint, that the Stock-Exchange quotations for the last few days do not represent the market value, but the result of a fraudulent conspiracy among the officers and directors of the road. A great many articles have no market value because there is not a sufficient supply of them in any market to furnish a basis for such a value. With such articles, in a suit of this kind, the jury is left to ascertain the actual value. Under ordinary circumstances stock may be counted upon as having a market value. But knowledge is always advancing, and it is obvious that such a pool as is described in these complaints may deprive any stock of its market value for the time being, and give it an entirely artificial one, which must necessarily disappear at once upon the breaking of the "corner." Probably a suit for damages would result in a very prolonged litigation and a succession of appeals, as the point involved has never been decided in this State.

In ordinary "corners" the public care very little which side wins, as they regard the whole thing as a pleasant little "Street" game in which they have no interest; but a pool combined with fraudulent breaches of trust on the part of directors presents a different case, and the breaches of trust described in the complaints are so glaring that the "bears" will probably get a good deal of sympathy, on the ground that the "bulls," through the aid of the railroad ring, have in this instance been playing with loaded dice, and have shielded themselves from the chances of loss which they would ordinarily have risked. Their case, however, is one which it will be difficult to prove, and a compromise of some sort is the most likely conclusion of the whole affair. If the "bear" side of the story is true, however, we trust, in the interest of the public, that some "cornered" operator may have the tenacity and courage to fight the matter through in the courts.

A NEW VIEW OF FRENCH FINANCE.

The latest financial statement made by the French Ministry for 1882 was probably the most brilliant, under all the circumstances, which has ever issued from a European Government. It is only on this side of the water that Ministers of Finance have been able to make a showing in which promise and performance both seemed splendid. It may be summed up in brief by saying that it set forth the payment by a sorely burdened people of $200,000,000 of the public debt in four years, the abolition of $60,000,000 of taxes, and at the same time a perfect balance of receipts and expenditure. In fact it seemed as if in recuperative power, as well as in military enterprise, France still retained what M. de Mazade called "the glorious privilege of astonishing the world." In truth her finances since the war *have* astonished the world. She has apparently followed close on our footsteps in the work of retrieval, without the aid of our ceaseless immigration and our practically limitless productive lands.

Now comes M. Cucheval-Clarigny, however, and says there is a reverse to the medal: that if the whole truth were told, Frenchmen would be much less pleased with their financial situation, and foreigners less dazzled by French dexterity in dealing with knotty problems of currency and taxation. He is a well-known economist and publicist, and, though a Bonapartist, speaks with a certain authority; and the article in which he sets forth his view in the *Revue des Deux Mondes* of August 1st must attract widespread attention, and can hardly fail to call forth some sort of official or semi-official answer. He treats not simply the management of the public finances, but the commercial situation in France at this moment; but it is only to what he says of the former that we have time to refer to-day. He takes M. Thiers's programme after the war as the basis of his argument, and sets down all aberrations from the line traced by him as so many steps on the road to ruin. This may be an abuse of reverence, but anyhow it will make the article much easier reading for the general public.

Thiers laid it down, when he took office after the war, that to recover herself financially France should not only raise enough revenue every year for her vast armament, and for the charges on her enormous debt, but should furnish the treasury with a clear surplus of $40,000,000, which was to be used in the first instance in repaying the advance of $200,000,000 made to the Government by the Bank of France, and then in making a sinking fund for the extinction of the debt created by the war. This was what the United States was doing, and in Europe at that date the example of the United States had already become very powerful. Now M. Cucheval-Clarigny declares that this plan has been not only abandoned but repudiated by the Republican Ministries which have succeeded M. Thiers. In the first place they did not repay the Bank in full. By a little "financing," which we have not space to describe here, they reduced the amount by about $26,000,000. In the next place the surplus of $40,000,000 has never been raised. The nearest approach

made to it was in 1875, when there was a surplus of $22,000,000; but only $5,000,000 of this was used in repaying the Bank: the rest went to stopping gaps in the budget of the following year. Every year since then the falling off in the surplus has increased, until in 1880 all that M. Léon Say was able to show was about $329,000. This decline, too, in what may be called financial courage on the part of the Government, was not brought about by foreign war, or domestic convulsion, or popular impatience of taxation. France enjoyed profound peace, and the people never winced under their burdens, for the receipts of each year were always fully up to the estimates, no matter how sanguine these may have seemed when made.

What has caused the surplus to disappear, is, according to M. Cucheval-Clarigny, the rapid development of unproductive outlay, and the steady growth of the practice of resorting to "supplementary and extraordinary credits," which he says are the peculiarity and the curse of French finance. These "extraordinary credits" are opened by a simple decree of the President, and consist in the practice, forbidden by our law, of borrowing and spending money not appropriated by the Legislature. They have to be ratified of course by the Chambers, but when the indemnity bill is introduced for this purpose, the money has been spent, and there is no alternative but to provide for its repayment. The regularity with which the Chambers under every régime submit to these stretches of power on the part of the Executive, and refrain from forbidding them with the sanction of appropriate penalties, is a striking illustration of the familiarity of the French mind with official arbitrariness. As these extraordinary credits are opened on the Minister's own motion, and spent, not under appropriations, but for such objects as he thinks proper, it is impossible to present a correct balance-sheet of the year with each budget. There is always a floating debt about which it is not possible for any one to tell *all* with accuracy. The result of this, as described by M. Cucheval-Clarigny—and we must say that this is the most startling statement in his article—is that although the law directs the Minister of Finance every year to make a full and complete statement of the finances of the previous year up to the 31st of the preceding December, with all the necessary vouching documents, as a matter of fact no such balance-sheet ever appears. The law has not been, he says, obeyed for ten years. The Legislature, when it begins to discuss the budget of this year, never has under its eyes the complete accounts of last year. In fact, the accounts are generally two or more years in arrear, and he publishes an extraordinary table, showing that since 1870 the French people have never known the results of the financial administration of any particular year until five, four, or at least three years afterwards. The financial statement for 1877, for instance, has only been submitted to the Chambers and the public within the present year. So that for eleven years, to use M. Cucheval-Clarigny's words, "not a single budget has been finally settled."

During the last Empire, the extraordinary credits were given up, and in their place was substituted the system of "virements"—that is, the power of the Executive to divert the money appropriated by the Chambers for any one department to any other; or in other words, to choose the objects on which it would spend the revenue. The Republicans denounced these "virements" at the time very savagely, but according to M. Cucheval-Clarigny their own system is far worse. The Empire, in providing itself with money for the "virements," drew only on the actual revenue, while the Republicans meet their extraordinary expenditures, not provided for by the regular budget, by the issue of Treasury notes, or, in other words, by borrowing; and he adds, that they now not only borrow on short notes, but take up the short notes with long ones, and have now afloat exchequer bills, having six years to run, for which they have invented the new name of "obligations sexennaires."

The motive of this apparently reckless policy, according to our accuser, is, first of all, reluctance to bring the Republic into popular disfavor by increase of taxation; next, the desire to bring it into popular favor by lavish expenditures on public improvements, such as railroad and harbor building, which might in most cases be, and if let alone would be, executed by corporate or individual enterprise. The situation in 1880, he says, showed really, if the accounts were complete, a deficit of over $12,000,000; and he winds up the most formidable indictment of Republican administration which has yet appeared by the remarkable statement that far from getting out of debt, France is every day getting deeper into debt; that the recent loan of $200,000,000 falls short by $5,000,000 of meeting the deficits caused by the extraordinary expenses of the years 1879-1880; that another loan of $200,000,000 will be necessary in 1883 to meet the floating debt which will be created between now and then; that the expenses of the Government for 1882 already foreseen reach the enormous figure of $780,000,000, and that the day is not distant when the annual expenditure will be $800,000,000, or double that of Great Britain!

BISMARCK ON THE TOBACCO MONOPOLY.

BERLIN, August 27.

THUS far the platform of the Government for the coming elections has been rather obscure and indefinite; abstruse phrases and glittering generalities occupying the ground of positive political demands and unequivocal measures. The clearing skies which Bismarck promised several months ago have now at least partly made their appearance in the shape of the tobacco monopoly, and in the contemplated appropriation of its proceeds for the benefit of the accident and annuity insurance of the workingman, or, as the official organs say, of "the disinherited of society."

A Berlin professor of political economy, Herr Wagner, a State Socialist, or, as his friends are nicknamed, a "Katheder-Socialist," has lately conferred with the Chancellor at Kissingen, and in electioneering speeches, delivered in Barmen and Elberfeld, has in Bismarck's name announced to the world that the tobacco monopoly will and must be submitted to and driven through the next Reichstag, in order to carry out the Government's benevolent intentions. When at Christmas, 1877, Herr von Bennigsen was invited to enter the Cabinet and to propose two Liberal members besides himself (Forckenbeck and Stauffenberg), he was informed that he would have to co-operate with the Chancellor in introducing the tobacco monopoly. After due consultation with his political friends, Bennigsen declined the offer, for he had arrived at the conviction that it would be an immeasurable economical loss for Germany if her most flourishing manufacture, in which she surpasses all Europe, and her large tobacco trade, commanding the markets of the world, should be ruined. Prince Bismarck, becoming aware that he could not win over to his side the National Liberals, the then most powerful party in the Reichstag, which alone was able to turn the scales in his favor, broke off his negotiations with Herr von Bennigsen, and at the ensuing election, to the best of his ability, "pushed the National Liberals to the wall till they squeaked." Then the new Reichstag of 1878 was expected to vote the monopoly. In order to gain a basis, the Imperial Government convoked experts from all parts of Germany, and even sent for a clerk in the Washington Internal Revenue Office, who, however, was no expert. The decision of this commission was eight to three votes against the monopoly, and towards the end of 1878 the majority of the Prussian Cabinet acceded to this vote. Under these circumstances nothing was left to Bismarck but an effort to raise the duty on tobacco as much as possible. He, therefore, asked to have it increased to seventy marks the hundred pounds, which the Federal Council reduced to sixty, while the Reichstag finally laid a duty of forty-two and a half marks on imported and twenty-two and a half marks on domestic tobacco (before 1879 the latter only paid two marks). We import about 1,000,000 hundredweight a year from America, and raise about 500,000 hundredweight at home. In order not to be again troubled by an increase of the duty on tobacco or its monopoly, the Reichstag, on April 28, 1880, by one hundred and eighty-one against sixty-nine votes, adopted a resolution according to which it was expected that the mutual understanding between the two parties would not again be called in question by a new bill. The Government was satisfied with this, but Bismarck still declared the monopoly his ideal, and on various occasions said that tobacco had not yet been bled enough.

Thus the fifteen thousand German tobacco manufactories, which employ about one hundred and fifty thousand hands, have for the last few years had no repose, and are almost daily vexed by new rumors. Thousands of men employed in that trade have already emigrated, and others would have followed them if they had had the means. Nevertheless, Bismarck suddenly publicly states that he still insists on carrying out his pet measure, and now recurs to it as his weapon for winning the campaign. In other countries, a bill having been defeated by an overwhelming majority, the Government yields to the will of the legislative branch. But German political life is still so young, and the constitutional system so little developed, that Bismarck does not refrain from again and again harassing the Reichstag with the reiterated discussion of bills which have been rejected and do not find the least hold among the people. In order, however, to make his plan more palatable, it is now proposed to constitute a separate fund from the proceeds of the monopoly, the income of which is to be devoted to insuring the working classes against accident and granting them an annuity for their old age. When the new taxes and duties were first proposed the surplus was promised to be used in alleviating the direct and local taxes of the people; next it was to serve for the subvention of the several trades and guilds; then for the benefit of our shipping inte-

rest; and now it is to be set apart as an independent fund for the above purpose. One vague promise supplants another, and the end is not yet.

As the correctness of my statements may be doubted if I report the substance of the new plan, I think it best to give you the verbal translation of the article in the *Norddeutsche Allgemeine Zeitung*, which characterizes it in the following words:

"Prof. Wagner has thus settled the fact that the Imperial Government intends to lay before the next Reichstag the bill on the tobacco monopoly as a basis for the insurance of workingmen against accident or inability to work by old age. The income of the monopoly shall become '*the patrimony of the poor.*' This idea is really imposing, and, in view of its grandeur, it is quite indifferent whether it is considered as practical Christianity or State Socialism. The execution of this plan will relieve the disinherited of society, who live by the toil of their hands, from the anxieties of the days when they shall be unable to work, and will guarantee them the peaceful prospect of a secure old age. In no country, and under no government in the world, thus far, has such a peaceful solution of the social question been tried, nor has the Government anywhere caught the idea by which that truly Christian element which underlies the doctrines of the Socialists—viz., the protection of the weak and helpless—no longer left to be the capital of Social-Democratic agitators, is appropriated to its own purposes. It will really be a task worthy of the King of Prussia now, at the end of the nineteenth century, to break ground for tranquillizing the agitation among the working classes, as in its beginning he emancipated the serfs."

A few months ago the Chancellor, in the official "motives" accompanying his bill for compulsory insurance against accident, argued that it would take at least one generation to carry out that measure, and that therefore all other kinds of insurance should be postponed. And now, all at once, annuity insurance is put in the foreground of political agitation. I was perfectly thunderstruck when I read the Chancellor's new plan. If it had been published four years ago by a Social-Democratic paper, the sheet would have been confiscated and its editor prosecuted for disseminating wild communistic theories. And now all the satellites of the Chancellor praise him as a new redeemer, as if the very basis on which the structure of the social and political organism is erected were not jeoparded. I tremble for my country if similar experiments are repeated and developed to their utmost consequences. Why, then, should the Government stop here? Why not extend its patriarchal system to all profitable trades—why not exercise the functions of a baker, a butcher, and a tailor, at the state's risk? Even the Conservatives begin to suspect and denounce Bismarck's socialistic schemes and wild dreams. The other day Herr von Bethmann-Hollweg, an independent proprietor of large manors, at a meeting of his political friends, asked that the Chancellor should submit his plans fully specified and worked out, in order to make an examination of his intentions possible, and most emphatically concluded his remarks with the notice that he would not become an accessory to such a swindle. On the other hand, Liebknecht, one of the Social-Democratic leaders, says that Bismarck, not having succeeded with the *bourgeoisie*, is, like Louis Napoleon, now trying his better luck with the working-classes.

"We of course accept his offers, but why should he not go a step further, and let those who are starving and have no work apply to the Government? Bismarck must advance still more, or he is lost. A tyrant cannot reach his ends by Social-Democratic reforms; socialism can only be realized by revolution. It is far from us to kiss the hand of the man who made the law against the Socialists. Bismarck will consequently fail. We will take from him what we can get, but we will ask for more, and continue to fight to the end."

Still another side of the question. At the beginning of this week the united clerical and aristocratic Protestant orthodoxy held its yearly meeting in this city. People call it the Black Conference. On this occasion the light infantry as well as the heavy artillery of the Church are accustomed to free their minds on the questions of the day. On the second and last day of their proceedings, the 25th instant, the two hundred reverend gentlemen rose to a man and sang Luther's "Eine feste Burg ist unser Gott" (a mighty stronghold is our Lord), to take up arms—against the Jews! Thus they entered on the discussion of the Jewish question. I will only point out two queries raised by the speakers. One of them, a clergyman, asked why it was not possible for a people, united in itself, to take from a minority (the Jews) the rights which had been granted them. Another Hotspur, Baron von Hammerstein, however, an old antediluvian fossil, spoke more to the point. His hostility against the Jews was only a pretext for his hatred of our modern civilization and economic development. It is our foremost duty, he said, to break the tyranny of capital, and by so doing to undermine the power of the Jews. Our statute law must change the basis of private law in relation to capital from the pagan Roman to a truly Christian German code. Or, in other words, let me add, we must make new statutes which will prevent a merchant or manufacturer from accumulating more money than an indebted country squire or *Junker* will ever be able to acquire. This is, at the same time, the authentic interpretation of the so-called Jewish question. You will perceive from this sample that our Conservatives understand very well how to "fructify," as the Austrians would say, Bismarck's economical whims and vagaries.

However, to return to the tobacco monopoly, its proceeds will not be so large by far as is anticipated. An old German proverb says, "You must not distribute the pieces of the bear before you have caught the beast." Prof. Wagner's computation of the sums to be derived from it is so far interesting as it repeats Bismarck's estimate. For this reason only it deserves a passing notice. He says that the monopoly in Austria yields 70 to 80 millions of marks, and that with us it will and must from the beginning bring at least double that amount—viz., 160 millions. Then he deducts interest and sinking fund, which he computes at 30 millions, and leaves a balance of 130 millions. This, in his opinion, will increase from year to year till it reaches the sum of 200 millions. Prof. Wagner only gives vague estimates, and does not even approximately prove his suppositions. I point out only one great mistake. The German smokers are estimated at about 8 millions—I believe there are not so many. If, now, not perhaps within the next year, but in fifteen to twenty years, 200 millions of marks are to be realized out of the monopoly, this number must not only not decrease, but each smoker must consume at least so much tobacco that the Government will make a yearly profit of 25 marks out of him. For the present, the first question to be answered is, How much will the Government pay for damages to the manufacturers? The committee of experts put them down at 687 millions of marks, the interest on which alone, at 4½ per cent., amounts to about 30 millions of marks. But, even granting that the monopoly in the first years of its existence will yield 180 millions net, how far will they go to cover the annuity and insurance expense?

For the coming elections the Chancellor's platform is very dangerous, as by its demagogic promises it may win over the poorer classes and effect a Conservative majority. Once laid before the Reichstag, it cannot do much harm, as by subjecting the plan to the close examination of practical men it will prove impossible.

+++

THE EGYPTIAN SUDAN.

CAIRO, August 7, 1881.

LAST summer Colonel Gordon's private letters to members of his family, and public documents concerning his administration in Central Africa, were, with Colonel Gordon's consent, placed in the hands of Mr. Hill, who, personally unacquainted with Colonel Gordon, was informed that Colonel Gordon would neither see nor correspond with him until the book was finished and before the world.* Colonel Gordon, moreover, refused to read the manuscript, or the proofs of the work as they passed through the press. Mr. Hill states in the preface: "The book is mine, and I must answer for it just as much as if Colonel Gordon were dead and I his literary executor."

Almost everything that has hitherto been written about Central Africa is of purely geographical or ethnological interest, but the letters published under these somewhat unusual circumstances throw much light upon the problems of governing or colonizing those lands and of ultimately bringing them within the pale of civilization. Besides possessing considerable literary merit, Colonel Gordon's letters will be of great value to the anti-slavery cause, and to all who take an interest in any one of the numerous aspects of the Central African question. Without attempting anything like a review of the more than four hundred and fifty pages of solid food for reflection which this book contains, I wish to call attention to that portion of it which sets forth the overwhelming difficulties that prevent the Sudan from being profitably or properly administered by any European or American in the service of Egypt.

Colonel Gordon was vested with supreme and absolute control of the Egyptian Sudan, a territory nearly as large as the entire portion of the United States to the east of the Mississippi River; and to-day—two years after his departure—if we except seven thousand miles of telegraph line, there is not a trace to be found of his ever having been there. I do not say this in disparagement of Colonel Gordon, whose iron constitution, indomitable energy, honesty of purpose, and genius for ruling uncivilized races are matter of common notoriety. But that the outcome of his five years' labor was a mere weaving of ropes in the sand is a most significant fact, and strengthens my belief that one hundred Gordons, working from some solidly established European colony as a base of operations, must wear themselves out in the Sudan before anything like a tolerable or profitable administration can be maintained there. For Egypt, herself possessing the faintest veneer of civilization, to attempt such a task is an absurdity. Colonel Gordon, writing from Laboré, near the Albert Nyanza, says:

"The Khedive's people are incapable of civilizing these natives, and may be described as 'conies'†—a feeble race. One Arab lieutenant came up to Moogie, and you never saw such a pitiable sight. He was muffled up like his veiled wife, who accompanied him to me, begging and praying in the loudest and most pitiable terms to be allowed to go back. I threatened him with the combatch (whip), and then he left me and went to the interpreter, kissed his feet, and bothered him till he came to me for refuge. As the Arab is the dominant race, and it was not conducive to the Khedive's benefit to let a public exhibition (of which all the camp was witness) go on, I sent him down to Khartum, saying what I thought of him. It is wonderful how

* *Colonel Gordon in Central Africa.* 1874-1879. [Although this work has already been reviewed in the *Nation* (No. 840), our correspondent's extracts have a practical bearing which justifies the trifling repetition involved in printing them at this date.—ED. NATION.]

† "The conies are but a feeble folk."—Proverbs xxx., 26.

effeminate these Arabs are. The fact is these officers have committed some crime at Cairo, and are sent up here for punishment. They are the most useless set of beings I ever came across. . . . I am thoroughly disgusted. These people are unfit to acquire the country. However, I have one consolation: they are a great deal too timid and apathetic ever to do the numerous stations much harm, and so I do not feel any compunction in opening the route. Some Pasha will come; he will be a grand man, will neglect the stations, lose them perhaps, and the whole affair will die out, unless they send another foreigner, which they may do. I hope he will have more patience than your brother. As for the Arabs, with one exception, they are lazy, effeminate, shirking, and only seeking a hole to hide in. As for the Sudanese, they are idle, only thinking of their own comfort, and shirking."

And further (p. 161):

"The Shillooks have had some idea of government. Mehemet Ali destroyed it. Their kings had a dynasty of two hundred years' duration. They *did* number two million before Egypt civilized (?) them. . . . If you ask me what is to be done to regenerate these people (the Egyptians) I could not answer it. They are the most hopeless set. Continual oppression has made them of such a material that you could find no sound principle to work on. Nations have generally some regenerating qualities, either commercial, military, religious, or patriotic spirit. These people lack each one of these motive influences. . . . Three generations of good government would scarcely regenerate them. Their deceit is the result of fear and want of moral strength, as they have no independence in their characters. For a foreign Power to take this country (Egypt) would be most easy. The mass are far from fanatical. They would rejoice in a good government, let its religion be what it might. . . . It is the Government that needs civilizing far more than the people. . . . The way in which my suggestions for the improvement of these lands [the Equatorial Provinces] are left unanswered, shows me that they are not wished for. I want to open the country to merchants and to let the troops merely afford protection to them; but that would diminish the gains (the immediate gains) of the Government, and so I do not expect it will be done."

The evidence of Colonel Gordon, as well as that of Colonel Dye, forces us to believe the Egyptian soldiers to be an arrant set of cowards. Colonel Gordon occasionally caught one of his officers in the act of selling the Khedive's soldiers for slaves; but without going into further details the passages quoted above show the value of Egypt as a "conquering nation," as well as the folly of attempting to govern those distant provinces, some of which are as far from Cairo as Cairo is from St. Petersburg. The Sudan, instead of bringing in any revenue to Egypt, is not only not self-supporting, but costs Egypt from £50,000 to £100,000 yearly. Colonel Gordon suggests that vast cotton crops might be raised in the Sudan which would in two years produce a far greater revenue than the ivory. After reading his letters one can scarcely help agreeing with his conclusions that "The Government of the Egyptians in these far-off countries is nothing else but one of brigandage of the very worst description. It is so bad that all hope of ameliorating it is hopeless. . . . One thing is certain, *that the Egyptian should never be allowed out of his own country.*"

Writing from Khartum in May, 1877, Colonel Gordon says:

"I am guarded like an ingot of gold. I must not rise to give a chair to a guest; if I get up, every one else does the same. It is misery, and I now feel what work princes must go through. I take advantage of their ignorance of English to say to the Sheiks, 'Now, old bird, it is time for you to go'; they are delighted. The sister of the late Governor Ismail Pasha Ayoob, hearing of my appointment instead of her brother, broke all the windows of the palace—some one hundred and thirty—and cut the divans in pieces out of spite. My predecessors never allowed any one to come near them. I admit the people, and have a large petition-box with a slit in the lid, which is filled up daily. I think the people like me, and it is an immense comfort that, while in the old régime ten or fifteen people were flogged daily, now none get flogged."

Concerning his measures for the prevention of slavery Colonel Gordon writes, Khartum, August, 1878: "I am striking daily deadly blows against the slave trade, and am establishing a sort of government of terror about it. I have hanged a man for mutilating a little boy, and would not ask leave to do so. I do not care if his Highness likes it or not." On Colonel Gordon's shoulders each man's burden lay, and such burdens brought, as they ever must in these deadly climates, nervous exhaustion and alteration of the blood. Whenever he was present all would go well, but the moment his back was turned all would go wrong. He had to be ubiquitous. In 1879 he rode 2,230 miles through the desert on camels, and 800 miles in Abyssinia on mules. In the three years, 1877, 1878, and 1879, he rode 8,490 miles on camels and mules. His average day's journey on camels was 32½ miles and on mules 10 miles.

In December, 1879, Colonel Gordon left the Egyptian service, and after a short stay in England, visited India and China in the spring and summer of 1880. He is at present commanding the Royal Engineers at Mauritius. The Sudan is "taking care of itself," and if ever it is to be opened to commerce other than that of slaves, efforts must proceed from Zanzibar, or the Congo, and not from the Nile.

Correspondence.

COLOR-PERCEPTION IN THE SEXES.

To the Editor of The Nation:

Sir: May I respectfully request the correction of what I believe to be an error in your criticism of my letter on the "Sexual Theory of Games"?

You say in effect that science has only shown that a larger percentage of men than of women is color-blind, and not that women as a class have a finer color-sense. Dr. Daae, of Norway (quoted by Dr. Jeffries in his book on 'Color-Blindness'), on examining two hundred and eight girls, found that none were color-blind, and only five had "*imperfect color-perception.*" I cannot give his statistics of boys, but they may be inferred from his remarks which follow:

"The better *color-perception* of the girls than the boys was very marked. Is this because the girls have personally more exercise with colors than boys? If this is the case, then we must assume that even very considerable degrees of color-blindness may be relieved by many years' exercise. This is, however, not probable. It is more probable that the better color-perception which the female sex has acquired and developed by many generations of handling colored objects is essentially sexual, or only inherited by the female descendants."

Prof. Magnus, of Breslau, says:

"Methodical education of color-sense does not intend either to cure color-blindness or to develop the power of perceiving colors in the sense of evolution, but to bring the color-sense which from insufficient use had become limited, or which had not been sufficiently developed, to as perfect a function as can be obtained, according to its organization."

These statements go to prove, first, that between color-blindness and a perfect color-sense there exist infinite gradations; secondly, that, though color-blindness be incurable in the individual, education of the color-sense may be productive of results even in the first generation, and still more in future generations. Your statistics of 4 per cent. refer to *color-blindness*, leaving quite out of consideration the *imperfect color-perception.*

I call attention to this because as a matter of fact it is of importance. Your further criticisms, being matters of opinion, call for no further comment. C. D. M.

New York, Sept. 10, 1881.

[Nothing is more objectionable in polemical writings, and nothing, unfortunately, more common, than to infer from what a person really says to what he says "in effect." "C. D. M." said that "long before science corroborated the fact, women have known that the majority of men have no fine perception of color." To this we replied: "We were not aware that science had shown that the majority of men have no fine perception of color. What science has shown is that a larger percentage of men than of women are color-blind; but the number is only four per cent." In other words, we merely corrected the statement that the *majority* of men have a defective color-sense. We never dreamed of denying that "women as a class have a finer color-sense than men," which is a fact familiar to every schoolboy. The same want of scientific accuracy, therefore, which made our correspondent overstate the defective color-perception of men induces her to imagine us guilty of going to the opposite extreme. There is no such absolute antithesis between color-blindness and imperfect color-perception as "C. D. M." makes out. Her own admission that between color-blindness and a perfect color-sense there exist infinite gradations, should have guarded her against this assumption. The published statistics in regard to this matter do not refer to cases of total color-blindness, which are of very rare occurrence, but to defective perception of any one color, marked enough to be discovered by the very delicate tests which have been devised by different physiologists. A defect in the color-sense more delicate than these would certainly not prevent a young man from leaving athletics and taking up æsthetics, as the original argument implies. And, finally, if a test were made, it would doubtless be found that the very highest power to discriminate between different shades of color belongs not to milliners or flower-girls, but to painters, the majority of whom, as we said before, are males.—Ed. Nation.]

THE COMPANY OF THE SEXES.

To the Editor of The Nation:

Sir: Although it is a pity that the defence of women on any count should be left to the irrelevant arguments of "C. D. M.," it is only to protest against one clause of your rejoinder that I venture to address you. How many women have admitted to you that meetings of their own sex "are apt to be somewhat stupid"? If the majority of the sex finds them so, why are "hen-parties" of all sorts more and more popular?

I am a woman, and not a stupid one, and in my day I was not considered unprepossessing, yet I find a well-chosen ladies' luncheon the pleasantest form of meeting I have ever taken part in. Moreover, all my life long I have preferred the society of my own sex to that of men, *cæteris paribus*, and I have had plenty of both. I do not pretend to prefer a stupid woman to a clever man as a companion, unless the difference should be compensated for by some extraordi-

nary advantage on her side or drawback on his; such, for instance, as the inveterate "shop" or wearisome cynicism which would make a good nursery-talk a relief from the conversation of some clever, well-informed men. But between a stupid man and a stupid woman, a clever man and a clever woman, or a room full of men or women, my choice has ever been for the latter. Nor am I a monster in this. Among the women whom I know best there are several, young, attractive, intelligent, and all three at once, who share my preference for our sex.

It is natural that both men and women should find in their own sex sympathy and understanding which they cannot look for from the other: the comprehension of those who have similar needs, experience, interests, and points of view —the compatriotism of sex, in a word. But, besides this, women have a power and desire to throw themselves into the feelings and positions of others which is seldom found in men; men make unstinted demands upon this altruism in their intercourse with women, and women are as ready and able to extend it to each other as to men. This goes to make the companionship of women more congenial to each other than that of men. And, while agreeable men are more apt to be stimulated by the presence of women (except where a recognized "talker" is keeping up his reputation, or is pitted against another of his calibre) to do their best in conversation than by that of their own sex, women are more anxious to "shine" among each other than among men, perhaps because they know that it is not for their brains men valu[illegible] them most. A woman is much more afraid of being thought a fool by another woman than by a man. These influences conduce to make women's society acceptable to each other, and the proofs that they find it so are the ladies' luncheons, kettle-drums, where man hides his diminished head, and other purely female gatherings, until at last we have reached the absurdity of ladies' dinners, with an elaboration of food which they do not eat, wine which they do not drink, and flowers which they would enjoy more at another time.

The marked predilection of women for the society of their own sex threatens to be injurious to general society; for of course there can be no real society composed solely of women or solely of men, any more than a real library composed of poetry only, or only of scientific books—not that this is a happy illustration, for in a well-chosen party of either sex there would be a variety of intellect and taste—let us say, rather, any more than a dinner-party composed wholly of talkers or wholly of listeners; for you will admit that some women listen, as well as that some men talk, or there would be no mixed society at all, except for dancing.

Now, on the other hand, *do* men "always manage to have a good time together"? If it be so, some of you are foully forsworn. I know of a city of several million inhabitants where a certain club gives weekly parties to which all the distinguished men of the place, as well as many undistinguished, and every stranger of note, are asked. I have heard men of every degree declare that nothing can be more stupid than these assemblages, and that nothing could induce them to attend one a second time. I have heard the same thing averred by numbers of men about nearly every man's dinner or supper club in my own place, and of every social reunion exclusively of men; and I cannot flatter myself that these complaints are made to humor me, as they often come from men in those relations which discard such subtle arts. And why, when men wish to bestow a name on a social or literary junta expressive of peculiarly select and stellar qualities, have they chosen again and again for centuries the designation of a feminine congeries—the Pleiades?

There is the usual masculine contempt for feminine logic, or possibly for feminine humor, in your statement that women owe their superior beauty to men, by the law of the selection and survival of the fittest, since the beauty of the mother can scarcely be transmitted to her female descendants only; nor, I suppose, have the handsomest men of all times remained celibate or childless. On this point I will follow "C. D. M.'s" example and refer you to George Eliot in 'Daniel Deronda' for your answer.

But to return to female society: I cannot affirm what I have said above of the women of any country except my own, who strike me as the best company I have ever known, and of whose pleasure in the society of their own sex I am able to speak from observation. As far as I am personally concerned, I have retained my preference for my sex in my slight acquaintance with French, Italians, and Germans. I am bound to confess, however, that in England, as a general rule, if there is a companion whom a woman appears to hold in horror above all the rest of the human or brute creation, it is another woman. We do not hear of ladies' lunches and dinners in that country; nor is it wonderful that we should not, for the interval in the drawing-room after the women leave the table at a dinner party before they are joined by the men accounts for the disfavor of forms of society exclusively feminine, and deserves all that has been said and written of it by English people themselves.

Although it would not be to the point in question, I might defend myself against your probable retorts by admitting the existence of circumstances in which a woman prefers the companionship of one man to that of all womankind. But I will not rob you of your rejoinder, nor dispute with you that last word so dear to human nature. I have the honor to be,

Yours respectfully,

A True Woman.

Elberon, N. J., Sept. 5, 1881.

PRESERVATION OF NIAGARA FALLS.

To the Editor of The Nation:

Sir: I want to thank you for your eloquent and earnest appeal for the preservation of Niagara Falls as a park, in the issue of Sept. 1, and to urge you to further and repeated efforts in the same direction. The American Association for the Advancement of Science has for a long time annually appointed a committee to push the matter, which this year felt so discouraged that, at Cincinnati, it reported its efforts as useless. In the hope, however, that something might yet be done, the committee was continued, and Mr. G. W. Holly, of Niagara Falls, appointed chairman. As he is a gentleman enthusiastically interested in the matter, he will welcome your article, and perhaps your united efforts will accomplish the desired result. The Falls are as worthy of preservation as a national park as those in the extreme West, and possibly the general Government might take them if New York refused. Hoping that you can push the good work to success, I remain, most respectfully, Chas. Schäffer.

1309 Arch Street, Philadelphia, Sept. 9, 1881.

Notes.

Houghton, Mifflin & Co. will, in addition to works already enumerated in these columns, publish this fall Henry James, Jr.'s 'Portrait of a Lady'; 'Country By-Ways,' by Sarah Orne Jewett; 'The Common Sense, the Mathematics, and the Metaphysics of Money,' by J. B. Howe; 'Eastern Proverbs and Emblems,' by the Rev. J. Long; Feuerbach's 'Essence of Christianity,' in Marian Evans's translation; 'A History of Materialism,' by F. A. Lange; an 'Index to Neander's Church History'; 'A Grammar of the Old Friesic Language,' by A. H. Cummins; 'Poems,' by Harriet Prescott Spofford; and 'Poems, Lyrics, Songs, and Sonnets,' by Francis Bennoch.——Other announcements for the coming season are as follows:—G. P. Putnam's Sons: A popular edition in one volume of Tyler's 'History of American Literature'; 'Buddha and Buddhism,' by Arthur Lillie; 'Authors and Authorship,' by William S. Walsh; 'Cambridge Trifles,' by the author of 'A Day of My Life at Eton'; 'Worthies of the World,' a large volume; 'The First Book of Knowledge,' by Frederick Guthrie; 'Suicide: Studies on its Philosophy, Causes, and Prevention,' by Dr. James J. O'Dea; 'Sensation and Pain,' by C. Fayette Taylor; and 'The Usury Laws' (for the Political Education Society).——Henry Holt & Co.: 'Greece and Rome, their Life and Art,' by Jacob von Falcke, an illustrated work for the holidays; Parts 2 and 3 of Symonds's 'Renaissance in Italy,' viz., the Revival of Learning and the Age of the Despots; Baring-Gould's 'Germany, Past and Present'; Ten Brink's 'History of English Literature'; Cox's 'Introduction to the Science of Comparative Mythology and Folk-Lore'; 'Our Familiar Songs and Those Who Made Them'; 'The Young Folks' History of the War for the Union,' by John D. Champlin, Jr.; Gardiner's 'Introduction to English History'; and Hardy's 'A Laodicean.'——J. W. Bouton: an *édition de luxe* of Hamerton's 'Graphic Art,' in one volume; a 'Gil Blas' in eight quarto volumes; a new edition of Jackson and Chatto's 'History of the Art of Wood-Engraving'; also, of Bryan's 'Dictionary of Painters, etc.'; 'The Luxembourg Gallery'; Racinet's 'Interior Decorations'; and 'Modern Artists,' by F. G. Dumas. All these works, it is needless to add, will be richly illustrated.——Jansen, McClurg & Co.: Hauff's fairy tales, translated from the German under the title, 'Tales of the Caravan, Inn, and Palace'; a new volume of poems by Ella Wheeler; 'Haydn,' in Nohl's series of biographies; 'Golden Thoughts,' selected by S. P. Linn; and 'Golden Poems,' a new anthology prepared by Francis F. Browne, editor of the *Dial*.——Peter G. Thompson, Cincinnati, has in press 'The Parent-Heart in Song,' poems collected by Mrs. Livietta Bartlett Conner.

—The Committee of the Carlyle Memorial Fund in England have naturally looked to this country for substantial sympathy and co-operation. Mr. George Cabot Ward, the well-known banker of this city, at 52 Wall Street, has consented to receive American contributions to this object. Nothing need be said to stimulate them, as they will be spontaneous if made at all.——A movement is also on foot to remove the remains of the late Joseph Severn, H. B. M. Consul at Rome, to a place beside those of the poet Keats, whose devoted friend he was; to mark his grave with a stone like Keats's; to enclose both with a common railing and hedge; and to erect near by a common monument or memorial tablet. Each subscriber will receive a carbon-printed photographic copy of the last portrait of Keats, by Severn's own hand. Contributions may be sent to Mr. R. W. Gilder, care of *Scribner's Monthly*, 743 Broadway, New York.——Mr. Quaritch, 15 Piccadilly, London, is prepared to furnish the auction catalogue of the famous Sunderland Library, of which the sale will begin December 1. This great collection numbers about twenty thousand volumes, and is especially strong in early editions of the works

of classic authors, and of Bibles. The early Italian writers also figure largely, there being a hundred editions of Dante for the period 1472–1583. The collector of Americana will also find his interest in the sale.——The Messrs. Appleton state that the sale of Jefferson Davis's 'Rise and Fall of the Confederate Government' at the South has been "remarkably large," as, indeed, twenty thousand sets must be considered.——A second edition of Mr. Kwong Ki Chiu's 'Dictionary of English Phrases' has been called for.——The *Century Magazine*, as *Scribner's* will be known with the November number, holds out for the coming year a promise of "Studies of the Louisiana Creoles," by George W. Cable; a new novel, "Through One Administration," by Mrs. Burnett; an illustrated series of papers on "The Opera in New York," by Richard Grant White; "The So-called Venus of Melos," by W. J. Stillman, with fine engravings; a "Life of Bewick," by Austin Dobson; and articles by Turgeneff on the "Russia of To-Day." The Century Co. will soon issue a photographic likeness of Dr. J. G. Holland, after the crayon-drawing by Wyatt Eaton.——*Harper's Bazar* has made a special arrangement with the South Kensington Museum for the exclusive publication of the designs of its school of needlework.——A tribute to the late Lady Blanche Murphy, by Cardinal Manning, will be one of the attractions of the October *Catholic World*, which will also have an article controverting "H. H.'s" 'Century of Dishonor.' This magazine is about seeking a transatlantic circulation through Burns & Oates, the well-known London publishers.——The September number of the *Magazine of American History* is nothing if not timely. It was issued in season for the late centennial celebration of the defence of Fort Griswold against the British and Tory-American attack (Sept. 6, 1781), under Benedict Arnold, and it repeats the painful details of this most atrocious incident of the Revolutionary struggle. It also gives interesting genealogical particulars concerning the Ledyard family, and otherwise illuminates the historic record. The Yorktown celebration, too, receives another instalment of fresh data, most noteworthy being some charming letters to his wife written by St. George Tucker, the step-father of John Randolph of Roanoke, and that humane jurist whose 'Dissertation on Slavery' (1796), advocating gradual abolition in Virginia, is a precious rarity for the collector. Mr. Stevens has increased the obligation of his readers by accompanying the letters and a biographical sketch of Judge Tucker with his portrait—one of the St.-Mémin vignettes. The face is worthy of the philanthropist, and bears a not fanciful resemblance to Washington's.——The "First Supplement" to the Catalogue of the Taunton (Mass.) Public Library is rather a gain to the usefulness of that institution than to bibliography. We like the continued use of manila paper. The cover bears the city seal, with the disputed motto, "Dux femina facti."——Mr. James Terry, of the Central Park Museum of Natural History, describes in an interesting communication to the *Evening Post* his discovery of pre-historic mounds on the eastern extremity of the Long Sault island, situated midway in the rapids of that name in the River St. Lawrence. The relics obtained were remarkable, and have been sent to the Museum.——Circulars of Information Nos. 1 and 2 of the Bureau of Education treat respectively of the construction of library buildings (Mr. W. F. Poole's paper), and of the relation of education to industry and technical training in American schools.——Father Curci's 'I vecchi zelanti e la nuova Italia' has been put in the "Index," and the author has "submitted," as he promised to do in his preface. But the submission will not have much practical effect, as he had sold the copyright to the publisher, who is now preparing a second edition, the first being entirely exhausted.

—All signs point to the increasing pursuit of historical studies in this country, and apparently the approaching season is to be remarkable for literary productiveness in this line. We reported, a fortnight ago, the two series, of great promise, undertaken by Houghton, Mifflin & Co., namely, "American Men of Letters" and "American Statesmen." We have now to add the announcement, by Charles Scribner's Sons, of the preparation of a third, hardly less important and significant, bearing the title of the "Campaigns of the Civil War." Twelve volumes are expected to embrace the whole story, and these have been apportioned as follows: 'The Outbreak of the Rebellion,' by John G. Nicolay, President Lincoln's private secretary; 'From Fort Henry to Corinth,' by Judge M. F. Force (late Brigadier-General and Brevet Major-General United States Volunteers); 'The Peninsula,' by Alexander S. Webb (late General commanding Second Division, Second Corps); 'The Army under Pope,' by John C. Ropes; 'The Antietam and Fredericksburg,' by Francis W. Palfrey (late Brevet Brigadier-General United States Volunteers); 'Gettysburg,' by Abner Doubleday (late Brevet Major-General United States Army); 'The Army of the Cumberland,' by Henry M. Cist (late Brevet Brigadier-General United States Volunteers); 'The Campaign of Atlanta,' and 'The March to the Sea—Franklin and Nashville,' by Jacob D. Cox (late Major-General United States Volunteers); 'The Campaigns of Grant in Virginia,' by Andrew A. Humphreys (late Brevet Major-General United States Army); 'The Mississippi,' and one other volume. The first two will be issued in October. The volumes will be duodecimo in size, of about 250 pages each, and illustrated with maps and plans, and the price of each will be one dollar. The work is therefore of a thoroughly popular character, while the list of writers ensures a high level of accuracy and literary execution.

—An American scholar, engaged in the study of Keltic, desires to learn if there are others interested in the same pursuit. He may be addressed through the Publisher of the *Nation* ("Columba").

—A correspondent writes us from Tennessee:

"In your issue of September 1 you say that the minority report of a committee on the subject of municipal reform in Massachusetts remark in their report that no cities outside of New England, except Philadelphia and Baltimore, have the 'double-headed city council.' This is a mistake. Nashville, Tenn., for one, has had it at least ever since 1858. Her City Council consists of a Board of Aldermen and a Board of Common Councilmen. The Mayor has a veto, but a concurrent two-thirds majority will overcome it. This municipal arrangement has, moreover, worked excellently."

—The death of Mr. Sidney Lanier, at Lynn, N. C., on the 8th instant, removes a poet and man of letters of much promise and of considerable accomplishment. Mr. Lanier was a Georgian and fought on the Confederate side during the civil war. About ten years ago he went to Baltimore to reside, and at first attempted to practise law, but his health compelled him to confine himself to rather desultory literary work. This, however, he pursued in anything but a dilettante spirit, and perhaps the most marked characteristic of his production is the evident amount of care expended upon it. His poetry is eminently thoughtful and studied; so much so, indeed, as too frequently to sacrifice the lyric to the epigrammatic quality. The felicity of the following, for example, is mainly epigrammatic:

"O age that half believ'st thou half believ'st
Half doubt'st the substance of thine own half doubt,
And, half perceiving that thou half perceiv'st,
Stand'st at thy temple door, heart in, head out!"

It would be easy to quote from his poems much which essays poetry and falls short of it in just this way, but which does not thus atone for its shortcoming. A deficient sense of humor cannot but be remarked in much that he wrote, from the ambitious and rather ecstatic cantata composed for the opening of the Centennial Exposition to such positive doggerel as

"Look up the land, look down the land;
The poor, the poor, the poor, they stand."

On the other hand, a true and not common poetic feeling is often manifested, unobscured by either the effort at polished condensation and pithiness or the effort at exaltation. Such a figure as

"Than half-wing openings of the sleeping bird
Some dream of danger to her young hath stirred,"

could occur only to a poet, and only by a poet be thus happily expressed. Mr. Lanier was, in fact, to an appreciable degree of dignity and excellence in advance of the magazine poets with whom, nevertheless, his work, by its meagre amount and general character, of necessity classed him. He was, we believe, an accomplished musician, and wrote an ingenious book on "The Science of English Verse," in which he attempted to substitute musical notation for the ordinary prosodical signs—a work prohibited by its scheme from ever becoming popular or very useful. He lectured on English literature at the Johns Hopkins University, and his condensations, 'The Boy's Froissart' and 'The Boy's King Arthur,' must have already won for him an enviable measure of gratitude from both old and young.

—The author of 'The Brotherhood of Thieves; or, A True Picture of the American Church and Clergy,' died last week at his home in Worcester, Mass. The title of this work implies a remote date, and in fact the publication belongs in the year 1843. At that time Stephen Symonds Foster had been five years out of college (he was a graduate of Dartmouth), and not too long out of the Union Theological Seminary to deprive his testimony of weight as an expert. He had been drawn into the swelling flood of abolitionism, and, dedicating his life to the extirpation of slavery, he took as his specialty the guiltiness of the church in regard to the overshadowing evil of that day. Not content to deliver his testimony from anti-slavery platforms or in tracts, he used to confront the clergy in their own temples, with an effect upon them and their congregations which could only be matched by the primitive Quaker disturbances of Puritan meetings, and with the necessary consequence to himself of being rudely ejected in spite of, or partly because of, his utter non-resistance. A more resolute man never lived, nor a gentler or more amiable in his private relations, between which and his public utterances the contrast was stupendous. Nature, while endowing Mr. Foster with an enormous "bump of combativeness" and a hard logical sense, had denied him the faintest ray of humor—a fact as perceptible to his associates, who esteemed him and made allowance for him, as it was exasperating to an unsympathetic audience. Our greatest humorist, now American Minister at the Court of St. James's, in some familiar verses, written "in steamboat haste" but with infallible characterization, thus described him in the winter of 1846:

"Hard by, as calm as summer even,
Smiles the reviled and pelted Stephen,
The unappeasable Boanerges
To all the churches and the clergies;
The grim savant who, to complete
His own peculiar cabinet,
Contrived to label with his kicks
One from the followers of Elias Hicks;
Who studied mineralogy,

Not with soft book upon the knee,
But learned the properties of stones
By contact sharp of flesh and bones,
And made the *experimentum crucis*
With his own body's vital juices;
A man with caoutchouc endurance,
A perfect gem for life insurance:
A kind of maddened John the Baptist,
To whom the harshest word comes aptest;
Who, struck by stone or brick ill-starred,
Hurls back an epithet as hard,
Which, deadlier than stone or brick,
Has a propensity to stick.
His oratory is like the scream
Of the iron horse's frenzied steam,
Which warns the world to leave a space
For the black engine's swerveless race.
Ye men with neckcloths white, I warn you—
Habet a whole haymow *in corau.*"

On the Sabbath question it will readily be guessed that Mr. Foster's views were not orthodox. He had been brought up to think it "a very great sin to take up an axe and cut a stick of wood" (for "the sound of the axe must not be heard upon the Sabbath"), but, in his own words again: "I could lift my foot a dozen times to break it." He made amends for all this in adult life by chopping wood by the roadside and getting in his hay on Sunday, not because he thought seven days of toil a good thing for the race, but to censure what he considered the superstition of his neighbors. In 1845 he married Miss Abby Kelley, who may be regarded as the pioneer in the woman's-rights movement in this country, and who was the rock on which the abolitionists split at their memorable convention in 1840. As she yet lives, we need not quote Lowell's tribute to her also. Of late years Mr. and Mrs. Foster have steadily refused to pay taxes on their homestead, on the ground of woman's deprivation of the suffrage. Their protest has caused them much annoyance, but the interposition of friends has saved them from the sheriff. Mr. Foster had nearly completed his seventy-second year.

—Census Bulletin No. 261, by Prof. G. Brown Goode, gives the statistics of the fishing interest on the Great Lakes. The total number of men employed in the business in 1879 was 5,050, and the total capital invested was $1,345,975. The plant included 1,656 vessels and boats, 1,500 pounds, 44,544 gill nets, and 148 seines. The total product of the fisheries was 68,720,000 pounds, valued, as fresh fish, at $1,652,900, an average per man engaged in the business of $327. Of the total catch 21,463,900 pounds were whitefish, 6,804,600 were trout, 15,356,300 herring, and 7,012,100 pounds were sturgeon. The remainder were variously denominated as hard, soft, rough, coarse, and mixed fish. Of the total amount 43,122,270 pounds were sold fresh, 16,793,540 pounds were salted, 2,821,650 were frozen, and 1,721,770 were smoked. The product of caviare was 230,160 pounds, valued at $34,315; that of isinglass 3,909 pounds, having a value of $5,765, and of oil 5,680 gallons, valued at $2,280. The total value of all products, fresh, salted, frozen, and smoked fish, caviare, isinglass, and oil, was $1,784,050.

—In a recent interview, the Canadian weather-"prophet" allowed his secret to be quizzed from him as follows: "I discovered . . . that seasons and years recur in couplets and triads." A few moments later in the conversation, his self-confidence having been apparently shattered by the exposure of his mistakes in these columns last May, and in the New York *Tribune* within a fortnight, he made the astounding admission: "Sometimes I am bothered by my inability to decide whether I have entered a *couplet* or *triad* of seasons, and until that matter is settled I am all at sea." But he immediately reassumed his fighting-gear, and exclaimed, "Such a miss is not possible once in a thousand times." The reporter abstained from pushing him to the wall by subjoining, "How can a thing possess either couplets or triads which has not even units, since the 'season' is an artificial and not a natural division of time?" It is time the press ceased to give currency to Mr. Vennor's preposterous guessing.

—Mr. John S. Dwight has issued a sort of "*post-mortem* number" of his *Journal of Music* in which the reasons for its discontinuance are frankly indicated. The paper did not pay, but actually entailed a loss upon its editor, who at last got tired of the struggle to keep it alive without the means to make it such a journal as he desired. It has been suggested that the demise of the *Journal*, after an honorable career of thirty years, is due to its uncompromising hostility towards modern music and its exclusive devotion to the so-called classical school. There is some truth in this suggestion, but it does not cover the whole ground, for the late *Musical Review*, which was an enthusiastic advocate of the claims of modern composers, and in its general tone much more impartial and just, as well as more "newsy" and enterprising, than the *Journal of Music*, succumbed to the same fate after a much shorter career. In both these cases, we are inclined to think, the cause of failure cannot be ascribed to the management or the character of the periodical, but, as Mr. Dwight rightly suggests, to the fact that "there is not in this country now and never has been any adequate demand or support for a musical journal of the highest character." Even in Germany, where everybody is supposed to be musical, most of the papers devoted to this art alone lead but a precarious existence. In America, musical culture of the highest kind is almost entirely confined to the cities, and there the daily papers so constantly anticipate the weekly musical journals in news and criticism that there is little demand for the latter when they appear. It cannot be denied, indeed, that in Germany, and to some extent in France and England, the daily papers furnish more readable criticisms than the musical papers. The Vienna *Neue Freie Presse*, the Berlin *Boersen-Courier* and the London *Times* are the papers to which the musician turns most eagerly for the latest and most reliable views on his art. But it should be noted that in these papers time is not considered as important as quality and literary art; and perhaps in course of time American nervousness will so far subside as to enable us to prefer a well-digested weekly or semi-weekly feuilleton on musical events to a fresh, but hurried and imperfect, daily criticism of last night's concerts.

—In Part XIV. of Grove's 'Dictionary of Music and Musicians,' which has just made its appearance (New York: Macmillan), and extends from Richter to Schoberlechner, the longest article is that on Rossini, by M. G. Chouquet. Besides Rousseau, Salieri, and Scarlatti, the creator of modern opera, several living composers are discussed, among them Rubinstein, Saint-Saëns, and Scharwenka. The articles on Rubinstein and Saint-Saëns are good as far as they go, but disappointing by reason of their shortness. True, the career of these artists is not yet closed, but enough interesting material might have been found for longer accounts, which would have been welcomed, because few composers engage the attention of the public more than they do just now. Of executive musicians Rubini, Sarasate, Sainton, Sanley, Sauret, and the minor artists are mentioned. Rubini, it would seem, was not only the most celebrated of modern tenor singers, but by far the most wonderful musician that ever lived, for he succeeded, according to the author of the article on him, in "gathering up and expressing in one song the varied emotions of a whole opera"(!) The Scala Theatre of Milan, and the San Carlo of Naples, are briefly described, as are also the instruments called saxhorn and saxophone, after their inventor, M. Sax. Of the musical forms defined, Saraband, Round, Scherzo, Sanctus, and Romance are of importance. The articles Romantic, Roi des Violons, Royal Academy of Music, and others are of general interest. The names of Ries, Romberg, and Rummel are specimens of "those musical families of whom, from the Bachs downward, so many are encountered in Germany."

—Reliable information has at last been published in regard to the performances of Wagner's "Parsifal," which are to take place in Bayreuth next summer. The editor of the Berlin *Boersen-Courier*, who is one of Wagner's most intimate friends, announces the following particulars. The full rehearsals will begin on Sunday, July 2, at Bayreuth, and the first two performances will take place on the 26th and 28th of the same month, for the benefit of the patrons only, *i. e.*, for those who have subscribed fifteen marks annually for the last three years. These will be followed by fourteen public performances on Sunday, Tuesday, and Thursday of each week, ending August 29. The rôle of *Kundry* has been assigned to Frl. Marianne Brandt of Berlin, one of the very best living vocalists, whose wonderful impersonation of the part of *Ortrud* in "Lohengrin" would alone have sufficed to secure for her a national reputation. The piano score is to be prepared by Herr Engelbert Humperdink, the young musician who recently gained so much notoriety by securing both the Meyerbeer and Mozart prizes. This last announcement about him is the most complimentary of any yet made, and it would seem as if at last a new musical genius had made his appearance.

— A new edition of Miss Burney's 'Evelina' has just been added to Bohn's Novelists' Library (Scribner & Welford), with an introduction and notes by Annie Raine Ellis. The notes are wisely few, and are mainly devoted to descriptions of the various places of fashionable resort mentioned in the text; a few retail the gossip of Mrs. Thrale, Boswell, and Johnson over the different characters; and but two are superfluous, the information they contain being drawn from the book itself. It is always a matter of regret when an old book takes to crutches; it seems an anticipation of the day when it will be finally out of the race and fall into Voltaire's category of classics whose reputation is secure because they are never read. It is proper to express acknowledgments, therefore, for the self-restraint of an editor who would rather risk the omission of a necessary than the insertion of a superfluous note. In this case the work is well done, and the result ought to be that 'Evelina' will strengthen its position and win new admirers. The introduction is written from the standpoint of Macaulay's essay, and, remembering how thoroughly he disposed of Croker, an elaborate defence of Miss Burney from the charge of understating her age and gaining admiration for her work as the product of a girl of seventeen, was hardly necessary. On the appearance of the novel it was natural that the public should consider such keen observation of character and manners the fruit of experience, and upon learning that it was the work of a young girl (for Miss Burney was but twenty-four) should infer that it was a page of personal experience, and that she like her heroine was but seventeen. Certainly no elaborate confutation of Croker is now needed to convince people that she was not responsible for the public's natural mistake. The "epilogue" which follows the introduction defends Miss Burney's claim to superior

influence with the royal family as regards the counter claim set up by the family editor of Mrs. Delaney's correspondence for the latter, and again by Mr. Hare in a note to his 'Life of the Baroness Bunsen,' Mrs. Delaney's great-grandniece. Perhaps it does not greatly matter which of the ladies had the ear of the "sweet Queen" at that court which the editor of the present volume accuses of corrupting the English style of Mme. D'Arblay, as was said of the Bishop of Salisbury, preceptor of the Duke of Kent: "Living much at Windsor, . . . he had imbibed the bad style of manners belonging to that place."

TAINE'S JACOBIN CONQUEST.—II.

Les Origines de la France Contemporaine. Par H. Taine, de l'Académie Française. La Révolution. Tome II. La Conquête Jacobine. Paris: Hachette; New York: F. W. Christern.

The Jacobin Conquest. By H. Taine. Translated by John Durand. New York: Henry Holt & Co.

TAINE has propounded a riddle, he has not provided the answer. His facts are invaluable, his theories are, as an explanation of these facts, all but worthless. The riddle which he forces on the attention of historians is this: How did it happen that, in a great, flourishing, civilized country, such as was France in the eighteenth century, a minority of ruffians and blackguards —the very scum of the earth, if Taine's picture of them be correct—thwarted, defeated, and subdued to their will the vast majority of their countrymen? How was it that this extraordinary victory repeated itself at each successive crisis of a struggle extending over years? To give examples, as Taine does, of the weakness of the Constitutionalists, of the combined folly and feebleness of the Girondists, of the astounding audacity with which each successive minority was able to outwit its opponents, is, in reality, rather to re-state the problem to be solved than to provide its solution. Such explanation as Taine does afford may fairly be summed up as follows: The best, no less than the worst, minds in France were crammed with false political theories uncorrected by any practical experience in the conduct of affairs. The old form of government had broken up; the new constitution was unworkable, and required, to be worked at all, exactly those virtues in which Frenchmen are most deficient. In the absence of any legal and efficient government, inferior and bastard forms of government sprang up, so to speak, of themselves. The sovereignty which had fallen from the hands of the king, and had never been grasped by the constitutional authorities, was seized by the clubs, which gradually formed an organized society, headed by the Jacobins of Paris. Legal right was on one side, real force was on another, and force triumphed. Moreover, the respectable majority were hampered by their own scruples, and had to contend with adversaries who had no scruples whatever. To use a metaphor which Taine employs, if we remember rightly, more than once, the majority were like an honest man playing at cards with sharpers. He keeps the rules of the game; they cheat. If by any accident luck turns in his favor, they blow out the candles and rob him. It is no wonder that the honest man loses every penny.

Now all this and a great deal more of the same kind which is urged and repeated by Taine is true as far as it goes, but it certainly is a very inadequate answer to the questions which need a reply. Indeed, the main importance of Taine's explanations is that they betray the existence in the mind of a very intelligent Frenchman living in 1881 of a sentiment exactly similar to the feelings which he attributes to his ancestors of 1791; for Taine obviously thinks that respectable men cannot defend themselves against blackguards unless the party of order have the Government on their side. That Taine should feel in this way does suggest a partial solution of the problem why respectable Frenchmen have constantly been defeated by ruffians. Still, Taine's explanations remain, on his own showing, completely inadequate for their purpose. The same men who, as long as they were conspirators or insurgents, displayed infernal cunning and reckless audacity, become, on his view, from the moment when they are called upon to resist aggression, as silly as children and as weak as women. The Girondists, while they attack the throne, are invincible; when they are called upon to defend the Republic they are at once routed. The great Danton is a giant of strength while he heads the revolutionary movement. He assuredly is not a man of scruples. From the minute when he is called upon to act on the defence he hesitates and fails, and yields to a man admittedly his inferior in talent, energy, and resource. The internal inconsistency of Taine's own theories is hidden from him by a singular ambiguity of expression. The term "Jacobin" has in his mouth an extraordinary vagueness and uncertainty of meaning. As opposed to the Constitutionalists, the Jacobins are the whole body of Democrats or Republicans; as opposed to the Gironde, the Jacobins are the followers of Danton and Robespierre. By this lax use of words Taine conceals from his readers that the very men who (say) on the 10th of August triumphed by their astounding energy as Jacobins, on the 31st of May fell from power through their astonishing want of energy as Girondists. Views which can be made self-consistent only by the aid of verbal ambiguities must inevitably be, if not false, yet certainly incomplete; and the aim of thoughtful students should be, while admitting the weightiness and importance of Taine's facts, to discover, if not a solution for the problems which he leaves unsolved, at any rate some explanation of the inadequacy and inconsistency of his theory of the Revolution.

One cause of Taine's failure to deal satisfactorily with the facts which he narrates is that his book is based upon a radically defective plan. His intention is to trace the origin of French institutions, or to trace out historically the growth of the customs, habits, modes of thought, and institutions which make up the constitution of modern France. Now, an author who undertakes to perform this task might write a history of the Revolution, or he might, as seems to have been De Tocqueville's purpose, give an analysis of the principles which influenced or guided the Revolutionary movement, and which exert their power unto this day. Perhaps Taine proposed to follow in the steps of his great predecessor, but in fact he has adopted neither of the courses which are fairly open to him. He has not written a history, even in outline, of the events occurring between the opening of the States-General and the fall of the Girondists. All that concerns the wars of the Revolution, the treason of Dumouriez, and scores of other transactions without a knowledge of which no one could follow the course of French politics, does not find a place in his book. On the other hand, he has not given, we venture to say that he has not the powers requisite for giving, an analysis of the principles which underlie and govern the course of events. What he has done is to give extremely minute circumstantial and, we gladly admit, most valuable accounts of particular transactions. His work is essentially fragmentary. He has never grasped his topic as a whole, and does not appear to see that it must be grasped as a whole if it is to be made the basis of moral or political inferences. It is possible to isolate one definite part of a series of events and treat of it alone, as, for example, Doniol has treated of the legislation affecting the tenure of land in France; but it is not possible to deal with the general bearings of a great historical crisis and leave whole masses of facts and their effects entirely out of consideration. Thus, who can doubt that the weakness of the Constitutionalists had the closest connection with the King's flight to Varennes, or that the Girondists were hopelessly damaged in their own eyes (though they might not confess the fact) as well as in the eyes of the country by the treason of the general who had seemed the heroic defender of France? How is it possible to suppose that the fact made patent to the world in Mortimer-Ternaux's pages, and certainly known to the political leaders at Paris, that Dumouriez's treason had all but succeeded, and that the army was within an ace of following the leadership of their commander, did not influence the whole course of the contest between the Jacobins and their opponents? Who can suppose that the conduct of the Republicans can be even understood without reference to the relations maintained between the court and foreign powers? To explain the Revolution while leaving most important matters out of account is an absolute impossibility. The radical defects in Taine's plan would of themselves almost account for the shortcomings of his work, but, added to the defect we have noted in the scheme of his book, there are also essential errors in his whole point of view, two of which deserve special notice.

He does not, in the first place, show any perception of the immense difficulty presented by the task which French statesmen who wished to lay the foundation of French liberty had to perform. We do not for a moment deny that they all, from Lafayette downwards, displayed a good deal of unpardonable weakness, and a great deal of much more pardonable incapacity, which was little else than another name for inexperience. But to suppose, as Taine apparently supposes, that if the French Government would but have firmly repressed popular disorder all would have been well, is to ignore the essential features of the situation. The difficulty to be overcome was how to control at once the court and the mob. There was a danger, and a perfectly real danger, though Taine seems to forget this, of reaction as well as of foreign invasion. There was, on the other hand, a danger, the existence of which he never forgets, of falling under the supremacy of the multitude. You cannot judge men like Lafayette or Roland justly unless you remember the twofold peril to which the cause of freedom was exposed. That Taine or any man of his generation should overlook the chance that to disarm the populace might be to arm the court, is the more inexcusable because the events of 1848 proclaim as loudly how great is, in revolutionary eras, the risk of reaction, as the events of 1791 proclaim how fearful at such times is the danger of anarchy. In 1848 the party of order throughout Europe, and especially in France, followed precisely the course which Taine thinks ought to have been pursued by the men of '89 or '91. They rallied after the first check; they played off one part of the populace against another; they trusted the rulers who from one end of the Continent to the other swore to protect constitutional liberty; they used cannon and grapeshot against the mob who but a few months before were flattered as the defenders of freedom. We all know the result. With rare exceptions, the ruler, were he emperor, king, or president, turned the reaction to his own account. At Paris, at Vienna, at Berlin, and at Naples the despots of the day re-

imposed the yoke which the people had for a moment shaken off, and made it tenfold heavier than before. There were in 1852 few enlightened Liberals who did not bitterly repent of the policy by which the party of order had played the game of despotism. Can any fair judge doubt that if (say) Lafayette had coerced the mob of Paris, or if the Swiss had been allowed to disperse the insurgents of the 10th of August by rounds of grape-shot, the Court would have soon made short work of the Liberals and of the institutions which Liberal Frenchmen were attempting to found? To say that Lafayette and his friends or Roland and his party committed deplorable mistakes, is true; but to deny that they were placed amidst perils from which the wisest of statesmen could with difficulty have extricated himself with success, argues either blindness or gross unfairness. Moreover, the dread of reaction perplexed the moral judgment of men who, with all their faults, undoubtedly had a sincere love for their country. It was absolutely impossible for any Frenchman who hated the *ancien régime* to pursue a policy which was certain to bring him into alliance with nobles who detested the Revolution. Taine, in a striking passage too long for quotation, describes the terror felt by the peasantry lest the miseries of the bad old times should return, and hosts of patriots whose own interests or lives were menaced by Revolutionary excesses deliberately chose rather to be the victims of injustice than run the risk of restoring an abominable state of society. What was the true sentiment of France is apparent from the popularity of Napoleon's early government: the whole country rallied round a ruler who for the first time promised to secure France at once against the disorder and against the return of the *ancien régime*.

Taine does not, in the second place, ever make plain to his readers whether he does or does not look upon the events of the Revolution as to a great extent the result of deliberate plot or conspiracy. There and again he uses language, especially with regard to the Duke of Orleans, which suggests a belief that design and intrigue had a good deal more to do with producing popular demonstrations than is, we suppose, believed by most modern historians. The view that world-wide events are the result of Machiavellian machinations is rather out of date, but it is certainly probable that writers like Carlyle have very considerably exaggerated the spontaneous character of the tumults at Paris. The point is one on which accurate information is much needed; but, though Taine hints at dark designs planned by the hangers-on of the Duke of Orleans, he does not adduce specific facts in support of his mysterious intimations. He perhaps has never made up his own mind on the question whether direct conspiracy deeply influenced the course of events. But an author who on such a point is himself in doubt is hardly a safe guide through the labyrinth of a period which, though in one sense well known, is in another full of obscurity.

Taine, moreover, still retains his belief in one portion of the Revolutionary legend. He kindles into something like enthusiasm when alluding to the exploits of the volunteers. No one can wonder at his fervor. The day will never come when any Frenchman—one might say any lover of freedom—can think of the youths who repulsed the despots of Europe and carried the tricolor in triumph through the capitals of Europe, without admiration. But it is difficult to retain one part of a legend while you reject the rest. Can it be that all the men who crossed the frontier were heroes, while the men of the same class who stayed at home were unredeemed ruffians? Surely not. A view which makes the Frenchman who stays at home a totally different man from the Frenchman who fights abroad must be infected with error. The mistake is, we venture to assert, twofold. The volunteers fought well, but they were not quite the heroes that they are painted in French romance. There is no reason to suppose that a French sailor differed from a French soldier; and any one who chooses to refer to the 'Life of Macaulay' may find a striking picture of what French sailors who sang *Ça Ira* and shouted *Vive la République!* might be when they got a chance of plundering and wrecking an establishment devoted to the promotion of philanthropy. On the other hand, the roughs who crammed the Jacobin clubs were not all of them graceless scoundrels. Fanaticism is a tremendous evil, but it almost implies the existence of real enthusiasm. Taine overlooks the reality of that Jacobin faith which, with all its monstrous faults, was at one time a genuine faith which, in its way, moved mountains.

BIBLICAL ENGLISH.

A Glossary of Difficult, Ambiguous, or Obsolete Bible Words. With Illustrative Quotations from English Writers of the Period of the Authorized Version. By the Rev. J. Rawson Lumby, D.D., Norrisian Professor of Divinity, Fellow of St. Catharine's College, and late Fellow of Magdalene College, Cambridge. New York, 1881.

THOUGH we now have a part of the Bible, and are soon to have the whole of it, in a motley half-new dress, the interest which has been felt in the production of King James's revisers, as regards its language, instead of abating, is likely, for obvious reasons, rather to increase. To the works of which this interest has, within the last few years, prompted the preparation, another is now added, differing from its forerunners mainly in not being confined to the elucidation of obsoletisms.

Dr. Lumby's 'Glossary,' at least as to a considerable share of its contents, is intended to meet the wants of those who are still occupied with acquiring the merest rudiments of learning. For instance, under *a*, it offers definitions of *ado*, *alms*, *aloof*, *anon*, *apace*, and, of course, of *adjure*, *affinity*, *albeit*, and *amerce*. If of uniform execution throughout, it would spare one even the trouble of seeking elsewhere for the meanings of the most familiar expressions; but the design in conformity with which simplicities of this description are admitted is carried out anything but thoroughly. At the same time, however, that it fitfully descends to the humble level just indicated, the elementary students whose needs it aims to supply will often, in the absence of supplementary explanations derived *ab extra*, find it a strange sort of aid towards enlightening their ignorance. Thus, of what use can it be to such to be referred, for an etymology, to a Greek word? And suppose that this word is submitted by a pupil to his teacher: it is in the Roman character, and while, for all that, an unmitigated enigma to the former, is to the latter, if he knows Greek, a present of a gratuitous metamorphosis. The teacher, it is assumed, is Grecian enough to expound *apŏskeuasamenoi* (under *carriage*), and Latinist enough to interpret *digito monstrandum* (under *monster*). We cannot help thinking that a practical experience of the illiterate, or a more judicious estimate of their requirements and the requirements of their immediate instructors, would have suggested a good deal to Dr. Lumby, either for addition or for omission.

The reader is informed at the beginning of the 'Glossary,' that its illustrations "are chosen, as much as possible, from authors of the Elizabethan and Jacobean times; but now and then, to indicate that a word is old, an example of it has been given from Chaucer; while, on the contrary, a few examples have been selected from Milton and Dryden, when a word continued to be used in its Biblical sense to a late date." The principles here intimated, it seems to us, are not all of them readily reconcilable with sound judgment. Chaucer is here and there appealed to, and so is his predecessor, Robert Mannyng; and why their names should not appear, if at all, very constantly, is not easy of discovery. And the same objection is valid with reference to Milton and Dryden. In fact, but few of the citations adduced are strictly to the proper purpose, which ought, at any rate primarily, to show from the more popularly intelligible writers of the early part of the seventeenth century, how far, as regards items of language now laid aside, King James's revisers adhered to the usage of their contemporaries. And why should words and meanings which are still current, or were so short of many generations ago, be treated as if they belonged to antiquity? To be more explicit, before *anon* is reached, quotations are given for *abroad* (out of doors), *ado*, *advertise* (inform), *advisement* (counsel), the conjunction *against*, *allegory*, *amerce*, and *angle* (for fishing), from Burton, Gosson, Latimer, Ralph Robinson, Shakspere, Selden, Howell, and Lyly, respectively. A most mistimed jumble is this, surely, and one, further, of a nature, where not to lead the uninformed astray, to perplex them; seeing that the second and the last four expressions specified are to this hour in circulation, that *advertise*, for "inform," lived on into the last century, and that *abroad*, for "out of doors," and *advisement* still survive as provincialisms. Illustrations quite as inappropriate as those here instanced encumber every page of Dr. Lumby's unequal performance. And why, under *a* alone, has he left the Biblical *addicted*, *admiration*, *ambassage*, *ambushments*, *answer*, *appearance*, and *attent* unillustrated? As to his quotations under *overflow* and *vehement*, it might be inferred that he countersigned *overflown* as the past participle of the first, and *respective* for "considerate." He ought, besides, to have perceived that his extracts under *settle* and *spring* are inapposite. So, too, is the extract under *sort*, an extract illustrative, nevertheless, of *sort*—"mass," "herd," or the like—in "all the *sort* of you," an expression in the Prayer-Book version of the Psalms which he has overlooked, just as he has *save*, the quasi-preposition, in "forty stripes *save* one," while making a muddle of *save*, *saving*, the conjunction.

Nor are his shortcomings by any means yet fully exhibited. The article on *all to*, a combination hastily made equivalent to "all to pieces," requires to be essentially recast. How, in *all torend*, is *all* "added" to *torend*? That "*all to* became used [*sic*] as an adverb" is a fact of no relevance to *all tobrake* in Judges; as to which it certainly ought to have been pointed out that the ordinary reading, *all to break*, is simply some wiseacre's alteration of it. Moreover, Shakspere's *tobless* and *topinch*, unpreceded by *all*, disprove the assertion that, "by the time of Spenser, *all* was invariably joined with [*sic*] *to*." Concerning *bank*, applied to earth, we would ask, in what part of the world the word is "now used only of the ground by the side of a river"? *Caul* is not, in the Bible, restricted physiologically, as it is laid down to be, to the sense of "pericardium." In connection with *chapman*, the outworn phrase *good cheap* is wrongly accounted for. *Coast* was of old often one with "region," as well as with "any border-land." *Deceivableness*, for "deceptiveness," was not "rare" in the literature of bygone ages, as is evident from more than twenty quotations for it which lie before us. To say that *lewd* now signifies "vicious" might be

taken to imply that lying and other kinds of naughtiness belong to a different ethical category. *Morian*, it should have been distinctly noted, has been replaced by *Moor*. *Nephew* was not formerly, among the designations of direct descendants, in all cases "grandson," with which alone it is represented as synonymous in the Bible. *Once* is explained by "sometime" (*sic*); and *sometime* by "once." And who now ever uses the antiquated *sometime* otherwise than of the past? The substantive *quarrel*, in the passage of Colossians which is particularized, is not "complaint," the marginal lection, and that preferred by the author's fellow-revisionists, but "matter, cause, or ground of complaint." *Do*, as in "we *do* you to wit," is overpassed in its alphabetical place; and no cognizance is taken of the factitive *have* in "*have* me excused." But, though tempted to go on with minutiæ such as these, we must hold our hands.

Markedly deserving of all praise are the articles on *away with*, *ceiled*, *cockatrice*, *commune*, *frontlets*, *froward*, *jeopard*, *runagate*, *seem*, *shrewd*, *stomach*, *stomacher*, and *surfeiting*. *O si sic omnia!*

Notwithstanding what has been effected by Mr. Booker in his 'Obsolete Scripture Words,' by Messrs. Eastwood and Wright in their 'Bible Word-book,' by Mr. Davies in his 'Bible English,' and by Dr. Lumby in his 'Glossary,' a kindred work of wider scope than any or all of them, and of thorough practical utility, especially for the young, still remains a desideratum. Not in our century, at all events, will King James's Bible be transferred from the table to the bookshelf, as an antique curiosity. Looking to its manifold obscurities, assistance should therefore be devised for all, in the way of rendering its language completely intelligible, which, to the multitude and even to most scholars, it is far from being at present. Indeed, we venture to say that not one English-speaking person in a hundred thousand can, without very special study, read half a dozen consecutive chapters of it without being stumbled by archaisms, or without being unconsciously misled by them. Yet the case would indisputably have been otherwise, except for an unfortunate prepossession on the part of its executants in favor of superannuated phraseology; a thesis which, by the by, for its promise of ungarnered and interesting fruit, may be commended to the aspiring philologist, who would select a line of nice investigation hitherto well-nigh wholly neglected, and who is minded to gird up his loins for persistent and vigilant toil.

RUSKIN'S ARROWS OF THE CHACE.

Arrows of the Chace. Being a Collection of Scattered Letters Published chiefly in the Daily Newspapers, 1840-1880, by John Ruskin, and now Edited by an Oxford Pupil. With Preface by the Author. Vol. I. Letters on Art and Science. Vol. II. Letters on Politics, Economy, and Miscellaneous Matters. New York: John Wiley & Sons. 1881.

It is inevitable that any one who now undertakes to form a candid opinion of what comes from Mr. Ruskin's pen should approach the subject in a spirit quite different from what Mr. Ruskin would think fair or right. When he began to write, notwithstanding the hostility with which he met, he had certain advantages on his side in the condition of criticism itself which were sure in the long run to tell in his favor. It was an epoch when, for a variety of reasons, the literary faculty as such counted for more than it does now; and Mr. Ruskin has always possessed what some of his imitators would call a very precious literary faculty. The early part of this century was distinguished by the appearance on the scene of a number of men gifted with a marked facility and power of expression, the nature of whose influence upon their contemporaries we now find it often difficult to understand. To take but two examples, Carlyle and Emerson: both exerted in their prime an influence which bears no comparison with any moral literary force that we can now discover in any quarter, and yet it is impossible for us to conceive of their exerting the same influence now, were they to begin their work over again, upon anybody. We do not speak of Emerson's poetry nor of Carlyle's historical pictures—for these alone are to be judged by purely literary standards—but of the didactic writing by which they gained and fixed public attention. Why was it that their teaching so aroused and moved their contemporaries, while it so often leaves us cold and puzzled? It must have been in some measure because with the public of their day the possession of the power of expression carried a much greater *auctoritas* with it, apart from the value of the matter expressed, than it would now. The progress of positive methods of thought has in the last fifty years done a great deal to produce a change. When Mr. Ruskin began to write, the mere fact that he could write vigorous and impressive and poetic English would have been of itself almost enough to equip him as an art critic; and if he subsequently fell into the mistake of supposing that he was by the same fact qualified to instruct the public in military science, railroads, strikes, wages, arbitration, cooperation, or anything else that happened to attract his attention for the moment, his experience of the public gave him a sort of right to assume that it would continue to listen.

Of course his equipment as an art critic consisted of a great deal more than his literary faculty, and he did so much for the development of sound artistic taste in England that the world owes him a profound debt of gratitude; but so far as his public was concerned, they were from the moment he had secured their ear completely under the influence of his power of expression, and they followed him blindly wherever he led, regardless of logical consequences. This has produced, too, upon him the same effect that it has had upon many other reformers. In the first instance meeting with violent opposition, and having after a stout struggle succeeded in silencing his enemies and obtaining a following of disciples, he seems to have come to the conclusion that opposition is a kind of test of truth, and that his holding unpopular opinions on any subject is a proof that they are probably correct. The volume before us is full of indications of this, sometimes very amusing, even to one who puts the highest value upon Mr. Ruskin's labors in the cause of art reform; but no single illustration could be so striking as the following comprehensive remark in his preface: "Here are a series of letters ranging over a period of, broadly, forty years of my life, most of them written hastily, and all in hours snatched from heavier work; and in the entire mass of them there is not a word I wish to change, not a statement I have to retract, and, I believe, few pieces of advice which the reader will not find it for his good to act upon." When we consider that the letters touch upon almost every variety of topic, both those of which Mr. Ruskin is qualified to speak and those of which he knows little or nothing, and further, when we recollect how exactly opposite is the feeling generally inspired by the re-perusal of old letters to that which Mr. Ruskin expresses, it seems impossible to explain his statement except in the way we have suggested—that what carries this settled conviction of the value of every word he utters home to him is the opposition it excites.

The present volumes are fragmentary in the character of their contents, and deal with such a variety of subjects that they present the author to us less as an art critic than as a general teacher. It would be unfair to base an estimate of the value of his æsthetic writings upon the letters contained in them. Nevertheless, we may say in passing that they bring out in a stronger light than any of his larger works the curious fact that while he has at bottom a singularly fixed and individual standard of taste, his analysis of the æsthetic principles on which this taste is based is fluctuating, generally contradictory, and often unintelligible. This is a matter, of course, about which it does not require an artistic education to form an opinion. It may be tested by the ordinary rules of reasoning. We have only space for a single illustration.

In a letter on Art Criticism written in 1843 (vol. i., p. 14) he says:

"The public, when referred to with respect to a particular work, consist only of those who have knowledge of its subject, and are possessed of the faculties to which it is addressed. People continually forget that there is a *separate* public for every picture and for every book. . . . With reference to a new edition of Newton's 'Principia,' the 'public' means little more than the Royal Society; with reference to one of Wordsworth's poems, it means all who have hearts; with reference to one of Moore's, all who have passions; with reference to the works of Hogarth, it means those who have worldly knowledge; to the works of Giotto, those who have religious faith. . . . We listen to no comments on Newton from people who have no mathematical knowledge; to none on Wordsworth from those who have no hearts; to none on Giotto from those who have no religion."

Now, it is obvious that Mr. Ruskin here confounds, in what, in any one else, we should call a most sophistical manner, authority in matters of science with authority in matters of taste. There are certain tests by which it can be ascertained who have mathematical knowledge and who have not, and it is perfectly true that the "public" in the case of a new edition of Newton's 'Principia' is a small and well-defined one; but poetry and painting are not collections of facts and laws which can be verified and demonstrated according to sentimental, or pathetic, or religious, or worldly tests. If one person holds himself out as a competent critic of Wordsworth, and another denies his competence on the ground that he "has no heart," the critic may fairly reply either that he has a heart, in which case there is obviously no way of deciding what lawyers call the issue presented, or he may take the ground that, though he has no heart, he has something else, as, for instance, a knowledge of versification, which will make what he has to say about Wordsworth worth listening to. In reality, in this case as in many others, Mr. Ruskin has converted what was originally a valuable critical suggestion into a universal law, and in the process made it seem absurd.

An examination of these volumes, extending as they do over forty years of the author's life, will make any one hesitate to say that Mr. Ruskin's peculiarities have increased with the lapse of time as much as might have been expected. There are in his later letters a good many passages characterized by an amusing extravagance. It is impossible not to be startled at being informed, *apropos* of Macaulay's certainly innocuous remark that "the giants of one generation are the pigmies of the next," that Macaulay's mind "swelled like a puff-ball in an unwholesome pasture, and projected itself far round in deleterious dust"; and it is amusing to learn that the reason why we have never had an opportunity of giving Mr. Ruskin a hospitable welcome to the United States was because he "could not, even for a couple of months, live in a country so miserable as to possess no castles."

On the other hand, the following passage with regard to heroism, written in 1870, though it will be set down as extravagant by many people, will be held by others to contain a piece of profound wisdom :

"The wonder has always been great to me that heroism has never been supposed consistent with the practice of supplying people with food or clothes, but only with that of quartering one's self upon them for food and stripping them of their clothes. Spoiling of armor is an heroic deed in all ages ; but the selling of clothes, old or new, has never taken any color of magnanimity. Yet one does not see why feeding the hungry and clothing the naked should ever become base businesses, even when engaged in on a large scale. If one could contrive to attach the notion of conquest to *them* anyhow ? So that, supposing there were anywhere an obstinate race who refused to be comforted, one might take some pride in giving them compulsory comfort, and, as it were, 'occupying a country' with one's gifts instead of one's armies ? If one could only consider it as much a victory to get a barren field sown as to [get] an eared field stripped, and contend who should build villages instead of who should 'carry' them ? Are not all forms of heroism conceivable in doing these serviceable deeds ? You doubt who is strongest ? It might be ascertained by push of spade as well as push of sword. Who is wisest ? There are witty things to be thought of in planning other business than campaigns. Who is bravest ? There are always the elements to fight with, stronger than men, and nearly as merciless."

There are many curious points of parallelism between the careers of Carlyle and Ruskin, particularly in their attitude towards public affairs and political economy. These volumes are full of letters which bring out in a striking way the latter's Toryism and his comically ferocious hostility to economical science. In most cases we should say it was glaringly inconsistent for any one holding the views we have quoted above on the subject of heroism to come out as a defender of Governor Eyre's proceedings in Jamaica, and it is difficult now even to understand the line of argument by which Mr. Ruskin satisfied his mind that Governor Eyre deserved his support. He says that he dislikes slavery, but believes that "white emancipation not only ought to precede, but must by law of all fate precede, black emancipation." The whole passage deserves notice, as an extraordinary illustration of what may pass for argument in a time of great public excitement :

"I much dislike the slavery, to man, of an African laborer with a spade on his shoulder ; but I more dislike the slavery, to the devil, of a Calabrian robber with a gun on his shoulder. I dislike the American serf economy, which separates, occasionally, man and wife ; but I more dislike the English serf economy, which prevents men from being able to have wives at all. I dislike the slavery which obliges women (if it does) to carry their children over frozen rivers ; but I more dislike the slavery which makes them throw their children into wells. I would willingly hinder the selling of girls on the Gold Coast ; but, primarily, if I might, I would hinder the selling of them in Mayfair. And, finally, while I regret the need that may exist among savages in a distant island for their governor to do his work sharply and suddenly on them, I far more regret the need among men of race and capacity for the work of governors when they have no governor to give it them."

Mr. Ruskin's impatience with political economy is to be traced partly to the same source with Carlyle's—the feeling that a science which professes to be based on general, ascertained laws regulating man's action implies a curtailment of man's free agency, and seems in so far an impious and immoral science. In Mr. Ruskin's case, however, this seems to be complicated with an æsthetic feeling that in an ideal state of society, which his conservatism leads him to believe once existed on earth, exchanges, rents, profits, etc., were governed not by economic but by moral laws ; so that political economy represents a real moral decline, the disappearance of primitive Arcadian simplicity and fair-dealing. In a curious letter on strikes and arbitration, he admits that it is of course right to arrange all one's business with reference to one's own interest ; but what, he enquires, will be the practical difference between self-interest, rightly understood, and "the old and simple conscientious" way of life ? "In those bygone days," he continues, in a strain which cannot but be comical to any one who recollects what the labor system of those bygone days really was—"in those bygone days, I remember, one endeavored, with such rough estimate as could be quickly made, to give one's Roland for one's Oliver. If a man did you a service, you tried in return to do as much for him ; if he broke your head, you broke his, shook hands, and were both the better for it. Contrariwise, on this modern principle of self-interest, I understand very well that if a man does me a service I am always to do the least I can in return for it ; but I don't see how I am always to get more out of him than he gets out of me." There can hardly be much wonder that a man should be, as Mr. Ruskin says he is, a "king's man," who really believes in this picture of the difference between "those bygone days" and the present time.

Mr. Ruskin has unquestionably greatly weakened his influence even as an art-critic by his extraordinary excursions during the last ten or fifteen years into non-æsthetic fields. Nobody who feels the force and beauty and moral elevation of much of his writing can help regretting that the fatal gift of expression should have misled him into attempting to deal with subjects with which he is totally unfamiliar.

Domestic Folk-Lore. By the Rev. T. F. Thiselton Dyer, M. A. [Cassell's Popular Library.] New York: Cassell, Petter, Galpin & Co. 1881.

PERHAPS the most impressive lesson of a comprehensive survey like this is the impertinence of using any tense but the present in writing the history of the human mind. One hopes, indeed, that the tense is misused when he reads that in Ireland "the peasants often place the [idiot] child supposed to be a changeling on a hot shovel, or torment it in some other way," to force the fairies to restore the true offspring ; but similar barbarities are reported in the Western Isles of Scotland and in Denmark, and somewhere in the wide world we may be sure the darkened intellect is capable of them. Now and again some British trial reveals the persistence and currency of superstition among the vulgar, but the most respectable and intelligent classes are hardly themselves conscious how much their daily life is governed by traditions of signs and omens, lucky and unlucky, that would do no discredit to Fiji Islanders. The most universal, if not the most senseless observance, that of days and seasons, is in well-nigh undiminished force. We may smile at a certain great-grandmother who used to cut her nails on Friday to avoid the toothache, but not all would find as ridiculous her rule never to begin on Friday any work, like the making of a garment, that could not be finished the same day ; and how many would indifferently set sail or be married on Friday ? Mr. Dyer tells us that May marriages are really few in England, because "Marry in May and you'll rue the day," says the proverb ; and who can doubt that this jingle is to some extent heeded among us, who are not unfamiliar with it ? The custom of covering the mirrors at funerals prevailed here in the early part of the century, and probably may be still met with ; while it is safe to say that in every community the breaking of a looking-glass is by somebody regarded as a sure presage of death or misfortune. The superstition about thirteen at table has the sanction of the wisest and the best. To discover a thief by suspending a Bible by a key would not be practised in polite society ; but divination by "dipping" might turn up in almost any pious family. "Dipping" means, in England, to open the Bible and consult it at random on New Year's Day or Eve, in order from the passage hit upon to forecast one's lot for the coming twelvemonth ; and it is clearly of a piece with the more common variety, to which Robinson Crusoe resorted in his doleful moments, viz., the application of a casual text to one's present condition. One of the most curious survivals that we have been cognizant of is the scrupulousness of the monthly nurse about taking the new-born infant *up-stairs* before letting it be taken down-stairs. We know two young men, one of the adult and the other of the rising generation, the former of whom was taken into the garret by his nurse (to make him high-minded, as she declared ; to prevent his always keeping low in the world, as Mr. Dyer explains it) ; and the latter would have been if the house had had a garret, a defect very distressing to the nurse.

This little book enables us to understand without difficulty the possibility of the witchcraft mania. It reminds us that our forefathers brought over with them the whole range of superstitions which Mr. Dyer here displays under the heads of Birth, Childhood, Love and Courtship, Marriage, Death and Burial, The Human Body, Articles of Dress, Table Superstitions, Furniture Omens, Household Superstitions, Popular Divinations, Common Ailments, etc. Dr. William Bentley, of Salem, Mass., records in his diary, under date of February 16, 1802 :

"An inhabitant of Salem, and descendant of the Skerry family, assured me it was a tradition in the family that her great-grandmother, the first of the family that came to Salem from Yarmouth, always swept her hearth and set a pail of water upon it before she went to bed, for the fairies. This may be easily believed."

It may also be readily believed that this prudent old lady shared Mr. Wesley's notion that "the giving up witchcraft is, in effect, giving up the Bible"; and, what is more, the victims of the delusion of 1692 had fundamentally the same belief in it that their persecutors had—they merely complained of the attribution to themselves of hellish compacts and performances, the reality of which in a world given over to the devil they were far from disputing. So that when, as in accompanying Mr. Dyer in his pleasant excursion, we perceive the "evil eye" and "hand" for which Giles Corey and George Burroughs perished, to be an indistinguishable part of the inheritance that embraces charms for warts and looking at the moon over the right shoulder, we are made aware, as we began by saying, that the historian of the human mind needs no other than the present tense.

A Treatise on Comparative Embryology. By Francis M. Balfour. Vol. II. London and New York : Macmillan & Co. 1881.

THE immense progress made by embryology of late years can best be measured by a comparison of Balfour's work with the 'Lectures on Comparative Embryology' published by Agassiz in 1848. The time is not very distant when embryological monographs numbered less than a score ; the bibliography given by Balfour enumerates no less than nine hundred memoirs, and it is by no means complete, since many of the older monographs which do not treat of the germinal layers, and others mainly devoted to postembryonic development, have unfortunately been omitted. In fact, the great fault we have to find with this handbook is that it is too com-

pletely devoted to the history of the germinal layers, and that the author apparently loses interest in his subject when dealing with the later stages of development.

The second volume is more strictly within the special field of the author, as he has himself contributed his principal additions to embryology in the vertebrates, and has had occasion, as Forster's collaborator in the 'Handbook of Embryology,' to verify a very considerable number of facts respecting vertebrate embryology. The general developmental history of the chordata is followed by three chapters on systematic embryology, the balance of the work being devoted to organogeny. The bibliography is collected under different headings at the end of the volume; and while we cannot but admire the judicious subdivision of the subject, it necessarily introduces a frequent duplication of titles, some of the general works being repeatedly named without definite quotations. The author is evidently somewhat partial to English and German embryologists; French, Italian, American, and even German memoirs of as great importance as those quoted are often omitted. Although Baer and Reichert have taken a very different view of the meaning of the embryology of Ascidians from the current one, yet in a work chiefly made up of analyses of original monographs their views certainly deserve to be quoted quite as much as the more recent but unintelligible memoir of Todaro. The views of Wyman, Martins, Wilder, and Morse on the morphology of the limbs are fully as important as those of Thatcher (spelled Thacker by Balfour). It is true the latter have been introduced to the British public in a prominent English periodical; the former have not. The memoir of Cornalia on the embryology of Selachians is certainly of greater importance than many of the short papers quoted by Balfour. Some of the most prominent memoirs on the development of fishes are also omitted. We hear nothing of Quatrefages, of Dareste, of Sundevall, of Forchhammer, of Carus, of Kölliker, and of Duvernoy; and certainly Balfour cannot escape criticism of his bibliography when he mentions only two memoirs by Hertwig on the development of the scales of fishes, and says nothing of Nitsche when writing on feathers. As he must of course, while writing these volumes, have gone over the whole of embryological literature, these deficiencies are annoying, and it is often difficult to imagine the reasons which have led him to quote certain things and to omit others. We are sorry to notice also that Balfour has followed a practice which is becoming very common in writers of text-books: he introduces, for instance, illustrations borrowed from Gegenbaur, who originally copied them from Calberla, in such a way as to leave one in doubt which is the original figure. It may be very convenient to borrow woodcuts from a text-book, but surely an acknowledgment in the preface is becoming, and the legend of the cut should be such as to leave no doubt of its original source.

These volumes would gain in their usefulness were the phytogenetic guesses they contain printed in a chapter by themselves; they add nothing to its accuracy or completeness, and merely confuse the student; they belong with the chapters on the origin of the germinal layers, on the types of larval forms, and on the ancestral forms of the chordata. Among the chapters on organogeny we would specially call attention to those on the nervous system and on the development of the skull; they are admirable sketches of the present state of our knowledge of those subjects. These volumes will remain for some time the basis of future hand-books of embryology. From the author's standpoint the treatment is very thorough, and it would be an easy task in subsequent editions to cover that part of the field which on account of his special studies the author has somewhat neglected.

Le Forme Primitive della Evoluzione Economica. Di S. Cognetti de Martiis. Turin: Ermanno Loescher. 1881.

PERHAPS no country in Europe is more interesting at the present time, whether from a political or literary point of view, than the new kingdom of Italy. What is to be the effect on the national life of the change in the last twenty years from a number of petty despotisms to one constitutional government of the whole? At the time of the revival of classical learning in the middle ages the universities of northern Italy were among the most celebrated and the most frequented in Europe. But civil wars and foreign and ecclesiastical dominion almost extinguished the name of Italian literature. In the department of fiction, the one first-class novel, Manzoni's 'Promessi Sposi,' only gives effect to the general darkness, though Massimo d'Azeglio, among so much else which he did for his country, did not neglect the field of historical romance. It is not unnatural that, after long and severe restriction of the press, the first movement of freedom should take the direction of bold scientific speculation; and the lounger in Italian book-shops cannot fail to be struck with the number of works upon medical and other subjects of natural science, upon jurisprudence, and metaphysics.

The work of Professor de Martiis can hardly be said to advance any very new or original propositions. It is rather to be described as a clear and erudite presentation of what has been achieved in the investigation of the bases of human society from the economical point of view. It begins with the argument of Aristotle that, apart from the generative function, which is common to all animals, and tends to the reproduction of life, there is an economic function which tends to the preservation of it; and the various developments of this are discussed with special reference to the ant and the bee, to the former of which Sir John Lubbock has of late given such careful attention. But apart from this economic *function*, with its immediate instruments provided by nature, Professor de Martiis distinguishes what he calls the economic *fact*—that is, the indirect agencies developed, whether by instinct or intellectual power; and it is the relations and differences in these between men and animals, and between different races of men, which form the main subject of the book. An extensive range of enquiry takes in all those nations and peoples which, by reason either of antiquity or distance from the civilized centre, throw light upon a comparison of development. The Chinese, the Chaldeans, the Egyptians, the Aryans, the Aztecs of Mexico, the Mayas of Central Africa, and the Incas of Peru, on the one hand, the Esquimaux, the tribes of Africa, and those of the Pacific Islands, on the other, are brought into review. The comparison embraces nearly all the relations of social life, especially the condition of woman, the state of slavery, the tenure of land, and, above all, the element of exchange or trade, which De Martiis regards as the chief economic *fact* distinguishing man from the other animals. The trade of the Assyrians and Babylonians was conducted by caravans, and, as they inhabited an inland country, it was peculiarly exposed to the attacks of robbers, and they were thus led, by the same cause which operated centuries later in modern Europe, to the invention of bills of exchange. Professor de Martiis gives us the text of a mortgage deed, of promissory notes, and of bills of exchange, of which the originals date from five centuries before Christ.

Like all comprehensive treatment of scientific subjects, the book has a kind of bewildering fascination for the general reader, while special students of the writings of Darwin and Spencer, Maine and Max Müller, Humboldt and Schweinfurth, will find in it much of new and special interest.

BOOKS OF THE WEEK.

*IN any family, whether large or small, but es*pecially where the number of children is large, a record of the constitutional peculiarities of each one, and the whole course of its physical development in sickness and in health, is certain to be instructive and may prove invaluable. Such a record is Professor J. B. Fonssagrives's 'Mother's Register,' consisting of a series of tables scientifically arranged for brief and convenient entries. A separate volume for boys and for girls. Price, post-paid, 75 cents per volume, or $1 25 for two volumes. Address PUBLISHER OF THE NATION.

The Nation.

NEW YORK, THURSDAY, SEPTEMBER 22, 1881.

The Week.

PRESIDENT GARFIELD'S death on Monday night apparently took the doctors somewhat by surprise, as they did not look for it for some days. It was immediately preceded by so much prostration that it came as a happy relief. The autopsy, which was made on Tuesday, illustrated strikingly the defectiveness of the materials on which medical diagnosis has to be made. The bullet was not found where it was supposed to be, and had gone in an entirely opposite direction to the one the doctors supposed it to have taken. After breaking the eleventh rib, it had turned to the left, and not, as was believed, to the right, breaking some of the spinal vertebræ; and the channel to the right, which the doctors were all along probing as the real wound, was a cavity formed by pus. There was a great deal of suppurating surface, and several abscesses, but none in the lungs or liver. Nor was the immediate cause of death neuralgia of the heart from exhaustion, but great internal hemorrhage from one of the mesenteric arteries, rupturing the peritoneum. These discoveries throw no discredit on the physicians, of course. They simply illustrate strikingly the enormous difficulties in the way of building up a medical science on observable symptoms, there being for every symptom so many possible and widely differing causes. It seems now plain enough that President Garfield had no chance of surviving from the first, and plain enough, too, that nothing but a constitution of extraordinary power would have enabled him to survive as long as he did. It is the kind of constitution which seems almost necessary to a man who is to rise high in the world from small beginnings. Much work, and valuable work, has been done by men with feeble physique, but the work of pushing one's way to the front seems to be but rarely performed except by persons with much vitality and a vigorous digestion. He is said to have suffered much from dyspepsia in late years, but it must have been in late years only, and was probably all along what to most men would have been eupepsia.

The manifestations of sorrowing sympathy which have come in from all parts of the English-speaking world, form a very striking phenomenon. The late President's struggle for life seems to have been followed with almost as much interest and anxiety in England as here. The Queen in particular has been most cordial in her expressions of sympathy with Mrs. Garfield, and Mrs. Garfield's one published response to the Queen's enquiries was strikingly characterized both by good feeling and good taste. It was in its way a model composition, if we may say so of anything written under such circumstances. The way in which the Southern press has shared in the general anxiety and mourning is one of the most gratifying and hopeful incidents of the tragedy, and would, even if it stood alone, go far to warrant the assertion that President Garfield had not died in vain.

The fact that only one life—that of the Vice-President—stood between President Garfield and a deadlock in the Government excited some comment during the earlier days of the late President's illness. As time wore on and some encouragement was gained that he might recover, or that his life might be protracted till Congress should meet in regular session, the subject was dropped as by common consent. It now becomes a matter of much moment to know what would happen in the event of President Arthur's death. The succession *pro tempore* would devolve first upon the presiding officer of the Senate, if there were any such officer, and afterwards upon the Speaker of the House of Representatives. But it happens that there is no presiding officer of the Senate and no Speaker of the House. Consequently, in the event of the new President's death before these offices are filled, there would be no regular way of assembling Congress prior to the time fixed for its annual meeting. Possibly no harm would come of an absolute interregnum of a few weeks, but it is best not to take any chances of consequences which cannot now be foreseen. It has been observed in the discussion of the inability question that lawyers of reputation have taken the most widely diverse views, and there would probably be no greater accord upon the question now before us. Undoubtedly President Arthur and the existing Cabinet will give the subject their earliest attention. It is to be observed that an extra session of Congress is not necessary to provide for the emergency—an extra session of the Senate being sufficient for the present purpose.

We are very glad to hear that Sergeant Mason's offence is to be left to be dealt with by the military authorities. If they are wise they will not palter with it. They do not need to be lectured by civilians about the value of discipline: they know all about that. But there is one point on which they may possibly deceive themselves. The army is, for reasons which we shall not enter on here, an object of great dislike to a certain class of politicians, and the feeling is shared by a considerable portion of the public. Its best defence against this dislike has been, not the services it renders—for not one American in a thousand has any knowledge or experience of these services—but the respect inspired by the popular belief that the army was at least a fine military machine, and that the regulars could be counted on in all emergencies to obey orders. If this belief should be shaken, the army would become an object not simply of dislike but of contempt, and all classes would join in desiring its abolition. Sham soldiers are something that nobody will put up with. Nothing could do more to shake this belief than lenient treatment of such an offence as Sergeant Mason's. If a sergeant of the guard may take a pot-shot through a jail window at a prisoner, on the ground that he dislikes extremely the prisoner's offence, and get off easily because the public shares his dislike, it will be impossible hereafter to convince any one that the army can be relied on by the Government. Moreover, we would warn army officers that those civilians who are now loudest in applauding Mason and wishing him to escape punishment would be foremost also in despising and deriding a service in which such crimes as his could be committed with impunity. The business of the court-martial will, therefore, be to take care of the army, by making disobedience of orders terrible.

News has been coming in for some time past that Federal officers in Virginia are being removed for refusing to "act with Mahone and the Readjusters." At least three such cases are already reported, one that of a negro revenue officer, and the general expectation in Virginia is that others are to follow. Most of the "decapitated" officers are in the service of the Treasury Department, which is the more singular as Mr. Windom has been announced as one of the recent official converts to civil-service reform. What "acting with Mahone" is, we do not exactly understand, but we presume it means performing the usual political work in his interest. But whatever it means, there is no question that the use of Federal offices to coerce anybody either into supporting or opposing him is a gross abuse, and is none the less mischievous because it happens just now to be confined to one State. To turn a man out of his office because he refuses to support your candidate is as much corruption and "intimidation" as to turn him out of his house, or even to take him into the woods and give him a whipping. Many a man would probably sooner be whipped than lose the salary by which he supports his family. It cannot be too often repeated that in this matter the Government rests under even stronger moral obligations towards American polity than any private employer. A private employer who uses his power over his dependents to attack that fundamental principle of American polity, the freedom of the voter, can at least plead his right to do what he likes with his own. But a Government officer who uses his patronage to coerce his employees is not doing as he likes with his own; he is abusing a trust, and he is abusing it for the corruption and demoralization of the *cestui que trust*.

The good, if any, that may come out of Mahone's success has, for those who profess to be civil-service reformers, nothing to do with the duty in the premises of the head of a department. Reformers, and especially official reformers, cannot be reminded too often that they are not simply engaged in introducing a better system of appointments, but in introducing a system which public opinion will compel Democrats, when they come into power, to respect and uphold.

No system which is partial, that is, which means reform in Washington or New York and "spoils" in Virginia, which, while making the department clerk a real Government servant, treats the country collector or postmaster as a political "worker," can ever exact this Democratic respect and maintenance. Such occurrences as the anti-Mahone dismissals in Virginia will be used to excuse disregard or repudiation of the competitive system in the post-office and custom-house here, and the excuse to the great body of the ill-informed or indifferent will seem sufficient. The consequence will be that the first time there is a change of administration everything in the reform which in the least depends on discretion will disappear, and probably disappear amid much popular laughter.

At the dinner of the Aztec Club at Philadelphia last week General Grant nominated General Hancock for president of the society for life in place of General Robert Patterson deceased. We do not know what are the qualifications for this distinction, but we should suppose that a person who is said to have been accused by General Grant of using his military and official position to promote a swindle on the people of Louisiana by the issue of fraudulent levee bonds would not be the right man to receive the highest honors of the Aztecs. Perhaps General Grant is satisfied that General Hancock has been vindicated, and is determined to stand by him while "under fire."

The New United States Senator from Nebraska, Mr. Van Wyck, has been discoursing on various matters at a State fair in Chicago. He touched on civil-service reform among other things, and is reported by the telegraph as having expressed hostility to "the project of modern civil-service reformers," and preference for "business qualifications" over "competitive examinations." The Senator evidently belongs to the school of politicians, now nearly twenty years old, who have been from the beginning friendly to civil-service reform, but utterly opposed to any "particular measure" of reform. Many of our readers must remember the amusement which the antics of these gentlemen in the early Grant days used to excite, and their stern determination to have the service reformed, combined with utter distrust of any plan of reform which the wit of man could devise.

We venture to assert that no uninspired committee, commission or association, or solitary lawgiver or jurist, could draw up a "project" that would satisfy Mr. Van Wyck. He would always say that it looked well on paper, or was very good in "theory," but that when he thought of the way it would probably "work in practice" it made him shake all over with apprehension. Any plan of reform throws these men into a kind of daze, like that which overtook the Duke of Wellington when he read the Reform Bill, and asked plaintively how, if it passed, "the King's Government was to be carried on." Most of them have reached middle or elderly life under the spoils system, and it now seems to them not only as much a part of American polity as the Constitution itself, but as, in a certain sense, part of the order of Nature. They can conceive of the Constitution being amended, and know that it has been amended; but a change in the spoils system—that is, the bestowal of places in the United States service for other things than political "work," and the withdrawal of patronage from Senators—is to them simply unthinkable. It may seem to some that inasmuch as Mr. Van Wyck has expressed a liking for "business qualifications" as a test of fitness for office, we are in these last remarks doing his mind some injustice; but those who think so have not given as much attention to the Van Wyck type of mind as we have. When he talks of "business qualifications," he is simply phrasemongering. He does not propose to have any machinery for ascertaining a man's "business qualifications," to which any one who wished to enter the service could subject himself. What he means is that any man whom he, Mr. Van Wyck, selected for a vacancy in the public service would *ipso facto* possess the needed business qualifications.

Judge Devens of the Massachusetts Supreme Court has rendered a stage-right decision which shows that the judiciary of that State still cling to the local view of the subject which makes a distinction between pirating an unpublished play by memory and pirating it by stenography. Every American court, we believe, outside of Massachusetts, which has been called upon to deal with the subject has come to the conclusion that piracy is piracy, whether it is done by the ear and memory, or by the eye and hand. In England the modern American doctrine of stage-right in unpublished plays is apparently unknown, although it is itself founded on early English decisions. Fortunately the difference between the law in Massachusetts and the rest of the country merely affects dramatic property in Massachusetts. Stage-right is sold very much as patent-rights are, by localities—*i. e.*, a manager buys the right of the foreign author for a given city or number of cities. Boston managers, under the decisions of the Supreme Court, can steal plays as much as they please; but outside the jurisdiction of the Massachusetts courts dramatic property is the best protected literary property in existence.

During the five business days of the week preceding that on which the late President Garfield died the Wall Street markets were quiet. Only $144,500 foreign gold was received in this time, making the total since August 1 $14,658,981, against $21,165,745 received last year between August 1 and September 18. But simultaneously the Sub-Treasury paid out $2,064,843 more money than it took in. The New York banks, however, did not fully maintain their reserves, but are still carrying a surplus ($454,125) above the 25 per cent. limit required from the national banks. Money in London was easy for borrowers throughout the week, and the Bank of England made no change in its posted discount rate—4 per cent.; notwithstanding this the rates here for bills on London were less favorable for gold imports at New York at the close of the week than at the beginning—a circumstance which is chargeable rather to the "bull speculation" in this country in leading exportable articles than to the relative condition of the London and New York money markets. At the Stock Exchange U. S. bonds advanced a fraction for the 4 per cents, on the expectation that the Treasury would soon begin investing its surplus revenues in 3½ per cent. (extended 6 per cent.) bonds, so that the 4's would have a longer life; the latter declined nearer to the price at which the Government will redeem them. Railroad stocks, as a rule, advanced during the time named, in anticipation of a speedy settlement of the railroad war. On Tuesday, when the President's death was made known, this tendency of the stock market to advance was strengthened, the purchases having been made on the theory that an element of uncertainty had been eliminated from calculations, and that the situation, so far as the price of railroad stocks was concerned, was now more than ever under the control of the large speculators who manage some of the leading railroads, and that they would soon end the war. The Stock Exchange on Tuesday was opened for only two hours, and it was voted to close it entirely on the day of the funeral of the President. It is notable, but not surprising, so long had it been feared and expected, that his death caused no excitement or panic at the Stock Exchange. On the contrary, for reasons given, the speculative markets there were "steady" at advancing prices.

Governor Cornell has addressed a letter to the Mayor refusing to confirm the latter's removal of Messrs. French, Mason and Nichols. He says that from the papers submitted it appears that the removal proceedings were begun on April 2d last, and he admits that at that time the Mayor had full jurisdiction, which continued until chapter 677 of the laws of 1872 (imposing the duty of street-cleaning upon the Commissioners) was repealed. He then refers to the clause of the charter which provides that heads of departments may be removed "for cause," and says that this obviously means some "existing cause," while the only cause of removal given in the Mayor's certificate is the neglect of street-cleaning; though the law imposing this duty was repealed on May 26th last. He concludes that this repeal blotted out the old statute, and "cancelled all offences committed thereunder." He adds:

> "The Police Commissioners were charged with separate and distinct duties under two different laws—one statute requiring them to clean the streets, the other to maintain the peace and order of the city. Supposing, instead of being charged with the duty of cleaning the streets, as ex-officio officers, the same persons had held separate offices—one as Commissioners of Street-Cleaning, and the other as Police Commissioners—can it be pretended that under charges of neglect of duty as Street Commissioners they could be removed from the office of Police Commissioners? The cause alleged would only apply to the office whose duties were proven to have been neglected."

We called attention to the farcical character of this argument at the time when it was first produced by the ingenious counsel for the

commissioners on their trial. It is based entirely upon the technical legal doctrine that the repeal of a statute imposing duties, with penalties for their non-performance, wipes out all penal proceedings taken under it. In other words, the right to remove under the charter is a penal proceeding. There is no doubt about the legal rule, nor is there any less doubt of the complete absurdity of this application of it. The object of the charter provision was to enable the Mayor and Governor to remove heads of departments who proved themselves unfit for the discharge of the duties imposed upon them. Now these Commissioners did actually prove themselves so shamefully unfit that the Legislature was forced by prolonged public clamor on the subject to take the street-cleaning out of their hands and give it to some one else. If this proves anything, it proves that they are guilty, and if there is any doubt about it, the Mayor has found them guilty too. But because the Legislature, in order to take away this duty from them altogether, repealed the statutes imposing it upon them, it is not possible to do anything, and the case, according to the Governor, is precisely as if the Mayor had attempted to remove a Police Commissioner for neglecting to perform the duties of Street Commissioner—supposing the same person to hold both offices. If this is the law, most people will probably come to the conclusion, with Mr. Bumble, that "the law is an ass." Unfortunately, the view taken by the Court of Appeals of charter removals is not that they are summary proceedings to get rid of officials who neglect their duty, but are regular lawsuits between them and the Mayor for the right to their offices, in which they are entitled to plead under the code, to be represented by counsel, to introduce evidence, to take exceptions to evidence introduced against them, and above all to appeal to the courts at all stages of the proceeding for writs of relief against any acts on the part of the Mayor which the judges may consider contrary to precedent.

The Virginia canvass has entered on its bellicose stage, in a style which must recall old times to many prominent elderly citizens in that region. The Lewis family, one of whom is United States District Attorney, and who are acting with the Readjusters, have come into collision with the Wise family, who are for Democratic fulfilment of the public obligations. Both are old families, but their present representatives entertain, justifiably or unjustifiably, a very low opinion of each other. Mr. L. L. Lewis says that Mr. G. D. Wise is a "liar," a "scoundrel," and a "fool"; to which Mr. Peyton Wise, G. D.'s brother, replies "absolutely" and not "hypothetically" that Mr. Lewis is a "liar," a "coward," and also a "fool and blackguard," and under each of these general charges he submits specifications. They have since fought a bloodless duel, and the question comes up, as it always does in such cases, What effect has this on the charges? Were they eternally true, or only true till the fight, and are they now untrue?

The Irish National League Convention owes some of the attention it attracts to the fact that it is the first representative assemblage which has met since the repeal of the Convention Act, which long made all voluntary representative political associations illegal. It was this act, and this only, which prevented O'Connell from setting up an amateur Irish Parliament in Dublin, which would probably have secured more cheerful obedience than the legal Parliament in London. In fact, if all parties in Ireland could now agree to elect such a body, for the discussion of Irish affairs, it would test English respect for liberty of speech and association to the utmost, for it would put the Union in greater peril than it has yet encountered. But it might also, if conducted with temperance and moderation, powerfully influence English opinion in the direction of leaving Irish affairs in Parliament to Irish members.

The Convention resolved to try, or as they prefer to call it "test," the Gladstone Land Bill, but this is about all that it accomplished, although there was much speech-making. The organization is placed in a very awkward position by the fact that it is dependent for its funds almost wholly on the Irish in the United States. These American subscribers are desirous of a much more vigorous policy than the Irish at home, who would have to carry it out. It is much easier to pay another man a dollar for rising in revolt than to keep your money and rise yourself. The American-Irish demand not only the confiscation of the whole Irish soil, but the separation of the island from political union with Great Britain as the price of their subscriptions, and the Irish at home naturally feel that the job is too big a one at that price, so they decline to commit themselves formally to these extreme measures. Attempts to revive a national industry by taking vows to wear native cloth are among the melancholy comicalities of history, and there is one going on in Ireland just now which the Land Leaguers have tried to foil. But they are matching it with an attempt of their own which is equally childish, by taking vows not to wear English goods. No great political end was ever accomplished yet by putting on or leaving off particular brands of clothing, or forswearing particular kinds of victuals. These are among the cheap and nasty substitutes for the unyielding courage and unconquerable will which alone make revolutions.

Mr. Forster has definitively refused to release the Irish prisoners held under the Coercion Act, on the ground that if he did there would be fresh outrages. But as a matter of fact the Coercion Act and the arrests under it have not sensibly diminished the outrages, which to most minds is the same thing as saying that the Act has proved a failure, and that therefore, as long as it is enforced, it must prove a cause of irritation and furnish Parnell with ammunition in his attempts to dissuade the malcontents from accepting the Land Bill as a settlement. There is in the tenacity with which the Cabinet clings to the Coercion Act in spite of its ineffectiveness, a great deal of that devotion to principle irrespective of consequences which Burke described as so ridiculous in politics. The Coercion Act is now really enforced very much as the American taxation was by Lord North—not as something which will pacify Ireland, but as something which the English people owe to their own dignity and respectability. When there is trouble in Ireland most Englishmen feel that it is due to the rank of the Government to suspend the habeas corpus, and that if this does not quiet the Irish it is because they are so perverse.

The treatment of the "Fair Trade" movement in England by the Trades-Union Congress gives a tolerably good idea of the way the working classes generally, and especially the more intelligent portion of them, look at it. The "enthusiastic" cheers which are said to have greeted the president's mention of "the nonsense of protection," and the resolution turning out of the convention certain delegates, who had worked their way in with the view, it is said, of advocating the new gospel, shows how rash it was to treat the recent triumph of the Conservative candidate, Mr. Ackroyd, at Preston, as a sign that the English artisans were turning their backs on free trade. The very fact that "reciprocity" was to begin by taxes on food, ought to have been enough to settle the fate of the agitation in the eyes of everybody who knew how small is the proportion of the British population engaged in agriculture, and how large the proportion whose industry is absolutely dependent on the cheapness of food. A protectionist movement which proposed to do nothing for the farmers, might have some chance of favor in the manufacturing districts, but the farmers are the very class which the Fair Traders are compelled to affect most concern about in order to make any show of political strength. Curiously enough, however, they do not even seem to hold the farmers, for at a meeting of the Committee of the Farmers' Alliance in London a resolution has been passed condemning the reciprocity movement as likely to be, if successful, injurious to agriculture. The truth is that one of the great objects of its promoters is to stave off or divert attention from a radical treatment of the land question in England.

The announcement that the French Government has agreed to prolong the present Treaty of Commerce for three months in order to allow time for further negotiations for its renewal, makes its renewal almost certain. There is little doubt now that M. Tirard's peremptory attitude was due to his belief that the English would give way on the question of specific duties sooner than risk a total breakdown in the negotiations. But the more the matter was debated in France the more serious the crisis seemed for French trade, which is much more dependent on England than English trade is on France. Moreover, the more the matter was debated in England, the more hostility to any renewal of the Treaty was revealed. The Free Traders, pure and simple, began to oppose it because it was a violation of their principles to make any treaty at all, and the Fair Traders opposed it because it did not exact enough from France in return for the concessions made to her.

SUMMARY OF THE WEEK'S NEWS.

DOMESTIC.

PRESIDENT GARFIELD died on Monday evening, at about half-past 10 o'clock. His death was sudden, though the physicians must have been expecting it to occur at any time during the past week. The despatches of Mr. Blaine and latterly Mr. MacVeagh to Mr. Lowell have been the record of a case slowly but surely proceeding to a fatal termination. The official bulletins have been in the main, so far as non-professional readers were concerned, either non-committal or incomprehensible; while the daily talks of Dr. Bliss with the reporters have during most of the time been those of a physician rather confident of recovery. The history of the case during the last week was as follows: On Wednesday the bulletins announced that the President had passed the night comfortably, sleeping sufficiently, and that he was "bright and cheerful" in the morning. He sat up in an easy chair for an hour and a half in the afternoon, and was "not fatigued by the transfer or change of position." Notwithstanding a rise in temperature towards the end of the day, Mr. MacVeagh at its close was able to telegraph to London that if he had gained nothing, he had probably lost nothing either. On Thursday he was again reported as having had a comfortable night, and the physicians added: "In reviewing the case of the President since his arrival at Long Branch, it may be said that in spite of the various septic accidents which have for several weeks and do still complicate his case, he has certainly not retrograded, but on the contrary has made some progress towards convalescence." In Mr. MacVeagh's despatch he was described as being "still very weak," and "as this weakness is due to the condition of the blood, while it continues grave anxiety must also continue." On Friday it was evident that the symptoms were growing worse instead of better, although the utmost extent to which the physicians were willing to go was that the President's condition could not be considered as "improved." The next day showed, however, that a serious crisis was at hand. At half-past eleven in the morning the President had a severe chill which lasted for half an hour, and in the evening Mr. MacVeagh telegraphed to Mr. Lowell that the situation was "now probably more grave and critical than at any time heretofore." On Sunday he began to sink slowly, and in the evening he had another chill. The fever which followed lasted until midnight, and during this time his pulse ran up from 112 to 130. On Monday morning he had another chill. During the day he slept much of the time, and at six o'clock P. M. the official bulletin recorded the figures which the public had come to regard as "normal." At about ten o'clock he fell into a quiet sleep, but awoke in a few minutes complaining of a severe pain in the region of the heart. He almost immediately became unconscious, and died at 10:35.

The members of the Cabinet who were on the ground at once telegraphed to the Vice-President, informing him of the death of the President, and advising him to take the oath of office without delay. Mr. Arthur received this despatch at his house in this city about midnight, but had heard the news before it came. It is reported as having affected him deeply, his servant telling the reporters that he was so overcome that he did not dare to speak to him. His first visitors after the news reached him were District Attorney Rollins, Elihu Root, jr., Police Commissioner Stephen B. French, Dr. P. C. Van Wyck, and ex-Alderman "Barney" Biglin. Judge Brady was sent for, and at about two o'clock the oath of office was administered.

The death of the President has at once brought into prominence among the Democratic politicians the subject of the organization of the Senate, which the retirement of Senators Conkling and Platt, the death of Senator Burnside, and the removal of the Vice-President has thrown completely into their hands. According to the Washington *Evening Star*, a good deal of correspondence has been going on recently with regard to this subject, which has shown a general unanimity of sentiment. The canvassing has developed the fact that all the Democratic Senators are of opinion that the Senate should be organized in the interests of their party first, and the vacancies filled by the swearing in of new Senators afterwards. Under these circumstances, the first step taken will be the election of a President *pro tem.* Senator Bayard is, perhaps, the most prominent candidate for the place.

There has been some talk during the past week of the supposed difficulty of trying Guiteau for murder in Washington should the President die at Long Branch. All doubt on the subject has, however, been removed by discovery of a New Jersey statute providing for cases where the murderer attacks his victim outside the State and the latter dies within it. If the law of the District of Columbia, as reported, requires the murder to be complete within the District to give jurisdiction to its courts, this statute enables the authorities at Washington to surrender Guiteau to those of New Jersey, for trial in the latter State. Sergeant Mason has written a rambling letter addressed to all persons who hate assassins, in which he insists that he did no more than was right in shooting at Guiteau. It seems to be undecided whether he will be proceeded against first before a civil or a military tribunal, but it is said that General Hancock has decided to detail a special court-martial for the purpose of trying him. Since the President's death the reports of meetings of masked men determined to lynch Guiteau are again put in circulation.

Commissioner Raum, of the Internal Revenue Bureau, announced last week that the tax on bank deposits of one-half of one per cent. must be imposed upon all deposits remaining in a bank after the close of business, and that checks drawn the same day and settled at the Clearing House the next day cannot be deducted. The law imposing the tax was passed sixteen years since, and the question was then settled by an official ruling the other way—that taxable deposits were those remaining after checks payable during the same period of time had been deducted; that is, the balance which the bank had the use of, and might lend and receive interest on. The Commissioner has also made a decision requiring private bankers to return as deposits all money borrowed by them to be repaid at a future day, with or without interest, whether secured by collaterals or not; and also all sums left with them as margins on purchases of stocks, produce, cotton, etc.; and that for purposes of taxation brokers who receive money in this way are to be considered as bankers. This ruling, reported in Circular No. 237 of the Internal Revenue Office, was made in the case of a bank organized under a State law, which had borrowed money for its own use on a pledge of United States bonds. A tax on this borrowed money, considered as a deposit, was levied, amounting to $8,350. After a hearing, however, on the subject of the bank tax before the Commissioner, he decided on Wednesday that the banks are entitled to deduct from the amount of their daily deposits the checks received from the Clearing House on the following day; the practice having heretofore been to deduct the checks sent to the Clearing House. The gross amount of the tax collected will not be changed by this; but the question whether money borrowed on call by bankers and brokers is taxable as a deposit is held under advisement.

The report of the Board of Visitors appointed by the President to be present at the June examination of the Military Academy at West Point, has been submitted to the Secretary of War. The position and rank of the officers were found in accordance with the law, with the one exception that the command at West Point constitutes a military department of which the Academy is a part, and the Commanding General is the Superintendent, instead of being in charge of a colonel of engineers. In the opinion of the Board there never has been at the Academy a more competent academic board than at present. A rigid system of discipline has been found necessary, attempts to relax the discipline having herctofore resulted disastrously. Imprisonment does not seem compatible with the character of the cadets, and should be followed by dismissal. Hazing, in spite of rigid discipline, still continues to some extent. The amount of money allowed for the support of the cadets was found ample for the purpose, and it is recommended that, with a few exceptions, no other funds be allowed in the possession of the student. Fault is found with the custom of charging the cadets for their clothing more than it costs, in order to raise funds for buildings and the Quartermaster's salary. Cadets are also unjustly taxed to meet laundry accounts. Better arrangements for lighting and for ventilation of bedrooms are needed, as well as an officer to look after the quality and the mode of serving the food. Of the new candidates, no less than forty-nine out of one hundred and eighteen were rejected. The erection of new buildings for cavalry barracks and for the Board of Visitors is recommended. A minority report signed by three members of the board was also submitted, which, among other things, recommends the establishment of a preparatory school and the years seventeen and nineteen instead of seventeen and twenty-two as the maximum and minimum age for the admission of cadets to the academy.

Since the decision of the Supreme Court of Minnesota invalidating the Constitutional amendment of 1860 and the adjustment act of last winter, Mr. Selah Chamberlain, the principal holder of the railroad bonds in question, has renewed his proposition for a settlement in the spirit and terms of that act—that is, he will take half the debt in full payment in the shape of new 30-year bonds at 5 per cent. interest, provided immediate legislation be had to sanction it. Governor Pillsbury accordingly issued on Monday a proclamation reciting the above facts, and calling an extra session of the Legislature to meet on Oct. 11. He states that the court decided "that full and final power and authority to provide for the settlement of said bonds is vested in the Legislature"; that more than $2,000,000 of the whole issue of $2,275,000 are already deposited with the State auditor for exchange; that accepting the settlement offered will effect a saving of $300,000; and that to wait for the regular session of the Legislature would involve repudiation, as most of the bonds mature before that body could make provision for them.

The complete returns of the special election held in the Second Congressional district in Maine for a successor to Representative Frye, now United States Senator, show that ex-Governor Dingley, the Republican candidate, polled 11,007 votes, against 5,554 for the Greenback, 214 for the Democratic, and 66 for the Prohibition candidates respectively. His majority, 5,173, is to be compared with 3,000, the largest ever before cast by the Republicans in that district. We should have called this a political "straw," but the *Tribune* says it by no means ought to be "passed over as a small affair," and that "the result is in reality of great significance, and has a direct bearing as showing the drift of public sentiment upon the canvass in New York and Ohio."

An active canvass is going on for delegates to the Republican State Convention, the adherents of Mr. Conkling making a very energetic contest, in which they are led by the ex-Senator in person. In Utica he has openly engaged in "fixing" the caucuses for delegates, of whom it is said he fully means to be one. It is understood that Comptroller Wadsworth and State Treasurer Wendell are

not candidates for renomination, Mr. Wadsworth being desirous of succeeding State Senator E. G. Lapham as Representative at Washington.

At the opening of the Court of Sessions on Tuesday, the 13th inst., it appeared that the reason why the District Attorney was backward in bringing Mr. Sessions to trial for legislative bribery was his inability to secure Speaker Sharpe for a witness. When Gen. Sharpe was first wanted he was reported out of the State, and when he returned he was vainly sought for in a hotel in this city of which he seems to have enjoyed the privileges without ostentation.

The Governor has refused to approve the Mayor's act in removing Police Commissioners French, Mason, and Nichols for their failure to clean the streets. In his letter to Mr. Grace on the subject, he says that he thinks the Mayor's right to remove for this neglect was taken away by the repeal of the law which imposed the duty of cleaning the streets upon the Commissioners. He refers to the clause in the charter relating to removals of heads of departments, and says that they can obviously only be removed for some actually existing cause. The only cause mentioned in the Mayor's certificate is a neglect of duty imposed by Chapter 677 of the Laws of 1872, repealed by the Legislature after the commencement of proceedings by the Mayor. This repeal, the Governor thinks, blotted out the old statute and all proceedings under it.

The case of the alleged bandit Randazzo, or, as he calls himself, Rebello, has been decided by Commissioner Osborn in favor of the Italian Government. The case turned mainly on the question of identity, and the Commissioner in his decision admits that there is a mystery as to who the man is, but thinks that the prisoner ought to have cleared this up himself. It is said that the case will be carried up to the Secretary of State, many witnesses having testified in favor of the man that he was in New Orleans when the crimes for which the Commissioner has decided that he must be surrendered were committed. His counsel have insisted throughout that the question of identity ought to be tried in New Orleans, where he had undoubtedly lived for many years. The representatives of the Italian Government contended, on the other hand, that owing to the danger of intimidation of witnesses, etc., the examination could not be carried on properly there, and Mr. Osborn decided the point in their favor.

The opening of the Germania Theatre in its new house (formerly Wallack's) on Broadway on Thursday evening was a notable theatrical event. Hitherto the German drama here has, as it were, lurked in side streets or in unfashionable thoroughfares. Now the attempt is made, which merits success, to attract the support of the English-speaking public as well as of the German.

On Tuesday of last week the militia were called out by Governor McEnery on account of the labor troubles in New Orleans, and martial law was proclaimed there. But these extraordinary measures were revoked on Thursday, the peace of the city having been assured by them.

Prof. S. A. King, accompanied by Mr. Upton of the Signal Service and five newspaper reporters, started on a balloon voyage eastward from Minneapolis on Sept. 12 for the purpose of making meteorological and other observations. After a favorable start the wind died out, leaving the party for a while hovering over the Mississippi. When night came on the anchor was thrown out. The storm on the following day did so much damage to the balloon that the plan of making another ascension had to be abandoned.

In spite of sporadic relief by scanty rain, the general droughty condition of the country continues, and large areas at the North, in California, and in Canada are still being devastated by fires. Governor Jerome, of Michigan, issued on Friday an appeal to the people of the United States for relief, stating that in the four counties chiefly afflicted 200 persons have perished by burning and suffocation, and that it is estimated that 15,000 men, women, and children are shelterless, destitute, and suffering. They need clothing, the commonest utensils, tools, seed, etc. In all the great cities subscriptions have been opened, and the gifts in money have been liberal. Here the amount reached on Monday upwards of $50,000.

To complete the curiosity of this season's weather, snow was reported along the line of the Chicago, Rock Island & Pacific Railroad as far west as Omaha at the close of last week.

Mrs. Susan May Bonaparte, widow of the late Jerome Napoleon Bonaparte, the son of the First Consul's brother Jerome by his American wife Elizabeth Patterson, died at Baltimore on Thursday morning, at the age of sixty-nine. One of her sons is married to a granddaughter of Daniel Webster. General Burnside's remains were conveyed on Thursday, with a military escort, from Bristol to Providence, where they lay in state at the city hall. The burial took place on Saturday, amid a great public demonstration.

FOREIGN.

The Irish Land League Convention met in Dublin on Thursday. About one thousand delegates were present. Mr. Parnell presided and delivered an address, in which he advised the farmers to distrust the Land Act, and not to appeal to the Land Courts until a number of test cases prepared by the League had been submitted. A number of resolutions were passed calling for national self-government, and denouncing coercion and "landlordism," urging the condition of the laborers on the consideration of the farmers, and calling for the bestowal in the promised County Government Boards of the power of compulsory purchase of land for the laborer's use.

The Committee of the Farmers' Alliance meeting in London has passed resolutions condemnatory of the Fair-Trade movement. The Trades-Union Congress has also made a demonstration against it by applause of passages in the President's address, and by the expulsion from the hall of persons accused of holding Fair-Trade opinions. The agitation still continues in England. Mr. James Lowther in a speech declares that it does not aim at a tax on grain.

The French Government has officially announced that it will prolong the operations of the existing Treaty of Commerce with England for three months to allow time for further negotiations. The British Commissioners accordingly went over to Paris on Monday.

The Lancashire cotton spinners have determined to break up the Liverpool cotton corners by working on half-time or stopping. Thirteen cotton mills at Ashton-under-Lyne, representing 600,000 spindles, closed on Saturday for one week. The Trades-Union Congress has passed resolutions calling on Parliament for legislation prohibiting commercial corners.

There has been much excitement among sporting men over the winning of the St. Leger, at the Doncaster races, by Iroquois, the American horse which won the Derby. He was ridden by Archer, the same jockey who rode him at the Derby, and is the tenth winner of the former race who has within a hundred years won the other also.

The meetings of the Methodist Ecumenical Conference in London have continued. Among the practices condemned in strong terms were dancing, theatre-going, the sale of liquor on Sundays, the opium trade, and the habit of sending Methodist children to Romish schools. The higher education of the young was insisted upon. In a session devoted to a discussion of the press, religious and secular, Bishop Holland accused the religious papers of being too narrow-minded. The American press was praised for its willingness to report church services. Mr. Marshall advocated the establishing of a well-endowed church newspaper, which would have an influence equal to that of a great university. A paper was read by the Rev. J. Green on Methodist missionary work abroad. The Templar Mission and Anti-Slavery Society, on Sept. 15, gave a public breakfast in honor of the colored bishops and other representatives of African Methodist churches in America, as a demonstration in favor of the principle of the social equality of the white and colored races.

The situation at Tunis is considered grave by the European press. The Arabs cut the aqueduct from Zaghouan which supplies Tunis with water, and it was repaired and is protected with difficulty. General Corréard's advance on Khairouan, a town of the interior, considered sacred by the Arabs, has led him into a difficult country, where the desultory attacks of the enemy are very annoying and water scarce. The Bey finds his position so disagreeable that he threatens to abdicate. Great sensation has been created in France by a circular of the Minister of War directing the strength of all battalions sent to Africa to be raised to 600 by calling in the reserves and furloughed men. This is in direct breach of a promise made by the Cabinet before the election, and excites alarm about the prospects of the campaign in Africa. The disapproval of the circular by the other Ministers is reported to have led to a strong debate and the offer of General Farre's resignation. French relations with Tripoli are said to be again friendly.

The German National Liberals, after a vain attempt to frame a common programme for all shades of Liberals, have issued an electoral manifesto declaring that they will unite with the other groups in opposing the Conservative and clerical combination, and that they will resist attacks on the Legislature and the Constitution, as well as excessive taxation and dubious experiments in social politics. In an article in Moritz Busch's *Grenzboten*, one of the papers inspired by Bismarck, a violent attack has been made on the Jews, and the Chancellor's policy extolled. The writer of the article, who professes to be a German residing abroad, says the Jews originated the cry about Bismarck's "going to Canossa," as well as the anti-Semitic movement, for which they alone are to blame. In Russia a decree has been issued, in which the "pernicious" influence of the Jews on the masses is alluded to. On Sept. 12 four hundred Russian Jews passed through Germany on their way to America.

The Egyptian mutineers summoned 150 notables from the country districts, and on their arrival Sherif Pasha undertook the formation of a ministry, and received the complete submission of the army, which the notables guaranteed. England announced her intention to act in concert with France in the beginning of the troubles, which Sherif Pasha's ministry is not considered likely to bring to an end. The English press demand the disbandment or reduction of the Egyptian army and the use of Turkish troops to maintain order. Turkey is said to be unwilling to interfere. Considerable anxiety still exists among the foreign representatives at Cairo.

At Venice on Thursday the King and Queen of Italy formally opened the Geographical Congress, and M. de Lesseps delivered the inaugural address. A day or two later it adopted a resolution highly approving the canal through the Isthmus of Corinth projected by General Türr; but the cable is silent as to the ground of its approval.

The international chess tournament, which opened at Berlin on August 28, was concluded on the 17th instant. Mr. Blackburne, of London, took the first prize, as the winner of fourteen games. The American representative, Mr. Mason, of New York, won nine and a-half games.

TUESDAY, September 20, 1881.

PRESIDENT GARFIELD'S DEATH.

PRESIDENT GARFIELD'S death has been so long expected, and has twice already seemed even to the doctors so very near, that there has been no shock of surprise in it. It would have seemed very terrible if it had followed close on the assassin's shot, as Lincoln's did. Since then his prolonged struggle for life and the patience and heroism with which he bore it have excited an interest so pathetic that neither political anger nor alarm had any place in it. During the greater part of his illness people almost forgot that he was either a President or a statesman in the sympathy and admiration excited by the manly and simple way in which he met a very cruel fate. The popular imagination was touched in an unusual degree by the circumstances of his career. It was universally recognized as a typically American career. He had risen from nothing to various high places, had filled them all adequately, and without either self-distrust or undue elation. The simplicity, too, with which he revealed how largely his political success contributed to his domestic happiness, by such incidents as his kissing his wife and mother immediately after being sworn in on Inauguration Day, struck a chord in the popular heart which Presidents do not often reach. It must have seemed to hundreds of thousands a sort of seal of success of which they had often dreamed as among the possibilities of their own lives, and have brought the man who had realized the dream before their eyes as very near to them, and as dear to them as a stranger could well be. The attacks on him after his inauguration, therefore, missed their mark, because they assailed one for whom the public had already contracted a certain tenderness, in whose good intentions it had come to believe thoroughly, and whom it was not only prepared to forgive a good deal, but to like all the better for having to be forgiven.

All these holds on the popular affection were strengthened by the immense drafts which his long illness made on popular pity and hopefulness. The anxiety about his fate, in which the whole civilized world shared in an unprecedented way, in spreading through the country grew stronger through sympathy. It is impossible to feel but slightly what every one is feeling, and at last it seemed as if the President's sick bed stood in every house, and every family in the land were watching around it. There has been something very touching about this—something which, had he survived, must have constituted an experience such as no other man has perhaps ever had, and which must in his own eyes have worked a kind of consecration of all his talents and faculties. He would unquestionably have felt that all excuse for errors and shortcomings was thenceforward denied him; that with no human being could he thereafter share, in never so small degree, the responsibility which had been put upon him. No observer of public opinion during the last three months can have failed to be struck, too, with what may be called the retrospective action of the popular sorrow. It not simply clothed President Garfield with every kind of brilliant and consoling promise for the future, but it credited him with all the performance in the past which the most partial affection could have desired for him. People were unconsciously determined that he should not only be hereafter worthy of their love, but that there should be no day in his past career when he had not fully deserved it. His assassination, in fact, made him the martyr of a cause which we believe, had he lived, he would have served faithfully, but towards which his attitude in the first months of his administration had been disappointing.

He will now always remain one of the saints of American story, without a spot on the whiteness of his garments, one of the few Presidents who have left the White House amid universal reverence and regret. The last touch was given to the pathos of his fate by his dying on the anniversary of what was perhaps after all the greatest day of his career, that of the battle of Chickamauga. It was a hard-fought field in which he did good and conspicuous service and which he must have remembered with the purest pleasure of a man's life: the pleasure of knowing that on its most solemn and exacting occasion he had played his part well.

The task which the successor of President Garfield has before him is no enviable one. While it is the highest ambition of our public men to be Presidents of the United States, scarcely any of them would wish to mount the Presidential chair under circumstances such as surround General Arthur. We are sure that he did not wish it. But it is important that the peculiar nature of the difficulties confronting him should be well appreciated by him as well as by the country. The Presidential chair was made vacant by the hand of an assassin who, whatever his real motives may have been, pretended at least to serve a political end by his crime. No candid observer of the currents of popular sentiment will deny that this view of the meaning of the murderous act was accepted by the instinct of the masses far more generally, and with deeper feeling, than might have been concluded from the temperate tone of the press. However abhorrent Guiteau's crime may have been to the man to whom it opened the way to the Presidency—and it certainly was as abhorrent to him as to other good citizens—every official act of his administration will be liable to be watched with peculiar jealousy to ascertain how far Guiteau's supposed political programme goes into effect, and President Arthur will therefore find himself exposed to a kind of criticism which not one of his predecessors has had to meet.

President Garfield's administration, with which General Arthur was in disaccord, was in some respects open to legitimate criticism. But the profound sympathy called forth by Guiteau's deed, and by the long suffering of the President, have effaced those vulnerable points from the popular mind and left there only an ideal conception of President Garfield's intentions and of what he would have done had he lived. He might possibly not have been able to realize that ideal himself, but it stands in the popular mind as firmly as if he had given the most certain guarantee of its accomplishment. This popular conception President Arthur will have to meet at every step. The measures and the general tone of his administration will be apt to be judged not altogether upon their own independent merits, but according to the Garfield standard as it stands grand but undefined in the popular mind.

This tendency is not unlikely to be strengthened by another result naturally following President Garfield's death. His personal popularity, which was owing not only to his merits as a statesman but in a great measure to the winning heartiness of his nature, has by the touching spectacle of his sufferings been turned into a sort of blood relationship with the whole American people. His party especially became bound to him not merely by the ordinary bond of interest and party loyalty, but by sentimental attachment. He had become the head of his party probably in a larger sense than any American President has been. President Arthur cannot hope to fill that place; in fact, no man could fill it under existing circumstances. What was considered the natural, legitimate chieftainship of the Republican party is therefore vacant, and that feeling of party allegiance among leaders and followers which ordinarily is one of the strongest elements of cohesion, and which, had President Garfield lived, would have been peculiarly powerful, will in the existing situation of things be apt to show itself less potent than it has been for many years in the support of the Administration.

To-day President Arthur receives from all parts of the country assurances of good-will and of sincere wishes for his success. These assurances come from journals and from men of all political parties and shades of opinion, who esteem the welfare of the country a higher consideration than the fortunes or fate of any man, and we have no doubt they are sincerely meant. Every good citizen shares the feeling which inspires them, and will be heartily glad to find in President Arthur's administration much to praise and support, and little to condemn and oppose. Nevertheless, it must be remembered that these expressions of sympathy and good-will are given in advance, and that President Arthur's ultimate relations with the people will depend entirely upon the manner in which he understands and performs the duties of his high office.

THE FRENCH IN NORTH AFRICA.

THE South African question, which occupied the attention of Europe so much in the last two years of Lord Beaconsfield's Ministry, already seems a small matter compared to the North African question, which is looming up on the horizon, and apparently promises before it is settled to set Europe by the ears. Curiously enough, too, it is undoubtedly the outcome of the long-standing Franco-German quarrel, and may before it is over clear the German sky of the cloud of French revenge, which has since 1871 cast such a deep shadow on German industry and finance. In other words, France has, to all outward appearance, found the attack on Tunis a trap into which she has been led by the desire of restoring her military prestige at a cheap rate. The French Ministry seem in an evil hour to have come to the conclusion that the Re-

public could not afford a policy of peace or recuperation any longer; that something must be done to satisfy the electors that Republican government was not too *épicier*, and that the easiest thing to do to show that the Republic could fight was to attack Tunis. This scheme was undoubtedly running through the heads of the French envoys at the Berlin Conference, for they sounded Lord Salisbury about it and got his acquiescence. It is all but certain that they sounded Prince Bismarck, too, and if they did they were certainly encouraged to strike hard and strike quickly. It was the thing of all things which best suited him. In no possible place could it gratify him so much to see the new French army actively employed as in Africa. There it was sure to find plenty of work about which he would not have to trouble his head; and when he found M. Waddington boasting of having obtained a foothold in Egypt on equal terms with England, and had made sure that the African bee had once more got into the French bonnet, he must have smoked one of the happiest pipes of these latter years.

Everything has gone as he must have wished. France, with this scheme in her head, broke off from the European concert by her refusal to coerce the Turks into obedience to the Berlin Treaty and by her subsequent abandonment of the cause of the Greeks. She then plunged into the attack on Tunis, with excuses so flimsy and so soon exploded that the expedition from the first moment excited English hostility and distrust. The only thing that could have compensated for this hostility and distrust was such rapid and easy success as would have dazzled the eyes of the French people and satisfied them that the Republic knew how to do great things at small cost. But this compensation has been denied them. They were lucky in having all the successes of the expedition—the capture of Tabarca, Biserta, and Kef, and the reduction of the Bey to the condition of a French vassal—before the late elections. But since then everything has gone wrong. The whole African coast, from Egypt to Morocco, has apparently risen or is ready to rise on them, and the defence of Sfax, for which the Arabs fought from house to house with an obstinacy worthy of the old and great days of Islam, would have shown that the insurgents were thoroughly in earnest, even if their horsemen had not begun to carry fire and sword along the whole frontier. The reduction of Tunis was supposed, when undertaken, to be an affair of ten thousand men and $2,500,000. Sixty thousand men have already been despatched to Africa, or are on the way, and $20,000,000 have been spent or called for, and the end is nowhere in sight. The military prospect, as seen by the Minister of War, General Farre, is so serious that it annoys his colleagues, and there is talk of his resigning. It is impossible to catch the bands who are ravaging the settled districts, because they are mounted and have Sahara behind them; and in Sahara all the men in France could not at this season capture or dislodge them without seizing long lines of far-off wells, which serve Arab purposes by furnishing water occasionally to a passing tribe or band, but which could not support for a month a European garrison. Nor is the trouble confined to the attacks of the nomads, or of the malcontent Tunisians or Tripolitans. There is much apprehension of a general rising in Algeria, where the French colonists are still but a handful, living in isolated villages and farms in the midst of swarms of Mussulmans who have accepted French rule when it seemed inevitable, but have never swallowed the belief that it was interminable. What adds to the complication is the beginning of fresh trouble in Egypt at the moment when the whole French resources would not be too much to maintain a bold front in the division of the Egyptian spoil, and when the meeting of the three Emperors seems to make it most desirable that France should seem formidable and worth courting.

If the stories which are now told by all those who profess to be acquainted with what is going on in the Mohammedan religious world be true, or even half true, the French troubles are, however, by no means simply the result of Tunisian or Tripolitan dislike of foreign aggression. They are the result of the Mussulman revival which has now for twelve years been spreading among the Arabs, and of which vague accounts have been during all that period reaching the West. This revival is, or is represented to be, a result of the rapid decline of the Sultan not only in power but in prestige, owing to his governing his dominions under Christian dictation. His spiritual headship or Caliphate of Islam was originally, it is now said, a usurpation, is not two centuries old, was never acquiesced in by the Arabs, and has, through Turkish ignorance and sloth, been fatal, or very injurious, to religious progress. In other words, the true faith has been used and abused simply to build up the temporal power of the Sultan; and even if this was tolerable when the Sultan was able to defend it and propagate it, it is intolerable now that he has become a mere tool of the Giaour monarchs and only holds his dominions on sufferance. There is therefore a strong and growing movement among the Arabs in favor of setting up a real Caliph of the race to which the Prophet belonged, and to which it owed its earliest and greatest successes. No great increase of religious fervor in any sect takes place without a terrible increase of hostility to unbelievers, and in the Mussulman world this hostility, which occupies even in ordinary times a foremost place among the virtues of the faithful, during a revival glows with a white heat. The French are unlucky in having just now to bear the brunt of it. They would probably, owing to their position in Algeria, have experienced more or less trouble from it even if they were in their most peaceable and least aggressive mood. Their dropping down into Tunis, however, at this most unpropitious moment makes them to the Mussulmans of Arabia the representatives of all that is most odious and dangerous to the true faith.

THE COPYRIGHT TREATY.

ACCORDING to recent cable despatches, a member of a well-known firm of London publishers has come out against the proposed copyright treaty on the ground that it is "utterly selfish." His principal objection is the three months' clause, which, it has been evident from the first, is the most serious point of disagreement among the negotiating parties. By this clause an English author is given three months in which to make his bargain with the American publisher after first publication in England, and if he does not do so his book becomes at the expiration of this period public property, or, to speak more accurately, the property of any one who desires to steal it.

The explanation of the insertion of this clause in the treaty is that if no time is fixed the foreign author may prefer not to take out any American copyright at all, which would be a truly terrible state of affairs. The notion that any English writer is likely to restrict himself to an English copyright when he knows that he may increase his profits tenfold by getting one in this country, is one which it must have required considerable ingenuity to conceive; but apart from this, and assuming—as we may fairly do, in view of the general expressions of approval which the treaty as a whole has thus far met, both from authors and publishers—that there is no opposition to the insertion of a clause requiring a copyright to be taken out within *some* definite period, the question what the period should be still remains open. The objections to fixing it at three months are very serious. Writers of established reputation, whose books always find a ready sale in our market—novelists, historians, poets, and so on, whose names are already well known in this country—would find no difficulty in such a clause, because they would probably under the treaty always be able to complete negotiations with an American publisher in advance of publication in either country, so that their books would be simultaneously put on the American and the English market. But new and unknown writers would be in a different position. If they published first in England, there would be only a very small chance that they could in three months succeed in finding an American publisher ready to take their book; and to expect any American publisher to take the risk of the publication of books by new and unknown foreigners before their work has been tested in the home market, is of course absurd. The result would be that they would be driven, as they now are, to take any English publisher they could find, and that unless the book had an immediate and unusual success, the publishers in this country would simply hold off until the expiration of the three months' period, and then they too would do just as they do now—that is, they would proceed to republish without paying any copyright. In other words, with regard to this large class of books, the treaty would leave the matter just where it is now.

The period fixed by the treaty should obviously be long enough to test the value of the copyright in the home market. For this purpose a year is not at all too much. In the course of a year after publication the immediate money value of any new book is ascertained. The successful author can generally, before that time has expired, say to the American publisher: I have a thing for sale here which the public desire to buy. What will you give me for the right to sell it?

The present copyright agitation differs from all which have preceded it in having the support of the leading publishers of this country. But it should not be overlooked that the reason it has their support is not because they have become suddenly impressed with the immorality of international piracy, but because the "courtesy of the trade" has broken down, and they find that the legal possession of foreign copyrights is the only thing which will protect them from the "cheap and nasty" pirates who republish for a mere song whatever the others announce that they are going to republish for an ordinary price. In this sense it is true that their support of the treaty is "selfish:" they are at work to protect their own trade and not that of authors. They cannot do this without incidentally benefiting authors, but it should not be forgotten that this is merely an incidental matter with them, and their proceedings with regard to the treaty will bear a good deal of watching on the part of those interested in international copyright as a question of property. We are not likely to get international copyright at all if we do not get it by treaty, nor at any future time if we do not get it now. The small pirates who are now publishing cheap editions of foreign books are really supplying the enemies of international copyright with the one argument they needed for the support of piracy—the demonstrated fact that the public is now supplied by means of piracy with a literature which is good and cheap at the same time. It used to be the favorite argument of the great publishers that an international copyright meant "dear books." Now they find that this is just what they want too.

AN AMERICAN IN HUNGARY.

PRAGUE, August 30, 1881.

I HAVE just returned from attending, in a semi-official capacity, a "consistory," part ecclesiastical and part educational, held at Kolosvár, the old capital of Transylvania; and, as this is an opportunity that has befallen no American before me, one or two points of observation may not be unwelcome. Indeed, since Mr. Brace's memorable visit in 1850, I cannot learn that any American has been before me in Eastern Hungary, excepting a young theologian, Mr. Morison, who visited the country in 1873. The name itself, Kolosvár (which you find "Klausenburg" on your maps), is a token of the remoteness of this Magyar population and its self-chosen isolation from the common field of European culture. With a certain felicity not quite accidental, they have taken English as their medium of communication with European thought, and circumstances which I need not dwell on led to my appointment as delegate to their educational congress. This was composed of about fifty official members, clerical and lay, most of them representatives of the Székelys, or Szeklers, of Eastern Transylvania, Magyars of the Magyars, who claim to have held their "seat"* in these highlands since the great invasion of Attila.

This race may be described as a sort of peasant nobility or aristocracy. It is the same that held that outpost of Europe for ten centuries, and broke the tide of many a Turkish and Tartar invasion. They were also the backbone of Kossuth's republic in 1849, and to look at them, one may well believe that they made a formidable power in that year of reaction, holding even Russia, it is said, at bay: a sturdy and solid set of men, such as one seldom sees, most of them full-bearded, and the country squires and parsons wearing their high, well-polished boots after the fashion of a century ago.

The proceedings of the council of course were all in the Magyar, or Hungarian, tongue; but understanding that till within fifty years the debates of the Hungarian Parliament were held in Latin, I prepared my own brief address in that language, and was, as I was told, readily understood by every one present. The presiding bishop's allusion to the presence of an American delegate had been greeted with a hearty chorus of *Éljen!**—an enthusiasm which I need not be shy to acknowledge, as it means that American sympathy in 1849 is one of their liveliest and tenderest recollections to-day. I spoke of this sympathy at the public dinner that followed, in words which were at once rendered into Hungarian by a friend, and met an increased warmth and cordiality of response.

These sturdy men hold that "much meat and much wine" are true conditions of living—an experiment which was most generously compelled upon me during my stay. It would be difficult to make the wealth of their hospitality understood to one who has not encountered it; or the singular readiness and energy of their eloquence. Every man seemed equally ready—no hesitation or embarrassing consciousness; and I listened that day to several hours' uninterrupted flow of speech in a tongue not a syllable of which suggests any likeness to anything that the ordinary student of languages has ever learned. Two monosyllables (which stand for wine and beer) besides the dissyllables I have quoted, are all that I can promptly recall, after the floods of Magyar discourse to which I listened without weariness during those days, besides a play, admirably represented on the local stage. The language may be described as very fluent and very energetic. It is delivered by the speakers with frequent pauses that turn it into a sort of rhythm. I have heard that it is very easily and rapidly improvised in verse. Its modulations now and then recall German or French. Once I seemed to hear a Spanish word or two; but I was unable to liken the speech, as a whole, to anything I had ever heard. Its vocables suggest absolutely nothing to the Indo-Germanic comparative philologist, and its study may well be believed to be very difficult. I find it hard to decide whether it is a greater misfortune for this splendid population of eight millions to be thus cut off by an impassable barrier from the common field, or good fortune that its race-quality and flavor should ripen—as it must rapidly, under the great impulse it is receiving—without alteration from outside. A race of great pride and self-sufficieney, any contribution it makes to the common stock must be purely its own. They claim, even now, that theirs are recognized as the best lyrists and romancers.

I was surprised at the unembarrassed freedom of expression as to the past and present history of the country. Of course the native Hungarians crave political independence; and their feeling as to the Eastern Question, which touches them so nearly, may perhaps be best explained as an irritated alarm at the hint of a Slavic power in the southeast which should swamp their dear-bought nationality under a flood of what is immeasurably inferior. At present, however, they accept with extreme and loyal content their standing in the twin-empire. The Emperor is personally esteemed, and in Buda-Pesth I was told more than once of the tears which the Empress shed for Deák. This magnificent capital, astonishing in its new growth as Chicago, as stately as Vienna, and as noble for situation as Edinburgh, is not greatly out of the range of common European travel. It is reached without effort by the Danube, and should be better known than it is as the splendid type and pride of Hungarian nationality. Kolosvár is an important station midway between Buda-Pesth and Bucharest, and this line must become one of the most frequented of Eastern travel.

The clean and careful culture of the Hungarian grain-fields contrasts strangely with the poverty in the look of the peasantry and their squalid huts. But in this I speak of Central Hungary, before its wide prairie is cut sharply by the remarkable mountain portion of Transylvania. To speak of the races one encounters, especially towards the east—the gaunt Wallachs, the music-loving and swarthy gypsies, and the "everlasting Jew"—would lead me too far from my object, which is little more than to illustrate, by one touch of personal experience, the existence and the singular interest of that unique population whose acquaintance it was my good fortune to make.

* *Szék* is Magyar for "seat."

* In sound almost exactly "alien," but with the *l* often quite suppressed.

GALIANI'S LETTERS.

PARIS, August 30.

THE Abbé Galiani is well forgotten in our age, though he had once a sort of popularity in France. He was the correspondent of Madame d'Épinay for twenty years; he was a friend and correspondent of Madame Necker, of Madame Geoffrin, of Diderot, of Grimm, of D'Alembert, of D'Holbach. He was one of the minor stars in the rich constellation of genius and wit which may be called the constellation of the philosophers. There have been already two editions of his letters, both very incomplete, both published in 1818, one by Barbier (librarian of Napoleon I. and of Louis XVIII.) and Salfi (an Italian who continued Ginguené's 'Literary History of Italy'); the other by a literary pirate named Serieys, who had procured copies of the autographs, and brought out his edition simultaneously with the other. Both editions, however, are very defective. A new edition, which is the work of MM. Lucien Perey and Gaston Maugras, has been made with great care, and constitutes really an original work.

"Galiani," says Sainte-Beuve, "is one of the most vivacious, original, and gay figures of the eighteenth century." He was born December 2, 1728, in the kingdom of Naples, at Chieti; he was an apt student, and, as his uncle was archbishop, Galiani entered the church. He made himself known at a very early age by an essay on 'Money.' Economic questions were very much the fashion in the second part of the eighteenth century, but were little understood, as the science of political economy was still in its infancy. Galiani became a member of all the academies of Italy. At the age of thirty he was appointed Secretary of the Neapolitan Embassy in Paris. He was delighted to be sent to a place which he called "the *café* of Europe," and which was then the intellectual capital of the world. He was, however, disappointed at first, as many foreigners must be, who find themselves plunged for the first time in the ocean of what I might call Parisian indifference. Galiani was an *enfante gâté*, a pet, in Naples; at Paris he was at first nothing. He writes in this melancholy vein:

"This country seems to be made for an obscure and forgotten life; each man has only his own caprice for a law. . . . The bad air, the detestable water, everything does violence to my Neapolitan temperament; but the most cruel violence of all is done constantly to my good sense and to my nature. . . . Tuesday last I was presented to the Duc de Choiseul, who con-

descended to look at me for one second. I suppose he does not examine affairs as he did me; it would be a little superficial. . . . Documents which in other countries are framed to elucidate serious matters are here bare facts, of such a disgusting frivolity that you feel ashamed not only to note them, but to know them. And why should you know them? It would be better to try to count the waves of the sea than to try to know all the follies which occupy a superficial and passionate people, full of fire and of levity. . . . I am disabused, and see that I am not made for Paris. My dress, my features, my way of thinking, my natural defects, will always render me insupportable to the French and to myself."

This was the first impression. Gleichen and Grimm presented the lively little Italian secretary to Madame d'Épinay, to Madame Geoffrin, to the Duchesse de Choiseul, to Holbach. Galiani had much natural *esprit*, and he soon found himself adopted. We shortly find him at home at Madame d'Épinay's, at her country house "de la Chevrette," thus depicted by Diderot:

"We were in the sad and splendid salon of the Chevrette, and formed, with our groups, a rather agreeable picture. Towards the window opening on the garden Grimm was sitting for his portrait. Madame d'Épinay was leaning on the back of a painter's chair; an artist, sitting on a *placet* [what we call now a *pouf*, a seat without a back], drew his profile with a pencil. . . . M. de Saint-Lambert read in a corner the last pamphlet, which I have sent you. I was playing chess with Madame d'Houdetot. The good old Madame Desclavelles, the mother of Madame d'Épinay, had about her all her grandchildren, and spoke with them and their tutor. . . . The Abbé Galiani entered, and with the *gentil abbé* came gayety, imagination, wit, folly, pleasantry, all that makes one forget the sorrows of life."

Diderot speaks of Galiani's wit as inexhaustible. Madame d'Épinay became his intimate friend. She needed friends, as she was much neglected by M. d'Épinay, "a man," says Diderot, "who has eaten two millions without saying a clever thing, and without doing a kind thing." Galiani was one of the happy few who dined with the wise Madame Geoffrin. Grimm much admired the natural good sense which was concealed under Galiani's originality; for this is the striking note of the correspondence of the Italian abbé—his judgment is excellent, he is not led away by the love of paradox. He quickly perceived the defects and the absurdities of the philosophers. He remained himself; though not a sectarian, he lived with sectarians. "I cannot surrender myself to anybody," said he, "not even to the devil." It would not be very interesting to explain at length how Galiani fell into disgrace with the Duc de Choiseul, and why he was suddenly recalled to Naples in 1769. His recall was a great blow; it now seemed to him that he could no longer live away from Paris—from this choice society which, with all its defects and failings and absurdities, had taken complete possession of him.

Naples had only three or four salons: the English Ambassador Hamilton, Lady Orford, the Princess Belmonte, the Princess Ferolite kept open house. The manners of Naples were an exaggeration of the worst French manners. There was some taste, some respect for appearances, some decorum in the lightest French society: the ladies of Naples were perfectly cynical; they spoke of their lovers as naturally as of their husbands. "I heard a curious conversation," says Madame de Saussure in her journal, "at the Princess Ferolite's. She called the Duchess Castel-Pagano by the name of her lover, Count Vorbrand [Wurmbrand was the Austrian Minister]. The Duchess answered: 'How odd! I often have such distractions; I have called Count Vorbrand all the morning Count Kaunitz' [Count Kaunitz was her lover before Vorbrand]." One day Madame de Saussure goes to the Princess Belmonte's and sees a great procession. "What was a second spectacle for me was the joy, the agitation of the ladies who were on the balcony, and whom I see almost every day at the houses of the Princesses Ferolite and Belmonte, when they recognized in the procession some of their friends or lovers: 'Ecco il tuo innamorato! Ecco il mio! Ah! come è bello, figlio mio, gioja mia! Dio lo benedica!'"

Galiani consoled himself with collecting, and writing letters. He made a splendid museum of cameos, of medals, of bronzes, of pictures, of arms. His library was chosen with great taste. He became Minister of the Crown Domains, and had besides many other functions. His house was open to all foreigners of distinction. It is a curious fact that he always preserved serious tastes, though he liked the most frivolous society. He wrote a treatise on 'The Instincts and Habitual Tastes of Man'; another on 'The Duties of Neutral Princes towards Belligerent Princes, and the Duties of Belligerents towards Neutrals.' His correspondence has, here and there, pages which might be called short essays. He constantly refers to his books on the commerce in grain, a favorite subject with him; he was, in fact, one of the fathers of political economy.

It is impossible to analyze a correspondence such as that of Galiani and Madame d'Épinay; it is a perpetual exchange, not only of news, but also of ideas. Here is a good specimen of Galiani's best manner:

"I confess that Voltaire's chapter on *curiosity* is magnificent, sublime, novel, and true. I confess that he is right in everything; he has only forgotten to say that curiosity is a passion, or, if you like, a sensation, which can only be excited when we feel ourselves in a perfect state of security. The least danger takes away all our curiosity, and we at once only care about ourselves and our individuality. You see in this fact the origin of all our plays. Give safe places to all the spectators, and then exhibit before them a great risk or danger. The safer the spectator feels, the greater the risk he sees, the more he will be interested, and there you have the key to all tragic art, comedy, epic poem, etc. You must present very embarrassed people to other people who are not in the least embarrassed. This is so true that you give some comfort to the spectator. If it rained in the boxes, if the sun shone on the amphitheatre, the play would be abandoned. This is also why in every poem, dramatic, epic, etc., the versification must be happy, the language natural, the diction pure. Every bad, obscure verse is like a draught of air in your boxes. Thus, curiosity is a consequence of idleness, of security, of peace; the more happy a nation is, the more curious it is. Paris is the capital of curiosity; Lisbon, Naples, Constantinople have less curiosity. . . .

"Another reflection which Voltaire ought to have made is this: It is a sensation peculiar to man—the animals have not even the idea of it. . . . You can frighten beasts; you cannot make them curious. And, as I have said, fright is the very opposite of curiosity. The curious man is more man than another man. Newton was so curious that he enquired into the causes of the motion of the moon, of the tides, etc. The most curious people is therefore richer in men than any other. This is the best eulogy that can be passed on the *badauds* of Paris."

As Galiani himself observes to Madame d'Épinay, this is a profound thought, and you will find in it a corner of the human heart: man can be defined "a curious animal." Such essays are apt to become tedious where they are carried too far and are too long; but the hand of Galiani never becomes heavy, though he was an economist. He had essentially acquired the Parisian art of never exhausting a subject.

Poor Galiani was never able to return to Paris. He was loaded with honors by his sovereign, but also with duties. "I live not, having nobody with whom I could live." He died on the 30th of October, 1787, aged only fifty-eight years. He was buried in the Chiesa dei Celestini a Chiaja. Voltaire wrote, on his 'Dialogues on the Commerce in Grain,' to Diderot: "It seems as if Plato and Molière had worked together to write this book"; and in another letter Voltaire says to D'Argental: "Never has any one been more gayly in the right." Galiani was, indeed, a curious mixture of Neapolitan gayety and of Italian wisdom. His letters will be read with much interest by those who are very familiar with the French society of the eighteenth century.

Notes.

Lee & Shepard, Boston, announce for the coming season Mrs. Browning's 'He Giveth His Beloved Sleep,' illustrated from designs by Miss L. B. Humphrey; E. R. Locke's dialect poem 'Hannah Jane,' freely illustrated; two juvenile picture-books—'Our Little Ones,' edited by Oliver Optic, and 'The Four-Footed Lovers,' by Frank Albertson; and 'Ralegh,' in Mr. Geo. M. Towle's series of "Heroes of History."——A. C. Armstrong & Son's list also caters to youthful tastes in 'The May-Blossom; or, the Princess and her People,' and 'Shaksperian Tales in Verse,' both adorned with colored prints; and in 'Peter Trawl,' by the late W. H. G. Kingston. They will publish besides: 'A Picturesque Tour in Picturesque Lands,' a holiday gift-book with many woodcuts; 'The Nature and Function of Art, more especially of Architecture,' by Leopold Eidlitz; 'History of Religion in England,' by John Stoughton, D.D.; 'Apologetics,' by the late Prof. Henry B. Smith; more volumes in the series called "Heroes of Christian History"; and finally, a 'Primer of United States History.'——'The Land of Gold,' a tale of '49, by "a well-known Californian," is in the press of A. Williams & Co., Boston.——Harper & Bros. have prepared a new edition of W. Hamilton Gibson's 'Camp-Life; or, the Tricks of Trapping and Trap-Making.'——'Cat's Cradle,' an original rhyme and picture-book for children, with colored illustrations, will be shortly published by R. Worthington.——Reprints of Hill's 'Veterinary Pathology,' Fleming's 'Veterinary Surgery,' and Armatage's 'Veterinarian's Pocket Remembrancer' are promised by William R. Jenkins.

—A General Index to the ninety-six volumes of the *Eclectic Magazine* is the latest of the Q. P. Index series (Bangor, Me.). Typographically it is one of the most open and attractive, but as those who consult it cannot be expected to master the numerous signs from * to ‡‡, it is a pity a running key was not given at the foot of each page, as in the pronouncing dictionaries. The Index to *Scribner's* will be ready by Oct. 15.

——The eighteenth volume of Proceedings of the Massachusetts Historical Society is to an uncommon degree occupied with biographical notices of deceased members, and these by no means all of recent date. This deprives the contents of some of their freshness, though the notices are generally entertaining. In that of the late George Sumner, Prof. G. W. Greene institutes an interesting comparison between him and his brother the Senator. In other respects the general reader will find his taste best consulted by Prof. Young's amusing account of the orations for the degree of M.A. at Harvard from 1655 to 1791; the controversy over Puritans and Quakers between Dr. Ellis and Mr. Whittier; and Mr. Winthrop's paper on the John Hampden portrait at the White House. Mr. Winthrop exposes once more the erroneous tradition that Hampden came over to Plymouth Colony in 1622 for a brief visit. Yet the mistake has been propagated anew in Munro's 'History of Bristol, R. I.,' published this year (p. 31). The illustrations are chiefly portraits, but there is an

exceptionally valuable early print of Harvard College, in dingy fac-simile, though we believe it has already been published, somewhat freshened up, in the 'Harvard Book.'——The Curator of the Peabody Museum of American Archæology and Ethnology laments in his fourteenth annual report the loss of a number of co-workers, together with the cessation of explorations on behalf of the Museum for want of funds. His list of acquisitions during the year ought to prompt the liberal to endow the institution effectively. ——The somewhat belated report of Commissioner J. D. Hague and his assistant Mr. G. F. Becker on the mining exhibit of the Paris Exposition of 1878 possesses many points of interest even for laymen. Particularly is this true of the chapters on Portugal and Greece. At the model Saint Domingo mines the remains of Roman workings for three centuries after Augustus, at those of Laurium the remains of Greek, are described with sympathetic detail. At the latter, modern companies are now smelting the ancient slag and waste, whose volume indicates a lead and silver product of $345,000,000 in a period of seven centuries, active and inactive.——The *Bookseller* announces the intention of the Messrs. Longman to issue some of their "first-class copyright books" at popular prices, as is evidenced by their selling Mrs. Brassey's 'Voyage in the *Sunbeam*,' with all its woodcuts, for sixpence. The movement seems an important one.——Smith, Elder & Co. have in press the journals and letters of Caroline Fox, the intimate friend of Wordsworth, Coleridge, Carlyle, Sterling, Whewell, Bunsen, etc.——In the *School Bulletin and N. Y. State Educational Journal* for September, apropos of some expurgated American editions of Shakspere, it is incidentally mentioned that the writer lately "visited a certain Union school in this State" and found the teacher innocently engaged in using George Sand's 'Elle et Lui' as a text-book for his class of "four or five young ladies." He wanted "something standard," supposed anything of George Sand's to be, and took the work whose catalogue price suited him. He was disabused before the readings had gone too far.

—An original kind of journal began publication in Berlin on September 1. It is called *Die Tägliche Rundschau: Zeitung für Nichtpolitiker*, and is edited by Friedrich Bodenstedt, assisted by a large number of literary men and scholars. We suppose no daily was ever before started with the avowed object of eschewing politics, or treating such subjects but incidentally. The editor of this *Daily Review*, however, is convinced that there are "hundreds of thousands of newspaper readers who are tired of the squabbles of parties and sects, and long for a journal which shall coloriessly report the simple facts, without discussion or leading articles, and, while entirely ignoring religious questions, shall keep the reader fully informed of the progress making in all other spheres of human activity. It will give an equal amount of space to purely entertaining matter." This, moreover, is by no means the only point in which the *Rundschau* will be superior to previously existing journals. In contrast to these, "which have lived but a single day, the *Rundschau* will not grow old 'twixt dawn and eve, but will be a storehouse of literary treasures, so as daily to supply the place of a weekly and monthly journal." The price is as attractive as the prospectus, being but $4 per annum.

—Edward Strahan's article on Frederick A. Bridgman in the October *Harper's* unites rare literary excellence with sound criticism, and displays personal intimacy with and regard for its subject without abandonment of private judgment. These qualities make it the leading article of the number; but we must add that nowhere will one find sketched more graphically, in so few words, the traits of atelier life in Paris, and that several fine woodcuts after Bridgman's paintings exhibit well the versatility of this skilful artist. Edward Strahan pronounces his archæological work a misdirection of talent, like their common master's, Gérôme, at seeing one of whose Oriental pieces lately an Arab "spat on the ground in token of utter rejection." So, thinks our writer, "the implacable Clio, wherever in the immensity she is, looks upon the Egyptians and Assyrians of our best restorers, and spits ambrosially upon the ground." A theme of a very different order, "Cotton and its Kingdom," is treated forcibly and with knowledge by Mr. Henry W. Grady. He shows how the cotton-growing area has been enlarged by the use of fertilizers, so that the "area of low production" is moving away from the Atlantic States. He also traces the splitting up of the great plantations at the South after 1867, and points to signs of a counter-movement—"a sure though gradual rebunching of the small farms into large estates, and a tendency towards the re-establishment of a land-holding oligarchy." This has arisen from the system of credits of which we heard so much a few years ago, but which we incline to think has begun to correct itself more than the reader is left to infer. Northern capital, as Mr. Grady notes, has gone into the South to an enormous extent, and is competing with the usurers directly and indirectly; more and more that section is supporting itself by provisions of its own growth; factories are rapidly multiplying, and "during the present summer, the hottest ever known, not a Southern mill has stopped for one day or hour on account of the heat"—which cannot be said of the North. This disproves for the hundredth time the old climatic excuse for slave labor. Mr. Grady remarks the easily-explained fact that though cotton is the main crop with which the negro is concerned, "it does not enter into his social life, catch his sentiment, or furnish the occasion for any of his pleasures. . . . None of those tuneful melodies with which he beguiles his work or gladdens his playtime acknowledge cotton as a subject or an incident." One asks if it will always be so, when the memory of the taskmaster shall have faded away. Those of our readers who enjoyed a year ago the series of letters on "English Journalism" published in the *Nation* will be glad to return to them with the aid of the portraits and other illustrations to Mr. Joseph Hatton's first paper on "Journalistic London," and of the additional gossip he is able to furnish. He disclaims, perhaps unnecessarily, all intention to be formal and orderly in the presentation of his subject, and, beginning with Fleet Street and its adjacent courts, contrives to say more of *Punch* and the *Daily News* than of any other papers. Incidentally he controverts the *Nation* correspondent's estimate of the provincial press, as based on their relations to Mr. Gladstone. Portraits of Mr. F. C. Burnand, now the editor of *Punch*, and of Messrs. J. R. Robinson, F. H. Hill, Archibald Forbes, and Justin McCarthy, of the *Daily News*, will be new to most of *Harper's* American subscribers. The charming illustrations of "A Berkshire Road," by Mr. Wm. H. Gibson, and of "Adirondack Days," by Mr. Henry Vane, are fresher than their titles. The Editor, in his Easy Chair, has some proper comments on the social rehabilitation of Baker Pasha.

—One is reminded by renewed mention of the humble but devoted bequest of the late Dr. S. Habel to the Smithsonian Institution, in Prof. Baird's report for 1880, how singularly this beneficent agency has been overlooked by liberal givers ever since its foundation. Fifteen hundred dollars, yielding six per cent., is, we believe, the total endowment apart from Smithson's bequest and the Government subventions; and accordingly ninety dollars is solemnly dedicated to the annual prosecution of ethnological and archæological research. The sum of $850,000 is needed to raise the endowment to $1,000,000. Meantime, however, the National Museum has been built to Prof. Baird's entire satisfaction, at a cost of "less than $3 per square foot of ground floor," or "about six cents per cubic foot of capacity." The Centennial and other collections in the Armory Building are being transferred to the Museum, but the Armory will still be used as a sort of storage and lumber room, particularly in connection with the U. S. Fish Commission. The cost of the international exchanges of which the Smithsonian is the medium has grown with the business itself till now it is nearly $10,000 a year, and Congress is to be approached with a request for a special appropriation to meet this invaluable outlay. In the enumeration of accessions to the Museum it is remarked that Mr. F. A. Ober's collection makes the "series of West Indian birds by far the most complete of any in existence." The same can nearly be said of Mr. W. G. Binney's addition by gift to the American Land Shells. Of exceptional interest when repaired and put in good shape will be the late George Catlin's collection of Indian paintings and customs. The archives of the Centennial Commission of 1876 are to be deposited in the Museum. Probably no other institution in the world observes the practice of the Smithsonian (established by Prof. Henry) of stereotyping or electrotyping everything published by it. The wisdom of this from a commercial point of view has often been discussed, but that nothing should be allowed to get out of print seems a sound principle when "the diffusion of knowledge" is the sole object.

—The Census Office has recently published, in a bulletin, the statistics of the production of copper in the United States. Thirteen of the States and Territories are producers of this metal, the principal facts in regard to which are as follows:

	Product lbs. of Copper.	*Value of Product.*
Michigan	45,830,262	$7,979,232
Maine	85,080	10,115
Maryland	164,640	1,200
Missouri	230,717	25,730
North Carolina	1,940,000	350,000
Pennsylvania	476,508	5,030
Tennessee	Not reported.	
Vermont	2,647,894	403,495
Wisconsin	18,087	1,549
Colorado, Arizona, Idaho, California	5,704,460	Not rep't'd

The total production reported was 56,855,648 pounds of ingot copper. To this is to be added the small production of Tennessee, in which State 294 tons of copper ore were mined. Of the total production of the country not less than four-fifths was derived from the upper peninsula of Michigan. One county of Michigan, Houghton, produced more than 70 per cent. of the total product, and, it may be added, a very large proportion of this came from one highly successful mine, the "Calumet and Hecla." Professor Pumpelly shows that the net income from all copper-mining property is very nearly two and one-half millions of dollars, a proportion of the total capital invested of nearly eight per cent. It requires 62 cents capital to produce a pound of copper yearly. Of this capital 77 4-10 per cent. is in land, 18 39-100 per cent. is in the plant, and 4 21-100 per cent. is required to carry the current expenses. About one-third of the value of the product is paid as wages and one-sixth for supplies. Since 1870 the product has increased 116 41-100 per cent. in weight and 70 25-100 in value. The number of employees has increased only 13

7-10 per cent., while the capital has increased 303 per cent. The gain in production per hand has increased 90 per cent., owing to the great yield of the Calumet and Hecla mine, which controls, in large measure, all these averages, and to the more extended use of machinery and high explosives.

—From another bulletin by Prof. Pumpelly it appears that iron ore is mined in twenty-three of the States. The total number of "establishments" (by which term is presumably meant distinct mines) is given as 801, having a *possible* annual output estimated at 18,395,233 tons. The actual product of these mines during the census year was but little over one-half this amount, namely, 7,006,417 tons. To this is to be added what Professor Pumpelly terms the "irregular product," that is, the ore mined by private parties in a small way, which amounts to a little over a million tons, making a total product of 8,022,398 tons (the ton of 2,000 pounds being everywhere understood), estimated to be worth at the place of production $22,975,345. Of the iron-producing States, Pennsylvania takes the lead, with 2,173,415 tons, followed by Michigan with 1,834,712, and New York with 1,239,959 tons. New Jersey produced 799,545 and Ohio 604,241 tons. Virginia, with a capacity for an annual product of 1,404,440 tons, produced but 170,099. The mines which produce ore for the manufacture of Bessemer steel come nearest to the possible product. It is worthy of note that the ores of Michigan are valued at a much higher rate than those of Pennsylvania, or, indeed, of any large-producing State, on account of the higher percentage of iron which they contain, and this in spite of their greater distance from a market. Further, the total production exceeds by more than 300,000 tons the amount reported as consumed in iron-manufacturing establishments, by Mr. Swank, in Bulletin No. 94. In view of the fact that there was a scarcity of iron ore in 1879, and that, consequently, many new mines were opened whose stocks failed to reach consumers before 1880, the two results are easily to be reconciled. A great advance over the returns for 1870 is in general apparent. In the number of establishments there is a gain of 90 per cent.; of employees, 109 per cent.; of product, 106 per cent. The discrepancy between the last two items is due to the fact already noted, that many new mines were opened in 1873-80 which were not immediately productive. The amount of wages paid has increased 28 per cent., that paid for material 120 per cent., and the total capital, 249 per cent. The value per ton of product has decreased between 25 and 26 per cent., but the total value has increased 74 per cent. In conclusion Professor Pumpelly says: "Viewing the iron lands returned as a whole, they are capable of keeping up the present annual yield for an indefinite time." Furthermore, taken as a whole, the present valuations of iron property are very far from extravagant, though the period during which they were made, the summer of 1880, was a time of great activity in this interest.

—It may be worth the while of weather-observers to note the approximate coincidence between the interval separating the two dark days in New England (May 19, 1780, and September 6, 1881) and nine times the sunspot cycle of eleven years.

—Sir John Lubbock's address at the Jubilee Meeting of the British Association, at York, on August 31, consisted of a summary of the principal scientific discoveries of the last half century, with especial reference to those with which the Association was directly concerned. The report of the lecture takes up six closely printed columns of the London *Times*; and some idea of the comprehensiveness of modern science is given by the fact that the lecturer was nevertheless obliged at the end to regret that there were almost innumerable researches of great interest and importance during the last fifty years to which he had been unable to refer. In no department, perhaps, has so complete a revolution taken place as in biology, which, indeed, was not accepted as a term for a distinct section of the society until 1866, and only after much controversy, although it has been rightly said that at the present day biology proper and its subsection anthropology form, as a rule, the most interesting meetings of the series connected with the Association. Considering Sir John's own useful labors in biology, it was but natural that he should begin with it. In a few dozen lines he gives an admirable synopsis of the Darwinian theory. The four axioms on which he says the theory is based are worth quoting. They are: (1) That no two animals or plants in nature are identical in all respects; (2) that the offspring tend to inherit the peculiarities of their parents; (3) that of those which come into existence only a small number reach maturity; (4) that those which are, on the whole, best adapted to the circumstances in which they are placed are most likely to leave descendants. The grand result of the establishment of these principles has been to show that the differences in form and color and organization of living beings all have a *raison d'être*, being conditioned by surrounding circumstances, and another still grander result has been the classification of organic beings not on principles of external resemblance but on community of descent, "the hidden bond which naturalists had been unconsciously seeking." In embryology, which "may almost be said to have been created in the last half century," the great law has been established that the history of the individual is a mere recapitulation of the history of the race, or, as the lecturer puts it, "just as the contents and sequence of the rocks teach us the past history of the earth, so is the gradual development of the species indicated by the structure of the embryo and its developmental changes." From data furnished by Dr. Günther, the conclusion is drawn that as regards descriptive biology by far the greater number of species now recorded have been named and described within the last half century. The total number of animals described up to 1831 was only 70,000, while now the number is at least 320,000. But even now the British Museum contains some 12,000 species of insects alone which have not yet been described, and Sir John thinks that there is not a single species which would not repay the devotion of a life-time.

—After brief allusion to Darwin's discoveries relating to the devices which flowers resort to in order to secure the visits of insects for purposes of cross-fertilization, Sir John passes on to the theory of spontaneous generation, which received so much attention at the recent medical congress at London, in connection with the germ theory of diseases. Coming to anthropology, on which he is himself an authority, he expresses the opinion that we have no satisfactory evidence as yet of man's presence in pre-glacial or even miocene times, although he thinks it well established that man inhabited Europe during the milder periods of the glacial epoch. In geology the theory of violent periodical convulsions has been superseded by Lyell's doctrine that the forces in operation at the present day suffice to account for all the changes of the past; and as regards the physical character of the earth, the theory that it consists of a fluid interior covered by a thin crust has yielded to the evidence that it is a solid body. It has also been clearly shown that most of the great Swiss and Italian lakes occupy true basins scooped by glacier-ice out of the solid rock, and that in the main volcanic cones have acquired their form by the accumulations of lava and ashes ejected from one or more craters. Astronomers have discovered the planet Neptune, and increased the number of known minor planets from four to two hundred and twenty, and shown that our earth is but a fraction of one out of at least seventy-five million worlds. Comte predicted in 1842 that man would never succeed in finding out the chemical composition and mineralogical structure of the heavenly bodies, but spectrum analysis has within a few years accomplished this supposed impossibility, "showing how unsafe it is to limit the possibilities of science." As to the future of our solar system, Helmholtz has shown that the sun's heat is due to his continued shrinking, and will continue, with little if any diminution, for several million years. Some seventeen millions of years hence, however, the sun will probably be dead and cold, like so many other worlds the existence of which has been demonstrated by astronomers. Helmholtz's discoveries and Gladstone and Geiger's speculations about the color-sense and various phenomena of color are also referred to in poetic language, after which the various applications made of electricity in the telegraph, telephone, microphone, etc., are briefly mentioned. In economics "the establishment of the doctrine of free trade as a scientific truth falls within the period under review." In education much yet remains to be done in behalf of science. Indeed, Sir John regards the present system of education in England as "little less than a national misfortune."

—Upwards of two years ago we noticed the first cartographical fruits of the topographical survey of Attica undertaken by the Imperial German Institute at Athens ('Atlas von Athen,' Berlin, D. Reimer). The two maps of the city and its suburbs contained in that beautiful work—one showing the ancient city superimposed on the modern—are now reissued as part of the general map of Attica, with some modifications and with a complete indication of ancient remains down to this year's discoveries. The enlarged map of S. W. Athens contained in the 'Atlas' is omitted, but instead we have on the original scale of 1:12500 two maps of the Peiræus Peninsula, ancient and modern, quite equal in delicacy and fineness of execution to those of the capital proper. The illustrative text, in quarto shape, which accompanies the folio, dwells chiefly upon the archæology of the port, and is well supplied with diagrams. If Bismarck wishes to enjoy it, he must reconcile himself to the Roman print. From the same house we have received a new map of Middle Italy, showing, on a scale of a quarter of an inch to the mile, the topography of that interesting region with a fulness and authority never before approached except in the divers sources to which Dr. Kiepert has resorted, some of which, notably the latest Italian Government surveys, are not yet accessible to the public. Special attention has been paid to indicating the heights of mountains and the sites, even if ruined, of ancient towns and cities, of which the classical names everywhere accompany the modern; while the old Roman roads are laid down in red as far as they are known or can be conjectured. An enlarged side-map exhibits the environs of Rome. The whole work is calculated to be of the greatest utility to scholars and tourists, and, being in four plates, can be conveniently carried, either unmounted or mounted and between quarto covers. Like the one above mentioned, it deserves to be in every higher institution of learning. We ought to add that the district embraced includes ancient Latium, Campania, Samnium, with the southern parts of Etruria

and the country of the Sabini, and that the nomenclature is wholly Italian and Latin.

—Still another map of Dr. Kiepert's, that of the Southeastern European Peninsula, is completed by a third sheet just issued by Reimer. It shows the southern half of Greece and the Archipelago, together with Crete and part of Asia Minor; while a side-map gives in detail the Hellespont and vicinity, including, of course, the sites of Hissarlik and Bunarbashi. Finally, a large share of middle Europe is embraced in a fine political wall-map of Germany, in nine sheets, revised by Richard Kiepert. Copenhagen and part of Sweden on the north; Norwich and Ipswich, Rouen and Chartres and Bourges on the west; Modena on the south; and Temesvár on the east, indicate its generous scope. Taken together, the foregoing publications exhibit in greater or less detail nearly the whole of the Continent eastward and southward from the Rhone and the Seine as far as the meridian of the Bosphorus.

—Fräulein Brandt, of Berlin, and Herr Winkelmann, of Hamburg, have already gone to Bayreuth to study their rôles of *Kundry* and *Parsifal* under Wagner's personal instruction. To prevent any repetition of the accidents which occurred in 1876, and also to give more variety, Frau Materna, of Vienna, and Herr Vogel, of Munich, as well as Herr Jäger and Frau Vogel, will alternate with Brandt and Winkelmann in these parts. The other parts have been assigned to Scaria, Siehr, Reichmann, Beck, Schelper, and Hill. Lilli Lehmann, who sang and swam the rôle of the first Rhine daughter at Bayreuth, and is now a leading vocalist at the Berlin Opera, has requested the manager, Herr von Hülsen, to accept her resignation. The reason assigned for this step is that she feels offended because the rôle of *Dinorah* has been taken from her and assigned to Frl. Tagliani. According to the usual custom Hülsen will now lay the matter before the Emperor, who will refuse to accept her resignation. This will be interpreted as a compliment by Lilli, and in consequence all parties will be satisfied and happy. Next summer Frl. Lehmann will again make her appearance at Bayreuth, this time as leader of the flower-girls.

THE SOUTH OF TO-DAY.

The South of To-day. A Series of Letters. New York *Tribune* Extra No. 81, August, 1881.

We desire to call the special attention of our readers to these letters upon the South which have appeared from time to time since the beginning of the year in the *Tribune*, and are now reproduced in a "*Tribune* Extra." They are a contribution of exceptional importance to our knowledge of the actual conditions of the Southern States. The author went to the South for the purpose of observing the state of society in all classes and in all regions, and of reporting his observations. With these objects he has visited during the present year every Southern State, has associated familiarly with men of every condition, has seen life both in town and country, on the plantation and in the factory, has examined schools and prisons, and given attention to whatever might enable him to form a comprehensive and correct judgment concerning the social, political, and industrial conditions and tendencies of the Southern community. The extent and variety of his observations give to them, however, the least part of their value. No one can read these letters without speedily discovering that their writer possesses unusual qualifications as an observer; that he unites quick and well-trained faculties with sound and balanced judgment; that he is well equipped for his work by previous study of social questions and reflection upon them; that his candor is conspicuous, and that he is free from any partisan prejudice or personal prepossessions which might warp the statement of his conclusions. We have seldom read a record of travels that gave evidence of more absolute trustworthiness. And this is not the result of simply a dry and cold intelligence, for the letters are full of strong but reserved feeling, and frequently display a shrewd wit and cheerful humor. From a merely literary point of view they are excellent; they are free from newspaper slang, and written in direct and often vigorous English, though they exhibit not infrequently the marks of haste in composition, and lack of opportunity of revision.

We are well aware that in thus speaking of these remarkable letters we lay ourselves open to the charge of being prepossessed in their favor, by the fact that they very strikingly confirm the views expressed by the *Nation* during the past ten years or more in respect to the condition of the South, and the true methods of dealing with the problems of reconstruction. The principles we have maintained find full justification both in the bright and in the dark side of the South of To-day. We cannot but congratulate the *Tribune* upon its independence and frankness in thus giving to the public the most effective confutation of opinions which it has maintained with persistency, and of doctrines which it has asserted as essential to national salvation. And even the *Tribune* will, we are confident, agree with us that since the publication of Mr. Olmsted's admirable book concerning the South before the war, there has been no published study of the conditions of the Southern States so valuable as this by its own special correspondent.

From a work in which all is interesting and instructive it is difficult to select any special passages as of more interest than the rest, but we would call particular attention to the writer's vivid representation in various letters of different aspects of that state of semi-civilization characteristic of a large portion of the Southern people, by which the political problem—the problem, that is to say, of a republican government and the orderly administration of the laws—is so gravely complicated. The three letters on "The Southern Side of the Story," "The Suppression of the Negro Vote," and "The Evils of a Corrupted Ballot," are masterpieces of fair statement, and are full of information equally needed at the North and at the South. We should be glad of space to quote largely from them, but they deserve to be read in full by every one who desires to take an intelligent part in the discussion of Southern affairs. As the writer justly says: "Acquaintance on the part of the American people with the essential facts of the case must be the basis of any method or course of action which is to lead to real improvement in the 'Southern situation,' or to any genuine solution of its difficulties." As yet the people are very inadequately informed. "The need of reporting as distinguished from advocacy or argument, and from novel-writing, cannot be too strongly emphasized. There is excellent opportunity and abundant material for the construction of novels and romances dealing with Southern life and its conditions, but such works of art" (we commend this to Judge Tourgee and his admirers) "do not furnish the best method for conveying to the Northern people the knowledge which they require, to enable them rightly to understand the actual facts of Southern life, and of the relations between the two races."

The conclusions arrived at by the writer after his wide tour of observation have, as was to be expected, a twofold character. On the whole, hopefulness predominates in his general view. He finds the great need of the South, as it is the great need indeed of the North also, to be education, intellectual and moral. The South, according to his report, feels this need widely, and in many regions is making creditable effort to supply it. It is eager that the National Government should assume the duty of assisting in the work. "The 'subsidy' view of government is strongly held in the South, and henceforth the most determined champions of centralization will be found in that part of the country." The South now feels herself part of the Union, and means to take advantage of being so. She has put the war behind her; she has resolutely set her face forward and not backward. Wherever the writer of these letters went he found in this respect the same spirit.

The *modus vivendi* established between the whites and the blacks is on the whole not a bad one, though in many places the black cannot secure his legal rights as a voter. This deprivation is likely to be temporary, for in the long run its evil consequences will affect the white no less than the black race, and the break-up of the "solid" South now in progress will lead to attempts by the leaders of rival parties to draw out rather than to suppress the black vote. The negro is not about to belong for ever to the Republican party. The suppression of the negro vote is nothing more than was natural, nay inevitable, as we have often shown, under the conditions of the reconstructed States. It is a proof not so much of the perversity of the Southern whites as of their perplexity. They were in a desperate dilemma, and they chose that horn of it which seemed to offer the best chance of protecting the immediate material interests of society. New England itself, under similar circumstances, could not be trusted to choose differently. Improvement in education, improvement in material conditions, the gradual increase of confidence in established order, the slow diffusion of property among the negroes, and the consequent quickening of their intelligence, will ultimately make the ballot-box as open and as honest in Mississippi as it is in New York. The shotgun and the tissue-ballot are already dropping out of use.

The remarks of the writer on the labor question generally, in reference to white as well as to black labor, on the question of emigration, on the growth of Southern manufactures, and on the results of the common lack of thrift among all classes, are distinguished by sobriety and good sense. In fact these letters are so full of matter of importance that deserves attentive consideration, they are of such historic value as a truthful record of aspects and conditions of society such as have never elsewhere existed, that we trust they will not only have a wide circulation in their present shape, but will also be reprinted in a volume for preservation. We are confident that a publisher would find it for his interest thus to reprint them, and the permission for their republication could undoubtedly be obtained.

BUDDHIST SUTTAS.

Buddhist Suttas. Translated from Pâli by T. W. Rhys Davids. London and New York: Macmillan & Co. 1881.

We are glad to have another work on Buddhism from so capable a writer as Mr. Rhys Davids. It is not long since we reviewed in these columns the first volume of his 'Jâtaka Stories.' We now have before us this book of 'Buddhist Suttas.' The author speaks in his "General Introduction" of the difficulty of choosing, "from the stores of a nearly unknown literature," a collection of texts affording "a

sample of what the Buddhist Scriptures, as a whole, contain." This "nearly unknown literature," according to Mr. Childers ('Pâli Dict.,' p. viii.), is eleven times the size of our own Bible; Mr. Davids, on the other hand, has calculated that the words of the Buddhist Scriptures, including all repetitions, do not exceed twice the number of words in our Bible, and a translation from them into English would be about four times as long ('Buddhism,' p. 20). Anyhow, the selection of a representative text or two out of this large mass of literature must be a work of some difficulty.

We have in this volume a translation of seven Suttas or texts, which contain a fair sample of the substance and method of Buddha's teaching. The fault to be found with all such translations is that without a running paraphrase they are almost unintelligible to Western readers. Our author has tried, and well tried in most cases, to select English expressions to convey the idea of the originals; but even so, the reading is very dry. Let us take, as an example, a paragraph on p. 300 of the volume and see what can be made of it:

"But the wise man, brethren, the disciple walking in the Noble Path, who perceives the noble ones; who comprehends, and is trained according to the doctrine of the Noble Ones; who perceives good men, who comprehends, and is trained according to the doctrine of good men; he understands both what things ought to be considered and what things ought not to be considered—and thus understanding, the things that ought to be considered, these he considers; and the things that ought not to be considered, those he does not consider."

Now this, to say the least, is puzzling. What is it "to *perceive* good men"? What is it to perceive the "Noble Ones"? Are these "noble ones" the same in either case, or do the capital letters make any difference? And then the idea of walking in a "Noble Path" is somewhat confusing. No doubt (or, we may say, *probably*) the Noble Path is here the same as the Noble eight-fold Path, frequently referred to by Mr. Davids in his books; but in any case the word "Noble" appears an unfortunate one. If the epithet "ariyo," in the expression "Ariyo atthangiko maggo," is not altogether a Sinhalese introduction, we yet cannot doubt that the idea intended to be conveyed by it was not akin to *nobility* but to *orthodoxy*, and the Greek word ὀρθός accurately represents this idea.

Mr. Davids (p. 295) suggests the use of the word "fault" in a "geological sense" for the Pâli "âsava." But why not use the same word "fault" in a moral sense, as *culpa* is used in Latin? The ninth article of the English Church, for instance, tells us that "original sin" stands not in the following of Adam, but is a "culpa naturæ" (a blemish of nature). The word "blemish" or "fault" (in the sense indicated) appears to correspond very closely with the Buddhist "âsava."

The discovery of this Pâli literature has, at any rate, brought new students into the field of Buddhist enquiry, and this augurs well for our better knowledge of the subject generally. It is strange how little we know even yet about the very elements of this religion. To say that the Buddhists do not believe in God, for example, seems to come to this: that they do not believe in the God, "the Pot-maker" (Ghatikâra), of the Brahmans. But let any one take the definition of God as it is found in Cudworth, for instance, or in the words of the celebrated Mr. Norris, the Rector of Bemerton, near Sarum (in England), and let him compare with these words the general confession of the Buddhist Church, and then see whether the idea of God in its highest sense is altogether absent from the latter. "The essence and idea of God does consist in *Being* itself," so says Norris ('Treatises upon Several Subjects by Mr. John Norris,' London, 1697, p. 14). We know no saying of Buddha that would contradict this; he opposed root and branch the idea of a God having "body, parts, or passions" (the word "parts" here corresponds with "skandha"), but he never denied, to the best of our knowledge, pure and unconditional existence. In fact, is it not allowed on every hand that the "First Cause" with him was not denied, but simply declared "unthinkable" (*acchinteyya*) (see Childers, 'Pâli Dict.,' viii., n.)? We will not ask our readers to enter on a consideration of the endless Nirvâna discussion, but we can safely say it is a question still *sub judice;* and, until both Northern and Southern Buddhist texts are before us, it would be rash to dogmatize on the subject.

The most interesting Suttas in this collection, to our mind, are the first and second. The book of the "Great Decease" (*mahâparinibbânam*) gives us an account of the last journey of Buddha, from the Vulture Peak to Kusinârâ, where he died. It reads throughout like a pious fraud. No man at his time of life would preach such sermons as we find here. Still, there is much to be admired in the old man's dying words: "Behold now, Brethren, I exhort you, saying, 'Decay is inherent in all component things! Work out your salvation with diligence.'" This seems to be the refrain of all his teaching—to escape from the perishable world and attain the imperishable condition, and with this aim to use the highest degree of self-control: a noble purpose, and one not beneath our serious notice. A curious episode in the history of the last days of the saint is the reappearance of his old enemy Mâra, the Tempter. Formerly, under the Shepherd's tree, after his enlightenment, Mâra had besought the sage to die, as having finished his work. But this temptation was resisted, on the ground that his work was not done, nor would be done till his pure religion should have "been well proclaimed amongst men," and that till then he would *work*. But now the Tempter comes again and takes him at his word: "The time has come for the Blessed One to die; this pure religion of thine has been well proclaimed; pass away, then, Lord, from existence." And when he had thus spoken, the Blessed One addressed Mâra: "Make thyself happy. At the end of three months the Tathâgata will die."

These are singular features in the Buddhist legend—we mean this familiarity with the denizens of other worlds, good and bad. There is nothing like it in the Greek mythology: the Greek stream of Aryan tradition seems to have carried away with it a knowledge only of powerful and happy gods; the idea of a Tempter, or Mâra, or Ahriman, to all appearance, sprang up in the Iranian branch of the race—in fact, it seems to have been this quarrel as to who should be the Devil that led the Iranians, properly so called, and the Indian Aryans to separate. But, to give Mâra his due, Mr. Davids might have told us that he approached Buddha respectfully, and "upasamkanitvâ, ekamantam atthâsi." This surely means something more than "standing beside" Buddha; he approached, as others did, with respect, and having so approached he took his place on one side—*i. e.*, he went away some distance—and then, turning towards the Lord, he spoke.

This excellent translation of the story of the Great Decease will throw light on the tone of the early Buddhist Scriptures. We have been rather satiated by the unmeaning phrases and endless repetitions of such books as the "Lotus of the Good Law," but here at any rate is an attempt at history. The journey of Buddha to Kusinâgarâ (Kasia) can be traced out easily on our maps, and this of itself gives a reality to the narrative. The only exception to the probability of the thing is the miraculous flight of the sage over the Ganges, "the only miracle," as Mr. Rhys Davids observes, "in his entire history." We will let this one exception pass without discussing the general question, and be thankful for the comparative sobriety of the rest of the book. We have no space, unfortunately, for a lengthened reference to the second sermon, the "Foundation of the Kingdom of Righteousness," which is in all respects as interesting and important as the former. The "kingdom of righteousness" is the kingdom of religion. Buddha founded this kingdom when he preached at Benares and converted his first disciples, five in number. It is extremely curious that this idea of a religious kingdom should also take so conspicuous a place in the teaching of Christ, who, though the son of David—*i. e.*, of the royal line of kings—refused any claim to temporal power, though the people and his disciples would have thrust it on him, and became a homeless preacher, with no place to lay his head. It is not too much to say that the time has come for a thorough investigation of these constantly-recurring parallels in the two histories, and we are sorry that Mr. Davids has declared so emphatically that there can be no historical connection between the two (p. 166). Perhaps when this "nearly unknown literature" is further investigated, and the Northern books collated with it, a different opinion may be forthcoming.

RECENT NOVELS.

The Neptune Vase. By Virginia F. Johnson. [Franklin Square Library.] New York: Harper & Bros.

Reseda. [Franklin Square Library.] New York: Harper & Bros.

Cape Cod Folks. Boston: A. Williams & Co.

School Girls. By Annie Casey. New York: Cassell, Petter, Galpin & Co.

The Skeleton in the House. From the German of Frederick Spielhagen, by M. J. Safford. New York: George W. Harlan.

'THE NEPTUNE VASE' is an Italian story, but with the fresh background of Siena. If the author is a little apt to make up the setting with the names of pictures and *bric-à-brac*, guide-book fashion, there is still enough of delicate and graceful drawing to make a charming story. Katy Osmund is again the American girl abroad, but of the old, sweet Hilda type—Hilda the woman, not the artist, for "Katy Osmund had not been endowed with any special gift of genius by nature which absorbed itself to the exclusion of other lives." "Her mission was to take care of people, to divine and supply their wants by a thousand trifling and delicate attentions." She comes an orphan to the solitary home of Dr. Brent, the American consul, who is the enthusiastic connoisseur and collector of curios, while the Signora Argenti, the owner of the "Neptune vase," is a poor, faded, gracious, gentle woman, the embodiment of the clinging love of the last of a race for its heirlooms. It is the privilege of some lives to do good by the mere fact of their existence, the simple force of being, and such it seems for Katy and her frank young lover, the new professor in the Tolomei College. Their story has hardly incident enough to sketch here by itself, but we shall not be alone in our satisfaction with such a companion-picture to sundry portraits at which we have sighed the more because we could not deny their truthfulness. With an unconsciousness too unstudied not to be real, and therefore all the more effective, the author has made Katy Osmund in the dull waiting-room at Empoli, on her flower-decked balcony, or at the Lizza in Siena, the

American girl who vindicates her traditions and her training with simple, innocent dignity. For ourselves, we could have done without the episode of the Villa Giraldi, and would rather have left it in the mysterious shadow of the first chapter, and the fate of Henry Osmund to the dim suggestion of his wife's letter; but such discoveries belong to the accepted machinery of the novelist's trade.

'Reseda' is made up of three several stories. That of Mignonette is much after Mrs. Oliphant's pattern—a child left by herself in an old manor-house with the rectory and the rector's handsome sons close by. As usual, the heroine fares forth into the gay world and has wealth and titles laid at her feet, a cruel mystery threatens her peace, but at last the *ami d'enfance* wins her. It is a flaw in the logic that her father consents so readily; or is the cruel parent disappearing from fiction? The story of the step-sister lacks nothing of the wildest sensation—cheating at play, a sham-marriage, murder, forgery, and death in a duel. So far we have but the familiar material of the second-rate novel, but the history of Mignonette's father, Sir Clement Wychwood, has something in it less commonplace. After long mourning for Mignonette's mother, he is won by the wiles of a beautiful Mrs. Roston as the two are returning from India. Flattered by her devotion to himself, partly real and partly feigned, Sir Clement has no suspicion of the past, nor any misgiving as to her sedulous concealment of it. There had been a doubtful episode in India with a certain Captain Lauriston, though such passion as there might have been had so decidedly cooled that the gentleman finds it a positive relief that the offer of marriage which he feels bound to make after Col. Roston's death is refused by the lady, who, on her side, has no fancy for poverty. Each, however, believes the other as fond as ever, and gratified vanity keeps up a spasmodic correspondence. Completely as Mrs. Roston has exceeded her own expectations in her marriage to Sir Clement, she still feels that she has cheated herself when Captain Lauriston most unexpectedly becomes the rich Lord Hexham. At her suggestion he makes Sir Clement's acquaintance and becomes his frequent guest. No one suspects evil, for the best of reasons, that there is none to suspect; for nothing remains of the earlier attachment but this mutual delusion as to the other's feeling.

It will be seen that the situation is novel, and might have been developed so as to make a remarkable book; but to undeceive the two, to save for Lady Wychwood her husband's respect, to make her no mere adventuress, required too delicate handling. She is made guilty of deceptions of the most hackneyed and vulgar kind, even when practising a sisterly devotion that alone might have redeemed her. Sir Clement's love is supposed to survive all sorts of discoveries, but when a chance meeting reveals the identity of Captain Lauriston with Lord Hexham he believes all the old stories and imagines a legion of new ones. He leaves Lady Wychwood a virtual prisoner at the manor, and flies off to the Continent. Lest stern morality should be shocked by the lady's frequent escapes from detection, she dies in the railroad accident which seems to have been set apart in fiction as a special sort of divine judgment. Whoever begins this book will be drawn on to finish it, for it is full of incident and the scenes are not ill managed; but any one who stops to think over the plot will agree with us as to the curious "might have been" in it.

The author of 'Cape Cod Folks' is so successful in her sketches of real life that it is a pity she has not confined herself to them. It is only a new illustration of the fact that the power of reproduction is quite other than that of creation. What she saw or knew she has given with vivid force. The drowning-scene has evidently had much care spent upon it, but in weird, tragic effect it comes nowhere near the departure of 'Lihu's funeral procession. The first is of the universal stock-in-trade, the last is unique, unparalleled. The story of the "fisherman" is out of place and out of tune. We doubt even of the parting with 'Ren Nightingale, and we are sure the incident upon the pond is either so improbable as to be absurd, or is an outrage. Either way it is a positive blemish in the book. A note from the publishers implies that some offence has been taken at the frankness of the portraiture of local manners, but surely not by the delightful, impossible, actual "Cedar Swampers" themselves, for the tone of the book as a whole is one of hearty appreciation: for one example, the recognition of the beauty and power of their singing, and the part played by such music in a simple, primitive community—their one fine art. The impression of the book that will linger longest may be the refrain of the hymns swelling and dying above the monotone of the surf.

To quote humor is to do it no justice, but here is one bit: "'Never—you—trust a neat man,' impressively. 'Never you trust 'em—for why? They wasn't made so. God made 'em. God made 'em to clutter.'" From the graver pages, we think this glimpse of the country school the best:

"Ah! what to do with them through the long hours of the day—beautiful creatures! by no means unlovable, with their bright clear eyes, their restless, restless feet, their overflowing spirits; their bodies all alive, but with minds unfitted by birth, unskilled by domestic discipline, to any sort of earnest and prolonged effort. Long, weary hours, therefore, not of furnishing instruction to the hungry and enquiring mind—ah, no! but of a desperately-sustained struggle, in which, with every faculty on the alert to discover the truest expedients, with every nerve strained to the utmost, I strove for mastery over this antic, untamed animal, until I could throw the reins loose at night, and drop my head down on my desk in the deserted school-room, tired, tired, tired!"

One graphic description tempts us to copy it for its simplicity:

"I could watch the ocean on one side and the clam-diggers on the other; could see grandma on her hands and knees, a dot of broad good-nature in the distance, always remaining apparently in the one place, and always, somehow, getting her basket full of clams, as she gradually sank deeper and deeper into the briny soil; but no true Cedar Swamper ever caught cold by soaking in the brine. I could distinguish Adelaide wandering lightly about among the rocks, scraping off mussels with her hoe; and the Modoc, the champion clam-digger of all, spreading her tentacles here and there, and never failing to come up with a bivalve. It was a picturesque scene viewed from the great rock; and when the tide began to sweep in again, George Eddie sent a piercing whistle along shore to call the stragglers together; clams, children, and all were loaded into the cart, and jostled gayly homeward, chased by the fresh sea-breezes."

'School Girls' might be left undisturbed in its mediocrity but that we find their home, Montagu Hall, pronounced by critics a school of "a very superior and enjoyable variety." By the showing of the book itself, not from the scholars, it appears that the principal instructor was "a stern man, but a clever, good (?) teacher. Quick, industrious, and attentive pupils could and did appreciate his instruction; but the slow and the timid quickly lost their footing. He had no power of sympathy with dulness or timidity." The French governess is "extremely passionate," of obvious vanity and dubious sincerity. No pains of description are spared to make the head-mistress a model of every virtue and grace; but, with all due respect for the subject of her discourses, it is certain no living girls would listen to them. It goes to prove that her own pupils did not, that she is in the habit of putting even grown-up girls under lock and key—not new scholars either. Nor have they learned not to play practical jokes of the most cruel and aggravated kind. As to the intellectual level of this "superior" school, all that one can gather is that one girl reads Keats's 'Hyperion' in the arbor, another fails in her examination because she has spent the hour in writing "verses to Balder the Beautiful," and Bach's fugues are left in the dining-room. Except a ballad of Schiller, we find no other mention or pre-supposition, so to speak, of literature (not school-books) in the story—none of that school-room chit-chat of books and music and stories such as makes Miss Yonge's work so attractive. Girls like to read books of this kind, and there would be no better way to do them good than to write truthful, natural stories of school—truthful not in the petty sense of truth to single facts, but truthful as presenting in its whole round the many-sided life, the daily striving, the beautiful hope of the school-world.

'The Skeleton in the House' is as good as a play. It is a piece of clever mystification, which introduces us to the household of one of the great northern merchant-princes. The lovely bride is brought home by her husband, not in the anticipated triumph, but hurriedly, stealthily, before the appointed hour. The garrulous housekeeper chatters on about "it" and "it"; the old servant-man staggers in with knees shaking from terror; and the sobbing kitchen-maid protests, "It's a sin and a shame to tell such things about our master." The "Hausfreund," Dr. Bertram, blindly and tormentingly explains the pathology of the skeleton in the house, while Lebrecht, the handsome young husband, is in silent despair at his own folly and cowardice. Does it answer the old question, "What did the *first* wife see?" when the bride tremblingly takes the veritable Bluebeard key, and finds—"the family treasure, sparkling and glittering, but on the treasure sits the skeleton, rattling and grimacing: 'My best greetings to you, my darling; you and I now belong together, for you probably know that you have married me with the old house'"? How Lebrecht's wife was confronted by "a handsome young face, with soft, brown, waving locks, large blue eyes twinkling roguishly," is a puzzle within a puzzle, which it is well worth while to read the book to find out. Moreover, the story is a good-natured satire on German class-prejudice, and a hearty tribute to the power of woman's love to overcome such barriers. It will be a most welcome addition to the lists for the school-room, which are so scantily provided with short, bright stories of contemporary German life.

TWO WORKS ON ALGEBRA.

Algebra for Schools and Colleges. By Simon Newcomb, Professor of Mathematics, United States Navy. New York: Henry Holt & Co. 1881. 8vo, pp. xi.–454.

Elements of Algebra. By G. A. Wentworth, A.M., Professor of Mathematics in Phillips Exeter Academy. Boston: Ginn & Heath. 1881. 12mo, pp. v.–280.

It is hardly possible in the present age that an "Algebra for Schools and Colleges" should be the medium for communicating new truths. Its merit must consist in the manner in which it tells what, in one way or another, has already been told. The work first on our list is divided into two parts, the first containing "about what is commonly required for admission to college, and the second for the more advanced general student." The preface is in itself a little essay that will repay perusal on the part of all teachers. Prof. Newcomb says that he has "omitted several subjects usually inserted in treatises having

the same object," and gives good reasons for the omission Among those subjects is the process for finding the greatest common divisor of several polynomials. We admit the force of his reasons for believing that the time of pupils can be better employed ; but it must be remembered that we are all obliged to learn many things in which the labor of acquirement seems altogether to overbalance the advantage of attainment. To find the greatest common divisor of two polynomials is a very frequent requirement of examination papers for admission to college. We suppose this is required, not so much for its own sake as because the operation brings into play nearly all the elementary processes of algebra, and thus saves the necessity of asking many other questions. We have before us the examination papers for Sept., 1880, for admission to Harvard. The second requirement of the paper for algebra is : "Find the greatest common divisor and least common multiple" of two long polynomials. Whether the examiners would have rejected or conditioned a candidate who failed to accomplish this we cannot say, but most candidates would certainly like to be prepared to do it. No such objection applies to the omission of the other subjects mentioned.

We will now look at the book from a higher standpoint. There are two main distinctions between arithmetic and algebra. The first is that algebra has a far more extensive language of symbols, by which it is able to present to the eye and the mind propositions and processes which, expressed in ordinary language, would be either unintelligible or would require so great and such long-continued mental exertion that the efforts of a life-time would carry us but a little way. The human mind has never invented a labor-saving machine equal to algebra. The second distinction is still more important. In arithmetic, considered as dealing with abstract numbers, all operations are concerned with only one kind of unit. Everything is regarded merely as existing and as susceptible of repetition and division. De Morgan, in his treatise on functions, has in substance defined arithmetic to be the *art* which teaches what can be done with 1. Algebra introduces a new idea. In addition to the category of quantity it brings in the category of quality ; it teaches what can be done with different kinds of 1s. Elementary algebra gives us two different units +1 and —1 ; the higher algebra adds to these what is usually called the imaginary unit ; the highest algebra, as it appears in Grassmann's *Ausdehnungslehre*, teaches what can be done with an unlimited number of essentially different units. Those who are able to read between the lines will see that Prof. Newcomb's work is a continuous illustration of the ideas which we have thus briefly and imperfectly expressed. He has endeavored to make the pupil skilful in the translation of mathematical ideas from ordinary language into the language of algebra ; but, above all, he has endeavored by explanation and illustration to make the pupil understand that he is working a sort of double-entry arithmetic where two opposite kinds of quantities are continually playing against each other. The introduction of illustrations from geometry, although not peculiar to Prof. Newcomb's work (see the algebra of MM. Briot and Bouquet, of the École Polytechnique), is, we think, more felicitously carried out than in any other.

Perhaps the general character of Prof. Newcomb's text-book may be best expressed by a comparison with another. In 1861 Hermann Grassmann, one of the greatest mathematicians that ever lived, published an algebra for the use of high-schools. Following the example of Newton, he called it "Arithmetik," dropping Newton's qualifying adjective "universal." He contended that his method of presenting algebra was not only the best among several possible methods, but the only completely scientific and consistent method. As an abstract summary of the principles of algebra it is, so far as it goes, almost perfect. Prof. Newcomb's book presents many striking analogies to that of Grassmann, but there is this capital difference : a boy, say sixteen years of age, well prepared in arithmetic, of the average capacity of candidates for admission to college, and of perhaps a little more than average perseverance, would probably be able to learn algebra out of Prof. Newcomb's book without the aid of a teacher. Of course, such an attempt would not be advisable except under peculiar circumstances. We doubt whether such a boy would ever master the first ten pages of Grassmann's book.

We will venture one or two suggestions. In §§ 23-25, which treat of the rule of signs in multiplication, we think it would have been well to state the rule in the ordinary short and convenient form : *Like signs*, in multiplier and multiplicand, *give plus, unlike signs give minus.* The omission is probably merely an oversight, because in § 28 we read : "Hence the rule of signs is the same in division as in multiplication, namely" ; and the rule for division is then given in a form corresponding to the above. Again, Prof. Newcomb uses the words "like" and "similar," when applied to terms, as synonymous. We think it would be better, as some mathematicians have done, to use the word "similar" to denote terms having the same literal factors, and to confine the word "like" to similar terms having the same sign.

The second part, or "Advanced Course," possesses the same qualities of clearness and what may be called mathematical tact as the first. We have room only to notice the admirable chapter on imaginary quantities. The epithet "imaginary" was applied to these quantities when they were regarded as being merely the symbols of the absurd and the impossible. The name still clings to them as a mark of distinction, although the reason for it no longer exists. These quantities generally appear in mathematical investigations in the form of a binomial composed of a real and an imaginary quantity. Mathematicians quite commonly apply the word "imaginary" to these binomial expressions. Prof. Newcomb usually and rightly calls them "*complex* quantities," but he frequently falls into the old form of speech. It would certainly conduce to the clearness and convenience of mathematical language to adhere strictly to the distinction between real, imaginary, and complex quantities, even when speaking of the roots of equations, and to apply the word "imaginary" only to expressions into which real quantities do not enter except as factors. We would also suggest the use of the Roman letter i, instead of the Italic *i*, to denote the imaginary unit. The Roman letter looks more like a unit, and, as the Italic letters are generally used to denote quantities other than unity, there is less danger of confusion. It would also be better to place it in all cases immediately after the sign and before the other factors, whether literal or numerical, as is usually done in the case of the real unit where it is expressed.

The introduction of imaginaries enables Prof. Newcomb to treat in a philosophical manner the functions *sine* and *cosine*. As these functions are usually defined and treated in works on trigonometry, the student is led to suppose that they are something peculiar to triangles. He afterwards learns, if he ever learns at all, with surprise, that "every number has a *sine*" and a *cosine*, and that all the propositions of trigonometry can be stated and demonstrated without any reference to triangles. We will hazard another suggestion which we consider a small contribution to the philosophy of mathematics. Neither Prof. Newcomb nor, so far as we are aware, any other writer has stated the rules which govern operations with imaginary quantities in the form which seems to us most consistent with their nature and best calculated to show their relation to real quantities. The rules for multiplication will serve as the key to all the others, the deduction of which would find a more fitting place in a mathematical journal or treatise. We use the word "imaginary" in the strict sense above indicated. The first rule is : *The product of two imaginary quantities is a real quantity.* The second rule is the rule of signs for imaginary quantities : *Like signs give minus, unlike signs give plus.* Keeping these two short rules in mind, the manipulation of imaginary quantities becomes very easy. If, two centuries ago, mathematicians—especially those who were cultivating the newly-discovered science of analytical geometry—had asked themselves the question, May there not be quantities susceptible of the distinction of positive and negative, and yet of such a nature that plus into plus and minus into minus gives minus, and plus into minus or minus into plus gives plus ? and had they perseveringly striven to discover the results to which such a supposition led, it is possible that the subsequent history of mathematics might have been quite different from what it has been.

The second chapter of the book on imaginary quantities treats of their geometrical interpretation. Here these quantities become actual, so that we can lay them off with the rule and compasses. We would strongly recommend the study of this chapter to every student who intends to push his studies into the higher departments of mathematics. It is a well-constructed introduction to a class of ideas which have hitherto been exclusively confined to advanced mathematicians ; it is the entrance to a new intellectual world.

A comparison between the work of Prof. Newcomb and the Algebra of Mr. Todhunter naturally suggests itself. We must confine ourselves to a few general remarks. The perusal of Mr Todhunter's books leaves the impression on the mind that he regards mathematics very much as a clear-headed stoker who, by long and faithful service, has worked himself up to the position of engineer, regards an engine. Of the laws of heat and elasticity and motion he knows nothing ; but he knows exactly how to manipulate his machine, and may be, by all odds, the safest man on the road in a case of emergency to run an express sixty miles an hour. There is no living mathematician who has a more accurate knowledge of the whole machinery of mathematics, from arithmetic up to the calculus of variations, than Mr. Todhunter ; and there is no living mathematician who is freer from even a suspicion of genius. His highest reason for any process is that mathematicians have generally agreed to follow it, and that if you try it you will find it very convenient. To Prof. Newcomb's whole work we may apply the remark which he makes on page 402 in regard to a particular case : "This example illustrates the consistency which pervades all branches of mathematics when the reasoning is correct."

We have noticed several misprints ; the following are of some importance. In the equation at the end of § 329 (p. 398) the imaginary unit has been omitted from the second term of the right-hand member ; and in the "Remarks" on page 400 *i* is several times misprinted for *u*. We hope soon to see the key which Prof. Newcomb promises.

Prof. Wentworth's work would, we should think, be a very good working-book in a school.

The number of exercises and problems is unusually large. A boy who had actually worked even one-third of them would have little to fear on his examination for admission to college. In his preface Prof. Wentworth calls attention to the chapter on "factoring." The chapter is very good, but the larger portion of it is an anticipation of the theory of quadratic equations, and, we are inclined to think, would find a more fitting place under that head. He also calls attention "to the method of presenting choice and chance." By "choice" he means what is usually called the theory of permutations and combinations, or the combinatory analysis; by "chance" he means the theory of probabilities. We see no advantage in changing the ordinary terminology. The word "choice," especially, is often quite inapplicable to the questions treated. The brevity of the words is no doubt a recommendation, and then the alliteration, "choice and chance," is very tempting. The following curious statement we quote without comment: "To avoid trespassing upon the works of recent American authors, no American text-book has been consulted."

A GREAT CATALOGUE.

Index-Catalogue of the Library of the Surgeon-General's Office, U. S. A. Authors and Subjects. Vols. I., II. A–Cholas. Washington. 1880, 1881.

AFTER a delay of only a year the second volume of the 'Index-Catalogue of the Library of the Surgeon-General's Office' has appeared. It goes only as far as Cholas. At this rate the alphabet will fill a baker's dozen of volumes, or over eleven thousand pages. All other catalogues pale before it. The Advocates' Library has one of the best of mere author catalogues, but it is content with six volumes, printed in a type much larger than is ever used for the purpose in this country. The Boston Athenæum promised for a time to have the largest "dictionary" catalogue, but its 8,500 pages shrink into insignificance before this monster. Only a Government could print it. Our national passion for magnificence ought for once to be satisfied. Nor is the size attained by the use of large type and open spacing: Dr. Billings has crowded an immense deal into his pages by skilful typographical arrangements. To use small type for notes and the lists of contents of works, and even for what are called analytical references (that is, references to the articles in magazines and collections), is nothing new; but Dr. Billings has gone further than usual in economy of space by running these latter all together into long paragraphs, instead of beginning a new paragraph with every item and so furnishing the printer with much "fat"—that is, blank space. Owing to this economy the two volumes of only 1,878 large octavo pages contain, besides 21,549 authorities (representing 12,965 volumes and 16,208 pamphlets), and 20,550 subject-titles of separate books and pamphlets, the enormous number of 71,914 titles of articles in periodicals.

One naturally turns to the subject Bibliography to see what predecessors Dr. Billings has had. There is nothing equalling him in bulk; so far as we know, there is nothing equalling him in excellence. Yet his list is a long one—12 pages; and this leads us to make a slight complaint of his method. He divides these 12 pages into 8 parts—General Works; Catalogues of Public Libraries, of Private Libraries, of Booksellers; Literature of Countries and Localities; Dissertations and Theses; Indexes; Manuscripts. Making the divisions is a good plan; Dr. Billings might even have added to them Special Subjects and Periodicals. But in order to find out what the divisions are, one has to turn through the whole twelve pages. A few lines prefixed to the article, stating the arrangement, would have saved the consulter considerable time. The same criticism is to be made of the article Boston, which is a little longer, and is even more in need of an explanation because the titles placed under "Boston," simply, are indistinguishable in subject from those put under "Boston (municipal ordinances and reports of)." But these are trifles. It could not have been an easy task to determine the rules that should be followed in such a catalogue. The course adopted is in general judicious. One practice, however, seems to us of doubtful wisdom. It is this: "In indexing journals and transactions, the general rule has been that only original articles should be taken, but occasionally important papers are indexed in several periodicals, and sometimes a reprint is indexed when the original is not in the library." If an article is worth referring to at all, it is worth while to refer to it wherever it occurs. It takes little more space to add a second reference, and may lead to the satisfaction of an enquirer when the original article is out of the library; for the books under Dr. Billings's care are circulated, with a wise liberality, throughout the Union. As it is now, the unindexed reprints might as well not be in the library at all, since no one knows where to find them. That part of the typography which depends upon the printer is not of equal excellence. For some reason the Government Printing Office has always used poor type—poor, that is, in form, cut according to the taste of the last generation. Till lately, too, United States publications have appeared on wretched paper; but the paper of this catalogue is excellent, and the heavy-faced type, if not handsome, is at least distinct.

The work which Dr. Billings is doing is of almost as much importance to other libraries as to his own. Just so far as their books and periodicals coincide with his, is his index-catalogue their index-catalogue; and his collection is so large, especially in periodicals, that every medical library must coincide with his to a great extent. His work may also be very useful to public librarians in another way. Since medical literature is estimated at one-thirtieth of that of the world, public libraries, which generally offer themselves as catch-alls to those who are clearing out closets, attics, and lumber-rooms, are likely, even if they do not buy much in that line, to have a very considerable number of such books to deal with. Now, as the diversity of medical nomenclature is remarkably great, there having been three entire revolutions within a century, cataloguers have been often puzzled to know under what headings to enter a large portion of the literature. Hitherto there has been no authority to which all could refer, but we fancy that Dr. Billings's catalogue will be at once accepted by every one as relieving them entirely of the necessity of independent thought.

A French scholar travelling in this country remarked lately that what surprised him most was the great interest Americans showed in bibliography. He was told that it was because Americans of the Brahmin or reading caste enjoy literature so much that they take pleasure in all that is connected with books, like to read about them as well as to read the volumes themselves, and taste the pleasures of a collector at an expense of time alone. This explanation was all very well, and no doubt true of the books which *are* books, and their lovers, but would hardly apply to Charles Lamb's βίβλια ἀβίβλια, the mere tools of a trade or a profession. They certainly cannot be supposed to excite such enthusiasm in any one's breast that association should give charm to a bare list of their names. What could induce any man to spend years of labor in getting together and printing tens of thousands of titles of pamphlets and magazine articles treating of fevers, and consumptions, and wounds, and abscesses? Here other motives must be supposed, and among the chief, no doubt, is the desire to be of public service—a feeling very strong in all Americans, except perhaps politicians. Americans, too, have a national appreciation of labor-saving machines, and every scholar who has spent hours in searching for some communication in an old file of magazines, or, rather than waste his time thus, has left his own work incomplete, will appreciate the potential saving offered him by Dr. Billings. It always remains a question in regard to such mammoth indexes, whether the number of times they are used multiplied by the average saving equals the cost of their preparation. Probably not; but the deficit is made up by the various investigations which they render possible, and the scientific accuracy which without them would have been utterly unattainable.

BAPTISM AS A HEATHEN RITE.

Ueber die Wasserweihe des germanischen Heidenthumes. Von Konrad Maurer. Separatabdruck aus den Abhandlungen der K. Bayer. Akademie der Wissenschaften 1 cl. xv. B. iii. Abth. München. 81 pp. quarto.

IN these pages Dr. Konrad Maurer gives us an exhaustive monograph on infant baptism as practised among the heathen Teutons, an important historical fact which has not before been properly treated. To be sure, Rudolph von Sydow, in his 'Darstellung des Erbrechts nach den Grundsätzen des Sachsenspiegels,' called attention to the fact that, according to ancient Scandinavian laws, the right of inheritance on the part of children depended on their having received baptism; and Jacob Grimm, in his 'Deutsche Rechtsalterthümer,' p. 457 (ed. of 1828), showed that in the old Norse heathendom the father was permitted to expose his own child only before it had been sprinkled with water. But no one has heretofore taken the pains to collect all the references to infant baptism, and investigate not only how extensively it was practised among our heathen forefathers, and what its real significance was, but also how far it was the result of or modified by Greek, Roman, and Christian influences. Maurer has now done this, and he has done it with that marvellous learning and acumen for which he is justly celebrated. In the work before us we find a careful sifting of every passage referring to this subject not only in the old Icelandic and Norwegian, but also in the Swedish, Danish, South-German, and Anglo-Saxon historical documents.

In the old Norse Sagas, the usual term by which baptism is designated is "at ausa barn vatni"—that is, "to sprinkle the child with water." This expression occurs several times in the Elder Edda (thus, in the Lay of Rig, stanzas 7, 21, 34, and in Hávamál, stanza 158), and countless times in the Sagas; Maurer gives a large number of instances. It is also to be noted that in the old Scandinavian Christian records baptism is exclusively designated by the word "skirn" (cleansing), from the verb "at skira," meaning to purify. But the points of similarity between the heathen and Christian rite are very striking. The heathen baptism was performed in connection with the *naming* of the child. Furthermore, a peculiar bond was established between the person baptizing and the one baptized—a relation corresponding to that of godfather and godmother among Christians. Finally, it was customary to give presents corresponding precisely to the actual *Pathenschencke* among the Germans. The re-

corded instances of infant baptism among the old Scandinavian heathen are numerous and striking. Maurer has made a careful study of the legal importance of the baptismal rite, and shows that children who were to live were immediately after their birth exhibited first to the mother and then to the father. Thereupon they were placed in the arms or on the lap of the father to receive a name and be sprinkled with water. Children, on the other hand, who were not to be brought up, were neither shown to the parents nor sprinkled with water, but were straightway exposed or slain. So sacred was held the rite of baptism that it secured the child's life even when the ceremony had been performed by an improper person, and was not, consequently, strictly legal—an excessive regard for form for which the old Teutons were noted, and which still to a considerable degree characterizes their descendants.

A large portion of Maurer's monograph is devoted to showing how the ceremonies connected with heathen baptism were adopted by the Christian Church, and in tracing to a heathen source the rights and privileges secured to children by baptism in the Church. The author suggests that the laying at the breast was a recognition of the child on the mother's part, and that the granting of the rite of baptism was a recognition of the child on the part of the father, and that this was the chief significance of the latter ceremony ; although it would seem from Hávamál, in the Elder Edda, that spiritual blessings also were secured to the infant by the sprinkling of holy water. Baptism made the child an *heir* both among the heathen and among the old Teutonic Christians, and the fact that among both it had so many things in common—that it took place soon after the birth of the child, and was connected with the naming of it; that there were godfathers and godmothers, and that presents were given—makes the question an exceedingly interesting one.

But the author goes further, and proves from ancient laws of the Germans, Visigoths, and Anglo-Saxons that the rite of baptism is to be performed within the ninth day after the birth of the child; and here he calls attention to the ancient Roman custom of giving the name to a female infant on the eighth and to a male infant on the ninth day after birth, and quotes Roman law to show that this naming-day was of legal importance to the child. A similar custom is also found among the ancient Greeks, where the seventh day after the birth of the child was celebrated with *cleansing*, gifts, sacrifices, banqueting, and other ceremonies. Maurer suggests that this seventh day of cleansing among the heathen Greeks was of the same legal value to the child as the day of sprinkling with water among the ancient Teutons, and that it determined whether the child should live or be exposed. Roman law establishes the fact that the eighth day after birth for girls and the ninth for boys was a *dies lustricus*—that is, a day on which a religious rite (*lustratio*) for infants took place and on which names were given to them, whence it is also called *solemnitas nominalium*. The day was observed by bringing the infants to the temple, by banquets, etc. (see on this point Marquardt, 'Das Privatleben der Römer,' i., pp. 81, 82). We find, therefore, among the old Greeks and, what is of vastly more importance, in the old Roman laws a day set apart for infants on which they get their names, and this naming connected with the observation of certain ceremonies. What the precise nature of these rites was we are not told; but, inasmuch as the Roman documents designate them by the term *lustratio*, there can scarcely be room for doubt that it must have been a symbolic cleansing by means of water. And, since the *dies lustricus* confessedly secured legal rights to the infant, the question lies near at hand whether the old Teutonic heathen borrowed the baptismal rite from the ancient Romans, or whether baptism was an original institution among the Aryans before they became divided into Teutons, Romans, etc. There can be no doubt, on the one hand, that the *dies lustricus* of the Romans obtained among the Christians in fixing the day for baptism, especially since it corresponded so nearly with the Mosaic day for circumcision ; and, on the other hand, that, just as many of the old Teutonic feasts were turned into Christian festivals, so the form of the Teutonic baptism was largely adopted by the Christians in northern Europe.

We will add that the author inclines to the opinion that the rite of sprinkling infants with water was introduced among the heathen Teutons as a consequence of their intercourse with Christian peoples—in other words, that the Christian ceremony was adopted by the heathen. We believe, however, that the facts are susceptible of another explanation. As Anton Edzardi and before him Mannhardt have suggested, there were among the old Teutons a number of sacred fountains and a wide-spread fountain cultus. Water was regarded as a healing agency and played a conspicuous part in religious ceremonies of which many seem to cling to the holy water of the Christian Church. A person's fate and character were determined by the sacred norns who presided over births. The person's name was supposed to be an expression or omen of his character. And when we consider the intimate connection of the norns with the fountain of Urd (the norn of the past), the conclusion seems reasonable, that the sprinkling of infants when they received their names had reference to the holy fountains, and that the heathen *form* of baptism was adopted by the Christian Church ; for surely there is no intimation in the Bible that baptism was ever applied to infants, nor do we find a word in the New Testament connecting *the giving of the name to a person* with baptism.

Manchester al Mondo: A Contemplation of Death and Immortality. By Henry Mountagu, Earl of Manchester. London : Pickering & Co. 1880.

THE writer of this little work, a successful lawyer and courtier, was originally a commoner, and won his various titles, culminating in that of earl, by his own exertions. He was born in 1563, and died in 1642. The niche that he occupies in history might easily be passed unnoticed, for all that he succeeded the celebrated Coke as Chief-Justice of the King's Bench, and pronounced sentence of death on Sir Walter Raleigh. Just before the end of his life, when holding the office of Lord Privy Seal, he was implicated in proceedings relative to ship-money, and was impeached by the House of Commons. As to the immediate inheritors of his name, while his son Edward, on whom his earldom devolved, went so far as to sympathize warmly, for some years, with the popular party, his son Walter joined the Church of Rome, became confessor to Queen Henrietta Maria, consort of Charles II., and was banished from England in 1649. One of his four remaining sons, George, was father of the first Earl of Halifax. His brother James was Bishop of Bath ; and several other Mountagus, members of his family, are recorded as having achieved political or ecclesiastical distinction.

'Manchester al Mondo' was composed when its author was nearing three score and ten, and is his sole literary production. Little as it falls in with the taste of our day, at least the student of the seventeenth century in its inner life will find himself rewarded for turning over its pages with some attention. Curious is the reflection that it specially recommended itself, for its treatment of the most solemn of all subjects, to the generation that took delight in the fantastic and voluminous dreariness of 'Pharamond,' 'Polexander,' and 'Parthenissa.' Within sixty years after its first appearance it went through fifteen editions, and perhaps more—a fact indisputably authenticating its popularity. Nor is that popularity wholly to be ascribed to what was æsthetically peculiar on the part of those to whom it so long proved acceptable. Merit it has, though not of a very distinguished order ; and if, instead of being in good part made up of shreds of Latin, it were couched in smooth modern English, doubtless it would have many willing readers even now. We are informed that, before it lapsed out of vogue, it came to be included in the class of books which, like 'The Whole Duty of Man' and Bishop Taylor's 'Holy Dying,' it was once the custom to distribute at funerals.

The editor of the careful and elegant reprint before us, Mr. John Eglinton Bailey, who has executed his task in a way that leaves nothing to be desired, sums up the characteristics of the work, with just appreciation, in terms which, as none better can be selected, we transcribe :

"The subject of the contemplation of the noble author of the present treatise, which is creditable alike to his head and heart, is dealt with in a becoming manner. Upon Death itself he is the reverse of distasteful, and his thoughts tend to modify materially that 'kingly abhorrence of death' which it is said the French monarch displayed. They also rebuke the vulgar accompaniments of death—those signs which, as Lord Bacon, the author of the 'History of Life and Death,' said, 'showed death terrible,' and which Montaigne and Taylor alike reprehended. Our author argues gravely and philosophically, but here and there enters into the regions of fancy. He has always at hand an array of learning, in which St. Augustine is a favorite author. Like that old Father, the Earl was fond of putting his sentences in the form of apophthegms and antitheses, which, combined with their beauty or significance, give them a ready lodgment in the mind."

A few excerpts will suffice to convey a notion of the occasional quaintness and other noticeable traits of 'Manchester al Mondo': "Lazarus's sores will make as good dust as Jezebel's paint." "Heaven is full of good works ; hell, full of good wishes." "A man cannot look up to heaven with one eye, and down to the earth with the other." "Ere long, two ells of earth shall serve whom scarce a world could satisfy." "Men commonly discard those sins they can best spare, but retain those they love best." "Some of the passages," as Mr. Bailey pertinently remarks, "will recall ideas familiar to us by reason of their occurrence in more modern literature."

The author, though he wrote in the time of Charles I., when it was no less the custom to venture strange words than it has now again come to be, indulges in comparatively infrequent freaks of diction. Of interest to the philologist are his verbs *angelize, obambulate, pleasant, repartite, resurge, superinvest;* his substantives *incipient* and *subsapient;* and his *knownest* and *unknownest*. *Amative*, which he uses, has escaped lexicographers, save as a modernism ; in his verb *unweary* he forestalls Dryden ; and he is, probably, an early authority for such an expression as his "that which love *operateth* by affection."

The Foreigner in China. By Lucius N. Wheeler, D.D. With Introduction by Prof. W. C. Sawyer. Chicago : S. C. Griggs & Co. 1881.

'THE Foreigner in China' is a fair title for this book if the reader adds, "as viewed from the

missionary standpoint." It is a rapid account of the course of events in China brought about by the advent of Europeans, and their commercial, political, and religious connection with the country since 1516. It includes a comparison between the merchant, diplomatist, and missionary as to success in China, to the advantage of the latter; a favorable account of the Taiping rebellion, and a flattering description of the city of Peking and of the splendor of Chinese ceremonial. We fancy some of the old residents of that city would be surprised to find that they were living in the midst of such attractions without knowing it.

Mr. Wheeler refers to the indifference, not to say antagonism, of the commercial residents in China to missionaries and their occupations. He ascribes it principally to the pernicious effect of that *bête noire* of American writers and diplomatists, the opium traffic, and partly to the fact that "they sometimes indulge their passions without regard to human or divine law." He might have thought of an easier and more charitable solution. The supporters of missionary enterprise in the United States and England are not a large section of the community, and, circumscribed as this section is, it is principally its women who are interested. It needs a very sympathetic and emotional nature to see the call for sending emissaries for such a purpose to distant countries, when, as most men are apt to think, there is an inexhaustible field at home. It may be taken for granted that the missionary section comprises very few of the hard-headed men of commerce; and it is of course the offshoots of that class whom the missionary meets in China. He is the sort of man who dislikes to hear Sunday called Sabbath, and is not overfond of Scripture phraseology, though he may be conscientious, liberal, and charitable in his own way. We think it likely he is illiberal in his view of missionary effort and enterprise, but it is not worth while to ascribe it to an unworthy cause. As for the Taiping movement, it would be well for the reader to look elsewhere before he accepts Mr. Wheeler's favorable views of the morality and aims of the rebels, and his denunciation of the part taken by the English against them.

Mr. Sawyer's introduction is good, especially his manly denunciation of the late treaty in regard to Chinese immigration.

Histoire de l'Empire Ottoman depuis les origines jusqu'au traité de Berlin. Par le Vicomte A. de la Jonquière, ancien professeur d'histoire à l'école militaire du Coumbar-Hané à Constantinople. Paris: Hachette; New York: F. W. Christern. 1881.

As far as race is concerned, there was little in common between the peoples which spread the doctrines of the Koran throughout Arabia, carried them triumphantly along the north of Africa, crossed into and subdued Spain, poured into France, went down under the hammer of the Frank, were driven out of Spain by Ferdinand and Isabella, and withered away almost to the original source—between these peoples and the Ottoman Turk. Nationalities, however, disappear under the all-embracing type of a religion which, perhaps more than any other in history, has absorbed the whole existence of the state. In no particular does the religion of Christ stand in sharper contrast to that of Mohammed than in the former's saying, "My kingdom is not of this world." His self-styled vicegerents did, no doubt, introduce a good deal of confusion as to the boundaries of the two realms, but when modern civilization began to draw the lines again, great temporal changes were compatible with the preservation of the spirit of religion. The Koran, on the other hand, comprised the civil law of Islamism, and was that of a half-barbarous people. It was based upon war, despotism, slavery, and, above all, polygamy and the inferiority of woman in all respects. Therefore the Turk, not merely as Turk, but as Mohammedan, is what he has been for centuries—somewhat milder, certainly, for a sultan does not now celebrate his accession by the deliberate murder of all his brothers, and a prime minister, on being dismissed, is merely sent into exile instead of being presented with a halter; but the utter futility of all real attempts at reform is more and more apparent.

A more consistently dismal story it would be difficult to invent. From the time when, about the year 1000, the Turks, with the Mongols and Tartars, began to pour down from the regions of the Caspian, their history is that of continuous bloodshed and destruction. Their incessant wars have reduced some of the fairest portions of the earth's surface to a desert. Countries which in the time of the Roman Empire were filled with flourishing cities, with agriculture and commerce, are now the habitations of wild beasts or of scanty tribes of nearly as wild human beings. One might turn from the history in disgust were it not that as the "Eastern Question" it forms a part of European politics to-day. The work of M. de la Jonquière, as is almost unavoidable with a single volume dealing with so long a space of time, is little more than a compendium, but it is clearly written and valuable as a book of reference. The first chapters give the geography and ethnography, and the latter affords some idea of the enormous difficulties of a reorganization of the empire. All the races and all the languages which have flowed from Asia into Europe seem to have deposited their strata on the great highway; and, as if these elements of discord were not enough, the three great religions, Latin, Greek, and Mohammedan, find here a focus of collision. Next follows an account of Arabia, of the rise of Mohammedanism and of the Turks, with an analysis of the Koran. The mediæval history is bewildering, and yet, as Macaulay says of "Paradise Lost," fascinating, from the number of sounding and half-familiar names introduced—Selims and Suleymans, Mahmuds, Murads, and Bajazets. The confused struggles with Poland and Hungary, the ebb and flow of conquest, are chronicled in a manner to be very useful in a study of comparative history. The most interesting part is, however, the narrative of events in the present century, and of the rise of the various nationalities—Egypt, Greece, Rumania, Servia, and Bulgaria—to independence, and the gradual but inevitable approach of the period when the Sick Man's inheritance must be divided.

Four maps are added to the book, good enough in themselves, but which have, with the exception of that relating to the Treaty of Berlin, the not uncommon defect of being apparently taken from some other work, with very little reference to the text.

Our Western Empire. By Dr. L. P. Brockett. Philadelphia: Bradley, Garretson & Co.

In this thick book, containing more than 1,300 royal octavo pages, the attempt is made to set forth, within the limits of a single volume, the varied resources of all the States and Territories west of the Mississippi. Its purpose is to furnish emigrants and workingmen in our Eastern States and in Europe, who may desire to seek new homes and fortunes in the great West, with such information as will guide them in the choice of a location and career. The author has sought to embrace within the scope of his work almost every conceivable branch of the subject, from the geology, natural history, mineral and agricultural resources, and industrial development of the country down to the minutest detail affecting the social life and relations of its inhabitants. The larger part of the book is compiled from miscellaneous sources, such as official documents, Government and State reports, and, apparently to a considerable extent, newspaper correspondence, with an occasional reference to some well-known authorities. The degree of accuracy attained is probably quite as high as could be expected, considering the varied character of such sources of information. While the treatment of some of the special branches shows, here and there, a lack of accurate knowledge on the part of the writer concerning the details of the subject, he has, nevertheless, been fairly successful in the accomplishment of a somewhat difficult task. The book will give a good deal of useful information to the class of readers for which it is intended.

BOOKS OF THE WEEK.

Abbott, Dr. C. C. Primitive Industry. Salem: Geo. A. Baker.
Beesly, A. H. Sir John Franklin. New York: G. P. Putnam's Sons. $1.
Cooke, Laura S. H. Dimple Dopp, and Other Stories. Boston: J. R. Osgood & Co. $1 25.
Cook, Rev. F. C. Bible Commentary: Romans to Philemon. New York: Charles Scribner's Sons. $5.
Conway, M. D. The Wandering Jew. New York: Henry Holt & Co. $1.
Cummins, A. H. Grammar of the Old Friesic Language. Boston: Houghton, Mifflin & Co. $1 25.
Damen's Ghost: a Tale. Boston: J. R. Osgood & Co. $1.
D'Aubigné, Rev. J. H. M. History of the Reformation. 5 vols. in one. New York: Robert Carter & Bros. $1.
De Amicis, E. Spain. New York: G. P. Putnam's Sons. $2.
De Forest, Julia B. Short History of Art. New York: Dodd, Mead & Co. $2.
Feuerbach, L. The Essence of Christianity. 2d ed. Boston: Houghton, Mifflin & Co. $3.
Fothergill, Dr. J. M. Animal Physiology, for Schools. New York: G. P. Putnam's Sons. 75 cents.
Gardiner, Prof. S. R. English History for Students. New York: Henry Holt & Co. $2 25.
Geraldine; a Souvenir of the St. Lawrence: Poetry. Boston: J. R. Osgood & Co.
Greene, W. B. Three Vows: Poetry. New York: G. P. Putnam's Sons. $1 25.
Halsey, W. McD. Beginners' Latin. New York: W. R. Jenkins.
Hickey, W. Constitution of the U. S. A. New ed. Baltimore: John Murphy & Co.
Holmes, O. W. Poetical Works. 2 vols. Boston: Houghton, Mifflin & Co. $2 50.
Howe, J. B. The Common Sense of Money. Boston: Houghton, Mifflin & Co. $2.
Johnson, Helen K. Familiar Songs, and Those Who Made Them. New York: Henry Holt & Co.
Lange, Prof. F. A. History of Materialism. Vol iii. Boston: Houghton, Mifflin & Co. $3 50.
Lillie, A. Buddha and Early Buddhism. New York: G. P. Putnam's Sons. $2 50.
Lindsay, J. T. French Exiles of Louisiana: a Tale. New York: W. B. Smith & Co. $1.
Long, Rev. J. Eastern Proverbs and Emblems. Boston: Houghton, Mifflin & Co. $3 50.
Meredith, Owen. Lucile: a Poem. Boston: J. R. Osgood & Co. $6.
Merrill, Rev. S. Galilee in the Time of Christ. Boston: Congl. Pub. Soc. $1.
Newman, Mrs. With Costs: a Tale. New York: Harper & Bros. 15 cents.
New Testament: American Version. Second ed. New York: Fords, Howard & Hulbert. $1.
Nicoll, Rev. W. R. The Incarnate Saviour. New York: Robert Carter & Bros. $1 25.
Oliver, Dr. G. The Harcgate Waters. Philadelphia: Presley Blakiston. $1 50.
Plutarch's Essays. Boston: Little, Brown & Co.
Proceedings of the Massachusetts Historical Society. Vol. XVIII. 1880-81. Boston.
Rivulet and Clover Blooms: Poetry. New York: American News Co.
Robinson, Rev. C. S. Spiritual Songs for the Sunday-School. New York: The Century Co. 50 cents.
Rogers, J. E. T. Loci e Libro Veritatum, illustrating the condition of Church and State, 1403-1458. Oxford: Clarendon Press; New York: T. Nelson & Sons.
Row, Rev. C. A. Reasons for Believing in Christianity. New York: T. Whittaker. 75 cents.
Schüssler, Dr. W. H. Cure of Diphtheria. New York: Gavin Houston. 40 cents.
Schütt, O. H. Reisen im südwestlichen Becken des Congo. Berlin: Dietrich Reimer; New York: L. W. Schmidt.
Scudder, H. E. Boston Town. Boston: Houghton, Mifflin & Co. $1 50.
Selections for Responsive Readings for Use in Public Worship. New York: The Century Co.
Smyth, Rev. N. The Orthodox Theology of To-Day. New York: Chas. Scribner's Sons. $1 25.
Southworth, Mrs. E. D. E. N. The Bridal Eve. Philadelphia: T. B. Peterson & Bros. 75 cents.
Stearns, W. A. New England Bird Life. Part I. Oscines. Boston: Lee & Shepard. $2 50.
Stoddard, W. O. The Quartet: a Tale. New York: Chas. Scribner's Sons. $1.
Vincent, F., jr. Norsk, Lapp, and Finn. New York: G. P. Putnam's Sons. 50c.
Vincent, F., jr. The Land of the White Elephant. New ed. New York: Harper & Bros.
Wales, W. Rockland Cemetery Illustrated. New York: A. D. F. Randolph & Co.
Walker, J. E. Campaigns of General Custer in the Northwest. New York. 75 cents.
Walker, J. B. Experience of Pioneer Life in the West. Chicago: Sumner & Co. $1.
Wheeler, Rev. L. N. The Foreigner in China. Chicago: S. C. Griggs & Co. $1 25.

The Nation.

NEW YORK, THURSDAY, SEPTEMBER 29, 1881.

The Week.

THE manifestations of popular sorrow over President Garfield's death from all parts of the country, which seem to grow hourly in number and intensity, form a tribute such as no man's memory in this country or perhaps in any country has ever received. The manner, too, in which the news has been received abroad is unprecedented. Before the days of telegraphy his illness could not have been followed from day to day with the continuous minuteness of detail which has done so much to quicken the sympathy felt with him and with the American people. But, in addition to this, his career has been of a kind to touch the foreign imagination in an unusual degree; not simply because he rose from small beginnings—for the American "self-made man" is not always a dazzling object to the European eye—but because he rose not only in station, but in culture, and in breadth of capacity and of interest. He was a statesman of the type which is commoner in England than here, and to which the successful American politician does not always belong. Mr. Lincoln, for instance, much as he was loved and admired abroad, was not nearly so well equipped a man intellectually as General Garfield, and his success therefore was less comprehensible to the European mind; in fact the man himself was less comprehensible. General Garfield was understood, however. In the eyes of Englishmen he was a man like Gladstone, or Goschen, or Lowe, and he became so, it was plain, without any of their artificial advantages, by sheer force of talent and character. Then there was something very Roman in the variety of his achievements. The success of the same man both in the field and in the forum is something which was common in ancient Rome, but in the modern world has only been seen in England and America, and it is a kind of success which all Englishmen desire and few have ever achieved. General Garfield thus had a claim on their admiration which none of his predecessors, even if they had all been well known abroad, possessed, and it is amply acknowledged in the sorrow over his unhappy fate. The Court mourning, an unexampled tribute, too, is not simply the expression of the Queen's sympathy, deep as this is. It expresses also the national sense of fitness and propriety.

President Arthur's inaugural address was in all respects what the occasion called for. It was brief, because having declared with sufficient explicitness his intention to adopt the ideas, so far as practicable, of his predecessor, he had no policy to sketch, and his tribute to the memory of the deceased President was as respectful and sympathetic as any one could desire. This, moreover, seems to have satisfied the spectators that he fully realizes the solemnity of the occasion, and is sensible of the limitations which the peculiar manner of his accession to the office, and the state of popular feeling, necessarily impose on him in the use he will make of his great powers and opportunities. We have commented below at some length on the most important passage.

Attorney-General MacVeagh has informed President Arthur that when he offered his resignation he meant it; and he has also told the public that "he recognized fully the propriety of President Arthur selecting as his confidential advisers gentlemen who had heretofore sustained relations not only of personal good-will, but also of political sympathy with him," and that "he did not think any Administration could be strong if there was any ground for suspicion or distrust among its members." Mr. MacVeagh's attitude with regard to his own resignation is that of an honorable man who has the pride of independence in him, but his generalizations as to the principles upon which Cabinets should be constructed, if intended to be strictly adhered to in a Government like ours, are too sweeping. That a President cannot be expected to keep in his Cabinet men who do not "sustain with him relations of personal good-will" goes without saying. But that he should confine his choice exclusively to those who have "heretofore sustained relations of political sympathy with him," is not so clear, if this "political sympathy" is taken in the narrow sense. In that case a President who had been identified with a faction in his party would be bound to compose his Cabinet entirely of members of that faction. Such a course would, in a majority of cases, be disastrous. No President who wanted to hold his party together has ever attempted to do any such thing. There has probably not been a single Cabinet since the formation of the Government which did not contain representatives of different "political sympathies" within the party in power. Neither does it follow that if a Cabinet is constructed upon this broad basis there must be "any grounds for suspicion or distrust among its members." If the members of a Cabinet are only men of honor, they will be able to sustain with the President, as well as among themselves, relations of perfect frankness and cordiality, and there will be no ground for distrust or suspicion, no matter whether their opinions on some subjects differ, or whether they have kept different political company.

A few days ago a paragraph from a Western journal was telegraphed as news by the Associated Press, and thus gained general circulation, stating that the German Emperor and Prince Bismarck had been singularly remiss in their expressions of sympathy with the people of the United States in their great bereavement, having "violated international decency in allowing Prince Bismarck's mere house-servant Busch to express the sorrow of the German Government." This is evidently unjust. Dr. Busch, who signed the despatches in the name of the Government, is Secretary of State for Foreign Affairs under the Chancellor. Moreover, we were already on the 21st informed from Berlin by Atlantic telegraph that "the Emperor and Empress have personally cabled to Count Beust, the German Chargé d'Affaires at Washington, to express their deep sympathy with Mrs. Garfield." And to-day the Atlantic telegraph reports that Dr. von Schloezer, the German Minister to the United States, who has for some time been on leave of absence, but is now on his way back to this country, "takes with him to Washington autograph letters of the Emperor William and Prince Bismarck, expressing their heartfelt condolence with the widow of the late President." It appears, therefore, that, while the feelings of the German people were always above question, the German Government have not only not been remiss in expressing their sympathy, but that both the Emperor and the Chancellor have done so in a manner which they intended to be most personal and emphatic.

Business in every department was affected during the week by the general indisposition to consider any other subjects than the death of the late President and preparations for his funeral. The day on which this occurred was made a legal holiday. Although foreign exchange was at no time strong during the week, yet there was no profit in importing gold; $903,000, however, which had been previously shipped, was landed here late in the week. From August 1 to September 28 the receipts of foreign specie have been $15,482,517, against $25,711,944 a year ago. The Treasury continues to accumulate money at a rate which with other influences at work threatened the loan market, and the Secretary has been urged to buy bonds. On Saturday his programme was published, and it is to redeem $20,000,000 of the three-and-a-half per cents on December 24th, and to redeem $2,000,000 each week in October at par and accrued interest. It is considered doubtful whether many bonds will be presented for redemption in October, and there is, therefore, still much anxiety about the money market. The railroad war was not settled during the week, although there was much negotiation on the subject. At the Stock Exchange, railroad shares and bonds advanced. Money in London has become somewhat easier. Silver bullion there was steady at about 51¼d. per ounce, and here the bullion value of the 412½-grain silver dollar was about 86⅜ cents.

The accounts of Mr. "Sam" Lowery, who has just beaten Mr. Conkling in the convention at Utica, and will come here as a delegate to the State Convention next month, putting Mr. Conkling in the ludicrous position of contesting the seat from his own home, are very interesting. It appears he is a small Irishman, "mild visaged" and "oily spoken," and when not occupied with politics is occupied with the manufacture of knit underclothing. He is an Ulster Protestant, but

popular with the Catholics, and has for many years made it his life work, a correspondent of the *Sun* says, to "whittle down the Conkling Cæsar to ordinary mortal proportions." He has kept at this steadily for many years, and would have doubtless accomplished it before now but that he has had occasionally, for some unexplained reason, "to keep out of sight." He never, however, allowed any of the whittling he had done on the Cæsar to be repaired, or puttied over, or anything of that kind, so that when he resumed his operations, there never was anything to be done over again. He must in fact long ago have damaged the "magnificent torso" more than the world knew. This whittling, too, is described as having been a labor of love with him. He is a "master of political intrigue," but does not seek office, and will be satisfied with the honor of ousting Mr. Conkling from a seat in the Convention and occupying it himself. He is not an orator, but excels in "drastic retorts." He certainly seems from all this to have been made for the humiliation of the "great Senator."

Mr. F. W. Whitridge has an article in the *International Review* for next month in which he examines Mr. Conkling's claims to "greatness." For the purpose of finding out on what these claims rested Mr. Whitridge was at the pains to examine every speech which he ever delivered in the Senate, and most of his speeches outside the Senate, the laws he has introduced into Congress, and the reports of cases which he has argued. The following are the results of his investigation: Mr. Conkling in the House served upon the Reconstruction Committee, but was author of none of the important measures proposed by it; in the Senate he has served upon the leading committees, but is not the author of a single one of the great measures of his time. "His admirers, in answer to enquiries recently made, have, so far as appears, claimed for him the authorship of only three important laws. These are the present law governing the election of United States Senators, the law confirming the titles of pre-emptors and settlers to lands along the lines of railroads claiming lands from the Government, and the trademark law. Of these the latter was declared unconstitutional as soon as it got before the courts, and the others were amendments of old laws, and he had nothing to do with proposing or carrying either the laws or the amendments." On the whole, his actual services as a proposer or forwarder of legislation "might have been rendered equally well by any of fifty men who could be picked from the New York or Massachusetts Legislature."

If we turn from what he has done to what he has treated with indifference, we find that the latter head covers all the most important questions of his period of service. Tariff reform, our commercial relations with other countries, methods of taxation, the relations of corporations to the State and national governments, Chinese immigration, the condition of American commerce—"all these have no more vexed him than the passing shadow of a cloud." In financial matters he has taken no part in shaping legislation. "In the evils arising from the condition of the South he has been deeply interested, but rather as party weapons than as questions for his solution; and it is an historical fact that those evils have diminished in proportion as the use of the remedies advocated by Mr. Conkling has been discontinued." He has never attempted to cut a figure as an author, while as an orator his speeches, whatever their immediate impression as "efforts," have contributed nothing to the thought of the country. As a lawyer Mr. Conkling has appeared in only six cases in the Supreme Court since 1862, in two of which his political position may have had something to do with his being retained; in the Court of Appeals of this State he has had but five cases, and two of these may be called political. His last appearance, in the People agst. Dennison, covered him in the eyes of the profession here with ridicule. The question which of course arises in any one's mind on examining this analysis is what in the world Mr. Conkling has been actually doing all these years, for he has not been an idle man, and until a few months ago his "greatness" seemed to be rising and increasing steadily. Mr. Whitridge does not answer this question, but we all know what the answer would be. What he has really been doing all the time he is doing still, and probably will continue to do as long as he lives. In the past he has found that it paid better in the way of producing "greatness" than anything else he could do, but then his ideas of "greatness" are different from those of Mr. Whitridge.

The platform of the Massachusetts Republicans goes one step further than any party platform has hitherto done in the minuteness of its definition of a "thorough reform in the methods of making and obtaining appointments in the civil service." One reason why so little attention has hitherto been paid by men in public life to the utterances of party conventions on this subject is that they have generally been extremely vague. They seldom go beyond the expression of a general desire for an improvement in the civil service, and the selection of competent and honest men by proper methods. In such expressions even those who are secretly most opposed to any change are always ready to join. It would be impossible to find a politician in or out of Congress who would declare himself opposed to the entrance of "good men" into the service, and the enforcement of a rigid accountability in all public servants. In the region of general propositions, in fact, civil-service reform meets with no opposition whatever. It is only when we get down to the details of the machinery by which the reform is to be effected, or, as Congressmen call it, to "this particular measure," that we discover that there is any difficulty in the way of our having as much reform as the most enthusiastic reformer can desire. It is only, therefore, by pinning Congressmen down to a definite programme that any progress whatever can be made in bringing about Congressional action, or in making the subject a real political issue. The Massachusetts Convention thus defines the reform:

"The maintenance of the constitutional prerogative of the President to make nominations on his sole responsibility, and of the constitutional prerogative of the Senate to confirm, or refuse to confirm, such nominations free from executive dictation; the relief and exclusion of the members of the legislative branch from the business of selecting officeholders in the department of the administration; the prohibition of assessments upon the salary of officeholders for party purposes, appointments to clerkships to depend, in the first instance, upon successfully passing a proper examination, open to all applicants without distinction of party, and, secondly, upon satisfactory service during a period of probation; tenure of office during good behavior or for a reasonable fixed term, with promotion for meritorious performance of duty, and no removals except for cause."

It will be difficult for any Massachusetts Representative at least to get round the above in any creditable way. It will not be open to him to plead "pressure" as an excuse for dunning the departments for offices for his friends, or to declare that the blame of his doing so rests upon his constituents. Nor will he be able very well to accept the aid of assessments on clerks' salaries, or to participate in demanding them, much less use threats in enforcing them, as was done during the last national canvass. He will be cut off, too, from sneering at competitive examinations as the "schoolmarm test," or pretending that they are meant to be a substitute for what every business man knows is the only real test—actual trial in discharge of the duties of the place. The platform expressly puts these examinations forward as a substitute only for the Congressman's nomination. They are to be followed, as his nomination is not, by a period of probation. The protégés of Congressmen go through no probation. They are quartered on the public for better or for worse, and even if found incompetent, their removal is attended with difficulties which a head of a department who submits to the Congressman's dictation seldom cares to face. Moreover, the Massachusetts Representatives are cut off by the platform from the work of barren criticism. They cannot hereafter confine themselves to pricking holes in the Pendleton bill or any other bill, or to doubting the general practicability, in the existing state of American human nature, of any scheme of reform whatever.

The fight for some time expected between Ayub Khan and Abdurrahman Khan has come off, and must make the English Liberals again chuckle with satisfaction over the withdrawal of the English army from the country. We attempted a week or two ago an explanation of Afghan warfare. At that time Ayub Khan had just come up from Herat, and defeated Abdurrahman, who was abandoned on the battle-field by a portion of his forces going over to the enemy. Ayub then had his own way for a while, but made no progress, and Abdurrahman got another army together; and now they have had another engagement, and this time a portion of Ayub's forces have deserted him, and he in turn has been defeated, and has had to retreat to Herat. And so the game will go on until the weather gets too cold for active operations; and so it has been going on ever since the days of Alexander the Great. It would be an amusing game if it were not that England has just been trying to stop it at a cost of many thousand lives

and over $100,000,000, and that the Minister who thought he had made Afghanistan into "a strong, friendly, and independent" monarchy is still mourned by the Conservatives as a prodigious loss to the country.

It is not uncommon for subjects to lose their king or to get rid of him; but a monarch still upon the throne and yet in danger of losing his subjects is something of a novelty. This seems to be the position of King Kalakaua, of the Hawaiian Islands, who arrived in this city last week. In the course of an interesting conversation with a reporter of the *Evening Post*, his Attorney-General, Mr. William Armstrong, said that "the native element" of the islands "cannot survive long, having been destroyed by such civilization as came to them on the whaling ships of New England"; that "nothing can save the people"; that "few children are born, and still fewer live to grow up." One object of the King's travels is to find some other people to take their place. We often hear of infusing fresh blood into a nation, and the beneficial effect of immigration is beyond doubt; but repeopling a country outright is a different experiment. Naturally enough, no more New England whalers are wanted; and it is questioned by Attorney-General Armstrong whether Englishmen or Americans are fitted by their constitution and habits for the life of a tropical climate. Of all the men who have been examined as to their qualifications the Portuguese settlers in the Azores seem to be the most satisfactory. Fifteen hundred of these have been secured and a thousand more have been ordered; and it is to be hoped that before long the islands will be comfortably full. The further and official denial of the report that the Hawaiian King was looking up a market for his kingdom was scarcely necessary. As Attorney-General Armstrong says, it would be as reasonable to talk of Mayor Grace's selling the city of New York.

The haste and secrecy with which the decision of Commissioner Osborn, in the Randazzo case, has been followed by the delivery of the prisoner to the Italian Government are, to say the least, very surprising. The prisoner's counsel had given notice in open court of their intention to apply to the Secretary of State for a review of the case, and the question whether the man ought to be surrendered or not was therefore still open. The Secretary of State was absent from Washington, and the department in the hands of an acting Secretary. In this state of affairs for the representatives of the Italian Government to hurry away and secure an extradition mandate was a very peculiar proceeding. Now that the prisoner is out of the country and beyond its jurisdiction, he is no longer in a position to take any steps to rectify the injustice that may have been done him. The great advantage a foreign Government always has in extradition proceedings is that if it can once get bodily possession of the prisoner, no matter how, he cannot be taken away again, and, as a rule, no one continues to have sufficient interest in the matter to inquire what becomes of him. Arguelles was kidnapped and carried out of the country by Spain without the slightest pretence of justification, and has never been heard of from that day to this. Yet the Arguelles case never created much feeling. The part played in the matter by persons in the employment of the United States was made the subject of complaint in Congress, but the whole affair died out very quickly, and probably few people in the country know now what the Arguelles case was. In the present case the proceedings of the Italian Government have been from the first formally regular; but it is very doubtful whether the procurement of the mandate from Washington, though legal enough, was not in violation of an understanding that the case was to be reviewed by the Secretary of State. How far that understanding went does not appear; but the Commissioner is reported as stating that the issuance of the mandate was a surprise to him, and that he supposed there would be a final hearing at Washington.

Mr. Parnell has announced his programme for the Land League with regard to testing the new Land Act. He is going first to present cases which are not cases of rack-rent, and then cases of improvements long since made, and cases of recent improvements last. His theory is that the Land Courts will strain every nerve to favor the landlords, and therefore, as the first cases likely to come before them are cases of exorbitant rents, he thinks the Courts, by making reductions in these, which, after all, will not make the rent moderate, will be enabled cunningly to establish a high scale of moderate or "reasonable" rents, by which they will afterwards govern themselves. This he purposes to thwart at the outset by cases of his own selection. He is also satisfied that the Courts will do what they can to prevent tenants obtaining any compensation for their improvements, and will, therefore, whenever an improvement is of long standing, try to make out that it is exhausted and valueless. This he means to circumvent by selecting his own cases of old improvements for trial. The new improvements, on which the Courts would be less likely to indulge in fraud and corruption, he will bring in last. This is a somewhat dangerous experiment, however, for the Courts, like the Bessborough Commission, may incline strongly to the tenant's side, and if they do, on Mr. Parnell's own tests, where will he be? It must be said, too, that his programme is based on a theory which if sound would show Irish society to be so rotten that no political change could possibly save it. If there are no just men outside the Land League, the Irish cause is hopeless. The Land Commission, by the way, has published a most lucid circular, explaining to the tenants, point by point, all the advantages they can obtain through the bill, and we suspect it will have a great deal more effect than Mr. Parnell's test programme.

Mr. Baden Powell has been reading a paper before the British Association on a matter which has a good deal of interest for Americans, inasmuch as it touches the question so often asked in the tariff controversy—Should we have prospered without Protection?—and which is generally supposed by Protectionists to be sufficiently answered by saying: "See how we have prospered with protection." Two of the Australian colonies, Victoria and New South Wales, have, in the most obliging manner, tried the experiment, side by side, starting with equal advantages, and possessing similar soil and climate. Victoria is highly Protectionist and does duty frequently in the Protectionist newspapers in this country as an example of a British colony which has found out the humbug and mischief of British Free Trade. New South Wales is, however, Free Trade in its policy, but one seldom sees any mention of it in the Protectionist publications. Mr. Baden Powell now comes with a mass of statistics, and shows that in the development of manufactures the two colonies have fared about equally well, but the Free-Trade colony has a far larger revenue per head of the population. Moreover, the revenue from the customs has greatly increased under the New South Wales low tariff, and has barely maintained itself under the Victorian high tariff. In the Free Trade colony, however, the general prosperity, as indicated by the growth of trade and population, has been far greater than in the Protectionist colony. We do not know of any effective answer that our friends who are publishing the Iron and Steel tracts can make to this except saying that New South Wales is running against "the analogy of nature," and is like a human body without clothing and "exposed to aggressive, injurious, and outside influences," while Victoria is keeping up free intercourse between the kidney, the lungs, and the blood, and the stomach and the liver. There is, however, one other answer, though not of the same order, viz.: That Mr. Baden Powell is corrupt, and has been hired with gold by the British manufacturers to throw discredit on high tariffs by the aid of cooked statistics.

The Liverpool people are evidently not afraid that any change in British policy as regards foreign commerce is impending. Their own port has been built up by Free Trade, and they evidently expect Free Trade to continue. They have just made an enormous addition to their docks. How these docks have grown the Prince of Wales, who opened the new ones the other day, set out in some figures in his speech. In 1846 they numbered 27; they now number 58. In 1846 the area of water in them was 122 acres, it is now 543. The docks which have just been opened added 110 acres to this area, and 6½ miles of solid stone quay to the accommodation which Liverpool offers to shipping, which is not bad in the way of "exposure to aggressive, injurious, and outside influences." The chairman at the dinner, however, the chairman also of the Mersey Docks and Harbor, made a speech in which he made it plain that he thought one of the most important incidents in the history of these vast and splendid works was their having received some attention from the royal family. "These docks of the Mersey," said he, "which are not conducted for any purpose of private profit, but as a public trust for the benefit of the port, have enjoyed at other times the notice of the members of the royal family," and he then mentioned as among their foremost claims on English pride, that one was named an Albert Dock and another an Alfred Dock.

SUMMARY OF THE WEEK'S NEWS.

DOMESTIC.

THE remains of President Garfield lay in the Francklyn cottage at Elberon during Tuesday last, and on Wednesday were taken to Washington and placed in the rotunda of the Capitol, where they lay in state till Friday, when funeral ceremonies were held, President Arthur and Cabinet occupying the most prominent mourners' seats. Selections of Scripture were read by the Rev. E. J. Rankin, Congregationalist, prayer was offered by Mr. Isaac Erritt, and an address delivered by the Rev. Mr. Power, the pastor of the Christian Church at Washington. The exercises were over at about 5 o'clock, and the funeral train started for Cleveland soon after, almost every one at all intimately connected with the Government and its late head accompanying it, except the new President. The remains lay in state in Cleveland, where elaborate preparations had been made to receive them, until Monday, when they were interred in the Lake View Cemetery, the late President's wife and mother following them to the vault. The day was everywhere observed as a holiday. Services were held in all the churches. As noteworthy as any commemoration was a meeting of Americans at Exeter Hall, London, which Minister Lowell, Bishop Simpson, Mr. John Jay, and others addressed. The funeral decorations in this city have been remarkable for elaborateness and universality.

The expression of sympathy in Europe has been universal. The morning after the President's death the various consulates were visited by officials anxious to send messages of condolence to the United States Government and to Mrs. Garfield. In England the public buildings of the chief cities displayed flags at half-mast, and the church bells were tolled. In Liverpool, at the conclusion of the Cathedral service, the organist played the "Dead March in Saul," the large congregation standing, and many weeping. The royal standard was displayed at half-mast during the day at St. Martin's Church, London. The Lord Mayor, on taking his seat at the Mansion House, expressed profound sorrow at the news. Earl Granville telegraphed Mr. Lowell, "I am deeply grieved," and sent also a cable message to Mrs. Garfield and the Government through the Secretary of State. Queen Victoria sent a personal message to Mrs. Garfield, and, on the day of the funeral at Washington, a wreath of flowers. The English court were directed to wear mourning for eight days from the 21st. Messages of condolence were sent by the Prince and Princess of Wales, and by Prince Teck and his wife. The Ecumenical Methodist Council passed resolutions of sympathy. The people generally, of all classes, and the press joined in expressions of regret.

In Paris the official announcement of the President's death did not reach the United States Legation till the middle of the day; but all through the morning Mr. Morton had been receiving visits of condolence at his residence from officers and other people of distinction. The second meeting of the Electrical Congress was adjourned on receiving the news, and the foreign commissioners to the Congress went in a body to the United States Commission to express their sympathy. M. Cochery, Minister of Posts and Telegraphs, postponed his official reception. In Berlin the flags raised in honor of the marriage of the Emperor's granddaughter with the Crown Prince of Sweden were lowered to half-mast. The Emperor directed that his sincerest sympathy should be sent to Mrs. Garfield and the Government. The King and Queen of Italy sent messages of condolence. The Belgian and Spanish Courts were directed to wear mourning for eight days. There have been also messages of condolence from the Government of Holland; from the Parliaments of Victoria, New South Wales, South Australia, and New Zealand; from the Government of Italy on behalf of the King and the people, and from Cardinal Jacobini, the Papal Secretary of State, on behalf of the Pope; from the Swiss Federal Council; from the Municipal Council of Dublin; and from various boards of trade and private business men. Monday was generally kept in Europe as a day of public prayer, the services being timed, so far as possible, to coincide with the funeral ceremonies at Cleveland. The streets of the chief cities showed flags at half-mast, and the shutters of business houses were partly closed. The bells of parish churches were tolled. The Lord Archbishop of Canterbury, who earlier in the week had, in his official capacity, forwarded a message of condolence on behalf of the clergy, delivered the address at St. Martin's-in-the Fields. In all the royal palaces the blinds were drawn. The London Stock Exchange was closed three hours earlier than usual, and the American department was closed all day.

The autopsy performed on Tuesday revealed a wholly unexpected and unpredicted course for the fatal bullet. Entering the back at the right side, it fractured the eleventh rib, passed through the spinal column in front of the spinal canal, fractured the body of the first lumbar vertebra, sending small fragments into the adjacent soft parts, and then lodged below the pancreas, about two and one-half inches to the left of the spine and behind the peritoneum, where it became completely encysted. The wound was of a nature to ensure death, and had the locality of the ball been known, any attempt to extract it would have been futile. Hemorrhage from one of the arteries adjoining its track, rupturing the peritoneum, was the immediate cause of the President's death. The suppurating channel treated as the track of the ball was due to the burrowing of pus. The liver and lungs were free from abscesses, but marks of severe bronchitis were found in the organs of the chest.

Dr. Boynton, President Garfield's family physician, though not connected with the care of his last illness, is reported to have already begun an attack on the treatment of the case, and to have intimated strong doubts as to the perfect accuracy of the report of the autopsy, which he broadly hints was bungled, to say the least. Advance sheets of a review of the case by Dr. Hamilton in the *Medical Gazette* have been published. In the course of this résumé Dr. Hamilton says that from the first great uncertainty existed in the minds of the medical attendants as to the course and situation of the ball; that there were no evidences of malarious effects before the removal from Washington, but that the change was highly beneficial to the President's spirits and comfort; and that death was "sudden and unexpected, although in no sense unanticipated," and is fully explained by the revelations of the autopsy. As to determining the course of the ball by probing, Dr. Hamilton observes that "every anatomist will see that it was impossible." The "system of antiseptic surgery advocated by Mr. Lister" was rigorously employed, so far as it was possible. There was no time "in which we felt absolutely certain that what we recognized in the fossa as a point of induration was the ball." Dr. Hamilton avoids controversial discussion of disputed points in the main, and also says nothing in explanation of the confidence he at one time expressed of the President's recovery, which he prophesied from data which he then considered it only a temporary necessity to keep secret.

Guiteau was informed on Monday that he would probably be indicted next week. District Attorney Corkhill offered to telegraph for any counsel the prisoner might desire, and a telegram was accordingly sent to Guiteau's brother-in-law, George M. Scoville of Chicago, coupled with the request that Emory Storrs of the same city, and a prominent Stalwart orator, be also retained.

The fund for the benefit of Mrs. Garfield reached $312,903 86 on Monday.

President Arthur, who took the oath of office before Judge Brady of the New York Supreme Court last Tuesday, renewed the pledge in a more formal manner on Thursday in the Vice-President's room in the Capitol at Washington, the oath being administered by Chief Justice Waite. There were present ex-President Grant, and Senator Jones of Nevada, who accompanied the President to the Capitol, ex-President Hayes, the Cabinet, Senators Sherman, Dawes, Hale, Anthony, several Representatives, Speaker Sharpe of the New York Assembly, ex-District Attorney George Bliss, and a few others. The President, after taking the oath, proceeded to read a brief inaugural. In this he announced that it would be his "earnest endeavor to profit and see that the nation shall profit" by the late President's example and experience, and observed that "no adequate occasion is apparent for an unusual session of Congress," and that "the Constitution defines the functions and powers of the Executive as clearly as those of either of the other two departments of the Government, and he must answer for the just exercise of the discretion it permits and the performance of the duties it imposes." The reading of the inaugural was followed by a Cabinet meeting, all the members of General Garfield's Cabinet having, upon tender of their resignations, been requested to retain their portfolios, "at least for the present." On Friday the President issued a call for an extra session of the Senate for the 10th proximo. It is understood that the Democrats, who have a majority in that body owing to the resignation of Messrs. Conkling and Platt and the death of General Burnside, will complete the organization before the admission of newly-elected members, and that Senator Bayard will be made President *pro tem.*

The Republican State Convention of Massachusetts was held at Worcester on the 21st instant. Congressman Crapo of New Bedford presided, and in the course of his address advocated a civil service in which "continuance in office should depend upon real merit and not upon the urgency of Congressmen or politicians." The present State officers, headed by Governor Long, were renominated unanimously. The resolutions adopted call for a "metallic" currency, the silver dollar being made par with gold, for the "exemption of the civil service from partisan spoliation," for a free ballot and the rejection of Congressional candidates elected by fraud, a national commission for the revision of the tariff, national educational efforts "in States where illiteracy is most prevalent," a law defining a good method of determining the result of Presidential elections, a "wise and stable" Indian policy (the late Administration's plan of giving the Indians land in severalty being expressly approved), and the suppression of polygamy. The civil-service plank was the most elaborate of the platform and sets forth the convention's notion of the reform needed with great explicitness and some eloquence.

The Wisconsin Republicans met in Milwaukee on Wednesday of last week and nominated General J. N. Rusk for Governor, S. S. Fifield for Lieutenant-Governor, J. Timme for Secretary of State, and E. C. McLedridge for Treasurer. The platform denounces polygamy and further subsidies to railroads (though it admits that "corporations must be encouraged"), and calls for Congressional legislation relative to the counting of the electoral vote and to the question of Presidential disability.

The Republicans of the First Assembly district of Oneida county, N. Y., met on the 22d instant to elect delegates to the coming State convention, but failed to organize after much fruitless effort to do so. Consequently two conventions, Stalwart and Half-Breed, were held in the same room, the former selecting a delegation headed by Roscoe Conkling, and the latter one led by Samuel S. Lowery. Mr. Conkling will thus appear at the convention as a claimant of a contested seat.

There is a doubt as to when the term of Sur-

rogate Calvin of this county expires, and Judge Westbrook on Friday issued an order calling upon the Secretary of State to include in the list of offices to be filled next November that of Surrogate of this county, a petitioning complainant maintaining that Judge Calvin was elected simply for the unexpired term of his predecessor. In "municipal" circles the subject is an important one.

The annual meeting of the State Bar Association in Albany September 20th was uneventful, owing to the death of President Garfield, on account of which the proceedings for the day were dispensed with as far as possible, and all reports and papers submitted in silence, and printed in the minutes. The treasurer reported that the receipts for the year were $5,882 27, disbursements $1,527 07, balance on hand $4,355 20. After the re-election of the old officers the association adjourned until next September.

Esposito, the alleged Sicilian bandit, was sent to Italy on Wednesday, much to the surprise of his counsel, who had contemplated an appeal to the Secretary of State, and who characterized the procedure as a "spiriting away" of his client. No further action in the case, however, is threatened.

Mr. Peyton Wise, who is a brother of Congressman elect Wise of Virginia, and United States District Attorney L. L. Lewis, who is a brother of the Readjuster candidate for Lieutenant-Governor, met on the field of honor at Warrenton, last week, without fatal results. The quarrel concerned their brothers, but efforts at reconciliation met with no success. Both men fired simultaneously at the word, but whereas Lewis fired straight at Wise and, being unacquainted with the weapon, made a clean miss, Wise fired in the air.

The Georgia Senate passed last week by a large majority a bill appropriating $2,000 to the University of Georgia as the complement of an amount that will ensure free tuition at that institution.

Riotous proceedings consequent upon a railroad strike in Savannah, Ga., called out a proclamation from the Governor on the 22d instant.

Mr. H. J. Kimball, the Director-General of the Atlanta Cotton Exposition, makes the statement that the buildings will undoubtedly be ready for the opening on October 5th, the main building being four times Mr. Atkinson's original plan, and others proportionately large, and that exhibits have commenced arriving already. The expected daily attendance is 15,000, and 20,000 can be cared for if necessary.

A despatch from Camp Thomas, Arizona, dated the 21st instant, says that Sanchez, the leader of the hostile Indians and the head of the hostile chiefs, including the brother of Medicine Man, has surrendered unconditionally, with all his braves, and asks only to be represented by counsel before the military commission.

Another train robbery took place in the southwest on the 22d instant, Arkansas being the scene of the crime this time, three young men, "mere boys," as they are described, being the perpetrators, and their booty amounting to something over $30,000. The railroad company (the Iron Mountain and Southern) offered at once a reward of $5,000 for the arrest of the robbers, and the Governor of the State adds $500 for each conviction.

The prosecution in the notorious Malley-Cramer case, at New Haven, closed its testimony on the 20th instant, and the defence began to offer their evidence. On Thursday the perjury case against Blanche Douglass was postponed till October. On Friday another attempt was made to prove an *alibi* for the accused. None of the evidence introduced during the week has been particularly important.

Swarthmore College, near Philadelphia, one of the few Quaker institutions for the higher education, was destroyed by fire on Sunday night. It will be rebuilt, and meantime instruction will be resumed in temporary quarters in the neighborhood. The loss in libraries, general and private, is heavy, but probably not irreparable. The total destruction is estimated at $400,000.

The weather east of the Mississippi has continued very hot during the week, and two tornadoes of special violence have been reported. At Quincy, Illinois, on Saturday, a terrific thunderstorm unroofed houses, blew down spires and trees, and cut off telegraphic communication, with some loss of life. Elmira, N. Y., Sunday afternoon, suffered a similar experience, with the added discomfort of a flood. This storm is said to have been preceded by an earthquake.

The Michigan relief fund reached nearly $75,000 on Saturday.

King Kalakaua, of the Hawaiian Islands, who has been travelling in Europe for some time past, arrived in this city last week, and, upon being interviewed, mentioned that he had declined all demonstrations of welcome out of respect to the memory of President Garfield. As to Hawaiian affairs, he had little to say, except that to a small extent the result of his trip would be to induce emigration to the Islands. The countries, however, whose people he found most satisfactory, considered as possible emigrants, could ill spare any of their inhabitants, His Majesty observed. There is room, he says, for from 2,000,000 to 5,000,000 more inhabitants in his kingdom than there are at present.

A whaling vessel brought tidings on Monday to San Francisco of the revenue cutter *Corwin*, which had landed on Herald Island and explored it, and subsequently on the adjacent Wrangell Land, of which it "formally took possession in the name of the United States." Exploration was attempted here too, but the despatch does not indicate how thoroughly, or whether anything definite was learned as to the extent and insular or continental nature of this little-known region. It was found to be "desolate and sterile beyond description," with no trace of human habitation. At neither landing was there any evidence of a previous visit from the missing steamer *Jeannette*.

The Earl of Airlie, who arrived in this country a few weeks ago, died in Colorado on Sunday, very suddenly. Henry F. Vail, President of the National Bank of Commerce of this city, died on Thursday; he began his business career with Fish, Grinnell & Co. William O. Bartlett, a well-known lawyer and journalist, died at his country residence at Yaphank, N. Y., on Friday.

FOREIGN.

Twenty-eight thousand troops are said to have been despatched to Tunis from Toulon on Sunday. An engagement, described as "important," is reported to have taken place near Susa on Saturday, but no losses are given. Louis Blanc and his friends are to issue a manifesto urging the convocation of the Chambers to look into the Tunis affair. The Bey, it is said, persists in refusing his consent to the French occupation of the city, but agrees to their maintenance of a fortress in the near neighborhood.

It is now announced, or rather rumored, from Cairo that the recent Egyptian disturbances were "but a prelude to much graver events." The power of Araby Bey over his followers is said to be absolute; and it is even hinted that "the Khedive himself was at the bottom of the whole affair." Elections for an assembly of "notables" are to be held soon.

A very large reception was given Mr. Parnell on Sunday by the different branches of the Land League in Dublin. Mr. Parnell confined his speech almost entirely to the advocacy of home rule. A small riot occurred in Tobercurry, upon the release of Mr. Sheridan, on the 22d inst.

The Methodist Ecumenical Council closed in London September 20th, with the adoption of an address to all Methodists, read by Bishop Peck of Syracuse, N. Y., and signed by a representative of every Wesleyan body. The address recommends the views approved at the various sittings, calls for hearty co-operation in Christian work according to the traditions of Methodism, and declares that there should be a general call for a great spiritual awakening. The next meeting of the Council will be held in this country six years hence.

A Conference of Freethinkers opened in London on Sunday, Mr. Bradlaugh presiding.

At the International Literary Congress, now holding its sessions in Vienna, resolutions in favor of Anglo-American and American-German copyright were passed on Thursday.

The third Congress of Americanists, a society of savants and antiquarians interested in gathering information relating to America before the discovery of Columbus, was opened in Madrid on Sunday by King Alfonso.

The newly-elected Spanish Cortes met at Madrid on the 20th instant. The royal speech called attention to the need of a liberal interpretation of the Constitution in favor of liberty of conscience, and of reforms in schools and universities. The financial plans include the conversion of redeemable Treasury debts, and a petition to Parliament for special authorization to make a general settlement of the debt with state bondholders as soon as partial conversion and the general budget prove that Spain can resume full payment without new taxation. Negotiations for treaties of commerce, it is hoped, will be promptly concluded with Colombia, Venezuela, and other Spanish Republics, and also with France and England. The colonial relations are alluded to as follows: "The constitution has been promulgated and the previous censorship of the press abolished. In Cuba and Porto Rico the sons of those provinces enjoy already, as citizens of the Spanish nation, the same rights as their brethren in the Peninsula." The prosperity of the Philippine Islands since the abolition of the state tobacco monopoly was hopefully mentioned. The speech produced a favorable impression, and was followed by a rise in funds.

The Cuban Treasury has just reported that the expenditures for the fiscal year 1879–1880 amounted to $51,046,130, and the receipts to but $31,003,077.

The project of establishing a Papal Nunciate at Berlin is reported to have been abandoned, owing to the objections of the Evangelical Church to being put in a position of implied inferiority.

A despatch from Fort Amiel, dated the 26th, says that the Transvaal Volksraad has rejected the convention with England, as it was expected to do, but that nevertheless the decision causes excitement.

The Amir and Ayub Khan have at last come to blows again; and on the 22d, after the fighting had lasted from seven in the morning till noon, the regulation desertion took place—this time of two Herati regiments *to* the Amir—and Ayub Khan fled the field in the direction of Herat. The Amir has occupied Kandahar, and is reported to be planning a speedy advance on the capital of his rival. The battle cost but few lives on either side.

Intelligence from Lima *via* Panama, bearing date of the 17th inst., is to the effect that no substantial progress has been made towards peace between Chili and Peru, though the former had expressed great anxiety to terminate the contest as quickly as possible. Peru, however, refuses to cede any territory, which, of course, blocks negotiations. The centre of the difficulty is the lack of authority which the provisional President of the conquered country, Garcia Calderon, labors under, and owing to which the Chilians feel that any treaty with his Government would be a merely temporary measure. The Calderon Government, it is now said, "could not maintain itself an hour after the withdrawal of the Chilian army," and the Montaneros are reported to be increasing all over the country.

TUESDAY, September 27, 1881.

WHAT PRESIDENT GARFIELD WOULD HAVE DONE.

President Arthur said in his address on taking the oath of office: "All the noble aspirations of my lamented predecessor which found expression in his life, the measures devised and suggested during his brief administration to correct abuses and enforce economy, to advance prosperity and promote the general welfare, to ensure domestic security and maintain friendly and honorable relations with the nations of the earth, will be garnered in the hearts of the people; and it will be my earnest endeavor to profit, and to see that the nation shall profit, by his example and experience."

This shows that whether President Arthur has or has not clearly in his mind an ideal of what his predecessor would have tried to accomplish had he lived, he is fully conscious that the people have, and that he will best commend his administration to popular approval by endeavoring to discover and carry it out. It may seem at first sight as if this popular notion of President Garfield's promise was largely one of those visions of what might have been which sorrow loves to conjure up, and that his administration had really been too short and too full of trouble to leave his successor the materials for anything which can fairly be called a policy. It would certainly be difficult, even for the most commanding genius, to furnish in six months, half of which was spent on a sick bed, anything in the nature of an administrative model, and that General Garfield did this his warmest admirers will not pretend. It must, moreover, be confessed that a very large part of the time during which he was in perfect working condition was lost to the country by the unfortunate belief which seems to have taken hold of him almost as soon as he was nominated, that he was not strong enough to offer any determined resistance to the spoils system, and that instead of attacking it, it was necessary to the success of his administration to treat with it, and even use it, to secure support and assuage discontent. And one of the worst features of the spoils system is the amount of time it takes from our public men, in order to accomplish results so paltry and insignificant that there is no American who must not blush, on seeing them, to think that they should ever have for one moment occupied a statesman's attention. It took from General Garfield only too much of the three months during which he was able to bring all his powers to the service of the state. It is difficult to recall this without a touch of bitterness in one's regret, when one remembers that probably since the younger Adams no man has taken the Presidency with so good an equipment for its duties in the shape of cultivation, acquisition, and experience of public life. In fact the time he spent over the distribution of patronage may fairly be set down as pure waste. But he was, nevertheless, able to give the world an idea of his aspirations and aims, during his brief period of health, by enlarging the area of practical reform in applying and supporting its application to the Treasury Department and the Post-Office, and by actually keeping the New York Custom-House out of politics while the preliminary contest of the factions over the State Convention was pending. The funding operations, too, were carried out successfully almost immediately after he came into office, and the attack on the Star Route abuses of the Post-Office was begun. Of course, the Treasury and Post-Office Departments respectively are entitled to a large share of the credit of these things; but neither could have done the work without the instigation and support of a President who saw the value of it, and could have done it himself if necessary.

The true place after all, however, for those to go who wish to know what President Garfield's aims and aspirations were, and who seek to carry them out now that he is gone, is his speeches, and the legislation which he initiated or supported, while still a member of the House. It is here that his real views on great questions of public policy are to be found. It was these which made his fame, and which satisfied the country when he was nominated for the Presidency that if elected no great public interest would suffer in his hands. It is here, for example, that we must look for what he would have done in the matter of civil-service reform if he had not been overpowered during the canvass and after his inauguration by what seemed to him overwhelming practical considerations, such as the need of some sort of reconciliation and harmony between the leaders of the party which elected him, and the impossibility of bringing this reconciliation and harmony about except in the traditional way of "recognition" in the distribution of patronage. This was, in our view, we need hardly say, a deplorable mistake; that it was in his view a deplorable necessity there would be no difficulty in proving out of his speeches and writings. But that he too would have pronounced it a mistake and have made haste to rectify it, had he lived, we have no doubt. For had he recovered from his wound, he would have gone back to work literally disenthralled. He would have found himself so strong in popular affection, so completely delivered by popular sympathy from all bonds imposed by the envy or malice of enemies, so sure of his position, so confident that the best construction would be put on all his acts and all his omissions, that he would have felt perfectly free to follow wherever the reflection and experience of his life led him. He would, in other words, have found himself his own best counsellor, and there is no difficulty in ascertaining what the suggestions of his own mind would have been. They are set forth in the practical beginning of reform actually made, and in black and white in a hundred speeches and reports on all the momentous questions which have come up, successfully or unsuccessfully, for solution, since he entered Congress in 1863. There was nothing cloudy about his writing or speaking. In fact it is generally clearer than astute politicians would consider prudent, often perhaps clearer than General Garfield himself, struggling in the troubled waters of practical politics, found convenient. But it none the less contains a body of doctrine of which, taken for all in all, any American may be proud—such doctrine as perhaps no other man among us who for so long a period successfully retained his place in public life, could show. It is made up of conciliation and consideration towards the South, of perfect honesty and respect for the recorded experience of the human race in the management of the finances, of the removal of the civil service from the control and interference of members of Congress, of the substitution of tariff revision by experts for tariff tinkering, of the hearty recognition of knowledge and training as one of the most valuable of the national forces, and of the repudiation of rancor as a legitimate political influence.

If President Arthur, therefore, wishes to carry out either what a mourning people now vaguely think President Garfield would have accomplished, or what his recorded utterances justify us in believing that he would have accomplished, he will not confine himself to imitating what his predecessor actually did during the confusion of the first months of a Presidential term. The country will not be content with that, because it has made for itself out of the materials furnished by the whole of his career a better and more illustrious Garfield than the one who passed so much of his brief official life in an attempt to satisfy a faction in his own party. It sees now clearly enough that he was really a statesman, and that in trying to be a politician he mistook his rôle and wasted his powers. Moreover, nothing is more certain than that the bulk of the American people prefer statesmen to politicians, and would invariably give them the highest places if they could, and are delighted beyond measure when they find that, even by accident, they have raised one to power. That, considering the real admiration of the popular mind for first-rate political ability, statesmen so seldom get the first places, is one of the most striking illustrations which the history of free institutions has yet furnished of the difficulty of making political machinery produce the result aimed at. It is a difficulty, too, on which, much as it has been discussed, little light has yet been thrown. Our nominating machinery is still apparently in a condition analogous to that of firearms in the early days of gunpowder. A force of prodigious energy has been introduced into the field of politics, but the art of shooting straight and far with it has still to be acquired.

"CONFIDENCE AND SUPPORT."

There are certain demonstrations of the popular mind which repeat themselves with the greatest regularity at the incoming of every new administration, and indeed at the assumption of every great public trust by an American citizen. Whatever may have been said or thought of a man during a campaign or previous to his appointment to high office, no sooner is he invested with power and responsibility than the popular fancy endows him with all sorts of superior qualities, loftiness of character, profoundness of judgment, energy of will, etc.; and, as at the beginning of the war every little skirmish was called an important battle, and every movement of a brigade up a hill and down again deep strategy, so the first acts of a new man in power are almost always attributed to far-reaching schemes of government, and

looked up to with a peculiar kind of awe. At least so it appears in the newspapers and in the resolutions of public meetings; and from all sides the new man in power receives assurances of "confidence and support." This is a charming way the American people have of reconciling themselves to the inevitable. When they find it impossible to avert it they try to admire it and to dress it up with all sorts of fanciful excellences. In this good-natured spirit they have managed to get pleasantly over many a transition which otherwise would have caused them much trouble and anxiety.

These offers of "confidence and support" are entirely sincere when they are made; but the man who receives them, as President Arthur does at this moment, will, if he is wise, look to the history of his predecessors for information as to what they really mean. No new President ever entered upon his office without being greeted with the very same words of cheer, and these words cannot be assumed to have now a meaning different from that which they have had so many times before. Even the party in opposition has usually indulged in them as freely as the party in power; but it never hesitated immediately afterward to avail itself of every mistake made by the new President for its own advantage. And the promise of "confidence and support" by party friends never prevented the breaking out of more or less spirited criticism on their part whenever their wishes, hopes, and expectations began to be disappointed. In most cases such disappointments came shortly after the accession of a new President, as in fact they were bound to come, for the simple reason that the wishes, hopes, and expectations of different members or wings of the party in power were different and ran counter to one another. Then the admiration of the inevitable was at an end.

The promise of "confidence and support" at the beginning of a new administration, therefore, has never meant and cannot mean that those in power will be regarded as superior beings forever, and will be sustained in whatever they may do, but it means simply that they shall be credited with good intentions until they forfeit that trust; that there shall be no fault-finding merely for the sake of fault-finding, and no opposition merely for the purpose of embarrassing them; in one word, that they shall have "a fair chance." This is what the promise has always meant; this is what it means now, and in the nature of things it cannot mean anything else. Presidents who permit themselves to be carried away by the fair sound of popular acclamation, and count upon more than that, expose themselves to serious disenchantments.

President Arthur is in this respect not more favorably situated than were his predecessors; on the contrary, his situation is in some respects more delicate. Vice-Presidents who succeeded to the Presidential office, although their constitutional title was unquestioned, have in point of popular feeling always been regarded as Presidents of a somewhat lower degree than those originally elected for the first place. "His Accidency" has never been quite on the same level with "His Excellency." This feeling is sometimes apt to crop out in an offensive form when the course of accidental Presidents causes disappointment or provokes strong opposition. That it is not always just need scarcely be said, but it is an unquestionable fact that the promised confidence and support are more easily lost because of it. And here again President Arthur is laboring under some peculiar disadvantages. When a public man reaches the Presidency after a long career, in the course of which he has succeeded in making upon the popular mind a strong impression of his character, knowledge, and statesmanlike qualities, his drafts on public confidence will be considered much longer entitled to payment than when such has not been the case. The people hesitate to let the draft go to protest when the credit of the man who made it has been of long standing and general recognition. President Arthur's capital as a statesman so far consists entirely of credit advanced to him on his accession to power. There have been some items against him which in consideration of his delicate and proper attitude during President Garfield's illness were good-naturedly crossed out in the books. But he has no positive assets to draw against. Any serious mistakes on his part will not be regarded as mere unfortunate accidents, but as relapses. It is, therefore, especially important in his case that he should be very careful not to be misled by the sycophants who will crowd around him, as they have crowded around every one of his predecessors, to tell him that, if he only satisfies them, everything else will take care of itself. His most honest friends will impress upon him that he will have to act with far more than ordinary circumspection to save that "confidence and support" which are now so generally offered to him.

INTERNAL REVENUE OR CUSTOMS DUTIES.

Mr. Wharton Barker, of Philadelphia, has addressed an open letter to Senator Morrill, of Vermont, arguing that the time has now come for repealing all internal-revenue taxes. Mr. Barker thinks that we are paying off the national debt too rapidly, and that the public revenue ought to be curtailed, but only in so far as it is derived from distilled spirits, tobacco, bank checks, proprietary medicines, and other stamp and excise duties. The tariff, he argues, ought not to be disturbed, because that would be repealing the taxes which we levy upon foreigners. "Very naturally," he says, "our foreign competitors in industry, anxious to pour their productions into our markets, are prompt in suggesting that instead of lightening the burden of *our own* taxation we should diminish *theirs* by removing the duties now placed upon their goods." This means that when an American buys steel rails from an Englishman at $28 per ton and is compelled to pay $28 per ton in addition to get them through our Custom-House, it is the Englishman who pays the duty, and that he must never be allowed to escape. By repealing all internal-revenue taxes we should, of course, throw the whole burden of supporting our Government and paying the interest of our public debt upon foreigners. By parity of reasoning, if they should become like-minded and repeal their internal taxes, and clap heavy duties on imported goods, they would likewise throw their public burdens upon outsiders, and eventually all governments would be supported by taxes collected from foreigners—which would be a most convenient arrangement all around. If this is not what Mr. Barker means, he has been unfortunate in the choice of language in which to clothe his ideas.

If the present rate of taxation is kept up, Mr. Barker apprehends that the whole national debt will be paid off in ten years. This is, in his view, a dismal prospect, because in the first place when the bonds are all called in there will be no basis left for the national-bank circulation to rest upon, and because the finances of the Southern States are very much disordered, and it would tend to put them to rights if the general Government should release to them the subjects of taxation upon which it now in part relies, viz., whiskey, tobacco, patent medicines, bank deposits, etc. There would be, he says, some practical difficulties in the way, but they might be overcome. North Carolina, for instance, might devise some way to collect an excise on liquor so that it should be paid only on the amount produced and consumed in that State, and not be paid on any produced in Kentucky or Illinois; and in the same way as to cigars, lucifer matches, patent hair-restorers, etc., etc.

After giving due consideration to Mr. Barker's arguments, we do not share his apprehensions regarding the perils of an early extinction of the public debt. He overlooks one important fact, viz., that if the public debt is paid off in ten years the taxpayers will save about six hundred million dollars as against the plan of protracting it for twenty years. The debt is now about $1,500,000,000, and the annual interest (say 4 per cent. average) $60,000,000. At the end of ten years, if the principal is not disturbed meanwhile, the taxpayers will have contributed $600,000,000, and at the end of twenty years $1,200,000,000, and the original sum of $1,500,000,000 will still be due. Now, a saving of $600,000,000 is a very fair offset to the inconvenience the national banks may suffer in finding a new method to secure their circulating notes. As against a plan for continuing the debt, or some portion of it, permanently, which would seem to be the idea in Mr. Barker's head, it would be strictly within the bounds of accuracy to say that the plan of paying off the debt speedily is infinitely preferable to the plan of maintaining it forever, for in the one case a definite and in the other an endless sum has to be paid. To the superficial mind it may not be immediately apparent that the country saves the whole amount of the interest in perpetuity on a bond once redeemed and cancelled. Since railroad companies and municipal corporations find it to their advantage to borrow money and pay interest for long periods of time, why may not the Government (which is only a fiscal agency of the whole people) find the same advantage? The difference is that the Government has no means of investing money so as to yield a return out of which interest can be paid. The payment of its own debts is the only

form of investment open to it. The debt represents property lost and destroyed, and the interest on it is, strictly speaking, a diversion of the products of industry by the taxing power from one class of citizens to another—a process which is for the time being necessary, but which ought not to be protracted longer than is actually needful.

We leave to others the task of combating Mr. Barker's argument in favor of "free whiskey." We are of the opinion that the tax on distilled spirits, as a tax on a luxury, should be about the last thing repealed in the whole list of tariff duties or internal excises. The protectionists of course desire to get the public revenues to as low a point as possible in order to furnish a justification for high duties on imports; but if they run counter to the popular desire for an early payment of the national debt and excite the opposition of the teetotallers at the same time, they will have trouble at an early day.

THE POPE AND THE ITALIANS.

THE Italian Radicals are causing the Government a good deal of anxiety by their agitation on a matter towards which they know well the position of the Ministry is one of great delicacy, viz., the Papal Guaranties. These Guaranties are contained in an act passed in 1871, immediately after the transfer of the capital to Rome, when the Italian Liberals were still far from sure of their position, and overflowing with good nature even towards the Pope. They took Rome and the temporal power from him, but they were determined to show Catholic Europe that they were not the sacrilegious incendiaries they had been described to be, so that they went to work to make him compensation, and they made it on a very handsome scale. In the first place they settled an annuity of $645,000 on him. They next made his person as sacred and inviolable as that of the King, and allowed him to maintain a military guard, subject to his order exclusively, and to retain the Vatican, the Lateran Palace, and the villa of Castel-Gondolfo and the libraries and museums thereto appertaining. The Government bound itself, too, to protect the sittings of the Conclave during the papal election, and to allow the Pope to receive ambassadors from foreign states on precisely the same footing as those who are accredited to the King. To crown all, the act gave him a private postal and telegraphic service, which costs him nothing, and which he uses for his foreign and domestic correspondence.

The Pope's position when he was a temporal sovereign, and enforcing the obedience of his subjects with his own hired troops, was a very peculiar one. It became still more peculiar when, after discovering his inability to maintain his temporal power himself, he called in the assistance of the French. It is now, however, more peculiar than ever. He refuses to accept the annuity, and has never drawn one cent of it. He retains the Vatican, the Lateran Palace, and the Villa of Castel-Gondolfo, and maintains the guard and enjoys his personal immunities, but issues circulars about twice a year, in which he says he has been despoiled of his property, is restrained of his liberty, is subjected to the most cruel insults and humiliations every day, and cannot adequately perform his spiritual functions, and always speaks of the King in his ponderous mediæval Latin as a sub-Alpine usurper. He has been going on in this way now for ten years, and the Italian Radicals, who always opposed the Guaranties, are beginning to ask more strenuously than ever how long this burlesque of conciliation is to be kept up; how long the Government is going to subject itself and the nation to the humiliation of trying to placate an old priest who repays their politeness with maledictions and false accusations. There is a law of the kingdom which provides that all money due to the state shall, if not claimed by the creditors or beneficiaries within five years, revert to the Treasury. Under this, they maintain, five years of the Pope's allowance is already forfeited, and they call on the Ministry to use the money in public charity or education instead of letting it lie idle to the credit of a man who says its touch would contaminate him. They have been holding what they call "meetings," and very enthusiastic ones, too, in support of their contention. They have pushed matters so far that they have forced the Ministry to prohibit the meetings and promulgate an opinion in the *Official Gazette*, in which they announce that they intend to respect and maintain the Guaranties, which "have been embodied in Italian jurisprudence through the organic law." But, as one Italian writer exclaims, "this is the Ministry which at least once a year, from 1871 to 1876, thundered against these very Guaranties." It is true that the leading members of the Ministry were during the period in question violent opponents of the Guaranties, and this no doubt gives their opponents a useful weapon against them. But it shows, on the other hand, what few people out of Italy believed before 1859, that power and responsibility have just as sobering an effect on the Italian politicians as on those of the United States or of England. There was a similar agitation against the Guaranties when the Conclave which elected the present Pope was sitting, and M. Crispi, who was then in power, met it by a decision of the Council of State—an institution which the Italians have borrowed from the French—that the Law of Guaranties was part of the Constitution. By this decision the present Ministry now profess to be governed, whatever their views out of office may have been. During the excitement the rumor got abroad that the Pope was going to run away, which greatly agitated the minds of the faithful, as it followed close on the disturbances over the removal of Pio Nono's body; but it was promptly met by a semi-official denial from one of the Cardinals, with the addition that the Pope might become a martyr, but that he would never become an *émigré*.

He has, in fact, strong political reasons for staying, even if he knew of any place to go to half as good as Rome. The Italian Moderates are, he knows, anxious to come to terms with him, for it is quite certain that, now that the independence of the kingdom is assured, the Republicans are making headway. The monarchy cannot afford to rest any longer on the laurels of either 1859 or 1871. It has not as yet satisfied the popular aspirations, and at present it is doing nothing to satisfy them. It is sitting down calmly under what the Italian Democrats, rightly or wrongly, consider a snub or a series of snubs from France in the Tunisian question, and there is much reason for fearing that, in the great changes which are clearly impending all along the Mediterranean, Italy will secure no share of the spoil at all adequate to her pretensions, or, in the opinion of the Italianissimi, worthy of her traditions. Then it must be admitted that whatever may be said for the relations of the Government towards the Pope on the score of prudence, there is nothing to be said for them on the score of dignity. He is neither a ward, nor an ally, nor a subject. He is simply, the Radicals say, an insolent priest, living under the protection of the Italian laws and making a practice of insulting the state. They maintain, therefore, that if the Government cannot come to terms with him as a great spiritual potentate—and the effort to do so has now lasted long enough—they should reduce him to his proper condition as an Italian subject; that in the nondescript attitude they now occupy towards him there is neither credit nor profit. They are making so much capital out of this position, and it is really so strong, that the question of the Guaranties is rapidly becoming the burning question of the day.

The Moderates know very well how much explosive material there is in it. They know that no Government can long with impunity allow itself to be flouted by a *protégé* living on its own soil, and that the present situation is highly injurious to the monarchy and highly favorable to republican propagandism. They would, therefore, as the best course open to them, fain come to terms with the Pope, and thus, even if his spiritual countenance did them no good, have the credit of settling with him as a troublesome person. But he is apparently well aware of this anxiety on their part, and means to make the most of it. There are many signs now that he is open to negotiations, but he means to make the best bargain he can, and doubtless counts on the fears of the monarchists to bring him some day or other ampler concessions than now seem likely.

THE PLOT AGAINST LIEUTENANT FLIPPER.

WHEN Lieutenant Flipper was first arrested on a charge of misappropriating military funds, and some of the money was reported as having been found upon the person of his servant, and the deficit was subsequently made good, we pointed out that the public ought to suspend its judgment with regard to the transaction until it knew the lieutenant's side of the story; that he being a colored officer, the ordinary white view of his conduct must not be taken as conclusive, but that we should wait until we knew what the colored view was. We also suggested that if the lieutenant would examine the Whittaker case with care he would probably come to the conclusion that the true theory for a colored officer in his position to adopt was not that he must exculpate himself from the charge, but that the white officers who made it must show that it was not the result of a diabolical plot to drive him out of the army, or,

in other words, that it was they and not he who were on trial. We enquired:

"What is Flipper's side of the story? Is he unfamiliar with the Whittaker case? Does he not know that the prejudice in the army against colored officers is so intense that there would be nothing unnatural in 'putting up a job' of this kind? Did he never suspect anything when they pretended to like and esteem him very much, and craftily made him commissary, and entrusted him with funds, well knowing that the negro race is not accustomed to complicated pecuniary transactions, and can easily be confused about them by means of accounts, vouchers, and the like? When he was suddenly called upon to account, and stated that he had mailed his funds, did it never occur to him that his servant might have been bribed, and checks carefully prepared to look like those which have disappeared placed in his hands? Then the poor defenceless boy is locked up, prevented from communicating with his friends, and stories are spread abroad that his 'most intimate associates of late have not been the best.' And this, too, at a distant post, surrounded by army officers who loathe him, graduates of an institution where prejudice against his race is cultivated by officers of instruction, and where the mutilation of negro cadets is regarded as a pleasant pastime. It is pretty evident that Flipper has not 'retained counsel.'"

We have received from correspondents several letters asking whether these suggestions were ironical or serious, and in reply we may say that at the time we certainly intended them to be purely ironical and jocular. But since making them Lieutenant Flipper has retained counsel, and has written a letter stating his view of his case, which corresponds so closely with our suggestions that we shall desist from all attempts at irony with regard to it in future. The letter appeared in the *Globe*, the colored organ published in this city, last week, and contains a full account of the plot which we merely imagined for what it might be worth, but which the lieutenant lays bare in all its dastardly particulars.

Colonel William R. Shafter, the commanding officer of the post, was at the bottom of it. Colonel Shafter is evidently inspired by the most devilish hatred of the negro race, for he went about his work with an ingenuity which is only equalled by that of the lieutenant in unravelling it. Artfully beginning with professions of "great friendship," the colonel made him "believe in its sincerity" by retaining him in the position of acting commissary of subsistence, to which office he had been previously appointed. He was, however, "several times warned against him," and notwithstanding his belief in the sincerity of the colonel's friendship, "took every possible precaution to guard against him." But he adds pathetically that "the blow" came from an unexpected quarter. "I never expected him," he says, "to endeavor to strike me through my servant woman, who has been with me for three years, and who is thoroughly trustworthy and reliable." It must be said that in preparing to strike him "through his servant woman" the colonel began far, far away, and in a manner not calculated to rouse suspicion. At this time, the story begins, "there were four camps dependent on this post," and all of them were in debt to the Subsistence Department. He "told the colonel about this," and now the latter saw his chance. Craftily dissimulating his object, he called upon the simple-minded lieutenant for the funds due, telling him, no doubt in an off-hand pleasant way, "if he had any money" to "put enough with the other to make up the amount required for that month, and let him count it and send the papers off." The unfortunate lieutenant, in fact, had some money "belonging to the last fiscal year," and from this, in obedience to his wicked colonel's suggestion, he took the required amount. The next day he was arrested, according to the white account, while attempting to escape on horseback. The fact was, he says, that he went off for the innocent purpose of seeing a circus in the neighboring town of Chihuahua, where he was arrested by order of the colonel, who called upon him to "turn over the commissary" to Lieutenant Edmunds. He immediately said he would do so. The difficulty about "turning over" seems to have been that the part of the money which should have been turned over to Lieutenant Edmunds had been already turned over to the colonel, who now evidently had the lieutenant in the toils. He says: "You will observe here a deeply laid plan to entrap me, which I did not notice at the time, or I would have declined to turn over a single thing until I had put everything in condition. To go back, I had two lots of money. I took from one and put with the other a certain sum. I was ordered to turn over. If I had withdrawn this certain sum and put it where it belonged, I could not have turned over 'square.' I left it where I put it, knowing that the bills due would be paid and I could replace it. I made one hole to fill up another. Wherever I had left the hole it would have been discovered, but in either case there was no fraud."

We now come to the manner in which Colonel Shafter struck the lieutenant "through his servant woman." He says that on the morning of August 14 his quarters were searched by two officers, whose names are not given, but who were evidently decoys of the colonel's. They found a quantity of checks, letters, and telegrams, and for a purpose now only too obvious they went away, "leaving everything scattered all over the floor." The faithful servant woman came in to "clean up the house," and naturally enough picked the papers up and put them in her dress. Of course the colonel now appears on the scene, searches the faithful servant, and on finding the papers, with a round oath lets fall, among others, the following significant words: "I've got him where I want him."

The lieutenant was now put in the guardhouse, where the colonel came to see him, and with characteristic hypocrisy and treachery "was very kind and affable, and offered to do everything in his power for him." From his previous exhibitions of malignity it might now be supposed that he allowed the lieutenant to languish in the jail; but on the contrary this crafty man permitted the prisoner to see the "four principal merchants" of the place, and on his assurance that the lieutenant was innocent of any attempt to defraud the Government, these merchants collected and paid in the sum stated to be missing, and to this sum the colonel himself contributed $100, which, by the way, "was contributed to conceal his prejudice," etc.

What other officers took part in the plot does not appear, but probably the first lieutenant was in it, for Mr. Flipper says: "He hates me, and I have caught him at my window twice. He has trained his servant to watch me, and he watches me and my servant as closely as possible." "Even the colonel prowls around at night and has been seen at my windows."

The lieutenant has demanded a court-martial to vindicate him, but the *Globe*, in publishing the letter, calls attention to the fact that it is not Lieutenant Flipper who is on trial. It says:

"Colonel Shafter may as well understand at once that the day Lieutenant Flipper is arraigned before his court-martial he will be arraigned before the country, and if Flipper is proved innocent by his court, he will be adjudged guilty of the dastardly crime of attempting to destroy the reputation of a brother officer to gratify personal hate and prejudice.

"The American people are weary, very weary, of the antics of these gentlemen in epaulettes, who are educated at the country's expense and who, as soon as they are clothed with a little authority, proceed to set at defiance the will of the people as well as the laws of the land, and who, if perchance the Government introduces among them one who is not exactly to their taste, mutilate him at West Point or prefer charges against him in the wilds of Texas, and then place him in a felon's cell without even informing him of the nature of the accusation on which he is held."

This last statement seems to be a mistake, for the lieutenant says that he is charged with embezzlement. But that is a mere detail. The main thing is, as we thought from the first would turn out to be the case, that it is not Lieutenant Flipper who is on trial for embezzlement, but Colonel Shafter who is on trial for bringing charges against Lieutenant Flipper, and West Point which is on trial for producing such persons as Colonel Shafter.

THE FAIR-TRADE AGITATION.

LONDON, Sept. 12.

THE most important item of political intelligence is unquestionably the rebuff of Mr. Parnell in Tyrone. The main question before the Irish people at the present time is whether they shall accept the Land Act and endeavor to obtain all the good they can out of it, or whether they shall continue the agitation, with its accompaniments of violence and intimidation, with a view of carrying out the objects put before them by the so-called national party. Mr. Parnell and his friends, it is needless to say, are in favor of the latter. Accordingly, when a vacancy occurred in Tyrone by the appointment of the former member, Mr. Litton, on the Land Commission, Mr. Parnell determined to make a raid into the Ulster County and prevent the Liberal candidate from gaining the seat. His apprehensions are evidently the same as those so frankly expressed by Mr. Dillon. The latter, in announcing his temporary retirement from public life, admitted that the Land Act had taken the wind out of the sails of the Land League, and said that he foresaw it would be difficult to carry on the latter in face of the large concessions made to the tenants by the act. To prevent this Mr. Parnell, Mr. Healy, Mr. T. P. O'Connor, and Mr. Sexton have been vigorously stumping County Tyrone, and indulging in unmeasured denunciations of the Government. The Ulster County, one of the most populous of Irish constituencies, has about 8,500 electors, of whom between 1,700 and 1,800 are Roman Catholics. It has long been a Conservative stronghold, returning two Conservative members almost unchallenged, from the Reform Bill in 1832 down to 1880. At the election last year a Conservative headed the poll with 3,808 votes, followed by a Liberal with 3,500. A majority, therefore, of the constituency had always shown itself Conservative, and when it was known that in addition to these long-standing odds the Liberal candidate would have to contend with the whole influence of the Land League, backed by the Roman Catholic Bishop of Meath, it was felt that the enterprise was almost hopeless. Mr. Parnell's object was to detach the seventeen hundred Roman Catholic votes from the Liberal cause, and thus to divide Ulster into two bitterly hostile camps—Tory and Irreconcilable—squeezing out the party of reform by legal and peaceful means. Under these circumstances, when the numbers were announced—Dickson (Liberal), 3,168; Knox (Conservative), 3,084; Rylett (Parnellite), 907—and it was seen that the untiring efforts of the Parnellites had not enabled them to poll more than about one-ninth of the votes, and that the policy of the Land Act had detached between five and six hundred voters from the Conservative cause, it was felt universally that the triumph of the Government was signal and complete. This impression is not dispelled by Mr. Parnell's subsequent speech, or by the refusal of Mr. Givan, after a fortnight's hesitation, to accept the post of Assistant Com-

missioner under the Land Act. His acceptance of this post would have created a vacancy in Monaghan, and it is presumed that after his experience in Tyrone Mr. Parnell is unwilling to contest the seat.

Both the election in Tyrone and the other elections which have recently taken place in North Durham, North Lincolnshire, and Cambridgeshire, have brought out one feature in the programme of Conservative candidates which demands more than a passing notice. During the last few years there has been an inclination in many quarters to call in question the commercial policy of this country. First, the agricultural depression, then the French sugar bounty, more recently the negotiations for a commercial treaty with France, side by side with a slackness in certain industries, such as the Bradford woollen trade—all these causes have combined to bring this question to the front. Lord Beaconsfield, as long as he was alive, took care to keep the Conservative party free of all responsibility for raising the question, and spoke with contempt of his own protectionist speeches as "musty phrases." Since his death, however, there has been no one of authority enough to curb the more ardent spirits of the party, and at the recent by-elections all the Conservative candidates, three of whom were elected, dallied more or less with ideas and phrases which strike at the root of free trade. In North Lincolnshire Mr. Lowther, who boldly and unflinchingly advocated protection and denounced free trade, has won the seat from the Liberals by a large majority. Whether such victories as these may not be a cause of much embarrassment to the responsible leaders of the party, is another question ; the fact that they are won, and on this platform, is the significant fact.

Apart from these elections, there are many signs that this question will be, next to Ireland, the most prominent topic before the country during the recess ; and however unlikely it may be that any change in our commercial policy should be the outcome of it, the movement is too strongly marked to be ignored by an observer of the currents of opinion here. There has sprung into being a Fair-Trade League, as yet non-political, but with a number of names of persons from the manufacturing districts on its committee ; a National League, emanating from some of the trade and labor organizations ; and there is besides much discussion on the free-trade question in all the prominent reviews and newspapers. It should be noted that our neo-Protectionists do not profess to advocate protection, nor to doubt the benefits which free trade would confer if it were universal. As this is not likely soon to be, they contend that our free trade is "one-sided" ; that as we admit freely the manufactures of nations which will not admit ours, there is no "fair exchange," and that hence our manufactures and industries are being ruined, and our workmen starving for want of work. Their remedy is to impose an import duty upon the goods of all nations who will not admit ours on equal terms, raw materials which are necessary for our industries alone excepted ; and further, with a view to the full development of the empire, to put a duty upon food imported to us by these recalcitrant nations while we admit it freely from our own colonies. One's first feeling on reading this programme is that of comfort on finding that we have at last reached the logical outcome of these "velléités." After protection, after the talk about countervailing duties to meet the French sugar bounties, and putting precisely the same duties on other nations' goods that they put upon ours, it is satisfactory to have arrived at the goal to which these paths lead us : a tax on food. But here, I fancy, the difficulties will begin. These duties are to be imposed not because they are good in themselves, but in order to bring other nations to terms. But supposing they refuse to be convinced, what then ? The League, I gather, would not take it much to heart ; its objects are "the full development of the resources of the empire," "justice to our heavily-burdened agricultural industry," and the application of the revenue from the import duties to the reduction of local taxation ; and if these objects are to be secured by limitation of trade, they could scarcely be secured by universal free trade. This latter would not relieve the heavily-burdened agricultural industry ; as there would be no tariff, there could be no revenue derived from customs for the relief of local taxation, and there could certainly be no security for the exclusive development of the British empire. Under color, therefore, of a desire for universal free trade, objects are being arrived at which are essentially parts of a protective policy.

I have dwelt on the programme of the League less from the intrinsic importance of the body which puts it forward than from the illustration it gives of the inconsistencies to be found in all these schemes for applying the doctrines of fair trade, reciprocity, retaliation, etc., etc. Apart from particular schemes, however, let us look at the chances of any return to a protective policy. First, is the case made out of a decline in the well-being of the nation ? On this point Lord Derby's speech at Southport is conclusive. In the last ten years our imports have increased, our exports have increased, investments in savings-banks have increased ; the aggregate of property subject to the income-tax has increased ; the consumption of popular luxuries, such as tea and sugar, has increased ; while, in face of an increasing population, pauperism has largely decreased. The theory of the gradual impoverishment of the country thus falls to the ground ; and the only question that remains is the rate of progress, and it is to accelerate this that the Fair-Traders want to tax the quartern loaf. In my opinion, the proposal has only to be stated to stand condemned. A nation which has to stand competition with all the world must produce as cheaply as possible, and a tax upon its food means an increase in the cost of production. It means also a decrease in trade ; for a tax which checks imports must check the exports which go to pay for them. And besides, our working-classes have not forgotten the old corn-law struggle : they know that the effect of the tax would simply be to raise rents or keep them up to high-level mark. Taking all this into account, I do not expect any return from the policy of free trade ; but the question will have to be fought over again, and there are certain aspects of it, such as that of commercial treaties, which may lead to changes. But these I must reserve for another letter. H.

THE GERMAN NEGOTIATIONS WITH THE POPE.

BERLIN, September 7, 1881.

THE clerical question is once more the order of the day. Herr Korum, having received his appointment as Bishop of Treves from the Pope, has called on Bismarck at Varzin, has had an audience with the Emperor, and several interviews with Minister Gossler. On his return to Strassburg he went by way of Treves, where towards the middle or end of this month he will be solemnly installed. The hitherto insignificant priest, after having been acknowledged bishop by royal letters patent, plays the most prominent part in the affairs of to-day ; his coming and going is announced as an event of public importance ; at his entrance into the imperial palace the sentries shoulder arms, and the Empress sends for him and receives him on his passage through Coblentz. Bishop Korum, while mentioning that he read no newspapers, said to a Berlin gentleman that, being chosen to his present position, he should obey all the commands of the Church as well as the laws of the State. As, according to clerical views, there is a complete antagonism between the commands of the Church and the laws of the Government in clerico-political matters, it will be well to combine the above statement with a *reservatio mentalis* of the reverend gentleman.

So much is certain, that the Falk laws have been set aside in the present case, and the royal order of December 6, 1873, fixing the wording of the oath to be taken by the bishops, must have been dispensed with. The legal basis on which the royal letters patent have been granted is evidently the bill "De salute animarum," which in 1821 settled the conditions for the nomination of the Prussian bishop between Church and State. Those, therefore, who believed that the relations between Church and Government were still in an unsettled condition are disappointed. Herr Korum would not have gone to Varzin if he had not known beforehand that the question of taking the oath and similar minor difficulties had been removed from his path, and that the expense and trouble of the visit would be well rewarded by the Chancellor. This trip became of practical consequence only after the last preliminaries had been adjusted, and after it became certain that nothing but the last stroke of the pen remained to be made. Besides, Herr Korum was evidently the bearer of despatches from the Pope, the contents of which can at present only be guessed at. Their importance, however, may be imagined from the fact that an extraordinary negotiator has been to Rome in the person of Dr. Kurd von Schloezer, the German Minister to the United States.

As this gentleman is well known from his long and honorable residence in Washington, I shall allow myself a few words about him. Before he was sent to Mexico and to your country he was for about ten years, under Usedom and Count Harry von Arnim, Secretary of Legation near the Vatican. At that time the intercourse between the diplomatists and the Vatican was unrestrained and friendly, and, as there was no *Kulturkampf*, very pleasant, and even cordial. Herr von Schloezer, an historical student and a man of artistic taste and refinement, most cheerfully abandoned himself to the animating influence of this elevated atmosphere and won golden opinions for himself. When in 1868 he had to leave Rome his relations with the dignitaries of the Church and his connections with Roman scholars were of the most intimate character, and to the present day Herr von Schloezer has done everything to preserve and keep them up. Hardly a year passed that he did not, when on a furlough visiting Germany, go to Rome for a week or two. With his whole heart he clung to the Eternal City, and as he never expected to be transferred to an official position there, he prepared to retire to Rome after having received his discharge from the diplomatic service. While on his present furlough to Germany Herr von Schloezer once more made a flying visit to Rome, and on his return reported to the Chancellor that the leading persons of the Pope's court were animated by the most conciliatory sentiments, eager for a settlement of the present difficulties and peace. A more welcome message could not have reached Bismarck. To carry out his policy at home he must win over the Ultramontane party to his side and try to attain at least a *modus vivendi* with Rome. Herr von Schloezer is at present *persona gratissima* with

the Chancellor. Their past differences are forgotten, since the subordinate has repented and apologized for his former bolting. The superior knows that he can rely more implicitly on the penitent sinner than on dozens of untried followers. Consequently Herr von Schloezer has been at once sent back to Rome for the purpose of effecting an understanding.

What, then, is the object of his errand? He is to negotiate for concessions on the part of Rome in order to enable Bismarck to do away with the principal complaints of the German Catholics, and to fill the still vacant episcopal seats. This latter question is the most difficult to be disposed of, for here the views of both parties cannot be reconciled. The archbishops Ledochowski of Posen and Melchers of Cologne are beyond dispute, for the former will retire to a convent and the latter be made cardinal. In both cases Rome also admits a real vacancy of the seats, while those of Breslau, Münster, and Paderborn, in the opinion of the Church, are still occupied by their old incumbents, who were deposed by order of the Prussian Government. Take, for instance, the Prince Bishop of Breslau, Herr Förster. By judgment of a lawfully constituted court he has been dismissed for disobedience to the laws. Hence the Emperor can only grant him amnesty, but cannot bestow offices and honors of the Catholic Church upon a priest, nor elevate him, who is not a bishop, to a bishopric. From a clerical point of view, however, Herr Förster has uninterruptedly been and still is Prince Bishop of Breslau. There is neither a vacancy of the seat nor any hindrance on the part of Herr Förster to occupying the same (*sedes impedita*). The Pope cannot make him a bishop, because that was done by his predecessor, and the Emperor cannot acknowledge him as such if he has not been made a bishop by the Pope, who cannot do it a second time. In fact the Emperor cannot acknowledge that Herr Forster is still a bishop, nor can the Pope acknowledge that he is no longer a bishop. To do away with this contradiction, last year the Government in its so-called amendment to the Falk laws proposed that the King should be authorized to reinvest a deposed bishop with the royal approval; but this paragraph was rejected by the Landtag. Will Bismarck weaken the majesty of the law and resort to the only remedy left to him, in authorizing the bishops to return to their seats and to officiate as if nothing had happened? These gentlemen have, of course, not changed their views about their duty towards Church and State, which are just what they were ten years ago. After their reinstallation they may pick a new quarrel and declare what they consider right in their relations between Church and State. Imagine the position of the Government, which must either submit to their insolence or remove them for a second time.

We have still to hear of the concessions which Rome is going to make to Bismarck. Whether Herr von Schloezer will succeed rests on higher political grounds. Personally, he is very well adapted to his mission. In some of his characteristic traits he resembles Bismarck—does not care much for formalities, turns from one side of a practical measure to its opposite if he sees that he cannot master it according to his notions, and is not greatly troubled by his diplomatic conscience. In his manners he is easy, confounds his adversaries by a certain frankness and openheartedness, which, however, does not tell all he knows. He is intimately acquainted with the ways of Rome, wherefore he will not so easily be imposed upon and will do his utmost to gain advantages, as in case of good luck he will reach the height of his ambition, the new ministership to the Vatican.

But the obstacles in the way of a satisfactory settlement are enormous. Bismarck would ruin himself at home if he consented to the total abrogation of the Falk laws, which alone could secure a lasting peace. Besides, he has in the interest of his domestic policy acted with apparently undue haste in order to bring about a compromise, and the Vatican is too shrewd an observer not to appreciate the awkward predicament in which he has placed himself. When an official Berlin organ says that both parties had not desired the conflict, that in the heat of the struggle they had gone too far, and that it was time to bury the war hatchet, Rome, clinging to her old pretensions, accepts this statement as an acknowledgment of Germany's mistake, if not guilt, and arrives at the conclusion that she has still more to yield.

While thus little or nothing is to be expected from Rome's conciliatory spirit, Bismarck has kept a last arrow for his bow which may materially affect the pending negotiations and lead to his ultimate triumph. It is not yet known whether Herr von Schloezer has been formally instructed, but whoever knows anything of Bismarck's diplomatic predilections will not doubt that he will skilfully use the mission to his own advantage. You will remember the several ineffectual efforts of the Papal See to get its position guaranteed among and by the sovereigns of Europe after its temporal power had been broken by the victories of Prussia and the consequent occupation of Rome by the King of United Italy. The German *Kulturkampf* was caused by the Emperor's refusal to interfere in favor of Pio IX., and a bitter war on the newly constituted German Empire by the priestcraft of all Europe was the consequence. Leo XIII., having found out that the Catholic powers are not too eager to satisfy his cravings, now suggests to the same Protestant empire to declare the present position of the Pope untenable; to propose an understanding, according to which the Pope is placed under European instead of Italian protection, and to surround him with better guaranties in his Roman residence than heretofore. For this purpose he is spreading the news of his removal to Malta, and asks the good offices of Bismarck, who thus obtains a splendid opportunity of gaining a brilliant diplomatic victory. The natural consequences of a German interposition in behalf of the Pope will of course manifest themselves in the relations between Church and State, and may do away with comparatively minor differences.

A few weeks and even days will bring fresher particulars, if not the decision of the question. The Government seems to feel quite sure of success, for Herr von Schloezer's post in Washington has already, as I am informed by good authority, been designated for Count Herbert Bismarck, the elder son of the Chancellor. He is a young man of about thirty-four years, and only remarkable for being the son of an illustrious father, and for having last spring created the great sensation of the season by running away with or rather following a Princess Carolath, *née* Countess Hatzfeld, to Venice. However, the case is not yet as bad as it is represented by the political adversaries of the Chancellor. But how much is he *mutatus ab illo* who, on May 16, 1872, declared that if any clerical subjects of the King claimed not to be bound by the laws of the country, he would with all the means in his power uphold the full sovereignty of the State?

\+ + +

FRENCH POLITICS AND FRENCH HISTORY.

LONDON, Sept. 14, 1881.

A FEELING prevails among friends of France that there is something unsatisfactory in the present condition of her affairs. Gambetta's position; the constant succession of weak ministries; the recent scenes at Belleville; the influence acquired by politicians who accuse Gambetta of want of energy, or of treachery; the attacks on the priesthood, which appear to many Englishmen at once tyrannical and feeble; the invasion of Tunis, and other matters which will at once occur to your readers, do undoubtedly cause friends of France (under which name we may number every sensible man) throughout England or the United States to feel considerable anxiety for the prosperity of the republic. My object in this letter is to examine, in the light not of any private information or of any special knowledge (which I assuredly do not possess), but in the light thrown on the present state of France by her past history, how far there is sound reason for holding that republican institutions are not working well, and that the present attempt to establish what is popularly called a free government in France is likely to end, like so many other French political experiments, in failure.

The bad features of the situation appear to be fourfold:

First. France has not by any means entirely escaped from personal government. You cannot pass a week in the country without perceiving that neither President nor ministers nor the Chambers fill anything like the same space in the eye of the public as Gambetta. In this matter the attacks of foes are more instructive than the eulogies of friends. Every paper is filled with Gambetta. Except accounts of the Tunisian campaign, the French journals contain indeed little else than comments, favorable or unfavorable, upon the conduct, policy, and prospects of the Republican leader. To say, as English critics often urge, that the predominant influence of Gambetta is no more dangerous to the institutions of France than is the influence of Mr. Gladstone to the English Constitution, is utterly to overlook the different positions of the two countries. Gambetta has founded the Republic. Mr. Gladstone has not created the English Constitution. It is, therefore, a simple fact that the prosperity, and even the endurance of the present form of government in France, may possibly at least be dependent, for the present, on the life and power of the man who is really its author. Moreover, history betrays a tendency on the part of the French people to fall under the influence of powerful individuals. Imperialism would never have struck its roots so deeply as it did if the ground of France had not favored the growth of personal government; and the danger lest the Republic should come to depend on the life of Gambetta is in reality only one example of the general peril to freedom involved in the inevitable survival under Republican forms of Imperialist, or it may be of Revolutionary, sentiments and habits. Certainly, when one sees notices stuck up by the Government that any one who asserts that after the elections more troops will be called out in order to carry on the war in Tunis is guilty of circulating false news, and is liable to be prosecuted for the crime, one feels that English notions of free discussion have not yet obtained a footing across the Channel, and that Republican officials probably bear a very strong resemblance to the officials (often the same men) who used to assert the rights of authority under the Empire. As long as imperial traditions survive there will always be a danger lest ordinary Frenchmen should create for themselves some idol who, under whatever name, may attempt to play an essentially imperial part. "What would happen," asks the *Figaro*, "if M. Gambetta chanced to die?" It is impossible to deny that under the

present state of affairs the question has some point, and suggests serious reflections.

Secondly. There are signs, though this is a matter on which a foreigner can speak only with the greatest hesitation, that the overthrow of the Empire, the calamities of 1870, and the establishment of the Republic, have not been followed by that moral revival which every sincere well-wisher of France felt rather than knew to be necessary for the real prosperity of that country. Whether it be the case, as is sometimes asserted, that in some respects the moral tone of the nation is as low as under the Empire, is a matter on which no one can form any judgment which is worth making, who has not a very intimate acquaintance with modern French society. The one thing which the outside public can perceive for certain is that *Chauvinism* has assuredly not died with Napoleon III. If the Emperor had undertaken the expedition to Tunis, every Liberal throughout Europe would have denounced his conduct. Common honesty requires that we should apply the same standard in judging the Republic as in judging the Empire; and if this be done, it is impossible to acquit the Republican Ministry of just the same sort of faults in their foreign policy as the errors which brought discredit on Imperial attempts to play the part of Providence throughout the world. Nor can it be denied that in each case the folly of the Government only represented and intensified the permanent faults of the French people. The desire to make a display of French power; contempt for the feelings of neighboring and weaker nations, such as the Italians; and above all, great ignorance of the real condition of the world outside France, are not novel features in French diplomacy. One cannot read a batch of Parisian newspapers without making the reflection that their readers must be both ignorant of and indifferent to the interests of other peoples. The press of London or of New York contains every day more news from abroad than is to be extracted from a week's numbers of the Parisian press. Moreover, this press is for the most part Parisian and not French. Its readers must hold the world to be bounded by the boulevards.

Thirdly. The Chambers may so lose prestige as to have no moral hold on the nation. This is not an imaginary danger. Both under Louis Philippe and under the Republic of 1848 as well as before the *coup d'état* of 18th Brumaire, representative assemblies became from one cause or another an object of contempt to the French people, and though the circumstances of past times are not likely to recur, the difficulty of maintaining the dignity of a large representative body is one inherent in the nature of things. There has been more than one period of English history in which Parliament ceased to command popular respect, and Frenchmen find far greater difficulty than Englishmen in tolerating institutions which have not a character of dramatic effectiveness. There are signs that the Chambers have during the last two or three years declined in popular estimation, and the newly-elected Chamber of Deputies may find it a difficult task both to exercise practical control over the actions of the Government and at the same time to avoid undertaking functions which no assembly can discharge with effect and with dignity. France may possibly be ripe for Parliamentary Government, but she is certainly not prepared to endure Government by Parliament.

Fourthly. The Chambers may not represent the real sentiments of France. Paradoxical as the assertion seems, the difficulty which Frenchmen have, from the time of the Revolution downward, found it hardest to meet, has been the difficulty of avoiding the tyranny of minorities. Taine's recent volume proves, if it establishes anything, that throughout the Revolutionary movement the sympathies of France were with moderate Constitutionalists of the type of Lafayette; and it is at least a probable conjecture that from that day to this the mass of Frenchmen have, as far as they had any political sentiments at all, inclined towards what foreigners call the Left Centre, or, to apply English terms not quite accurately, have been in political sentiment Whigs or Liberal Conservatives. It is in any case absolutely certain that moderate politicians of this kind have in France never as yet been able to hold their own. They have been overridden, at one time by Parisian Democrats, and at another by reactionists, and one certainly may entertain a doubt whether an assembly where Republicans are in an immense majority can fairly represent a country which twelve years ago contained thousands of persons who by interest and principle were devoted to the empire. This suspicion is strengthened by the fact, which must strike any one who has even the slightest knowledge of France, that there are whole classes whose tone of feeling is utterly opposed not only to republicanism, but to the fundamental ideas of liberal government. A stranger who stands at the Grotto of Lourdes while a body of devotees are adoring the Virgin, not to say worshipping her image, may well wonder how modern France can flourish or even exist, for she contains within herself classes as much divided in sentiment as were Catholics and Protestants on the night of St. Bartholomew, 1572.

It were easy to add to the list of bad symptoms which I have enumerated other causes of anxiety for the prosperity of the Republic. But while there is no good in shutting one's eyes to the rocks ahead on which the French commonwealth may make shipwreck, it is of consequence to keep clearly in view the circumstances which favor the success of the Republican experiment. One of these is the deep discredit into which the whole body of monarchical pretenders, Imperialist, Legitimist, or Orleanist, has for the time fallen; but of this I say the less, because it appears to me that the advantage to the Republic to be derived from the removal of all rivals is often a good deal exaggerated. If France falls into a condition in which she is unable or unwilling to protect her own liberties, fate will assuredly provide some saviour of society. If the older tyrants have left no representatives, some new-made despot is sure to present himself. The real strength of the French commonwealth lies in three circumstances, which are of permanent importance, and are independent of the accidents of the day or hour.

First. France is for the first time since the opening of the Revolution governed by herself. The Republic may fall, but no fair observer can deny that the French people under the present form of government are able to make their wishes legally felt in a way in which they have never been able to make their will felt before. The main accusation brought against Gambetta, namely, that he waits upon the wishes of the people, proves what is sufficiently apparent from other considerations, that at the present moment the will of the nation can at once make itself constitutionally felt and compel the Government to obey it. Since 1870 the representatives of the nation have been really supreme, and no one disputes that the nation is now perfectly able to control its representatives.

Secondly. As I have before pointed out in these columns, one political institution at least has at last taken permanent root in French soil. Universal suffrage has now existed for thirty-four years, and has become to all appearance as firmly fixed among the institutions of France as is, say, the Senate among the institutions of the United States. The importance of this fact can hardly be exaggerated, for it proves that under all the external changes wrought by one revolution after another, the political arrangements of France are at last taking a fixed and durable form. Such an event for instance as the "Jacobin conquest," to use Taine's expression, is, under present circumstances, almost as impossible as a legitimist restoration, for the victory of the Jacobins could only have been achieved under a system of double election which practically restricted the numbers of the electors, combined with the system of open voting which placed each voter at the mercy of a violent minority. The consciousness, further, that there is one institution which neither revolution nor reaction dare touch will, it may be conjectured, gradually free ordinary French electors from liability to recurrent panics lest the "bases of society" should be overthrown. It is at any rate worth notice that the establishment of genuine popular government is giving rise, as it ought to do, to demands not for revolution, but for specific reforms. Frenchmen who wish to establish a law of divorce, to modify the position of the judges, to do away with the concordat, to sever the connection between Church and State, may or may not be fanatics advocating an unwise policy; but men who agitate for a definite reform or alteration in the laws have at any rate given up the attitude of revolutionists, and are, whether they know it or not, entering on that path of bit-by-bit reform which for nearly two centuries has been pursued by every English politician who cared to carry into effect his views of national policy. Nothing is more marked in modern French history than the extreme practical conservatism of statesmen in dealing with the laws of France. The mere proposal of changes which could be advocated and carried with ease in England, would till recently have thrown all France into alarm. The reason is obvious: men will not amend the law while they still dread the outburst of a revolution. That Frenchmen should now quietly advocate legal changes is, as far as it goes, strong proof that the shocks, so to speak, of the revolutionary earthquake are forgotton. Frenchmen feel for the first time that they stand politically on firmer ground.

Thirdly. Gambetta's much admired and much decried "Opportunism" must, to any intelligent critic, appear of the best augury for the fortunes of France. Let it be supposed, as to me seems extremely probable, that Gambetta retains his democratic opinions and aspirations, and will, as far as he can, carry into effect his real convictions. This does not detract essentially from the merit of his policy. Opportunism, as I take it, is a rather awkward name for a principle on which we have in England and America been accustomed to act for generations. It means simply that a statesman must carry out his views in accordance with the will of the nation as opportunity arises. This is the principle on which every English Liberal, and indeed every English Conservative, always acts. Peel, Lord Russell, Lord Palmerston, Disraeli, and Gladstone alike have all been in Gambetta's sense "Opportunists." They have been willing to take as much of their own way as they could get, and have never, or very rarely, tried to go further in any path than they were supported by the will of the nation. They have carried out their own ideas by carrying the nation with them. This appears to Englishmen and to Americans so obviously the right course for any leader of a free people to adopt, that they have never thought it necessary to bestow on this mode of action, which it was assumed everybody must pursue, a special or distinctive name,

But no one can read French history without seeing that Opportunism is not only in name but in fact a new thing in France. Orleanists, Imperialists, and Republicans have each and all tried to force their policy on the nation. A packed Assembly, a regiment of soldiers, a Parisian mob, might, according to circumstances, be the means by which compulsion was applied. But Guizot, Louis Blanc, and Louis Napoleon, disagreeing as they did in everything else, agreed on the one principle that a statesman who had the opportunity ought to compel the nation to follow what he held to be sound policy. To reprobate this principle, which is really inconsistent with the government of the nation by the nation, is to advocate Opportunism. That the most prominent of French statesmen should be an Opportunist is a proof that in his judgment, at least, France has "come of age" and can manage her own affairs. No more hopeful sign has for years appeared in the horizon of French politics. A. V. DICEY.

Correspondence.

PRICE'S PRINT OF HARVARD COLLEGE.

To the Editor of The Nation:

SIR: I note an error in the mention of the new volume of Proceedings of this Society in your last issue. The view of Harvard College given at p. 318 is not the print already published in the Harvard Book, but an earlier copy from the same plate with variations. By the way, the woodcut in the Harvard Book ought not to be called a *fac-simile*, as it does not show the dedication to Lieut.-Gov. Phipps and the long legend in the upper right-hand corner, both in the print copied for that Book.

The cabinet-keeper, Dr. Oliver, tells the story of the two prints at pp. 318–320 of the volume. The one of 1740 (used for the Harvard Book) was on panel, and had become discolored and warped. In making arrangements to repair it, the one now heliotyped was discovered under the first. It was carefully removed from the wood and restored. Naturally, the heliotype is somewhat dingy. The date of this print is between 1726 and 1730. The view was first published in the former year, and Lieut.-Gov. Dummer, to whom this copy is dedicated, went out of office at the latter date. It is interesting and valuable as the only known copy of one of the early impressions from Price's plate, and presents the earliest known view of the buildings of Harvard College. Respectfully yours,

GEORGE DEXTER, Rec. Sec.

MASSACHUSETTS HISTORICAL SOCIETY,
30 TREMONT STREET, BOSTON,
Sept. 24, 1881.

THE ETHNOLOGY OF GENESIS.

To the Editor of The Nation:

SIR: I wish to offer a word of criticism upon your review of Rawlinson's 'Origin of Nations.' You say: "He assumes exactly as rationalists do, that where the Scripture account says 'sons' we are to understand ethnological families. But what right has he, on his own principles, to give any but its obvious meaning to the plain language of the Bible?"

I would suggest that if the chapter (the tenth of Genesis) had been read, this criticism could not have been made; for at the end of each group the record speaks of families and nations in connection with the previous names. It concludes with the statement: "These are the families of the sons of Noah after their generations, in their nations."

Even in the case of Japheth, though all the actual names are but eleven, yet it is said: "By these were the isles of the Gentiles divided in their lands; every one after his tongue, after their families, in their nations."

The meaning "assumed" is upon the face of the narrative. Besides it is a usage of most frequent occurrence. All through the Old Testament they employ the name of the patriarch in speaking of the tribe or people descended from him, as Israel, for all his descendants, and the names of the twelve patriarchs for the tribes among whom Canaan was divided.

ELIAS BIRDSALL.

LOS ANGELES, CAL.

[There are two distinct questions here: What did the writer of the tenth chapter of Genesis himself believe? and, What facts do his words teach us? Upon the second point we shall not differ much from Mr. Rawlinson; but upon the first, after reading the chapter over again, as Mr. Birdsall advises, it still appears to us that the writer believed that he was speaking of real persons, the ancestors and eponyms of nations with which he was acquainted. For this reason he speaks of them as families; but that he regarded them as nothing but families we do not believe. Just so the Greeks believed firmly in the actual existence of Dorus, Xuthus, and Æolus, ancestors and eponyms of races with which they were acquainted. But, even supposing that we are wrong in this, the result is the same. Mr. Rawlinson's words are (p. 168): "Shem, Ham, and Japheth are no doubt persons, the actual sons of the patriarch Noah; but it may be doubted whether there is another name in the series which is other than ethnic." By what but a rationalistic process of reasoning does he make this distinction between these three patriarchs and their sons and grandsons? If it is proved that Elam, Asshur, and Arphaxad were only personified families—that is, myths—why will not the same reasoning prove the same of their father Shem?—ED. NATION.]

THE MORAL OF GUITEAU.

To the Editor of The Nation:

SIR: The horror and detestation excited by the assassination of our President are useless if allowed to spend themselves in words; they are worse than useless if misdirected.

For eleven weeks the President's physicians have been probing the wrong wound, following the bullet where it never went, treating symptoms. Let us not make a similar mistake.

Who shot Garfield? Whom does Guiteau represent? Is this a killing like those in Russia, that "despotism tempered by assassination"? Or are not the governments of Europe mistaken in supposing that the incorrigible populace has stricken down its elected chief just as if he were no better than a king? Let no man be deceived by etymologies. There are assassinations and assassinations. In this great republic the constituted authorities are (sometimes, thank God!) constituted by *the people*, and *the people* are willing to stand by them. The poorest man in America, so far from encouraging this crime, would have sold his shirt and risked his life to save his President. Did not millions of the poor watch with us by his bed-side and weep with grief and rage? Are not the raggedest of the land to-day refusing to be comforted because he is gone from us?

We must look higher up for the real assassin. Guiteau is the representative of political aristocrats, office-holders by divine right: Czars of all the custom-houses, New-World feudal chiefs, latter-day Bourbons, who forget nothing and learn nothing. Such men will rule or ruin. Let them disown Guiteau as indignantly as they please, yet the fact remains that without them there would have been no Guiteau. More logical than they, he has simply carried out their principles to an extreme, but natural, result. War upon the Administration was the order of the day, and it was not Guiteau who began it. Poor wretch! he is doomed to bear the blame which really belongs to them.

Every politician who cultivates party feeling at the expense of national feeling, who would bind his fellow-citizens by a discipline which is not and should never be of permanent obligation, refusing to them the right of independent judgment, and preferring the questions of the past to those of the present and the future—every such man is out of place in this nineteenth century. They who would have us vote with our party from mere force of habit, from ignorance, or from coercion, should have lived in the dark ages, before men dreamed of "government by the people and for the people." But here they are, right in our midst. The despots of old Europe sought to make their subjects mere machines. But these men keep up two great party machines, and we are nothing but spokes and rods and screws thereof. Woe to the man who attempts to clog the wheels—the wretch is torn in pieces. Many a one has thus been mangled and forgotten. The other day our President attempted for our sakes to break one of these machines up, and to-day he is a corpse.

Here is despotism. In Russia the despots are in office; in America they may be in opposition. That is the difference. Rulers are there assassinated in the name of liberty; here they are assassinated in the name of negro slavery and of party discipline. A.

Sept. 22, 1881.

WHAT IS AN IRISHMAN?

To the Editor of The Nation:

SIR: I am a plain man, as my writing will presently convince you, but I read the *Nation*, and I am in a tangle. I have thought that perhaps you can help me in my difficulty. It arises out of the question of the independence of Ireland, soon, if Messrs. Parnell and Rossa are true prophets, to be brought about by American subscriptions or "Irish-American" rifles. What then?

I was born in Dublin, of an Irish mother. Unfortunately, my father was English. I myself am Irish to the core, barring my naturalization as an American citizen. Will I be counted as an Irishman? After me my mother had two other sons, born in Liverpool. They have always been called Irish by their fellow-townsmen, and Irish they are in everything but speaking it. My mother dead, my father married again—this time a thorough Saxon (*my* mother was a Fitzgerald), and they came to live in Ireland, where a son, my third brother, was born to them. Sure, though, he cannot be a true Irishman, with never a drop of Irish blood in him? No less he is a Land-Leaguer, all his life, in Cork, and votes for Mr. Parnell. We have been always an affectionate family, and it disturbs me to think, in case of a war (most likely) between Ireland and Great Britain—well, never mind that! To put my question simply, How many of us are Irish? What is an Irishman? I may add that I have a son, not quite at years of discretion. He was born in this country, and his mother, of Scotch

parents settled in Ulster, is as Irish as myself. My boy calls himself a Fenian, whatever that may be, and hates an Englishman like the devil. Can you certainly inform me what constitutes an Irishman?

Perhaps the under-given table may help you to define our nationality:

	Place of birth.	Father.	Mother.
Myself	Dublin.	English.	Irish.
Patrick and James	Liverpool.	English.	Irish.
John	Belfast.	English.	English.
My son	New York.	?	Irish-born.*

* But of Scotch family.

While I am writing I may as well put in another question. I have some real Irish cousins on my mother's side, Connor by name. They are poor peasant folk in Cork County, and have scraped up a little (we sent them the little we could spare) to bring them here. They have not means to go from any port but Queenstown, and I am told that only English vessels take in passengers there. Can you tell me whether Mr. Rossa excepts from his dynamite intentions those English steamers which by accident may carry Irish passengers, Land-Leaguers or other? I would like my cousins to come safe.

I can only subscribe myself, at present, respectfully, AN ANGLO-IRISH-AMERICAN.

CURIOSITY IN ANIMALS.

TO THE EDITOR OF THE NATION:

SIR: I noticed in your issue of the 22d the statement of the Abbé Galiani that animals have no curiosity. This seems to me strangely inaccurate. Those who remember the bronze statuette of the dog and the turtle will agree that the expression of the dog is life-like and full of curiosity. Dogs, as well as inferior animals, frequently show a spirit of enquiry. The attempts to separate man as "a curious animal" must fail, unless we give another meaning to the adjective, and even then, as always, it is a question of degree. Respectfully,

AUG. R. GROTE,
Ex-Vice-Pres. Am. Ass. Adv. of Science.

211 W. TWENTY-THIRD ST., Sept. 24, 1881.

Notes.

ESTES & LAURIAT, Boston, will reprint in book form, from the *American Art Review*, Mr. W. J. Linton's 'History of Wood-Engraving in America,' with additional chapters and some eighty-five illustrations. They also announce the following illustrated gift-books: 'Nature and Art,' poems and pictures, compiled by Louise Reid Estes; Tennyson's 'Song of the Brook'; 'Beautiful Wild-Flowers of America'; and 'Beautiful Ferns of America.' Their juvenile books embrace 'Young Folks' Histories' of America, the Netherlands, Russia, Boston, New York, London, etc.——From the latest lists we derive also the following titles of forthcoming publications: Macmillan & Co.:—'Poems on English History,' by Francis Turner Palgrave; 'Subject and Neighborlands of Venice,' historical and architectural sketches, by Edward A. Freeman; Kant's 'Critique of Pure Reason,' translated by Prof. Max Müller; and 'The Principles of Political Economy,' by H. Sidgwick. They have also in preparation an important series of short books on the rights and responsibilities of the English Citizen.——Cassell & Co.:—Milton's 'Paradise Lost,' illustrated by Doré; 'A Tour Through Egypt and the Holy Land,' by F. A. Hyndman; a 'Biography of David Cox,' the painter, by the late William Hall; 'Lessons in Landscape Painting in Oil,' by A. F. Grace; 'Flower-Painting in Water-Colors,' by F. E. Hulme; 'Figure-Painting in Water-Colors,' by Blanche MacArthur and Jennie Moore; 'European Ferns,' by James Britton—all these last embellished with colored plates. Also, 'Ostrich-Farming in South Africa,' by Arthur Douglass; 'Land Tenure in Various Countries,' by J. W. Probyn; 'Land Questions, English and Irish,' by Mr. Shaw-Lefevre, M.P.; and 'Co-operation in Land Tillage.'——G. P. Putnam's Sons:—'Little Mook, and Other Fairy Tales,' from the German of Hauff; and 'Lectures on the Origin and Growth of Religion, as illustrated by Buddhism,' by T. W. Rhys Davids.——S. E. Cassino, Boston:—'International Scientists' Directory.'——James P. Burbank, Salem, Mass.:—'Sounds and their Relations,' as exhibited in visible speech, by Prof. Graham Bell.——Dodd, Mead & Co.:—'The Renaissance of Art in France,' in two volumes, by Mrs. Mark Pattison.——John E. Potter & Co., Philadelphia:—'History of the War between the United States and Mexico,' by John S. Jenkins.——A. Craig & Co., Chicago:—'Nineteen Christian Centuries in Outline: a Guide to Historical Study for Home-Reading and Literary Clubs,' by the Rev. Lewis O. Thompson.——Houghton, Mifflin & Co.:—'Garfield's Words,' suggestive passages from the public and private writings of the late President, selected by William Ralston Balch.——T. Whitaker:—'The New Birth and Life Eternal,' by the Rev. Andrew Jukes.

—Under the title of 'Plutarch's Essays,' Little, Brown & Co. have had the good thought to publish a selection from the five-volume edition of the 'Morals' issued by them in 1870 (see No. 292 of the *Nation*). Mr. Emerson's Introduction is retained, and Prof. Peabody furnishes a brief but comprehensive estimate of the author's personality, by way of preface. The Essays open with "Concerning the Cure of Anger," and embrace among others that "Of Large Acquaintance," the "Discourse concerning Socrates's Dæmon," "Whether 'twere Rightly Said, Live Concealed," "Concerning Such Whom God is Slow to Punish," "Lives of the Ten Orators," the Laconic Apophthegms, and the Remarkable Sayings of Kings and Great Commanders. It is needless to add that the mechanical execution of the book is admirable (8vo, pp. xxx.-549).——One must not speak disrespectfully of early editions of the works of the New England galaxy of poets, and we avoid comparison when we say that the latest blue-and-gold pocket edition of Holmes's 'Poems' should satisfy even the author's requirements (Boston: Houghton, Mifflin & Co.). The two volumes, which contain so much that is lasting as pure and as humorous verse, are committed to the public in a graceful prefatory sonnet dated August, 1881, which seems to close the productive period of Dr. Holmes's muse, and to deprecate further "plaintive measures from a worn-out lyre."——In a closely-packed volume of 890 pages, 8vo, printed from the plates, Robert Carter & Brothers have put the whole of D'Aubigné's 'History of the Reformation,' and offer it at the low price of one dollar. The print, if small, is clear.——With a slight change of title, and with a change of publishers (Harper & Bros.), Mr. W. Hamilton Gibson's 'Camp Life in the Woods, and the Tricks of Trapping and Trap-Making,' reviewed in No. 597 of the *Nation*, invites anew the remark that, though complete, it is not always as humane or as manly in its teaching as is desirable.——Henry Holt & Co. have published another volume of Prof. Newcomb's Mathematical Series, entitled 'Elements of Geometry.' It contains all the Euclidian geometry that is usually studied in schools and colleges, and all that is necessary as an introduction to the higher branches of mathematics, together with the elements of the conic sections. The method of treatment is substantially that of Euclid, with such modifications as Prof. Newcomb has deemed necessary to adapt it to the modes of thought of the present age. Any extended examination of them would hardly interest the general reader. We can vouch, from a rather careful examination, for the general excellence of the work, and especially we tender Prof. Newcomb our thanks that we have been able to consult different portions of his book upon special points of interest without being under the necessity of learning a new vocabulary or a new system of hieroglyphics.——The illustrations in *Le Livre* for September are two interesting portrait-vignettes (of the Romantic period) of George Sand and Mme. Barthélemy-Hadot, a writer of historical romances, now well forgotten; and an etching after Etcheto's spirited statue of François Villon exhibited in this year's Salon. *Le Livre* promises a great sensation when the Memoirs of the Marquis de Sourche are published, as they will be shortly, under the editorship of the Comte de Cosnac. The marquis was *grand prévôt* of France in the time of Louis XIV., and left behind him a diary of eighteen folio volumes not intended for publication. On the other hand, the publication of Barras's Memoirs, in four volumes, is postponed until Mme. Jubinal can make up her mind about them.

—Gen. William Birney, of Washington, is preparing a work on the life and times of his father, the late James G. Birney, the first Liberty Party candidate for President, as well as on "the rise, growth, and success of the anti-slavery movement in the United States." General Birney requests "all persons having in their possession letters from J. G. Birney, or anti-slavery papers or pamphlets published between 1831 and 1845, to write him giving details." For the papers and pamphlets it would seem less laborious to spend a few days at the Cornell Library in Ithaca, or even a few hours over such analytic catalogues as those of the Wisconsin State and the Brooklyn libraries, than to invite so vague a correspondence.

—An attempt is making to compile a catalogue of the works of the painter Trumbull, and any information concerning his pictures and sketches will be thankfully received by Prof. B. Silliman, New Haven, Conn. Particularly is it desired to find trace of the original sketch of "Cornwallis's Surrender at Yorktown," presented to Jefferson in 1787–88, and the first and second renderings of "The Sortie from Gibraltar." The first rendering was given to Benjamin West; the second was sold to Sir Francis Baring, and not many years ago was owned by Mr. McPherson, the well-known dealer in works of art at Rome, on whose death it is variously reported to have passed to England and to the United States.

—The *Atlantic*'s two serials are the features of the October number, but, though the instalment of Mr. James's "The Portrait of a Lady" contains some of the best chapters of his extremely subtle, and, as now begins to appear, powerful, story, Mr. Howells is hardly equal to the expectation justly aroused by the beginning of "Dr. Breen's Practice." Slenderness of material is almost a necessary element in Mr. Howells's most eminent successes, but the absence of material can hardly be an advantage to any novelist; and the seventh and eighth chapters of "Dr. Breen's Practice" indicate that their author feels under the necessity of testing the elasticity of his subject to the utmost. Doubtless they but

bridge an interval between really interesting portions of what seemed at first an extremely promising story. Rev. Phillips Brooks has an article of a partly biographical and critical and partly threnodical nature upon the late Dean Stanley, which, being by the head of the American Broad Church party upon the analogous ecclesiastic of Great Britain, could not avoid being sympathetically appreciative, and is, in addition, interesting to the ordinary layman. "Carlyle's Laugh" is the subject of a brief paper by Col. Higginson, who thinks that the key to many of Carlyle's utterances is the laugh by which they were qualified, and which, he says, has been singularly lost sight of in recent Carlyle notices; and he concludes that "a satirical improvisation" is a better phrase than any other with which to describe Carlyle. Mr. White discusses "The Two Hamlets," meaning the editions of 1603 and 1604 respectively, conscientiously warning off all but students in textual criticism. A series of articles on crime and punishment is begun by Mr. Richard L. Dugdale with a paper the chief object of which is to show that "there are inevitable laws regulating crime which are above legislative statutes," and that civilization is not measured by the amount of crime coexistent with it. "River Driftwood," by Miss Jewett; "A Tropical Sequence," by Mr. Charles Warren Stoddard, and the second part of "H. H.'s" delightful "The Katrina Saga" make up the lighter excellence of the number. "Is God Good?" is one of the problems which Miss Phelps is fond of discussing, and of which the title sufficiently indicates the quality of the essay. The reviewing of the number is not important, nor is the poetry, from whose general quality Mr. D. G. Rossetti's sonnet, "Place de la Bastille, Paris," need not be excepted.

—Mr. Maurice Thompson, evidently a keen sportsman, introduces the October *Lippincott's* with an animated account of Grand Traverse Bay, Lake Michigan, which, Mr. Thompson says, is "the most beautiful sheet of water in the West," but of which he abundantly proves the attractions without rigidly confining himself to geographical facts. The next article, by S. P. Scott, is an historical rather than a descriptive account of Cordova, Spain, concerned chiefly with the past glories of the place than with its present characteristics, and therefore of the encyclopædic order of magazine articles. Dr. Oswald's seventh chapter of "Zoölogical Curiosities" is an entertaining account of the "Sacred Baboons" of India. Of the unillustrated articles, Louise Coffin Jones's "My Journey with a King" is a rather sprightly narrative of a Sandwich Island voyage; and there are a number of sketches and short stories of which but little can be creditably said. A considerable instalment of Sherwood Bonner's "The Valcours" is certainly no better than it promised, though it is original, and has considerable movement, which better novels often lack.

—Poetry fills a large space in the October *Scribner's*. There is the "symposium" of minor versifiers which the editor from time to time provides as a vent for his overstock; there is besides the conclusion of Mr. Stedman's "Poetry in America"; and, finally, Mr. Richard H. Stoddard discourses chronologically and critically of "The Sonnet in English Poetry." Mr. Stedman's paper passes a summary judgment on the poetry of the colonial, Revolutionary, and post-Revolutionary periods down to the appearance of Dana, Sprague, and Bryant; then rapidly characterizes the Knickerbocker, *Home Journal*, and annual and keepsake school; and finally reaches the truly national line of poets who began with what was undeniably American —the landscape. This leads the writer to make an ingenious comparison with the beginnings of American art in painting, and he ends by enumerating with more or less particularity the chief poetic names from Longfellow to Miss Lazarus. All this will read better in the book for which it is destined to be the vestibule. That Mr. Stedman, with all his delicacy and tact, has not escaped the perils of contemporary judgments, is indicated in the single line in which he speaks of having paid Whitman "as liberal and impartial a tribute—and one as churlishly received—as any that ever was awarded to the genius of a poet." Mr. Schuyler's "Peter the Great" is also concluded in the present number, and can shortly be read to greater advantage as a volume by itself. Mr. Burlingame's "New Phase of Napoleonic History" is partly a biographic sketch of Pierre Lanfrey, and partly an undiscriminating eulogy on his incontestably great and admirable 'Life of Napoleon I.' Mr. Burlingame pays too high a compliment to M. Lanfrey's impartiality, and the belittling view of Napoleon's statesmanship and legislative genius is far too hastily adopted. To the latter topic a recent Bonapartist work has been effectively devoted. Mr. J. A. Allen has much to say that will be found novel on the "Migration of Birds"—the causes of it, the times and modes of it, the "mystery" of it, and the like. On Darwinian grounds he strips it of much of its mystery, and concludes that birds "usually pursue definite routes, and are guided in part by prominent landmarks, or by memory, and in part by 'instinct' or inherited experience." He believes they "discern approaching meteorological changes," which is no more strange than that four-footed beasts should first be warned of earthquakes. It appears that the monthly weather reports of our Signal Service often make reference to the movement of birds. We omit many other interesting and finely illustrated articles in favor of the last for which we have space—"The First Editor," Mr. Theodore L. DeVinne's tribute to the literary and typographical achievements of Aldus Manutius. The origin of printing possesses infinite fascination for every cultivated mind, and Mr. DeVinne is sure to write agreeably about it as he has done on so many occasions. The interesting facts about Aldus are that "the forms of the single Greek letters that we have adopted are the forms which he introduced," and that he was the inventor of the Italic character, the model for which "he found in the thin, sharp, inclined handwriting of the poet Petrarch."

—The Messrs. Wiley have published 'A Treatise on the Calculus of Variations . . . designed to present in all important particulars a complete view of the present state of the science, by Lewis Buffett Carll, A.M.' The book is a large-sized octavo of 568 pages, with a preface and table of contents of 17 pages. The calculus of variations is generally regarded as the most abstruse and difficult branch of mathematics. The number even of college professors who have anything more than a rather vague acquaintance with its general principles is comparatively small. With the differential and integral calculus mathematical instruction, in the undergraduate course of all our colleges, ends. We are not aware that even this is required in any college. It is always an elective study, and is elected by very few. The differential and integral calculus, which the French usually and conveniently call the infinitesimal calculus, may be said to constitute the material with which the calculus of variations works. A knowledge of the former is a prerequisite to the study of the latter. Any further attempt to explain its nature, even to persons of liberal education, would probably be futile, and certainly out of place. Assuming that such portions of Mr. Carll's work as we have examined with care are fair specimens of the whole, we should say that it was remarkably clear, and fully accomplished its purpose of presenting "a complete view of the present state of the science." We have good grounds for asserting that every treatise of importance on the calculus of variations, in any language, every article in any mathematical journal, and every paper presented to any learned society, has been examined by Mr. Carll. The only systematic treatise making any pretension to completeness in the English language is that by the Rev. J. H. Jellett, Professor of Natural Philosophy in the University of Dublin, published in 1850. It has long been out of print, and is now so rare that it was only after a protracted search, and vainly offering many times its original price, that Mr. Carll succeeded in borrowing a copy from the private library of an amateur mathematician. Neither is there any treatise in the French or German languages covering the whole domain of the science as completely as Mr. Carll's. The production of such a work is alike honorable to the author, the publisher, and the American people.

—We think it will be interesting to our readers, and that the author will pardon us, if we mention a few facts within our personal knowledge which are not alluded to by himself in any part of his book. Mr. Carll was born blind. He has never perceived the faintest glimmer of light. After finishing the course of instruction at the N. Y. Institution for the Blind he applied, in 1866, for admission to Columbia College. He passed his examination with more than average success, and immediately took good rank among his fellow-pupils. Each year he rose higher, and in 1870 he graduated with the second honor of his class. Of the enormous amount of labor implied in this achievement we could give no idea except by entering into details for which we have no room. After graduation he continued his mathematical studies, pushing his investigations into the most recondite parts of the science, finally crowning them by the production of this elaborate and profound treatise. Mr. Carll has had considerable experience as a teacher of private pupils, and is abundantly competent to assume a college professorship. Any institution that should engage his services would be following the example set by both the great universities of England. They have repeatedly appointed blind professors, and always with the most satisfactory results. We regret that Mr. Carll cannot see the handsome form in which his publishers have presented his work.

—Tissot & Co. have been satirizing the Germans for the benefit of the *revanche*-loving portion of their countrymen, and half a dozen Germans have rather more honestly been relating their experiences of Parisian life. This has led M. Arvède Barine to discuss at some length in the *Revue Politique* the comparative character of the Frenchman and the German. It is a very amusing article, full unobtrusively of that self-complacency which the French, the Germans, and the English alike show when they write about their national character or feeling, which is as old as literature and yet is always as interesting for a humorist to observe as the "old, old story" is to a novelist. M. Barine makes some neat points, as becomes a Frenchman. His treatment of German sentimentality veils a clever allusion to that German invasion whose success the French find it so hard to pardon. His countrymen, he says, have been reproached as wanting *Gemüth*. M. Barine, half acknowledging the justice of the imputation, declares it is not very wonderful that they should, since the French are so much the elder nation. Heirs of the Latin civilization, they had a fully

developed literature and social organization at a time when the Germans were still in that poetic age in which drinking and fighting are the main occupations. What wonder if the French lack a little of the enthusiasm and expansiveness of youth? They have learned to conceal their feelings. Perhaps, after all, they have as much real *Gemüth* as their neighbors, but hidden under an ironic exterior. One wonders how this plea strikes those neighbors across the Channel whose insular coldness and impassibility the French are never weary of reproaching. The chief comparison is between the two ideals of marriage. The *gemüthlich* German, according to Hillebrand, founds his union upon *Neigung*, and is ready to dissolve it when the *Neigung* ceases to exist. The prudent Frenchman, according to Barine, marries without love, in order to have progeny, and as soon as these come the father and mother by common accord subordinate themselves to them, economize for them, occupy themselves in opening a career for the sons and preparing a dowry for the daughters. If the cultured German, to whom *Neigung* is the supreme law and self-culture the only aim, finds after marriage that he has lost his inclination for his companion, and has only prosaic sentiments towards her, what can he do but leave her, regardless of the interests of their offspring or any other ordinary consideration? Regard for his own development requires separation. The Frenchman, on the contrary, even if he has never had love for his wife and has lost esteem and friendship as well, will think first of all of his children; he will suffer a great deal to preserve an honorable name for them and save them from those insults, founded on their parents' reputation, which it is so hard for youth to bear. Conclusion: How much more moral, noble, and less egoistic we Frenchmen are, and how much superior our theory of marriage is for the family and the state, nay, even for the individual. Neither theory, however, quite satisfies an American. Our ideal marriage is founded upon *Neigung*, like the German, and our ideal married couple sacrifice themselves to their children as much as the French, *when it is necessary;* but it is not so necessary, because our children, again like the German, are independent, self-subsistent, to a degree unknown in France. Thus we unite the advantages of both nations and avoid their defects, and are able to regard our own character with a self-complacency as great as theirs.

FREEMAN'S HISTORICAL GEOGRAPHY OF EUROPE.

The Historical Geography of Europe. By Edward A. Freeman, D.C.L., LL.D., Honorary Fellow of Trinity College, Oxford. 2 vols. London: Longmans, Green & Co.; New York: Scribner, Welford & Co. 1881.

Mr. Freeman describes his work in modest, almost in disparaging, terms. Its object "is really a very humble one: it aims at little more than tracing out the extent of various states at different times, and at attempting to place the various changes in their due relation to one another and to their causes. I am not, strictly speaking, writing history. I have little to do with the internal affairs of any country; I have looked at events mainly with reference to their effect on the European map." It is easy to understand why Mr. Freeman uses these expressions. Several years have, he tells us, elapsed since the book was begun. It has been delayed by a crowd of causes—by a temporary loss of strength, by enforced absence from England, by interruptions of various kinds. "It has been impossible to make it what a book should if possible be—the result of one continuous effort." 'The Historical Geography of Europe' has, in short, cost its author an infinity of labor, and has caused him that special pain, too well known to any man who has the least experience in authorship, which consists in the feeling—often a purely imaginary feeling—that the writer lacks the power to communicate to his readers the knowledge which he has laboriously acquired and knows to be well worth communication. A book which has caused this kind of anguish generally either is the special favorite of its parent, or else is looked upon with a sentiment of something approaching aversion. The latter seems to be the case in the present instance. Mr. Freeman assuredly does gross injustice to his offspring. A candid critic will come to the conclusion that, excellent and meritorious as are all the writings of the author of the 'Norman Conquest,' he has never produced any work which at once exhibits his own special powers in a more favorable light, and at the same time renders a greater service to students, than does this treatise on the geography of Europe.

Mr. Freeman's special and peculiar strength lies in the forcible exposition of obvious truths. This may seem a very inadequate description of the merits of a man who, with the possible exception of Professor Stubbs, is the greatest of living English historians; yet, if our language be properly understood, it will be found to contain as high and as fair a tribute to Mr. Freeman's genius as any of his admirers can desire. Of no writer can it with more exactness be said that he enforces "truths." Every man errs at times. Mr. Freeman, like the rest of us, is occasionally the slave to intellectual or moral bias; but the most careful investigation of the many pages he has written would satisfy the most captious enquirer that he had propounded fewer statements which were untrue than any modern author who has produced anything like the same bulk of good work. A real love of what is true; an aversion to paradox; utter detestation of all the arts of a literary charlatan; freedom from intellectual trickiness, and, we must in honesty add, a certain deficiency in that kind of subtlety which tempts able men to play tricks with their convictions; and a passionate, though not excessive, zeal for accuracy—have combined to make Mr. Freeman the most truthful of historians. The truths with which he mainly deals may indeed be rightly called "obvious," if that term be used in its strict etymological signification—they are truths which "lie in the way"; but such truths, though always most important, are constantly overlooked: a thing may be obvious, though every man omits to notice it. Thus, to make our meaning clear by one example, it is obvious, when once the fact is pointed out, that while in a constitutional history of Europe England would claim the very first place, in a strictly geographical point of view Mr. Freeman is right in giving England the last place. Yet, though this fact has weighty significance, and is, when once pointed out, as obvious as possible, we suspect that every one of Mr. Freeman's readers will feel slightly surprised at the position assigned geographically to a country which, looked at from other aspects, occupies a different position. Here, as in a hundred other instances, Mr. Freeman forces on our attention an obvious but neglected truth.

That our author excels in forcible exposition is almost too well known to need being insisted upon. The plain truth is, that Mr. Freeman is as an historian a trifle too expository. The errors, or the possible errors, of his readers or of his opponents—classes which he sometimes confounds together—are too constantly before his mind. The man (if such there still be) who does not acknowledge that Charlemagne was the successor of Augustus and was not a Frenchman; that the English are English, and are not Romans or Britons; that France has no right, moral or immoral, to rule in Elsass; that Louis Napoleon was a tyrant in the true sense of that term; that a republic need not be a democracy; and other truths which were always obvious, and, since Mr. Freeman took their exposition in hand, have become familiar—plays in our historian's imagination the same part which "the infidel" performs in the fancy of worthy ministers who think it their duty constantly to address a wretch who is hardly ever found in church, and to expose errors which "do not deserve confutation." On the historical heretic Mr. Freeman urges, presses, forces all the abundant proofs of the truth of the dogmas which this unbeliever or misbeliever is supposed to deny, and sometimes makes intelligent readers, who have long been converted to our author's ways of thinking, wish that some of the force which is wasted in attempting to hammer into the public mind points which have already been well driven home might be employed in establishing or expounding doctrines which had not yet obtained, in great part through Mr. Freeman's own labors, universal recognition. His strength as a writer is always admirable; there is scarcely a weak line in all his pages. The only question which admirers like ourselves can raise is whether the strength is always employed to the best advantage.

Now, what makes us hold that Mr. Freeman's last book gives the very most favorable view possible of his powers is, that the topic curiously gives room for the display of his very rare gifts, and almost of itself corrects or keeps in check the defects, such as they are, by which the effect of his talents is sometimes marred. For, if we are right in saying that Mr. Freeman's essential merit lies in his capacity for enforcing obvious truths, there is no subject in the world which lends itself better to the exercise of this talent than does historical geography. Take, for instance, the following passage on the difference between geographical and political names:

"Some names of countries are strictly geographical; they really mean a certain part of the earth's surface marked out by boundaries which cannot well be changed. Others simply mean the extent of country which is occupied at any time by a particular nation, and whose boundaries may easily be changed. Thus *Britain* is a strictly geographical name, meaning an island whose shape and boundaries must always be nearly the same. *England*, *Scotland*, *Wales*, are names of parts of that island called after different nations which have settled in it, and the boundaries of all of which have differed greatly at different times. . . . *Gaul*, again, is the geographical name of a country which is not so clearly marked out by nature all round as the island of Britain, . . . but which is well marked on three sides—to the north, south, and west. Within the limits of Gaul names like *France*, *Flanders*, *Britanny*, *Burgundy*, and *Aquitaine* are political names of parts of the country whose limits have varied as much at different times as those of the different parts of Britain and Spain. This is the difference between strictly geographical names, which do not alter, and political names, which do alter."

Here you have a distinction which, once pointed out, is as clear as day; but it is a distinction which we venture to assert few readers have ever made perfectly clear to their own minds. Mr. Freeman marks the difference, and expounds it with such perfect lucidity that no student can for a moment forget it. There is not a word in Mr. Freeman's explanation too little or too much for his purpose. He exhibits, in short, the perfection of forcible exposition. It were easy to cite hosts of other passages giving proof of the same power. The point, however, which specially deserves attention is that Mr. Freeman's subject delivers him from the faults into which he sometimes falls. A river, a mountain, or a peninsula excites no anger. The

most pugnacious of men can hardly grow hot over the shape of an island. Mr. Freeman is more just to France than he has sometimes been to the French, and when he writes as a geographer displays a scientific calmness which he has not invariably shown as an historian. Moreover, the limits of his topic have given him that kind of terseness which he sometimes lacks when interested in historical narrative, or when excited by the desire to demolish every vestige of some hated error. "Paris is not only the capital of the kingdom, but it is the kernel round which the kingdom and nation grew." It would be hardly possible in twenty words to sum up more of the history of France than is given in this sentence. It might serve as the text for an elaborate essay. The student who should develop and illustrate all that is contained in this terse statement would find that he had mastered some of the most important phenomena of French history.

Of the service which Mr. Freeman has in his last work rendered to students no one can speak too strongly. His series of maps (which, by the way, we could wish were larger) is of itself a treasure to any one who wishes to understand the histories which he reads. Even among educated men there are few who have any clear and definite conception of the extent of the Roman Empire at different periods of its existence. Fewer still can at all picture to themselves the lands over which the Saracens held sway. To persons, who may be numbered by thousands, standing in this condition of ignorance, Mr. Freeman's sixty-five charts give precisely that kind of information which they need. The map, for instance, of the Spanish dependencies of Charles V. teaches us as much as may be gathered from many pages of Motley or Froude. It is possible from such a chart to see with one's very eyes what were the causes which made Europe fear that Spain should in very truth become the mistress of the civilized world. But it would be doing gross injustice to Mr. Freeman's work to suppose that the maps themselves, necessary as they are, constitute its main or most essential part. The maps are illustrations of the book; the text is no mere comment upon the maps. At every turn the book suggests trains of thought, strictly connected with the subject, which yet carry the reader very far into some of the most interesting of historical problems. Thus, geographically, as in other respects, the history of England stands, and is seen under Mr. Freeman's exposition to stand, in a very curious contrast to the history of France. "The divisions of the English kingdom have been singularly lasting; the land, as a whole, has never been mapped out afresh since the tenth century. While a map of France . . . in the eleventh century, or even in the eighteenth, is useless for immediate practical objects, a map of England in the days of Doomsday practically differs not at all from a map of England now. The only changes of any moment, and they are neither many nor great, are in the shires on the Welsh and Scottish borders." Nor does the contrast end here. England has remained unchanged in part because the English people have found means of expanding themselves over countries which do not belong to the geography of Europe. France, on the other hand, while she has varied her European frontier so constantly that the France of one age means geographically a different country from the France of another age, has, after constant efforts at colonization, conspicuously failed to found any new France in any other quarter of the world.

With this failure on the part of the French nation should be put side by side a failure of English efforts which contrasts with equally marked French success. Englishmen have shown an incapacity, of which the history of Ireland affords the most striking but by no means the solitary instance, to incorporate with England lands lying outside the English borders. The union with Scotland has been an undoubted success, but to effect the kind of union which now exists required, in fact, more than a century of effort; while every one now perceives that Ireland is not, and will not in all probability be for years, really incorporated in Great Britain. On the other hand, France, with all the immense faults which have till of quite recent years characterized the French system of government, has at all times shown a singular capacity for incorporating or assimilating annexed or conquered countries. The most ardent admirer of Germany would not have ventured in 1870 to deny that Alsace had in reality become as much part of France as Normandy; and persons who detested the intrigue by which Savoy was in 1859 annexed to the French Empire, were forced eleven years later to admit that when France was absolutely helpless the Savoyards showed no disposition to desert a country of which they felt themselves to be truly citizens.

The study of historical geography which suggests, in part no doubt also explains, the contrast between English and French history. The inhabitants of an island must, if they wish to expand their power, seek for conquests beyond the sea; and the difficulty of incorporating one country with another is greatly increased when the two lands do not physically join on to each other. On the other hand, a nation which, like the French, has been formed by the junction or annexation of one adjacent land to another naturally acquires the habit of assimilating foreigners to citizens. No one, however, will suppose that geographical facts give the final explanation of something like a fundamental difference in national character. What is certain is that the study of historical geography, under the guidance of a teacher such as Mr. Freeman, brings several marked differences between English and French history into so clear a light that they cannot escape the notice of the dullest students. Here as elsewhere Mr. Freeman, throughout this invaluable little book, affords his readers solid material for thought, and then does them the infinite service of forcing them to think for themselves.

RECENT NOVELS.

Ayala's Angel. A Novel. By Anthony Trollope. [Franklin Square Library.] New York: Harper & Brothers. 1881.

Somebody's Neighbors. By Rose Terry Cooke. Boston: J. R. Osgood & Co. 1881.

Homoselle. [Round Robin Series.] Boston: J. R. Osgood & Co. 1881.

Patty's Perversities. [Round Robin Series.] Boston: J. R. Osgood & Co. 1881.

Queenie's Whim. By Rosa N. Cary. Philadelphia: J. B. Lippincott & Co. 1881.

Friends: A Duet. By Elizabeth Stuart Phelps. Boston: J. R. Osgood & Co. 1881.

MR. TROLLOPE'S stories are apt to be quite as interesting to the reader curious about the society which is Mr. Trollope's material as to the novel reader in general, and perhaps they are more valuable as sociological material than as romances. Hawthorne was inclined so to esteem them, as Mr. Trollope himself recently testified. In this view a social change, observable since Mr. Trollope began to write, seems to be indirectly chronicled in his latest book, 'Ayala's Angel.' The heroine of his earlier novels, loving, dutiful, and self-sacrificing, ready to follow her lover's fortune, with the parental sanction, through good and evil report, becomes in this book an exceptional character, on account of her changed surroundings. She used to correspond to her environment, but the latter has apparently suffered such a deterioration that her commonplace virtues shine extraordinarily by contrast. Ayala's Angel is the ideal she has formed for herself of a not impossible he; her devotion to this ideal prevents her from marrying her rich and vulgar cousin, and at last brings her to the realization of her dream and her happy marriage. A counterpart to this is the marriage of her sister to a poor but rising young artist—a marriage which is rendered possible by the liberality of the rich uncle who helps to provide for the two sisters after the death of their improvident father. The contrast by which the picture of the virtue of the sisters in marrying according to the dictates of their hearts is heightened, is furnished by the love stories of their two cousins. The elder of these marries a member of Parliament, who only intimates his willingness to wed her after he has been satisfied as to the amount of her dowry. After his marriage he sponges on his father-in-law for a home as well as for an income, until he is fairly told to leave the house, having proved impervious to hints. A second adventurer seeks the remaining daughter, first writing to the woman he loves that it will be impossible for them to marry on their income. He proposes to the heiress's father accordingly, but is told that, though he may have the young woman, all question of dowry must be left in abeyance. After long delay and much manœuvring, the lover, unable to trust the lady's assurance that she will have as large a dowry as her sister, lamely enough withdraws his suit and returns to his first love, whom he tells he would, on the whole, prefer her and poverty, in any case. The forsaken heiress, after a frustrated elopement, does finally hold a fortune-hunter to his word and get married. The greed of money has often been the theme of novels, but, so far as we know, it has never been treated in precisely this way heretofore—unless in Gilbert's farce "Engaged," in which those who have witnessed it may remember there is the same complete cynical understanding between the lovers, and the same open and frank discussion of material ways and means, to the exclusion of what is generally considered natural to their condition. It is doubtless possible for a woman to appreciate her lover's sordid motives, and at the same time devote herself to proving to her suitor that he will probably be successful; and it is certainly possible that a man may admit to himself that he is seeking only the money of his beloved; but it is hardly likely that he would make a more open confession to the woman he really loves than he would to himself, and equally doubtful that she would write him her determination never to meet his future wife, but that, if he should repent of his worldliness, and return to her, she would still be ready to marry him. If Mr. Trollope's aim were satirical, one might exclaim at his cynicism; the only other view to take of the moral of his book is that he has been guilty of unnatural exaggeration—which is a new view, certainly, to take of any of Mr. Trollope's works.

All of Mrs. Rose Terry Cooke's stories that are collected under the title of 'Somebody's Neighbors' have appeared in various magazines, and all deal with various shades of New England character. With this the author abundantly shows her intimate familiarity, and her ability to depict it effectively is not, perhaps, noticeably inferior. "Freedom Wheeler's Controversy with Providence" and "Miss Lucinda" are the best of the stories, being free from the slight tendency to sentimentality that can be noticed in many of the others. This, however, becomes

noticeable chiefly in the collection and might not be felt at all in a single story.

'Homoselle' is a story of Southern life before the war. The hero is a young Englishman visiting a Southern major. The heroine, Homoselle, is the daughter of a neighboring planter much reduced in circumstances by personal as well as ancestral extravagances. The rest of the family consist of the planter's unmarried sister, slightly older than her niece, and very much of a coquette; his nephew; his grandson; the latter's nurse, who, it is hinted, is also the planter's daughter; and slaves *ad libitum*. The remaining characters are a free negro of a savage character and a New England abolitionist, who together contrive and lead a negro insurrection, which is frustrated by the Englishman in conjunction with the nurse, who has fallen in love with him and whom he uses as a spy. The love story's course is troubled by the jealousy of the aunt aforesaid, who at first mistakes herself for the object of the Englishman's attentions, and of the nephew, who wishes to appropriate his cousin's affections to himself. Of course everything ends happily, however, and the major leaves all his money to the young couple.

Extravagances of every description pervade 'Patty's Perversities.' "Patty" is, of course, the heroine of the tale, and her "perversities" consist chiefly in encouraging all the lovers she dislikes, and snubbing systematically the one she does love, for no reason that can be set forth more concisely than the author has done it. The successful lover is projected as a softened Rochester, but appears to the reader as a humdrum lawyer, resentful of no ill-treatment and meekly inclined to accept the matrimonial yoke when his mistress's perversities finally suggest that consummation. There are a sharp young lady with dyspepsia, who deals in epigrams and is addicted to a constant consumption of popcorn, a bowl of which she always carries with her; a matron of extreme silliness, who directs her life by the aid of proverbs; a comic servant, and, finally, a most extravagant mystery, whose complications are so intricate and the elucidation of which leads to so little that it is really difficult to tell what it is all about.

'Queenie's Whim' relates the adventures of two orphan sisters, the elder of whom supports the younger by teaching. They find a friend in one of the boarders at the school where they are oppressed, who invites them to visit her in her country home. There the opportunity of taking the village school at a comfortable salary is accepted, when "Queenie" falls heir to an immense fortune, which fact it is her "whim" to conceal for a year and still to appear among her friends as the village schoolmistress. Of course her reason is the dislike of her friend's brother for heiresses, and of course she does not acknowledge it. It is needless to state that this brother's affairs become involved soon after, and "Queenie" induces the rector to lend the gentleman £2,000 of her money in his own name. The rector's sister inadvertently discloses the true source of the loan, and the beneficiary, who has by this time fallen in love with "Queenie," decides that he must discharge his debt before breathing his devotion. This a legacy enables him to do with but little delay. An epitome of such a story is in itself a characterization, and it need only be added that the writer's English is occasionally susceptible of improvement.

It is difficult to say anything of Miss Phelps's latest work, and her work is so well known that it is perhaps as unnecessary as it is difficult. 'Friends' is in all essential respects precisely similar to 'The Story of Avis,' and the mental process of the average intelligent person, upon taking it up, will doubtless be an endeavor, more or less conscious, to account for its idiosyncrasies, and to seek the sufficient reasons which, one reflects, must exist for the evident fact that these are found printable. Such an effort will, however, be either fruitless or expensive, we are persuaded. The "psychical problem," as a reviewer calls it, dealt with by the book is the question of second marriages. Mrs. Reliance Strong is told of her husband's death by Mr. Charles Nordhall in the first chapter, and agrees to marry that gentleman in the last. Among Miss Phelps's admirers this termination has created some scandal, we believe, but there are evidences throughout the book that the author would have held her heroine to her ideal if fate had not been against her. We cannot convey a better notion of the book than by quoting the following:

"Her manner changed. She led him quickly to the sofa, and softly said—

"'You have done too much. I will bring you a cup of coffee this moment. Do not stir till you get it.'

"This was all; yet it seemed to him that she said an inhuman thing. She was kind—oh, as kind as love; yet it seemed to him that she had been cruel as the grave."

This, one concludes, is what comes of Puritan intensity driven in upon itself, and raises questions impossible to settle in a short time or small space.

Experiences of Pioneer Life in the Early Settlements and Cities of the West. By James B. Walker. Chicago: Sumner & Co. 1881. 12mo, pp. 310.

Mr. Walker is the author of a work on the 'Philosophy of the Plan of Salvation,' which, translated into divers tongues, he says has "circulated more widely through Christendom . . . than any other argument in behalf of Divine Revelation," or indeed, "than any American book." He was, as we are left to infer, born in 1805, and his earliest recollections are of the "Indian country" of Pennsylvania—that is, the region west of the Alleghanies—in the neighborhood of Fort Pitt, now Pittsburg. Here he awoke to consciousness in a log cabin, and sixty years later he voluntarily withdrew from ease and comfort to occupy another log cabin in the wilds of Michigan, while founding an agricultural college and trying to build up a settlement. In the interval he had been editor of several religious and secular newspapers, travelling agent of the American Bible Society, teacher and professor, pastor of numerous churches in Ohio and Indiana, establishing some and reviving others, had visited Europe more than once, and, having no children of his own, had adopted one after another till he reckons up a total of ten. This, if not "so varied an experience" that "few persons living in the world have passed through" the like of it, could hardly be so dull as not to furnish some interesting reminiscences. In fact, the book before us abounds in anecdotes and incidents which fix the reader's attention almost from beginning to end (as the author anticipates in his preface), and which the student either of American history during the present century, or of American character, will find sufficiently instructive.

At the Sabbath-school of Mr. Walker's childhood he was taught to read, write, and cipher, and his pious mother's hesitation about sending him there arose not from this worldly instruction, but from the fact that it was without fee, and therefore, to the pride of those unused to public schools, a charity. The small money of that day, when not storekeepers' shinplasters, was pieces of five—a sixpence if cut from a Spanish quarter; a shilling if from a half-dollar. It speaks volumes in regard to the social habits and standards of the period that when the boy once received a *whole* half-dollar as a gift from a stranger, his grandfather advised that "the money should be expended for a treat all round in the factory" in which he was employed, and that half of it actually went to procure a half gallon of whiskey for this purpose. Near the Virginia border the brutal contests of rival bullies were a common occurrence, and in one of them Mr. Walker's Irish Protestant schoolmaster participated, with the loss of a part of his lip. A rustic gathering of which we do not remember to have read before was the "kicking frolic," for the fulling of the home-made woollens:

"The woollen web was saturated with soap and water, and thrown down in an emulsient mass upon a clean space in the centre of the cabin floor. The men of the neighborhood—especially the young men—rolled their pantaloons up to their knees, and with bare feet sat in a circle on the floor around the woollen web in the centre. At a given signal each one commenced kicking vigorously upon the web, and his kicks were met by equal ones from the opposite operator. It became a matter of muscular endeavor by each one not to be kicked back on the floor by his antagonist; hence quick, prolonged, and spasmodic kicking was paid out upon the web in the centre, which was occasionally plied by the laughing house-women with additional soap and warm water. The result was that the flannel was thoroughly fulled, the operators thoroughly saturated with sweat, soap and water; and a general and somewhat vociferous laughter was induced, which shook the sides of all present, and promoted appetite for the homely but wholesome meal which followed" (p. 15).

Mr. Walker was an anti-slavery preacher, as he could hardly help being, after receiving his education at the Western Reserve College, while President Storrs was still alive and Beriah Green and Elizur Wright were among the professors. He boarded in the family of Owen Brown, John Brown's father, and first met the hero of Harper's Ferry at a prayer-meeting. With Frederick Brown, the brother, he made a land-speculating tour in the northwest, of which the account is amusingly graphic. As editor and preacher he had his trials and persecutions because he would not be silent as to slavery, unlike Dr. Lyman Beecher, whose "people were anxious to hear things said that he believed but did not say" (p. 219). At Aurora, Ohio, the mob on one occasion (it is a fault of this book that dates are generally omitted) rang the church bell while he was speaking below, shattered the church windows by the concussion of continuously discharged fire-arms, and finally "got above the audience-room and broke the ceiling through in several places. Through these holes in the ceiling they poured down powder upon the church floor, and upon this they dropped fire, which produced explosions that would have ignited and destroyed the building . . ." Mr. Walker's testimony as to the pro-slavery guilt of the churches of all denominations is candid enough, if not vehement enough, to satisfy the late Stephen Foster himself; and he has not a word in regard to the "infidelity" of the Abolitionists.

The conversions and revivals which this narrative records are treated of without tedium, and with much frankness and shrewd sense. Mr. Walker's Ohio neighbors, of New England origin, fell victims, like the native stock at home, to Millerism, and some of them to Mormonism. One case of conversion to Adventism and then to Shakerism appears to have been Divine retribution for being one of the managers of a ball. Our author was a colleague in this bad business, and though he was not instantly removed by death, like a third, nor converted to Spiritualism and then led to commit suicide, like a fourth manager, it is pretty clear that he was punished by having a congregation he had built up with care at Akron go over *en masse* to Millerism after he had left it. Providence had a way of making travelling

very uncomfortable for him when he was shifting about without what the Quakers call "a right concern"; and, profiting by experience, he agreed with his flock at New Richmond, Indiana, "to go on board the packet with my goods, and if anything occurred before I got to Portsmouth I would return and take my place again at Richmond. . . . But the boat landed us safely at Portsmouth."

How difficult it was to bring either reason or Scripture to bear on Mormons or Millerites is illustrated in a passage on p. 103:

"In Glasgow, Scotland, an honest servant girl in a hotel, who had been perverted by the propagandists of their faith, was about to emigrate with a company to Salt Lake. Knowing that I was an American, she took an opportunity to speak to me of the Mormons in America. I did what I could to dissuade her from her purpose, but she was immovable. Everything, she said, in the Bible was like the Mormons. Nothing was like the religion of the churches in Glasgow. The Mormon preachers travelled without purse or scrip. They preached from house to house. They often healed the sick. They preached the Gospel to the poor; and if some of the older men had several wives, so had Abraham, Isaac, and Jacob. One man she knew had been healed of disease by the laying on of hands. He felt the cure the moment it was effected. He had continued well, and could work ever since. It was therefore impossible for her to doubt.

"So she talked. It was in vain that I spoke of the Old Testament, with its polygamy, as introductory, and imperfect in doctrine and morals as compared with the New. . . . She assented to everything I said in regard to the purity and obligation of the New Testament. *That* she professed to believe, and she said the Mormons practised it, but the churches in Glasgow did not. If I had been asked at that time," adds Mr. Walker, naïvely, "if I thought this young woman was a Christian, I should probably have said the dispensations of Providence are often mysterious—let us judge charitably."

The volume concludes with detached "Thoughts and Incidents," among which we find nothing more suggestive than the following, worthy to be commended, it seems to us, to the next writer of a prize essay on the causes of the decline of Quakerism:

"The Friend Quakers utterly fail in the matter of means and efforts to propagate the truth in the world. The Congregationalists fail in spirituality and testimony against worldly conformity, while they rigorously [qu. vigorously?] propagate the gospel as they understand it. The two qualities should be united. There should be testimony and effort in a spirit of love" (p. 302).

Boston Town. By Horace E. Scudder. With many illustrations on wood. Boston: Houghton, Mifflin & Co. 1881.

THESE tales of a grandfather are a successful attempt to sketch for boys and girls the salient points in Boston's history down to the Revolution. They are less scrappy than the same author's "Bodley Family" series, and more independent of the illustrations. The scheme consists in hanging the narrative upon the lives and public services of a few eminent characters —Blackstone, Winthrop, Sir Wm. Phips, Franklin, and Sam Adams—and upon a few typical, or, as we might almost call them, vital, public buildings—the Latin School, the Province House, the Old State House, Faneuil Hall, and the Old South Church. Most grown persons will derive novel information from the talk about landmarks and incidents, and children cannot fail to be interested at every stage of the conversations between Mr. Benjamin Callender and his grandsons, Benjy and Jeff. It is part of the merit of Mr. Scudder's performance that he does not wilfully intensify the traditional boys' hatred of the mother-country, though his story is mainly of collisions between it and the colony or the province. We notice one omission in connection with Blackstone—to mention the assignment to him in 1633 of the present Common. Necessary silence in the case of Franklin as to the manner in which he got passage away from his native town shuts out a flood of light on the morality of the time.

The disappointment with this pretty book comes from the pictures, which are inadequate and too few, and not very fresh. For a topographical discourse, as this really is, the paucity of maps is surprising; and why should we have two woodcuts of Winthrop statues and none of the Sam Adams and Franklin, which are made quite as much of? Why should there not have been a portrait of Peter Faneuil? Why not many views, after old but perfectly accessible prints, of Boston from epoch to epoch? Parts of these, even, would have been acceptable, and might have been employed very effectively, for instance, in showing the several aspects of Faneuil Hall cupola. A little enterprise, again, would have procured a photograph of Arch Street before its transformation into a business thoroughfare. Finally, when grandfather says he has seen pictures of the stamp enforced by the odious Stamp Act, it seems as if the editor and publishers must have constrained themselves not to furnish a fac-simile of it.

Our Familiar Songs,

AND

THOSE WHO MADE THEM.

More than Three Hundred Songs of the English-speaking Race, arranged with Piano Accompaniment, and preceded by Sketches of the Writers and Histories of the Songs. By Helen Kendrick Johnson. 8vo, $6.

The Wandering Jew.

An account of the Legend in various places and at all times. By Moncure D. Conway. 12mo, $1 50.

GARDINER AND MULLINGER'S

English History.

Being the Introduction to English History. By S. R. Gardiner. With a Critical and Biographical Account of the Authorities in English History by J. Bass Mullinger. 12mo, $2 25.

HENRY HOLT & CO., New York.

Miniature Pocket Atlas.

FIFTY COLORED MAPS AND CHARTS, showing the original thirteen Colonies, the United States and Territories (from latest surveys), and British Provinces of Quebec and Ontario; also a Track Chart of the Cunard Steamers. Each State, Territory, and Province forms a separate map by itself. Also forty-six pages of letterpress, devoted to commerce, finance, political history, etc., carefully edited—an indispensable pocket-companion. Bound in fine, flexible covers, 6¼ by 3½ inches; weight, 2½ ounces. Single copies, 75 cents; eight copies to one address, $5. Sent by mail free of postage. Stamps received for one book. Address, for copies of the work or for full descriptive circular,

MACULLAR, PARKER & CO.,
400 Washington Street, Boston.

The Rejected Gospels.

The first revision of the New Testament was by the Council of Nice A.D. 325.

We publish from the original tongues (giving authority for each) Twenty-three Gospels which the early Fathers then rejected.

Illustrated with thirty-two engravings from ancient missals. Cloth, $1 50; paper cover, $1. Free by mail.

GEBBIE & CO., Philadelphia, Pa.

The Critic.

"We are glad to be able to bear our tribute to the excellent manner in which the *Critic* is conducted. It is not quite so old as the present year; and it has already established its reputation as the first literary journal in America. We say this advisedly. . . . The specialty of the *Critic* is short reviews, and many of them; but we do not observe that quality is sacrificed."—*London Academy, Sept.* 10.

A specimen copy of the *Critic* will be sent free to every subscriber for the *Nation* who sends his address to 757 Broadway, New York.

THE

Sunderland Library,

THE PROPERTY OF THE

DUKE OF MARLBOROUGH.

PART I.

MESSRS. PUTTICK & SIMPSON

WILL SELL BY AUCTION, at their Rooms, 47 Leicester Square, London, England, on December 1 and nine following days, the first portion of this very important historical library, which is specially rich in early printed books, many of them on vellum and in fine bindings. Catalogues *raisonnée* are now ready, and may be had, post-free, price $1 25, of Messrs. TICE & LYNCH, 34½ Pine Street, New York, or from the Auctioneers direct.

Mexican Antiquities.

After a correspondence between Mr. A. W Franks, of the British Museum, London, and myself, a Collection of Toltec and Aztec Antiquities, at present to be seen at Mr. Sarony's Gallery, 37 Union Square, is at my disposal at the price of $5,000.

CHARLES A. COLE,
Assistant Commissioner of the Great Exhibition 1851,
105 E. 26th Street, New York.

C. T. Jeffries & Sons,

RADCLIFFE STREET,

BRISTOL, ENGLAND,

PURCHASERS OF AND DEALERS IN SECOND HAND BOOKS, MSS., ETC.

The largest stock in West of England. Upwards of 100,000 volumes always on hand; viz., History, Travels, Natural History, Science, Americana, Curious and General Literature.

CORRESPONDENCE invited. Any particular sets collected. Catalogues forwarded and information cheerfully granted to Booksellers, Caterers, and Collectors of rich and rare antiquities. N. B.—Catalogue No. 95 now published. Post free upon application.

D. APPLETON & CO.

WILL PUBLISH OCTOBER 1:

I.

THE SUN.

By C. A. Young, Ph.D., LL.D., Professor of Astronomy in the College of New Jersey. With numerous illustrations. "International Scientific Series." 1 vol. 12mo, cloth, price $2.

"It is my purpose in this little book to present a general view of what is known and believed about the sun, in language and manner as unprofessional as is consistent with precision. I write neither for scientific readers as such, nor, on the other hand, for the masses, but for that large class in the community who, without being themselves engaged in scientific pursuits, yet have sufficient education and intelligence to be interested in scientific subjects when presented in an untechnical manner; who desire, and are perfectly competent, not only to know the results obtained, but to understand the principles and methods on which they depend, without caring to master all the details of the investigation."—*Extract from Preface.*

II.

THE BLOODY CHASM.

A Novel. By J. W. De Forest, author of 'The Wetherel Affair,' 'Overland,' etc. 16mo, cloth, price $1.

This novel is likely to attract wide attention. The scene opens in Charleston soon after the war, and the story turns, as the title implies, upon the sectional passions pertaining to the struggle, which were then at their height. It presents some fine contrasts of character, and the main situation is strikingly original.

III.

BACHELOR BLUFF:

His Opinions, Sentiments, and Disputations. By Oliver Bell Bunce. 16mo, cloth, price $1 25.

TABLE OF CONTENTS: I. Introducing Mr. Bluff; II. Mr. Bluff on Domestic Bliss; III. Mr. Bluff's Theory of Poetry; IV. Mr. Bluff's Ideal of a House; V. Mr. Bluff on Feminine Tact and Intuitions; VI. Mr. Bluff on Realism in Art; VII. Mr. Bluff discourses of the Country and Kindred Themes; VIII. Mr. Bluff on the Privileges of Women; IX. Mr. Bluff on Modern Fiction; X. Some of Mr. Bluff's Political Notions; XI. Mr. Bluff as an Arithmetician; XII. Mr. Bluff's Meditations in an Art Gallery; XIII. Mr. Bluff on Melancholy; XIV. Mr. Bluff on Morals in Literature and Nudity in Art; XV. Mr. Bluff as a Critic on Dress; XVI. Mr. Bluff on Sundry Topics; XVII. Mr. Bluff's Experiences of Holidays.

IV.

New Volume in "Appletons' Home Books."

HOUSEHOLD HINTS.

A Book of Home Receipts and Home Suggestions. By Mrs. Emma W. Babcock.

'Household Hints' is the sixth issue in "Appletons' Home Books." 12mo, illuminated cover, price 60 cents.

"Appletons' Home Books" now consist of: 'Building a Home,' illustrated; 'How to Furnish a Home,' illustrated; 'Home Grounds,' illustrated; 'The Home Garden,' illustrated; 'Amenities of Home'; 'Household Hints.' 12mo, cloth, illuminated design, price 60 cents each.

V.

A WORLD OF WONDERS;

Or, Marvels in Animate and Inanimate Nature. With 322 illustrations on wood. Large 12mo, 496 pages, illuminated cover, price $2.

CONTENTS: I. Wonders of Marine Life; II. Curiosities of Vegetable Life; III. Curiosities of the Insect and Reptile World; IV. Marvels of Bird and Beast Life; V. Phenomenal Forces of Nature.

27 Feb 1880 C. F. Bickford

ROSES AND MYRTLES.

Poems. By Sarah Jerusha Cornwall. Square 12mo, cloth, gilt, price $1 50.

VII.

Field Book for Railroad Engineers.

By John B. Henck, A.M. New, revised edition. 12mo, tuck, price $2 50.

☞ *For sale by all booksellers; or sent by mail, post-paid, on receipt of price.*

The Nation.

NEW YORK, THURSDAY, OCTOBER 6, 1881.

The Week.

It is now said to be President Arthur's intention not to avail himself of the extra session of the Senate for the appointment of a new Cabinet, but to delay the formation of the latter until Congress meets in regular session, two months hence. The President thinks that the Cabinet Ministers now in office should be kept there to make the annual reports on the operations of their respective departments, and that in the mean time he will have better opportunities for ascertaining the current of popular sentiment as to what his administration should be. If this report is correct, the President will indeed have the benefit of the present Cabinet Ministers' reports on the public business in a retrospective sense, and to that extent they may serve him in getting up his own message to Congress. But if shortly after the meeting of Congress the present Cabinet is to go out, its members can aid him but little in shaping the prospective features of his message. In laying down his policy for the future it would evidently be of advantage to him to have his future constitutional advisers at his elbow.

Mr. George S. Boutwell has been interviewed about the new President, and has delivered some very Delphic opinions thereupon. He said by way of eulogy that "he had known the President for twenty years, and that he believed he would surround himself with Republicans, and that he would give the country a Republican Administration." Considering the immense variety of Republicans that exists, saying the President will surround himself with Republicans and give us a Republican Administration is about as reassuring as saying that he will surround himself with white males and give us a white male administration. General Grant surrounded himself with Republicans and gave us a Republican Administration, but that did not prevent the loss of sixteen Northern States to the party after six years' trial of his system. Mr. Boutwell also said "he had heard that people were afraid that Mr. Conkling would be the power behind the throne," but that "he did not know why the public should be afraid of Mr. Conkling." This shows either that Mr. Boutwell has a fellow-feeling with Mr. Conkling or does not read the newspapers. In either case he is disqualified for forming an opinion on the reasonableness of the popular fear of Mr. Conkling. He says he believes that Mr. Conkling will not be "a disturbing element in public or private life," and affirms, apparently as a reason for this belief, that "there are many worse men than he." But this only shows that Mr. Boutwell does not either observe or reason closely. Mr. Conkling is already and has long been a disturbing element, in public life at least. Public disturbance is his specialty. Moreover, the greater badness of other men cannot affect his disturbing powers and tendencies. You might as well say that he will not make a disturbance because there are many men better than he is.

There has been one feature in the primary meetings which have just been held in this State which merits the serious attention both of those who like the present nominating system and those who do not. The primary meeting, like all other political assemblages, is not a debating club, but a contrivance for getting at the will of the majority, with a view to the action known as the appointment of delegates. Its utility rests wholly on the assumption that the will of the majority can be ascertained by it, and that when ascertained it will be obeyed. Destroy this assumption and the primary is of no more political value than a crowd in a room collected through curiosity. Now, as a matter of fact—and we do not here propose to throw the blame of it on any one in particular—in a very large proportion of the primaries just held the will of the majority was either not ascertained or was not ascertainable, or when ascertained was disregarded by the minority. The reason the minority disregarded it in most of these instances was its belief that the committee which organizes the State Convention would also disregard it, or would, in other words, judge of the qualification of delegates by some other test than that furnished by the votes of the primary. This, or something like this, has often been done before now, both by Congress and by committees of conventions, but then it has never been done in more than one or two cases at a time, so that it has always been possible to regard it as one of the small defects or vices from which no system is wholly free, and about which, as the saying is, the law does not trouble itself.

If it should now be done, however, on a scale sufficiently large to change the composition of the Convention for the benefit of the faction to which the organizing committee belongs, it will show that the primary has as an institution passed distinctly into a more advanced, and, indeed, we may say, the last possible stage of decrepitude. This again we may say without throwing any blame on either side in particular. For if the Conkling bolting delegations are all admitted, or even admitted in the great majority of cases, it will show either that the minority has successfully resisted the will of the majority, or that the majority has been abusing its power and disregarding law and right on an unprecedented scale. Primaries which send up two contesting delegations are clearly useless, because if in the greater number or any large number of cases the committee of the Convention has to decide who are entitled to the seats, it might better select the delegates in the first instance, and save the scandal and tumult and demoralization of caucuses which can neither agree nor determine on which side the majority lies. There is only one mode of reform and regeneration for the primary, and that is to compose it of persons who are sufficiently agreed about great political ideas to make the choice of the delegates who are to represent them a matter of secondary importance, and make it possible, therefore, to satisfy the minority with any delegates whom the majority decide to elect. At present the election of delegates is entered on, not as if they were simply to labor for the promotion of certain ideas, but as if they were to be armed with absolute discretion in the distribution of a sum of money, and were sure to give none except to their own friends. In this state of things there is no room for compromise. If A cannot get B elected, he gets nothing whatever out of the bag, and it is therefore his interest to dispute the election by every means in his power. Worse off than it makes him he cannot be, and any change may benefit him.

The Pennsylvania Democrats have drawn up a good old-fashioned platform which must command the cordial concurrence of every friend of virtue. No pulpit in the country has ever spoken out more plainly against evil in all its Protean disguises. For instance, it condemns any attempt to overthrow the Constitution of the United States, and also "revolutionary changes tending to consolidation or empire"; also the "use of the public money for any purpose but the support of the Government"—a fact of which those who are appropriating it for their private needs will do well to take note. It also sets its face against legislation "which despoils labor to build up monopoly." What we like best in the platform is, however, the plan of putting an end to frauds and abuses of all descriptions in the management of the various departments of the Federal Government. Many people have, doubtless, fancied that this might be brought about by one or two prosecutions, or a few removals of lax officials, or some improvements in bookkeeping. The Pennsylvania Democrats do not, however, take any such namby-pamby view of the situation. They say that no effective reform can be brought about without "a sweeping change." What they mean by "a sweeping change" they explain by declaring that "sincere civil-service reform will only begin with the return of the Jeffersonian tests for office-holders of honesty, capability, and faithfulness to the Constitution."

What puzzles one about this is that the Pennsylvania Democrats should speak of this return as if it were a difficult thing to bring about, or as if it were sure to encounter violent opposition from the wicked and designing. We assure them solemnly that, after many years of close attention to the difficulties in the way of civil-service reform, we have never encountered a single enemy of, or heard one word of hostility to, the "Jeffersonian tests." As far as our observation has gone, no test of any description has ever in any age or country commanded so much approval from persons of all classes and conditions and parties. Even Messrs. Conkling

and Platt are, or at least were, not very long ago, heartily in favor of it. Indeed, the celebrated six rules for the purification of the civil service, which they drew up, and got adopted by the State Convention in 1877, were merely a series of commendations of the Jeffersonian plan. We have reason to believe, too, that even if the present system of appointment through Congressional nomination be kept up, there will be no difficulty in getting Congressmen to enforce these tests. In fact, they always have enforced them. We believe the surviving Congressmen of the last twenty years are prepared to declare with one voice that they have never nominated any one to office who was not "honest, capable, and faithful to the Constitution."

The public debt was diminished by $17,483,641 during September, making the total reduction for the current fiscal year, which began July 1, last, $41,742,866. The cash in the Treasury at the end of September was $250,686,547, but of this all is chargeable to outstanding obligations except $160,024,648. At the close of August the total cash in the Treasury was $240,498,788, of which the sum of $150,468,575 had no obligations outstanding against it. In the statement of assets and liabilities of the Treasury on October 1 and September 1 the principal changes are a decrease during September of $5,736,711 in the gold coin and an increase of $10,602,533 in the gold bullion, a decrease of about $2,000,000 in the legal-tender notes, and an increase of about $1,200,000 in the amount of public money deposited with national banks. The silver assets show slight changes during the month. On the side of liabilities the Treasurer's general account exhibits an increase of about $10,000,000. There were about $6,500,000 more silver certificates outstanding at the close of the month than at the beginning, while the old gold certificates outstanding were reduced about $150,000. The amount of interest due and unpaid increased about $4,200,000 during the month, and the called bonds and interest on September 30 are charged at $17,832,841, against $10,591,180 at the beginning of the month.

Altogether the statement is in a general way what might have been expected from a condition in which the scale of taxation is in many respects kept up to the war standard, and the Government is in the process of completing operations by which the annual interest charge on its debt is reduced. A continuance of revenues largely in excess of the Government's expenses will at no distant day force a consideration of the question whether taxation should not be reduced, at least in the proportion that the interest charge on the public debt has been diminished. There is much to be said on either side of this question. Unfortunately there is little reason for expecting that, if the present standard of taxation is to be kept up, any part of the surplus revenues of the Government will be devoted to extinguishing that form of the public debt which is circulated as money and clothed with its attributes —the legal-tender notes. This part of the public debt has given no trouble of late years, but it is by no means unlikely to do so in the future. The Treasury has coin enough in its vaults to pay nearly half of this debt; if it should pay one-tenth of it each year it would be advancing the finances of the country to a sound condition faster than it now is. So far as the money market is concerned, the result of such payment would simply be the exchange of one form of lawful money not now in the market, but in the Treasury vaults, for another kind which is now in the market.

The absorption of money by the Treasury, and the shipments of currency to the interior, were sufficient to reduce the reserve of the New York banks by $4,218,000 during the last week, and to leave them $2,756,025 short of a 25 per cent. reserve. The banks generally contracted their loans, and the result was that during the greater part of the week money was hard to get at 6 per cent. About $830,000 foreign gold arrived during the week and the rates for bills on London declined, but not sufficiently to warrant free importations of gold. The Treasury succeeded in buying at par and accrued interest $2,000,000 of the 6 per cent. bonds which have been extended at 3½ per cent.; in fact, $6,700,000 were offered at this price. At the Stock Exchange it was a week of depression for all kinds of securities, United States bonds having fallen ⅛@¼, railroad bonds ½@5¼ per cent., and railroad stocks 1½@6½ per cent. for the more important ones. The contest between the managers of the rival trunk-line railroads, so far from having been drawn to a conclusion, as was generally expected, has been embittered by a newspaper discussion between Mr. Garrett and Mr. Vanderbilt, in which each charges the other with bad faith, and which shows a feeling anything but favorable for an early settlement. General trade continues active, except where it is interfered with by the speculation which is running riot at the Produce and Cotton Exchanges of the country.

Within ten months eight ocean-going steamships have broken a shaft: the *Batavia*, the *Frisia*, the *Steinmann*, the *Persian Monarch*, the *Severn*, the *Catalonia*, the *Tomsah*, and the *Rochester*. Upon the trial trip of the new Cunard steamer *Servia*, a flaw was discovered in her shaft and her first voyage was postponed. We might "point with pride" to the fact that none of these shafts was of American manufacture, but for the other fact that we escape such accidents by not building or owning ocean-going steamships. Mr. John Roach no doubt will find in these cases of imperfect machinery fresh arguments against allowing our people to buy foreign-built vessels. But he can do better than to waste his time in review articles and interviews to this effect. Let him go to work and show that he can build better and cheaper ships than the British—ships which will not break their shafts and at the same time are no dearer. Until he does this shipowners will not buy of him, despite the navigation laws.

Mr. George Bliss, counsel for the Government in the Star-route cases, gives the gratifying assurance that the prosecution of Brady and his associates, against whom informations have been filed, will be pushed with all practicable speed. He promises further, while in this city, to "devote himself to the evidence in the Dorsey case," work which "can be done here as well as in Washington." Probably Mr. Bliss does not overrate the labor and difficulty involved in these cases when he says that "the general public has no conception" of it. "Investigations have to be made all over the country, while the records of the Post-Office Department have to be thoroughly sifted." There is this consolatory thought, that if the laborious search of the prosecuting officers must extend over so vast a surface, it has been proportionately difficult for the thieves to cover their tracks, and throughout these wide ramifications of fraud convincing evidence must be found. While, therefore, we are assured that "nobody is to be spared," we have reason to hope that somebody will be convicted.

Mr. Cyrus W. Field gives rather a startling account of the legal expenses of the Manhattan Company. When he began to overhaul the accounts after the appointment of receivers he was surprised to find how rapidly all expenses increased in June and July last, but on further examination found it was the law bills which accounted for it. In June these amounted to over $23,000, and in July to over $43,000, and in the preceding year to $150,000. He says he has a complete list of the recipients of this money and means to "prosecute" every one of them, but will not publish their names till the cases come into court. But how he will bring a lawyer to justice for making a high charge and receiving the money from his client, it is hard to see. It will be the more difficult in this case because his brother's firm is one of the counsel, if not the leading counsel, of the Company, and very active in the conduct of its litigation. It may be that the absence of the head of the firm in Europe may exempt him from responsibility for these recent bills, but he ought to have left instructions with his partners to be easy with the Manhattan Company.

The drafting of a Land Bill by the Scotch Chamber of Agriculture, which the London *Times* pronounces the most far-reaching measure on the land question ever submitted to Parliament, going further, we presume, than the Irish Land Bill, is rather hard on the Duke of Argyll. He left the Gladstone Ministry in horror over the Irish Land Bill, and in his attack on the bill in the House of Lords treated the Irish demands as something outrageous and not to be justified either by the plea that the Irish had been unjustly treated in bygone days, or that they were Celts. Life and property, he said, had in past days been very insecure in Scotland, but no one thought this an excuse in Scotland for now despoiling landlords of their property. Then, as to the argument that the Irish were Celts, and Celts were queer and must have their way, he said he was a Celt himself, and yet felt none of the turbulent desires of the Land Leaguers. It must, therefore, be rather mortifying for him to find his own hard-headed Scotch farmers prepared to go further than the Irishmen. They will not hough cattle, or boycott their landlords, but they will undoubt-

edly make themselves sufficiently formidable to the Government to get their bill passed, and, what is more, the Duke will have to submit to seeing the accursed thing in operation on his own estates. It is becoming more and more clear, both in England and Scotland, that, as Mr. John Stuart Mill said, it is not Irish ideas about property in land which are peculiar, but English ideas. The Irish are on this subject in the main stream of human tradition; it is the English who have gone up a little side-creek.

The attempt to break up the cotton corner in Liverpool, by a combination among the Lancashire spinners to stop their mills for a week, is said by the latest advices to have broken down. It was, considering the hardship it would inflict on the operatives, a very severe remedy. Now comes the *Pall Mall Gazette* and says it would have been an outrageous remedy, because the corner made by the Liverpool speculators was, in large part at least, made feasible by the speculations earlier in the season, by spinners among others, for a fall in the autumn. That is to say, the spinners have been largely "selling short" through the summer, and the Liverpool speculators, finding it out, made their corner and are now extracting "differences" from them in a manner which makes them "squeal" and threaten to stop working their mills. The moral of it all is that spinners should not speculate, but should quietly and soberly buy their supplies as they want them, paying for them in cash, and being content with the station of life to which it has pleased Providence to call them. But we presume that neither religion, morality, nor law will ever prevent a man's speculating in the raw material of his trade, if he has either the money or the credit to do it with. If he succeeds, it is very hard to avoid calling it prudence or sagacity. But such speculation seems legitimate only when it consists in buying in the expectation of a rise; in selling for a fall a manufacturer goes undisguisedly out of his sphere.

One of the most startling of the recent incidents in the Papal troubles in Rome is what may be called the apostasy of Count Campobello, one of the canons of St. Peter's, and a member of an old and noble family at Spoleto. He has written to Cardinal Borromeo, telling him that he thought of leaving the Church in the time of Pius the Ninth, but refrained in the belief that a better time for the Church and for the country would come after he was gone. He has, however, been disappointed. The new Pope he finds as bad as the old one. He thinks that the rupture between the Church and State which exists and grows wider is maintained by the obstinacy of the Pope, and he himself will not consent to belong any longer to an institution which "requires its ministers to form a kind of Hindoo caste in the midst of modern society," and which makes it impossible for him to be at the same time a good Catholic and a good Italian. He confesses that in addition to this he is sick of a canon's life, which is almost entirely passed, he says, "in uninterrupted religious exercises." Five or six hours passed every day in useless religious ceremonies form either a "stupid idolatry or degrading idleness." Accordingly he abjures the Catholic religion, and, curiously enough, has joined the Methodists. We question much whether there is another Italian Methodist in existence. The Canon's conversion is made impressive by the fact, which does not seem to be questioned, that he has nothing to complain of personally, and is not, as our politicians say, "a sore-head."

The French are pursuing in Tunis precisely the same policy as that pursued by the British in Afghanistan, and almost under the same circumstances. That is, they are seizing a country the people of which detest them, in the name of a ruler who has no power, and who is utterly discredited by his subjection to them, and are treating all resistance to them as rebellion against him, and shooting every Arab whom they catch with arms in his hands, just as General Roberts shot the Afghans. But they have gone beyond the British in their contempt for the religious feelings of the natives. They have destroyed one much-venerated shrine because they thought it was a resort of "treasonable" persons, and carted away the saint's bones in a box to some other mosque, and thought they could make it all right by firing a salute over them and presenting arms when they went by. But the Arabs take no such light view of the matter. Their fanaticism has been raised to white heat, and they are butchering every Christian they can lay hands on. They have just burnt alive a large collection of Europeans of various nationalities sixty miles from Tunis, and are handling Ali, the Bey's son, who is well advanced on the road to Kairwan, the Holy City of the Arabs, so roughly that he proposes to retire unless he is greatly aided. Reinforcements have been sent him, and the grand advance on Kairwan is to be made from Zaghouan, under General Logerot, on the 12th if all goes well. But in the meantime all does not go well. A very large Arab force is said to be collecting on the flank of the column, and the frequency with which French detachments have to retreat for want of provisions and ammunition, after even small skirmishes, shows that the question of supplies is a serious one, and the march will be no promenade.

The huge proportions the enterprise is assuming is getting M. Roustan, the French Consul-General at Tunis, into serious trouble, and trouble, too, curiously like that which overtook Lord Lytton in India. Like Lord Lytton, he concocted the difficulty with the Bey, and negotiated the treaty with him, or rather made him swallow it, just as Lord Lytton made poor Yakub Khan become a friend and ally of Great Britain. Having then got himself into the place of supervisor of the Bey, or French Resident at the Bey's court, he assured the French public that all trouble was over. They have been rudely undeceived. They find work cut out for 100,000 men, a debt of unknown proportions looming up in the future, and the whole desert from Tripoli to Morocco rising in arms against them. The Parisian press, therefore, already begins to grumble very loudly, and the public seems likely to be as sick of the whole business before long as they were of the march to Berlin after the fight at Reichshofen.

The Sultan has taken a step which is likely greatly to increase the complication of the situation in Egypt. He has sent a Commission of Inquiry to Cairo to investigate the cause of the recent troubles, to negotiate between the Khedive and the European Powers, and to find out why the Khedive has not before now gone himself to Constantinople to pay fealty to his Suzerain. He is said to have taken this step without the knowledge of his Ministers. It is, however, the logical outcome of the relations which are known to have existed between him and the Khedive ever since the deposition of Ismaïl. Tewfik had no sooner taken his father's place than he began to put himself under the Sultan's wing and try to get his advice and approval in the submissions he was making to the Europeans, and thus fortify himself with the Mussulman element among his own people. The Sultan was a little shy of him at first, but now the Pan-Islamic idea appears to have taken thorough hold of him, and he is tickled with the idea of making a public display to the Mussulman world of the pretence that Egypt is still a part of the empire. The British may tolerate the Commission, but the French are less likely to do so. They are already very suspicious of the influence excited on the Porte by England at this moment; and if they become convinced that the Commission is in any sense a British suggestion, or has British countenance or connivance, there will be trouble.

Sir Stafford Northcote has apparently been sufficiently affected by the criticisms called forth by his late concession that fair trade was only a good thing if it was reciprocal, to cause him to modify his position somewhat, or at least appear to do so. He now says that he "does not believe in some of the suggestions put forward by friends of his own side," which of course may mean various things, but will be generally taken to mean that he does not believe in a return to a protective tariff. He also protests against the Liberal "suggestion that the state of agriculture is remediable by a radical change in the land laws," but he admits that they are "susceptible of amendment." This is another of the now numerous signs that the fair-trade cry is losing all the force it ever had. The summary repudiation of it by the Trade-Union Congress, and the apparently firm determination of the farmers not to be diverted by it from the work of land-law reform, has probably by this time satisfied its supporters that it can secure no real hold on the public mind, and that as a "cry" it is worthless. What the Conservatives will do for a substitute it is hard to say. They are now forced to ask for a fair trial of the Irish Land act. They are afraid to come out openly against the English land agitation for fear of losing the counties, which are their chief strongholds, and there is nothing to take hold of in foreign politics.

SUMMARY OF THE WEEK'S NEWS.

DOMESTIC.

ADDITIONAL expressions of sympathy for the late President's family and for the country have been received from foreign governments during the past week. The Emperors of Germany, Brazil, and Japan, and the Kings of Belgium and Norway and Sweden, sent messages of condolence. On Thursday Queen Victoria telegraphed enquiries after the health of the late President's mother as well as that of his wife, and requested Mr. Lowell to obtain for her a good picture of President Garfield. Mrs. Garfield and her family returned to Mentor on Wednesday.

The fund for Mrs. Garfield reached $334,679 66 on Monday. The total amount collected for the Garfield monument at Cleveland so far is $5,137.

Dr. Boynton has denied the report that he intends to attack the treatment of the President's case. Dr. Shrady and Professor Weiss have, at Dr. Bliss's request, made an examination of specimens of the injured viscera, and have sustained Dr. Bliss in his treatment of the case. The official record of the autopsy has appeared in the October number of the *American Journal of the Medical Sciences*. It seems that the internal hemorrhage was caused by a rent in the main trunk of the splenctic—not the mesenteric—artery.

It is reported that an informal understanding was reached by the Republican and Democratic Senators upon the funeral train from Washington in regard to the election of a President of the Senate, and that it was agreed that Senator Anthony or some other Republican chosen by the Republican Senators in caucus should be elected without dissent, while the Democrats should have the right of naming the Secretary of the Senate, whose office is now vacant.

Numerous rumors have been flying about during the week in regard to changes in the Cabinet, but nothing certain is known as yet. Secretary Windom insists that President Arthur shall regard his resignation as *bona fide*, and shall accept it at once. Mr. Windom wishes to ask the Minnesota Legislature, which assembles on the 10th of October, to return him to the Senate, from which he resigned in order to take the Secretaryship of the Treasury.

President Arthur arrived in New York on Thursday night. During his stay in this city he has received numerous calls from prominent politicians. His visit was declared, however, to be solely upon private business.

The election of delegates to the New York State Republican Convention appointed for October 5 has excited great interest in political circles during the week. The result of the election has on the whole been favorable to the "Anti-Conklingites" or "Garfield Republicans," as they now sometimes call themselves. There will be, however, a considerable number of contested seats, owing to the fact that the "Conklingites" have, in many instances, "bolted" when defeated in the local elections. The total number of delegates is 496. The Convention meets in the Academy of Music, in New York city. It is stated upon reliable authority that Mr. Conkling will not be present.

The Democratic State Convention of Pennsylvania met at Williamsport on Wednesday, September 28. Mr. Orange Noble, of Erie, was nominated for State Treasurer. The platform adopted states that the "Democratic party, as of old, favors a constitutional currency of gold and silver in all forms," calls for a "prompt and unfaltering" prosecution of the frauds in the Postal and Treasury departments, for reform in the civil service, and a "return to the Jeffersonian tests for office-holders of honesty, capability, and faithfulness to the Constitution." It also takes strong ground against monopolies, and declares "that no monopoly or exclusive right in the forces of nature, in grants of eminent domain, in the diffusion of information among the people by telegraph and associations for furnishing despatches to the press, or the grant of privileges affecting the daily business of the citizen, can or ought rightfully to exist under our form of government." A resolution was adopted expressing the grief of the Convention, "as the representatives of 400,000 Democratic voters," at the death of the President.

The Republican State Convention of Minnesota met at St. Paul on the same day. General Hubbard, the candidate supported by the repudiating interest, was nominated for Governor on the second ballot. The attendance at the Convention was very large, partly on account of the interest excited by the possibility of its taking some action on the question of the payment of the State bonds. The bond question, however, was not discussed. Charles Vandebury, D. A. Dickenson, and Judge Mitchell were nominated for the Supreme Bench. The present Lieutenant-Governor, Secretary of State, Treasurer, and Auditor were renominated. The platform adopted demands the "maintenance of the broad constitutional distinction" between the rights of the Executive and Senate in the matter of nominations to official positions, a permanent system of examinations for the civil service, a standard metallic currency, and protection by a discriminating tariff.

The Wisconsin Democrats, Maine Greenbackers, and Massachusetts Prohibitionists held conventions on the same day.

The "straight-out" Republican Central Committee of Virginia met at Richmond on Thursday. Resolutions were adopted repudiating the Central Committee chosen by the coalition convention at Lynchburg in August, and recommending the Republicans to nominate candidates for the Legislature in all counties where there is party strength.

The fall campaign in Ohio is reported to be one of the quietest ever known in that State. This is partly ascribed to the long sickness and final death of the President. The County Central Committee and the Campaign Committee of the Lincoln Club, which are the most powerful organizations in the State, have both decided that political meetings of the usual order will be inappropriate to the time. Notwithstanding the apparent listlessness of the campaign during the past week, however, it is expected that the death of the President will bring out a large Republican vote.

Guiteau's case was brought before the Grand Jury on Monday. Only four witnesses were heard. Surgeon-General Barnes testified to the wound, George W. Adams and Officer Kearney to the shooting, and Dr. Lamb in regard to the autopsy. Guiteau will probably be taken into court to plead on Wednesday morning. It is necessary that he should appear in open court, but everything will be conducted as quietly as possible. Guiteau has been displaying the most abject cowardice during the week. He is suspicious of every one, and has several times refused to take quinine prescribed for slight malarial attacks from which he has been suffering. He has given up writing the autobiography which he had planned. His brother-in-law, Mr. George Scoville, has been secured to defend him. It is said that his line of defence will consist mainly in showing that Guiteau comes of a family in which insanity is hereditary.

Proceedings were begun in the Star-route frauds on Friday by the filing of an information against Brady, French, and several clerks and contractors. It is unusual to begin proceedings of this kind by information, but the Grand Jury having been adjourned until October 3, it became necessary to proceed in this manner in order to avoid the operation of the Statute of Limitations. The information states that in October, 1878, Second Assistant Postmaster-General Brady, Chief Clerk John L. French, W. H. Turner, G. L. MacDonough, S. P. Brown, and certain other persons conspired to defraud the United States out of large sums of money "in causing and procuring unnecessary and improper and extravagant additional compensation to be paid by the United States for additional service in carrying the mails." The document further attempts to show the method of proceeding on the part of the alleged conspirators in the particular case of the manipulations of the contract for carrying the mail on the route between Prescott, Arizona, and Santa Fé, New Mexico. It states that a contract was originally made with G. L. McDonough, by which he was to carry the mails over this route for $13,313 per annum; that by various manipulations the contract originally awarded for this amount was increased to $87,862, and that when the contract with McDonough was terminated General Brady made another contract with Walsh to carry the mails over this same route for $18,500; that General Brady again manipulated this contract so that Walsh was made to appear to receive $136,000 per annum, although the original contract was for $18,500. The next step in the case will be the trial before the Supreme Court of the District.

Active preparations are being made for the celebration at Yorktown. In addition to the official delegation representing the French Government, there will be a delegation of about twenty gentlemen bearing some of the best known names in France. Admiral Porter will have charge of the naval forces assembled at Yorktown.

The Committee of Fifteen appointed by Governor Cornell to receive the guests at the Yorktown Centennial met on Wednesday. A series of resolutions were passed offering the courtesies of New York State to the foreign visitors, the President and the Cabinet, the French Legation and the French Consul-General, the presidents of the great commercial bodies of the city and of the chartered institutions of learning, and to numerous other gentlemen. Arrangements were made for the reception of the French guests. Upon their arrival they will be met by the commission appointed by the Governor. They will then proceed, under the escort of the Seventh Regiment, to the Fifth Avenue Hotel, where a reception will be held on the following morning. A ter this they will be taken to West Point on the United States man-of-war *Vandalia*, accompanied by the *Kedrsarge*. Further than this, preparations have not been made. The committee will meet again on Friday.

Messrs. Shipman & Choate, counsel for the alleged bandit Esposito, have submitted a voluminous protest against the action of the United States authorities in surrendering their client to the Italian Government. They request that he be returned to this country so that "the question of his liability to extradition can be fairly and properly determined."

The receipts of the Government for the month of September have been large. It is estimated that they will be found to reach $33,000,000. The reduction in the public debt for the month will probably exceed $13,000,000. The aggregate receipts for the first quarter of the current fiscal year, which closed on Saturday, are over $107,000,000, against $98,000,000 for the corresponding quarter last year.

Captain Winans, of the whaling schooner *R. B. Hendy*, arrived in San Francisco from the Arctic Sea on October 1. He advances the theory, in a letter to the San Francisco *Bulletin*, that the *Jeannette* has sought a northeast passage round North America.

The Executive Committee of the Michigan Fire Relief Commission held a meeting on Saturday afternoon. There was some discussion as to the disposition of the funds. It was finally decided to send enough money to Port Huron to make the amount sent there equal to that sent to Detroit, and to retain the rest for further action of the Committee.

A meeting of the Anti-Monopoly Association was held in Tammany Hall, New York, on Monday evening. An address was read

which denounced monopolies and monopolists. Mr. F. B. Thurber made a speech, in the course of which he quoted poetry to the effect that while his heart beat at all it would always beat "for the under dog in the fight." Mr. John Kelly was chairman of the meeting.

The Co-operative Dress Association which has been started in New York was opened to subscribers on Monday. The capital stock is $250,000. There are 10,000 shares of stock, divided among 7,000 shareholders, and Miss Kate Field is the president of the company. It is expected that competition with the Co-operative Association will bring down prices of goods in other stores.

Mr. Edwin Booth made his first appearance on the stage since his return from England at Booth's Theatre, New York, on Monday evening, in "Richelieu." The Italian tragedian Rossi appeared the same evening at the Globe Theatre, Boston, in "Lear."

The Scotch cutter *Madge* has been very successful in her races during the past week. On Wednesday she gained her second victory, defeating the *Wave*, of the Seawanhaka Club, by twenty-five minutes and thirty-nine seconds. On Thursday she defeated the *Mistral*, of the New York Club.

The team of English professional cricketers under Mr. Shaw, which arrived in this country last week, began a match on Saturday at Nicctown with a team selected from the best players of Philadelphia and the neighborhood. The match was continued on Monday. At the end of the first inning the English team was 151 runs ahead.

On Thursday Judge Westbrook, of the Supreme Court, granted the application of the receivers of the Manhattan Elevated Railroad for authority to borrow money on certificates for the purpose of paying the rentals, dividends, and interest in which the company is in default to the Metropolitan and New York companies. The amount to be borrowed was limited to one million dollars, and Judge Westbrook had it distinctly stated that the Court gave no guarantee that any more than the property actually owned by the Manhattan Railroad was answerable for this amount, and that no pledge was given by the Court that the property of the lessor companies should be held in the possession of the Manhattan Company until the certificates were paid. Mr. Cyrus Field is reported to have said that he considered the certificates almost worthless.

Bishop O'Hara and several of the Catholic clergymen of Scranton, Pennsylvania, and vicinity, preached sermons on Sunday last denouncing the "graveyard insurance men," who have been carrying on such a thriving business in Pennsylvania of late.

In the Malley case the defense have been continuing the attempt to prove an alibi for James Malley. Strong testimony has been adduced to prove that he was at work in the store during the hours of Thursday and Friday when, according to the testimony given for the State, he was elsewhere.

The three men who robbed the Iron Mountain Railroad train on the 22d of September have been captured.

The Chiricahua Apaches have left the San Carlos reservation, stealing cattle and killing citizens as they went. Colonel Sanford pursued them with three companies of cavalry, and overtook them October 2 near Cedar Springs. A fight ensued in which one sergeant was killed and four soldiers wounded. The loss of the Indians was not ascertained, but is believed to have been heavy.

A despatch from Arizona states that the surrendered hostiles of Sanches's and other bands number 60 bucks, 73 squaws, and 76 children. Judge Advocate-General Egbert has gone to San Carlos to ascertain whether the renegades can be tried by military commission.

The Hon. William Walter Phelps, United States Minister to Austria, has asked to be relieved as soon as a successor can reach Vienna.

FOREIGN.

The French are gradually accumulating troops at Tunis for the advance on Kairwan, the Holy City, and the headquarters of the insurgent tribes. General Logerot is to have command of the entire expedition when organized. The advance of General Corréard, with a smaller detachment, who has not got beyond Zaghouan, appears to have been attended with great difficulty, and frequent encounters with guerrilla parties. There is said to be much sickness among the troops. As correspondents are rigidly excluded from witnessing the operations, the news is scanty and comes mainly through official channels. The prevailing impression in Paris seems to be that the affair is becoming very serious. Bou-Amema, the Algerian insurgent chief, is said to have established communications with the Tunisians. The assistance rendered by the Bey's troops is small. They are greatly disturbed by the French. The Bey himself is said to be desirous of abdicating.

M. Roustan, French Minister to Tunis, has instituted a criminal prosecution against M. Henri Rochefort for his statement that M. Gambetta and M. Roustan arranged the Tunisian expedition for stock-jobbing purposes. M. Roustan has returned to Tunis from Paris. He is invested with full power to settle every question that may arise.

The convocation of the French Legislature has been fixed for October 28. The ministers will soon tender their resignations in order to leave M. Grévy full freedom of action; but it is stated that he will refuse to accept them, deeming it the proper course to wait and see whether the present cabinet will have the confidence of the new Chamber.

It is said that, upon the overthrow of Premier Ferry, President Grévy will send for M. Gambetta and give him the fullest latitude in choosing a Cabinet.

It is semi-officially stated that Sir Charles Dilke, Under Foreign Secretary of Great Britain, has declared privately that the negotiations for the Anglo-French commercial treaty are making fair progress. The London *Times*, however, states that unless the French negotiators relinquish the condition of the complete substitution of specific for *ad valorem* duties, upon which they have been insisting, it is difficult to see how any agreement can be arrived at. A Paris despatch to the London *Times* says that there is a feeling in Paris that the English commissioners have been acting as if it were for their interest to wait for the opening of the Chambers, relying on the expectation that there will be a stronger free-trade policy in the new than in the old Chamber, but that it may be safely affirmed that the new Chamber will be quite as protectionist as the old. Englishmen look to Gambetta to settle the matter.

The Scottish Chamber of Agriculture has prepared a Scottish Land Bill, which the London *Times* calls one of the "most far-reaching measures on the land question ever yet submitted to Parliament." It provides for an adjustment of rents by arbitration, a revaluation of farms, and for power in the tenant to sell his holding. It makes strict provision relative to compensation for improvements.

The Farmers' Alliance have drafted a Land Bill for England. The bill aims to establish security for the capital of the farmer, and to secure protection from capricious eviction; also to secure the right of the tenant to sell his improvements in open market, with the provision that the landlord must accept as a tenant for seven years, and at the same rent as that of the outgoing tenant, the person who purchases them. It calls for the creation of a land court in every district, for the settlement of disputes concerning rents and all other disputes.

Mr. Parnell had a public reception in Cork on Sunday. Triumphal arches were erected in some of the streets. There was a procession nearly two miles long.

Mr. Parnell has advised tenants not to go into the Land Court unless the Executive of the League selected their cases as test cases. The Land League has decided to appoint two tenants in each neighborhood to assess "fair rents," with a strict regard to leaving the tenants means for an improved mode of living. The amount thus fixed is to be registered by the local branch of the League, and no greater rent is to be paid.

Father Sheehy and four other prisoners have been released from prison. In a speech at Kilmalloch Father Sheehy said that he came out of prison with the same spirit with which he had entered it.

Fresh outrages have been committed by the Land League. On Thursday an attempt was made to blow up the residence of Captain Thomas Lloyd at Pallas Grean, County Limerick. The building was occupied at the time by Captain Lloyd, seventeen emergency men, and police. The building was shattered, but no one was hurt.

A meeting was held near Baltinglass, County Wicklow, for the purpose of establishing an organization for the protection of farmers and others who have incurred the displeasure of the Land League. It was resolved to establish an association to protect boycotted persons. The organization will pay special attention to Catholic farmers who are desirous of resisting the dictation of the League.

Lord O'Hagan, Lord Chancellor of Ireland, delivered the opening address at the Social Science Congress. He spoke hopefully of the proposed revival of Irish manufactures.

The official machinery of the Land Commission has been completed by the appointment of the following Assistant Commissioners: Professor Baldwin, the well-known authority on land; Colonel Bayley, who has an extensive acquaintance with farming; Messrs. Garland, Haughton, O'Keefe, O'Shaugnessy and Ross, who are practical farmers, and Mr. Rice, who was Assistant Commissioner, representing the tenant-farmers' interest, on the Richmond Commission.

In a speech at Hull on Monday, Sir Stafford Northcote said that he considered the condition of affairs as regards the Boer convention and the Anglo-French commercial treaty very unsatisfactory.

The commission appointed to inquire into the transport and commissariat operations during the Afghan campaign has discovered a vast system of bribery and corruption, and several influential native bankers have been arrested in India.

Foxhall won the Grand Duke Michael Stakes at the Newmarket October Handicap meeting on Thursday.

The meeting of the Czar and the Emperor of Austria will take place at Warsaw next week. General Ignatieff will accompany the Czar.

There was a great fire in Moscow on the 28th. Twenty warehouses were destroyed, and the damage is estimated at $2,000,000.

The most important Chambers of Commerce in the various states of Germany have published reports for 1880. A great majority of the chambers, whether inclining to free trade or protection, reject Bismarck's new protectionist customs policy.

The subterranean telegraph system connecting 221 towns and cities of Germany has been completed. The total length of buried cables is 3,417 miles.

Herr Krupp, of Essen, has accepted a contract for the exportation of 25,000 tons of steel rails to the United States.

The state of the crops in Canada is said to be very satisfactory this year. The Grand Trunk authorities have issued their annual report of the condition of the crops along their lines. According to their report the wheat, oats, and barley exceed a fair average crop.

TUESDAY, October 4, 1881.

A NOVEL EXTRADITION PROCEEDING.

THE counsel for Esposito have submitted to the State Department and the President a statement of the facts connected with his extradition, which throws new light on the very extraordinary manner in which the proceedings were conducted. They insist that the Italian Government ought to be made to surrender the man for a re-examination of his case.

The chief irregularities complained of are, first, that the man was kidnapped, and not arrested, in New Orleans. In support of this charge they produce a copy of the original warrant issued on June 17, 1881, which ran in these words: "To any marshal of the United States, to the deputies of any such marshal, or any or either of them, to any sheriff, constable or other officer in any State, District, or Territory within the jurisdiction of the United States, *to James Mooney.*" James Mooney is not an officer of the United States, but a private professional detective carrying on business in this city. Under this warrant the prisoner was seized in New Orleans by him and brought to New York in irons. Messrs. Shipman and Choate, with commendable self-restraint, confine themselves to saying that such an arrest is illegal, only responsible officers having authority under our laws to make arrests. Marshals are required to give bonds for the very reason that persons who are wrongfully arrested by them may have indemnity for their illegal acts. James Mooney gives no bond, and no one can have any redress against him. Of course if James Mooney can arrest one person he can another, and the practice would be so frequently convenient for the marshal, and always so profitable to Mooney, that we may be sure it would grow in favor if warrants of this sort were upheld. When the charge of kidnapping was first made in the press, it was indignantly replied that the prisoner had been regularly arrested under a warrant. We now see what this meant, but the curious fact remains behind that as soon as he was brought to New York, the persons in charge of the proceeding immediately got out another warrant, addressed to the Marshal of the Southern District of New York and his deputies (and not to James Mooney) commanding them to arrest the accused. Why was this necessary if he was already in lawful custody?

The next feature of the case which merits attention is the transportation of the prisoner to New York. It is said that this was done because any United States Commissioner has power to issue warrants in extradition cases running all over the country. Assuming this to be the case, such extraordinary powers ought to be exercised with caution and a due regard for the rights of the person whose surrender is demanded. To drag a man from his home to a city fourteen hundred miles away, where he is absolutely unknown, and where, if he is poor, he can have no means of communicating with his friends and family or procuring any evidence in his behalf, when there was precisely the same machinery for the proper investigation of the case at the place where he was living, may not be illegal, but it is a gross abuse of law. The only explanation of this ever offered has been that the prisoner had a powerful "gang" behind him in New Orleans, who would certainly have rescued him if any attempt had been made to extradite him there. Considering that the United States can always bring in the aid of the land and naval forces to preserve the peace in such cases, it is a little too much to ask any one to believe that Commissioner Osborn was affected by such an argument as this.

As soon as the case came up, it appeared that the main question was the identity of the prisoner. The evidence was conflicting, but the Commissioner decided that there was sufficient testimony that the prisoner was the brigand Randazzo, to authorize his surrender. We do not propose to criticise in any way this conclusion of the Commissioner, but in view of the subsequent proceedings it is important to notice that his decision was final unless it should be reviewed at Washington. Most people have a vague idea that the proper way to redress any injustice done by a Commissioner in such cases is by *habeas corpus*, and that his acts can always be reviewed by the Circuit Court. But the fact is that recent decisions of the Circuit Court make an appeal from the Commissioner on any question of fact or discretion impossible, and remit the prisoner for redress to the Executive. In one case it was contended on behalf of the prisoners that the evidence did not show that any act had been committed which amounted to a crime within the treaty. The court said:

"Of the effect of this evidence it was the judicial duty of the Commissioner to judge, and neither the duty nor the power to review his action thereon has been conferred upon any other judicial officer. If he deems it sufficient, the statute prescribes his further action in the premises. It then rests with the Executive authority to determine, in the last resort, what is demanded by justice and the obligations of the treaty. If it appears to the President, upon a review of all the evidence, that the charge is not sustained, and that justice and the obligation of the treaty do not require the surrender of the prisoners, he can refuse it and set them at liberty."

These decisions left the prisoner without any means of saving himself, after the decision of the Commissioner, from transportation to Italy but an appeal to Washington. This appeal would have been nominally to the Secretary of State, but really to the President himself. Due notice of it was given in open court. Everybody in the case from the Commissioner down was informed of it. In such cases it has been usual, as indeed it is obviously necessary, that written or printed briefs should be submitted, and a good deal of time occupied in argument. The case was decided on September 14th. On the 19th of last month, when the papers reached Washington, the President, to whom alone the appeal lay, was dying at Long Branch. The Secretary of State was absent. The First Assistant Secretary was also away. On this day a warrant of surrender, signed "W. Hunter, Acting Secretary of State," was obtained by some one acting on behalf of the Italian Government, no notice whatever having been given to the prisoner or his counsel. On this warrant, the existence of which the legal representatives of the Italian Government are stated to have specially requested the marshal in this city to keep secret, the prisoner was quietly shipped on Wednesday, the 21st, on board a steamer which sailed for Rotterdam on the same day

Considering that his final surrender must have been effected by concealing from the authorities at Washington the fact of an appeal having been taken, this last step was, like the first, a simple case of kidnapping. Of course it is again justified by the fear of a "rescue," though the prisoner was brought to New York for the express reason that a rescue of him here was not feared.

The facts we have given above do not seem to be disputed. Comment upon them is superfluous.

GOLD IN AMERICA AND EUROPE.

ALTHOUGH the rate of discount of the Bank of England remains at four per cent., the general anxiety which has for some time past prevailed in European money markets in anticipation of the American demand for gold has given place to a feeling of ease, and it is believed that future demands will be comparatively light and easily met without creating any stringency in the markets. There have been few occurrences of a financial nature in the past three years which present more interesting questions to the economist than this "drain of gold" from Europe to America, and much speculation has been made on the probable results. The resumption of specie payments in this country, and the vast refunding operations of the Government, both accomplished with no disturbance of the money market, may rival it in magnitude, but their results are not so far-reaching in their influence nor of such an uncertain nature. The elements of the problem are simple. A general failure of crops forced Europe to obtain her supplies from America, where the harvest was abnormally large. A large balance in favor of America was thus created, and the difficulty of settling this balance was increased by the tariff system, which prevented payment in merchandise, as the larger part of the balance would have been liquidated had trade been left to its natural course. Hence the necessity of an export of gold or of securities to pay the debt. Other disturbing influences this year were the loan placed on the market by Italy, which called for gold, and the action of the Bank of France in taking measures for protecting its reserves from any demand on the part of Italy and of the United States, and thus striving to throw the whole demand on the Bank of England. A monetary crisis was deemed imminent, but is not now probable. To these special and temporary causes of the export of gold from Europe must be added a general cause that will probably draw gold to this country for some time to come, though not in large amounts, but in a steady and continuous stream—viz., the natural demand on the part of the United States for an increased stock of bullion.

The United States for many years suffered from an inconvertible paper currency, which caused the larger portion of the gold in the country to be exported, and what little remained to become an object of speculation. There could be no stability of values under such a system. But in 1879 a return to specie payments rendered necessary, or at least safe, a larger reserve of the metals; and in July of that year the importation of gold began. This nation increasing in riches and population more

rapidly than any other nation on the globe, and requires for its extending manufactures and growing exchanges also an increase in the circulating medium. It is true that the economy in the use of the precious metals in this country is very great. The statistics collected by the Comptroller of the Currency show that in the city of New York but a little more than one-fourth of one per cent. of the financial transactions are settled in coin; checks, bank bills, and drafts serve for the balance. In other parts of the country the use of coin is larger, varying from three to nine per cent. in the larger cities, and a still higher average, probably, holds in the rural districts. The growing demand for an increased circulating medium comes from the interior, which is fast being settled, and the demand is stimulated at this season of the year by the need of money to move the crops. As the currency flows from the city to the interior the bank reserves are kept up by the imports of gold from Europe. But, as we have said, there are indications that the heaviest shipments are past.

It has been estimated—with how much truth can hardly be said, for the amount of gold used as currency and in manufactures is always more or less a matter of conjecture—that America already absorbs the total annual product of gold throughout the world (estimated by the London *Economist* in 1871 to be about £20,000,000), and that not only is none left for Europe, but the demand encroaches upon the existing stock of metal in Europe. This may be an exaggerated view of the condition of affairs, but it forcibly illustrates the anxiety which this drain is producing. The capacity of the banks of Europe to supply this extra demand is the real matter in doubt. A reasonable reserve of gold must be retained at all hazards, and the object of the recent sharp advance in the bank rates in the leading financial centres of Europe was to protect the reserves. Doubtless a large amount of gold can yet be exported without creating the threatened "gold famine," but any continuance of this exportation will render necessary a greater economy in the use of the metal. A few statements will serve to illustrate our meaning.

In the business centres of England the proportion of gold used in settlements is probably even less than what Mr. Knox thinks to be the proportion in this country; for England has long enjoyed a wide-spread banking system and a stable currency. The general banking system of England exhibits one peculiarity: the Bank of England serves as a reserve for all the other banks in the kingdom, and it is upon the treasure in the vaults of the Bank of England that all the demands for export operate. It is necessary, therefore, to keep an adequate reserve of gold to meet any unusual demand that may occur. Mr. Tooke used to say that the reserve should never fall below ten million pounds; but Mr. Ricardo argued that by the adoption of his system of regulating the currency a reserve of only three millions in gold would be required to float twenty-four millions of paper. Even if this computation errs in giving too small a reserve, and making allowance for the great increase in the amount of exchanges since that estimate was made, it at least shows that some further economy in the use of the metals could be devised. In such an event the same method could doubtless be applied in this country, which would set free in this market a further quantity of gold with which to meet the demands of the interior.

In France there is room for much improvement in the banking and credit systems. The population of France is one-third less than that of the United States, yet it is believed that there is twice as much gold in the former country as in the latter, though, as we have said, such statements must be received with caution. But other facts show that there is more gold in France than would be needed under a highly developed credit system. The banking system has long been in a rudimentary state, and the savings of the people (and what French peasant does not save?) used to be hid in old stockings and pots. Among the lower classes the practice of hoarding was general, and among the rich many would find it impossible to make even large payments otherwise than in coin or bank bills. The French peasants and middle classes have of late been beginning to learn how to invest their savings, but the amounts hoarded are undoubtedly still very large. An increased demand for gold would draw out these hoards, and thus a further supply of gold sufficient to meet the demand would be thrown upon the market. An extension of a stable banking system would produce the same effect; for the custom of employing bank checks is not general, and a stamp tax, light as it is, prevents the general use of this substitute for coin.

In Sweden, it is said, the banking system is nearly as good as in England, and the use of gold consequently as small. Italy, Austria, and Russia can spare no gold, and in the case of Germany we have no statistics by which we can judge of the extent to which her reserves can be drawn upon, but it cannot be very great. From France alone, then, can any great supply of gold be expected without a monetary crisis or a change in the monetary system.

Not the least curious phase of this exportation of gold is the great difference of opinion as to its results exhibited by those who are most competent to judge of the matter. An example of this is seen in the recent utterances of two well-known European economists. M. Laveleye, who is a bimetallist, writing in the *Nineteenth Century* for September on the future of gold, says:

"Even supposing that the absorption of gold by America will suddenly stop, it is beyond all doubt that if silver remains proscribed there will not be gold enough for the monetary and industrial uses of Europe. Already, at the very moment these lines are written, the gold scarcity begins to be seriously felt on the money market. What the late Mr. Bagehot used to call the 'apprehension point' is very near. Soon the sentiment of living under the perpetual fear of lacking the breathing-air of commerce—*i. e.*, of the means of exchange—will become intolerable, long before the exhaustion of the gold washings predicted by Dr. Suess will be realized."

We have already suggested the reply to such an argument. On the other hand, the able editor of the *Économiste Français* writes in the last issue:

"In truth, what disturbs us is not the decreasing supply of gold in France, but the abundance of silver. We could wish that for every milliard of gold parted with there also went out with it one and one-half milliard of silver. The evil which we suffer in France is not an absence of gold, but an encumbrance of silver. There is great risk that owing to the many faults of our Government we shall have a silver standard only. The maintenance of the present monetary situation is becoming more and more difficult, and it is necessary to take steps to demonetize silver."

If by any turn of affairs there should be a necessity of exporting gold from America to Europe, we should be in very much the same position in which France now is—rapidly drifting to a silver standard.

LORD DERBY ON IRISH AFFAIRS.

Lord Derby, who now deservedly enjoys the reputation of being *par excellence* the sensible man of British politics, has written an article in the *Nineteenth Century* on Irish affairs, in which he confirms the view which we ventured to propound in these columns some weeks ago, that the Irish discontent was not likely to be appeased by the Land Act, but that, on the contrary, it was likely, in consequence of the Land Act, to be more formidable than ever. The reasons we gave for this opinion were almost identical with those he gives. The passage of the Land Act, unfortunately, took place under the pressure of Irish turbulence, and it is not, therefore, unnatural for the Land Leaguers to conclude that more turbulence will produce more concession; therefore more turbulence there will probably be. Secondly, the Land Act has given the tenants a greater sense of power than they have ever had, and in this way has widened in their eyes the range of their political possibilities. It has, in fact, made that which the vast majority of them eagerly desire—legislative independence—seem to them now far more nearly within their reach than it has ever seemed before. Lord Derby thinks, therefore, that the struggle for this will now be continued with more vigor than ever.

The telegraphic summary of his article, which is all that we have seen, does not give his remedy. He apparently looks forward to a prolonged and obstinate attack on the Union by the Irish people, and an equally prolonged and obstinate defence by the English people. What he thinks the issue is likely to be, we do not know. But it is to our mind certain that if there be any way of meeting this attack successfully—that is, of bringing it to a favorable termination without a dissolution of the Union—there is but one. If there be any concession to Irish national longings or prejudices, short of a dissolution of the Union, which Englishmen are willing to make for the sake of peace and good will, it ought to be made promptly. It ought to be made before it takes that form of inevitableness which every man in England saw the Land Bill had taken before the close of the last session of Parliament, and which unhappily prevented its passage having the air of conciliation. That there is such a concession—that English Liberals at all events are prepared to let Irishmen manage their own affairs to the extent to which Scotchmen are allowed to manage theirs—Mr. Gladstone admitted in the recent debates, but he unfortunately spoke of it only as a concession which might be made at some remote and indeterminate period. But to make it of any real value it ought to be made at once. If made now it would probably take the wind out of the sails of the new agitation

which Lord Derby says is springing up, and might end precipitately the struggle which he says is only just beginning.

Unhappily there is no sign of it. The management of Irish affairs at this moment, in so far as they are in the hands of the Executive, seems to be left entirely to Mr. Forster and his English advisers at "the Castle." There is no sign that any opinion which the bulk of the people recognize as Irish opinion has the smallest weight with him, or is even considered by him. The continuance of the Coercion Act is condemned severely at this moment by everything which can be called Irish opinion, as well as by some of the best English opinion. But by this Mr. Forster is not affected in the least. He gives no sign that the Ministry are dreaming of such a thing as allowing Irish representatives to say what sort of treatment Irish discontent requires. He is nevertheless a good man, and a well-meaning man, and he is governing Ireland through a body in which she is represented. Therefore his position is technically unassailable. But the mistake Englishmen have been making about the government of Ireland, ever since the Union, lies in supposing that in politics it is enough to have the law on your side. Mr. Forster is technically the countryman and fellow-subject of the Irish; in reality he is to the bulk of the Irish people as much a foreigner as President Grévy, and far more a foreigner than President Arthur. The majority in the House of Commons which armed him with the power he exercises was essentially a foreign majority. It may have been a wise and benevolent and upright majority. But in our day it is not enough that the majority be wise and upright and benevolent to secure cheerful obedience to its enactments. It must be a majority composed of men whom those who are to obey feel to be their countrymen, and though perhaps belonging to an opposing camp in politics, to be animated at bottom by the same hopes and fears and sympathies and ideals. Greater contempt for Irish feeling in this matter could hardly have been shown than Lord Beaconsfield showed in giving the Irish Secretaryship first to Sir Michael Hicks Beach and then to Mr. James Lowther. These were appointments which would, *mutatis mutandis*, have exasperated to the last point any disturbed community, even a community tenfold more reasonable than the Irish community is. There is no race of men in the world who would submit to Mr. James Lowther's or even Mr. Forster's rule in the shape in which it comes, without bitterness and fierceness. The mistake Mr. Gladstone is making is in not putting an end to it at once, and giving all the chief Irish offices to Irishmen while this compromise is still open, and in not checking the tone of insolent power with which some of his followers, notably Sir William Harcourt, treat Irish malcontents. It is not yet too late to correct it; but in two or three years it probably will be.

THE LAND AGITATION IN ENGLAND.

THE appearance in a very pronounced form of the agitation for reform in the land tenures in both England and Scotland is one more sign that the "Fair-Trade" device has failed. The discussion of the subject which the Tories very unwisely stimulated brought out very clearly the fact that English manufactures were not really suffering in any unusual degree from foreign competition, or in any degree from any cause except the crop failures of the last five years, involving, according to Mr. Bright's estimate, a loss to the nation of $1,000,000,000. The statistics of all kinds are conclusive as to the generally healthy condition of British industry. They show increased consumption by the working classes, increased deposits in the savings banks, and a marked decline in the number of paupers. They show nothing unfavorable, in fact, except a cessation of the extraordinary rapidity of progress exhibited during the ten years following the crisis of 1866. In truth, on reading the figures illustrating the industrial condition of the country which Lord Derby poured on the heads of Fair Traders in his speech a fortnight ago, any one who knew nothing of their antecedents or of the secret plans of their leaders would be at a loss to account for their beginning it at all. The outbreak of the land agitation both in England and Scotland, explains, however, clearly enough why they began it. They began it to turn away attention from the true means of relieving the only branch of British industry which is really in distress, and which legislation can really help —the agricultural industry.

It is acknowledged now that this cannot recover under its present organization. It does not help the landlords to say that the trouble is all due to five bad years in succession, and is therefore temporary. All the landlord's calculations of what the British farmer can stand in the way of charges without succumbing to American competition, are based on the assumption that the five bad years which have just elapsed will not recur. But the mere fact that five bad years have followed each other in succession would satisfy every farmer that they might be looked for again, and that the possibility of them must be taken into his calculations, even if farming had not always been a business in which an occasional bad year was a certainty. The most hopeful farmer hitherto has only expected to make money "one year with another"—never many years in succession. Five bad years in succession combined with American competition have of course greatly changed the farming outlook to all the class who have hitherto been in the habit of investing capital in agriculture. Even if they were ready to face the apparently increasing uncertainty of the weather and the uncertainty of foreign competition, they could not face at the same time the old and long-standing uncertainty about the rent. There are but few leases in England. The amount of rent is mostly an affair of reasonableness and "good feeling" between the landlord and tenant. This basis for business might do where the margin for profit was large, but will not do here, where the farmer has to figure more closely than ever and be very sure of his figures in order to escape ruin.

Most landlords have raised their style of living and the charges on their property and their estimate of its value during the past twenty fat years. They are naturally reluctant to come down to what we call here "lower values." To do so would to many of them mean confession that they were ruined. They therefore struggle hard to cherish and diffuse the belief that the present agricultural distress is but transitory; that the cause is to be found in the tariff, or something else far away from the land; that the remedy is "Fair Trade," or some other nostrum.

This, however, naturally alarms the farmers, and prevents the numerous temporary reductions of rent and remissions of arrears which have been made from having the desired effect. They say to themselves that as long as landlords hold these views about the cause of the trouble, they are sure to return to the old rates as soon as there is another good harvest, and farming is therefore not a safe business. They ask themselves, naturally enough, why, when the Irish farmer is furnished by law with absolute certainty as to his principal item of expenditure, for fifteen years at a time, and is at all times protected against the operation of the landlord's necessities or caprices, the Englishman should be left to take his chance of both? In Scotland there is a custom of nineteen-year leases, but even there the notion has got into the tenant's head that the close of the lease does not put an end to his claim on the farm; that the landlord has no right to put up his home to the highest bidder, and thus get the benefit of improvements which, even if they are exhausted in a commercial sense, undoubtedly heighten the attractiveness of the place to the stranger.

In fact, it would appear from what is now passing both in England and Scotland that the idea which has been recognized in the Irish Land Act, that the landlord is only part owner, is not an exclusively Irish idea, after all. The Saxon mind moves more slowly than the Irish mind, but it seems to take kindly to this survival, as it has been called, of the tribal state. It is apparently prepared to take that step backwards and towards a ruder economical stage, which the English economists, like Lord Sherbrooke, the Duke of Argyll, and Mr. Bonamy Price, distinctly detect in the Irish Land Act. Of course, it would not take it so readily if the times were good. It was the terrible suffering of the working classes during the periods of dear food which recurred so often under the high tariff, that committed England irrevocably to what was then the strangest and queerest economical policy in the world, the policy of free trade. It is the inability of the land to maintain three classes in interest which will probably soon bring about a recognition of the idea of state property in land, which has perhaps had less foothold in England than in any other country. When Mr. Mill, many years ago, suggested that what he called the "unearned increment" in the land—that is, the rise in value caused by the growth of population, the neighborhood of great towns, and the construction of railroads—properly belonged not to the owners of the fee, but to the public, he was treated almost as an amiable lunatic. We do not say that since then the notion that the state has a right to share in the profits of land has in its naked form made much

progress; but the notion that the state possesses vast and widespread powers of interference with the ownership of land, that the land is the dwelling place of the nation, and not a collection of estates simply, has made very great progress since Mr. Mill's day. We shall probably now see its results multiply every year in legislation. The legislation will be in the direction of what may be called quieting the cultivator, that is, making his mind easy about his future and giving certainty to his calculations in making his investments

The English Farmers' Alliance has followed the example of the Scotchmen in drafting a bill as the basis of their agitation, and the main feature of the measure in both cases is the transfer to a court of the power of fixing the rent. As the rent will depend on the market and not, as hitherto, on the landlord's estimate of what the tenant would bear sooner than surrender his home, of course this transfer would involve a social revolution of considerable magnitude. That all its consequences will be pleasant or valuable no one can expect; but it will raise a very large class immensely in self-respect, in enterprise, and in political independence.

LIEUTENANT FLIPPER'S DEFENCE.

A CORRESPONDENT writes to us :

"In your yesterday's paper there is an article on Flipper, in which West Point comes in for its usual share of abuse, based on the assertion that Colonel Shafter is a West Pointer. The writer of that article will no doubt be surprised when he consults his Army Register and finds that Colonel Shafter is not a graduate of West Point. He won great distinction in the late war, being brevetted several times for gallant conduct, and at the close of the war was appointed in the regular army.

"The writer of that article will be further surprised that twenty officers in Lieutenant Flipper's regiment are civilians, while in Colonel Shafter's regiment some twenty-three of the officers came from civil life.

"I do not think that the reputation of a brave, gallant, and efficient officer should be thus assailed on the improbable statement of Lieutenant Flipper, even if he is colored."

This affair was funny in the beginning and grows funnier every day. When Flipper was first accused we thought, in view of Whittaker's remarkable defence, that it would be a good joke to predict that Flipper would appear also as a race martyr, and set up a similar defence. We accordingly did so, and sketched out the defence for him. Only one thing was needed to make the joke complete, and that was that the prediction should be fulfilled. Sure enough it was. As soon as he could be heard from, Flipper was found proclaiming himself the victim of an elaborate white conspiracy, and his colored friends, as before, put West Point and his commanding officer "on trial." This was very amusing, as it seemed to us, and we reported his account of his pleas for the further entertainment of our readers. But here our arrangements began to break down, for the joke did not take. We got letters from some subscribers complaining of our brutal treatment of Flipper, and from others complaining of our scurrilous attack on Colonel Shafter, and also requests that we would decide wagers on the question whether we were joking or in earnest. Some took our report of Flipper's statement of his case as an expression of our own opinion of it, and others as a base attempt to discredit the story of a friendless and sorely-tried colored victim of white arrogance. The following is really the only letter we have received from those who have appreciated our exertions in the cause of innocent mirth :

"The delightful irony that points your review of the Flipper case will be probably best appreciated by those who have known Colonel Shafter's high character and some of the facts of his life.

"You err in assuming him to be a graduate of West Point. He is a graduate, and one of the very best, of the volunteer army; and what is specially significant, in view of his relations with Flipper, is the fact that he was one of the first, and was recognized in the army as one of the most successful, commanders of colored troops during the civil war. J. A. B. W."

In view of all this we suppose we must admit that the joke has proved a failure. There is clearly less demand for irony, even in the crude or pig state, than we thought there was. But we console ourselves with the reflection that the prediction has been an immense success. We cannot recall any newspaper exploit of recent times which can compare with it. The defence we sketched out for Flipper was far-fetched and intricate, and its adoption, to the careless observer, seemed highly improbable. We were more than two thousand miles distant from him, and knew nothing of his mental habits. Nevertheless, he has followed its leading lines very closely. Our suggestion that they made him Commissary of Subsistence out of far-reaching malice, with the view of basing a charge of embezzlement on his want of skill in accounts, we considered the least valuable of all our imaginings, and yet this too turned out a masterpiece, for he took it as it stood. Our satisfaction and pride were complete when the colored organ, the *Globe*, put Colonel Shafter and the Military Academy "on trial" for accusing Flipper, and when Flipper became in the twinkling of an eye a kind of prosecuting judge advocate. There is nobody, however devoid of humor, but must enjoy this, because even those who do not understand joking like to see a prediction come true, or a guess turning out correct, or the solution of a conundrum, or in fact any successful dealing of the human mind with the unknown or apparently inscrutable.

THREE BRITISH CONGRESSES.

LONDON, September 20, 1881.

WE are now in the midst of the various congresses and meetings of societies which take place in the autumn and occupy men's minds after the cessation of political strife at Westminster. The congress season, if I may so term it, has been an unusually brilliant one this year. It started last month with the International Medical Congress, which was remarkable both from the excellence of the papers read and the importance of the subjects with which they dealt, and also from the number of eminent men of all nations who had the opportunity of meeting together face to face. Since then the British Association for the Advancement of Science has held its Jubilee meeting at York, and has brought prominently before the world the great strides made by science during the last fifty years, and filled it with hopes of what may be done in the future. In London three congresses have been going on and attracting more or less of attention : the Trades-Union Congress, which has just brought its sittings to a close ; the Conference of Librarians ; and, last but not least, the Œcumenical Conference of Methodists. All these meetings serve to bring into prominence the great number and variety of the interests which constitute our modern civilization, and enable one to take stock of the forces which go to form the sum total which we call public opinion.

Without doubt the congress which has attracted most attention is that of the British Association at York. The interest taken in it cannot be measured solely by the number of those present, though this was considerable—amounting to 2,556, a number which has only been exceeded on seven previous occasions ; it must be tested also by the amount of comment and discussion in the press to which the reports of the proceedings of the Congress gave rise. The more intelligent part of the public is thoroughly familiar with the idea of the triumphs which have been achieved by the scientific method; and an occasion such as this, when the Association was celebrating its fiftieth anniversary, was well calculated to draw out the full measure of interest. The proceedings were worthy of the occasion. The address of the President, Sir John Lubbock, is universally admitted to have been a most able review of the principal achievements of science during the last fifty years, and the papers and reports in the different sections, amounting to nearly three hundred and fifty in all, were many of them of great value. To attempt to generalize in any way on the results of the meeting would be obviously impossible, and your readers will doubtless refer to the special organs of science for full reports of the discussions. There is some talk of transferring the scene of one at least of the future meetings to the New World, and Canada has been suggested as the place of meeting for 1885.

For other reasons than those which have given such interest to the meeting of the British Association, the Trades-Union Congress has attracted a large amount of attention. Your readers will bear in mind that with us the present extended suffrage is of comparatively recent date, going back only fourteen years, and that it was not carried into law without gloomy predictions not only from professional Conservative politicians, but also from independent thinkers, as to the use which the most numerous class of the community might make of it. Later on, in 1875, when trades-unions were granted their legal status, expression was given to the same feelings of alarm, and we heard a great deal of the dangers which would befall us when the working classes got to know their power and combined against the rest of the community. To such fears the Congress which has just brought its sittings to a close supplies the best antidote ; not that the alarmist will not find a programme which is extremely distasteful to him, but that, if he be fair-minded, he will recognize that it is put forward by men who, so far from constituting a class apart, form an integral portion of the community, share its feelings and common interests, and have the same differences of opinion among themselves as any other class. If he has heard much of the Socialists of the Continent, or of the doctrines of the "Internationale," and expects to find furious denunciations of religion, marriage, and private property, he will be agreeably surprised. The programme contains nothing so exciting. The Congress is, in the first place, a business meeting, where the special trade interests of the workmen are treated in a practical and sensible manner ; then it is a meeting for the discussion of measures of a more or less political character, which are calculated to benefit the working classes, and which the Legislature is to be prevailed upon to pass ; and throughout its proceedings there reigned a spirit which is absolutely the reverse of anything that can be called revolutionary.

The Congress met on the 12th, and was attended by one hundred and twenty-nine delegates of trades-unions and trade councils, representing one hundred and two distinct trade organizations, which have an aggregate of over four hundred and seventeen thousand members. Among the delegates were several women, who represented trades in which women were em-

ployed, and, as the sequel showed, took an active part in the discussions. The proceedings were opened by an address by the chairman of the Parliamentary Committee, which was an admirable example of the temper I have indicated; and then, after the election of officers, followed a resolution, unanimously agreed to, expressive of the horror felt by the trade societies at the attempted assassination of the President of the United States, and of sympathy with the American people under the calamity thus brought upon them. To dwell upon the details of the discussion which ensued would hardly be worth while. A great variety of matters was brought before the meeting. Some of these were specially trade questions, such as the working of the Employers' Liability Act of last year, the appointment of workingmen—and working-women too, as carried by an amendment—as inspectors of factories and workshops, under the Factory and Workshops Consolidation Act, and the establishment of co-operative societies for purposes of production, which was commended to the notice of the branches. Others were questions of a general kind, such as imprisonment for debt, the codification of the law, the land laws, and the assimilation of the borough and county franchise, all of which might have stood for debate at any Radical club. One of the discussions which arose was so signal an instance of the temper in which the delegates treated political questions that it is worth while to dwell upon it for a moment. Your readers are aware that one of the most peculiar of English institutions is the existence of an unpaid magistracy, sitting in petty sessions throughout the country districts. In each county men of position and standing are put upon the bench, and attendance at sessions forms part of the ordinary life of most country gentlemen. The system is obviously open to criticism on many grounds, and the main charge made against it at the Congress was that magistrates were appointed who had received no special training for the work, and that in certain cases, such as offences under the game laws, their sympathies as landowners biassed their decisions. Here was a case in which it might have been expected that all the speeches would have been on one side, and that the leaning to a paid magistracy would have been unanimous. Yet it was not so. One member pointed out that in the towns, where there was always a stipendiary, the system was not more satisfactory, and another called attention to the small number of appeals from the decisions of the unpaid magistracy. A mixed bench was advocated, in which the trained skill of the lawyer and the common sense of the plain man might both find a place; and though ultimately a somewhat vague resolution expressing dissatisfaction with the present system was carried, it was not till after both sides of the question had been before the meeting.

But by far the most important act of the Congress, as far as the public are concerned, has been its emphatic repudiation of the Fair-Trade movement. The president gave the key-note in his address by the remark, which was received with loud applause, that they "were not willing to tolerate any reversion to the old nonsense of protection." Later on, a curious incident took place. In order to ensure that the delegates who attend are duly accredited by the bodies which they profess to represent, a resolution was passed at the second meeting to the effect that no one should be eligible as a delegate whose expenses were paid by private individuals or institutions not *bona-fide* trades-societies or trade councils. Under this resolution five delegates were found to be present without proper credentials, and were accordingly expelled from the Congress. These men were known to be advocates of the Fair-Trade theory, and the Congress has been charged in some quarters with insisting on an unduly strict interpretation of its resolution in order to burke a discussion of the question. It is more generally felt, however, that, in view of the importance of ensuring to the Congress its character of a *bona-fide* representative body, it could have taken no other course if it was to maintain its authority. In any case, its decided vote on the question of Free Trade is the point which has impressed itself upon the public mind. The tax on bread has proved, as was to be expected, too much for the working classes to swallow.

The Methodist Œcumenical Conference, which has been attended by members of every sect into which Methodism is divided, and by representatives from every quarter of the globe, is assuredly a unique gathering, and one which, from its circumstances and the cause which it represents, might be expected to create a considerable amount of interest. Yet I do not think I should be misrepresenting public opinion here if I were to say that, whatever may be the effect produced within the circle of the adherents of the creed, it has not in any great degree attracted the attention of the public. The reason of this want of interest is probably to be found partly in the existence in this country of an established church, to which, from its learning and prestige, the public habitually look for the best that can be said in behalf of the distinctively Christian as opposed to the secular view of life; and partly in the wide diffusion throughout all classes of scientific theories which, to say the least of them, tend to throw considerable doubt on the fundamental beliefs common to all divisions of Christendom. From these causes Methodism has somewhat fallen out of account in the reckoning up of the forces from which society may expect fresh developments, or the solution of social problems. As a force operating upon individuals, beginning and ending with the individual, it certainly cannot be ignored; but as a force operating upon society as a whole, either with a mission to impress upon the world a new social ideal, or, like Roman Catholicism, claiming allegiance in rivalry to the state, it cannot be said to command attention. In the proceedings of the Conference itself there was nothing calculated to modify materially the general view. The interest of the discussion has been mainly for the initiated. The questions brought up for debate have partly belonged to the work of organization within the church, and have partly dealt with matters which might well have come before any Christian assemblage. The history of Methodism and the statistical results of its success naturally occupied the first place. The subject was introduced by the Rev. Dr. Cooke, of the Methodist New Connection of Great Britain, who drew attention to the fact that Methodism, which one hundred and forty-four years ago had no existence, now numbered 4,688,083 members, and, including adherents, a Methodist population of nearly 23,500,000 souls, and, he somewhat quaintly added, "besides these, many millions of glorified spirits in heaven." Then followed a discussion on the advantages of the itinerant ministry and of the institution of lay preachers; the training of children, both in the Sunday-school and at home, so as to attach them to Methodism; and, among other questions, the sphere of women's work in Methodism. Subjects of a more general character were also dealt with, such as the observance of the Sabbath; the attitude to be observed by Methodists towards temperance; the use of the press as a means of Christian propagandism; foreign missions; the opium traffic; and the armaments of Europe. On the question of the possible perils of Methodism from modern scepticism, the Rev. Dr. Todd, of the Methodist Episcopal Church, boldly enjoined upon the ministry the duty of familiarizing themselves with current scientific teaching, and advocated the introduction of physical science into the course of study of candidates for the ministry. On the concluding day papers were read on the question how Christian unity might be increased among the Methodists, and on the catholicity of Methodism, and the Conference separated with a resolution declaring it advisable that a second Œcumenical Conference should be held, if practicable, in the United States, in 1887.

One group of questions with which we are familiar here was conspicuous by its absence—viz., the political aspects of Dissent. Here the political Nonconformist is a prominent figure: he is an ardent and useful Liberal, ranging himself habitually on the side of the party now in power; he denounces wars and armaments, and it was owing greatly to his efforts that the Jingo policy of the late Government received so crushing a defeat; he is ever on the watch to guard against the encroachments of the Church in education and the administration of the poor-law; and he holds tenaciously, I need scarcely add, to the idea of the separation of Church and State, and looks forward to the realization of this idea as his final goal. In a purely English gathering of Nonconformists such a question as that of disestablishment, and cognate questions, would certainly have found a place; and it is a striking testimony to the success of the policy of practical and theoretical religious equality which has been carried out in America and the colonies, that these matters found no place in the programme of the Conference. In this gathering Methodism has appeared in its true colors, as a purely spiritual force, not organized in the sense in which Comte conceived a spiritual organization, but working with a method and procedure of its own which experience has proved to be adapted to its ends. No better key to its position can be found than the eloquent words with which the Rev. John Myers closed his paper on the concluding day, and which I may be perhaps allowed to quote in full:

"Our Conference will soon close; our essays are well-nigh all read, our addresses nearly all spoken, our discussions nearly ended, and what are to be the results? Shall Methodism from this Conference renew its youth, and return to its ancient path of going 'into the highways and hedges' to compel the millions of our perishing fellow-sinners to come in to the feast which our loving Father has prepared? Say not that they will not hear, for the thousands that press along the streets and crowd into dreary, most uncomfortable buildings to hear, and who subscribe of their pence thousands sterling a year to support the Salvation Army, show us that they will hear where the conditions of hearing are suitable to them. They may not come to our churches and chapels to present their destitution as a contrast to our respectability; they may not listen to well-prepared essays, whose finish is so perfect that, to use the words of one of them, they are so smooth that there is not friction enough to light a Congreve match upon them; but the entire history of Methodism shows that whoever will tell the old, old story in plain and simple words and loving tones, will never want an ear to hear his message." H.

A SUMMER RESORT IN SOUTHEASTERN EUROPE.

HERCULESBAD, NEAR MEHÁDIA, Sept. 10, 1881.

BUDA-PESTH and Bucharest are like the rhymes in a poor distich: all very well in themselves, it is the intervening space that is tedious. The great, drab plains of Hungary and Wallachia, where the towns, the roads, the people all look equally dusty and dilapidated, are what decides the character of the impressions of most travellers going from Vienna to the East. On

the whole, the effect is of a dead level, and yet half-way between the two extremes there is the beautiful scenery of the Transylvanian Alps. A little halt among these mountains may be made so agreeable as to cause one to forget the tedium of the rest of the journey. This fact is worth insisting on, in view of the great number of travellers who now follow this route to Constantinople and the East, and who are apt to regard this particular stretch as the most wearisome one of all the weary way.

Fortunately, as nearly as may be half-way between Pesth and Bucharest, is a station that seems placed there by a kind of travellers' Providence. It breaks the monotonous line of stations where, were there anything to be seen, there would still be lacking a bed to lie down in without fear, or a dish not smothered in red pepper and other strangling condiments. But Herculesbad (Herculesfürdö in Magyar) is Austrian, though in respect to cookery it is but a poor and far-away cousin of Vienna. In other respects this is a bathing-place that has been in repute for more than seventeen hundred years. The Romans used it and consecrated one of the principal springs to Hercules. Inscriptions in his honor to Æsculapius and Hygieia and other divinities, together with fragments of sculpture, have been found and now ornament the promenades of the place. The springs, of which nine are in actual use, are held to be sovereign for rheumatism, and good for gout, neuralgia, and hypochondria. The Government maintains here a military hospital, besides which the baths are visited by about five thousand strangers in the course of the season. In its height the affluence is so great that bathing, even in the waters of some of the less-renowned springs, begins at two o'clock in the morning, and many have to wait two or three hours for their turn.

Our recommendation is directed, however, rather to tourists and pleasure-seekers than to invalids. Herculesbad exists for all classes. It is indeed the principal watering-place for Rumania, Servia, and a large part of Hungary. Notices of amusements and advertisements are addressed to visitors in the languages of these three countries, with, ordinarily, a German translation for the rest of the world. It goes without saying that the aspect of the place is in a high degree varied; the more so as national costumes have not died out in this part of the world, and race and position are made evident even to a careless eye. To be sure, the taint of affectation occasionally kills the character of the dress; the pretty ladies of Bucharest, who sometimes appear at the Cursalon as superb versions of the peasant-girls of their neighborhood, are prompted by the same spirit that induces the Englishman, who has rented a Highland shooting, to bare his legs and don kilt and tartan when he goes out with the gillies. But the old-fashioned Hungarian, peasant or noble, wears his embroideries like a man to whom no idea of wearing any other dress has ever come. So with the Servian ladies, with their velvet jackets bordered with silver, and their caps of scarlet or of gold coins. Indeed, Servia is such a land of unpretentiousness that I dare say even its Jewesses are contented in the ugly head-gear that marks their race. But of all the costumes here, that of the peasant women of the country is the most striking. Its elements are few, at least during the warm weather, when it consists in a handkerchief on the head, a long chemise, and a fringed girdle. Lest it should be assumed that this covering is all too scant, we hasten to add that both the chemise, which is richly embroidered, and the fringe of scarlet and violet, descend to the ankles. In color and in grace the costume leaves nothing to be desired. In colder weather a jacket of white sheepskin, gay with silk embroidery, is put on, and, as the cold increases, above this is worn a long mantle of white felt, also ornamented, but usually in black. It is well worth while on a fête day to go to one of the neighboring villages, or to Orsova, to see the youths and maidens in their best—the above is only the ordinary wear—dancing the *Lora*, the Rumanian national dance, in all the open places. Even after having seen the popular dances of Greece and Russia, it must be owned that this spectacle has a character quite its own.

Herculesbad has the ordinary watering-place amusements, excepting that the music given two or three times a day in the Garden of the Cursalon is usually from an Hungarian orchestra. While freely yielding to the Hungarians the doubtful honor they may claim for their *cuisine*, it must be said that they owe their music, which is not without a certain weird beauty, to the Gypsies. The players in all their orchestras look as strange and wild as the music they play, so that it is, to our mind, a question how far these famous dances deserve the name of Hungarian.

The crowning glory of Herculesbad is its situation. It is in a narrow valley, between mountains whose slopes are richly covered with wood, above which rise the summits in precipices and needles of bare rock. Between the slopes, often occupying the full width of the valley, flows a river, named, in the simple nomenclature of the peasants, the Cserna, or Cserna Reka ("Black River"), because its bed is rocky and abounds in deep, dark pools, though the real color of the water is a lovely, transparent, chrysoprase green. It joins, not far below, the Bela Reka, or "White River," which is shallow, and flows over pale sands. The beauty of the Cserna and its valley cannot be too highly extolled. It is all the more striking as the mountains seen from the rail—at least when coming from the west—are rather tame and lumpish in character, and one is quite unprepared for the change that one sees in leaving the valley of the Bela Reka (Mehadika on some maps) for that of the Cserna. On arriving one is surprised at being driven, not to the hotel of one's choice, but to a central bureau, where the rooms of all the hotels are distributed according to tariff, and where all business connected with them or with the baths is conducted. The distances at Herculesbad are so small that the awkwardness of having the clerks' office outside the hotel is rather apparent than real; so with the fact that the two principal hotels have one restaurant midway between them that serves for them and, to a certain extent, for the others also. The whole place belongs to the state, and is farmed out to a *General-Pächter*, who no doubt finds that a central bureau administers everything more economically than would be possible for several special offices. One must allow that houses, gardens, promenades are kept in good order, and that the service is on the whole as prompt as in other watering-places.

The shadow side of the whole, to one who believes in the principle of nationalities founded upon race, is that Herculesbad should be in Hungary at all. These picturesque peasants are Rumanian, as, indeed, they are almost throughout this eastern portion of the kingdom, constituting more than one-sixth of the entire population. For the rest of Hungary, two-sixths are Slav, another sixth is German or Jewish; so that the Magyars, the dominant race, form barely a third of the population. In such a mixture of races, one might content one's self with the reflection that, after all, somebody must rule, if only it could be seen that the Hungarian rule were reasonably wise and just. In fact, the country is administered upon the assumption that the interests of the Magyars are those of the kingdom; indeed, to read the Pesth journals, one might be led to think that Magyar interests were those of the world. But this assumption agrees so little with the subject races that, unable to bear longer with the denial of justice, with arrogance, and the intolerable burden of taxation, they are emigrating in large numbers to Servia, to Rumania, to Bulgaria, to countries where they may be at home, and where it is possible to earn something more than a bare subsistence. This movement is so marked that during the last ten years, while the debt of Hungary has grown to enormous proportions, the population has remained almost absolutely stationary in numbers.

Fortunately, at Herculesbad itself the misery of this state of things cannot be seen as it can at a distance of a few miles. The people subsist upon the summer visitors, and seem to do well enough. So the future traveller who may come here to enjoy the rocks, the splendid beeches, and the spectacle of the motley crowd of pleasure-seekers, need find nothing to vex him beyond an occasional official inscription in untranslated Hungarian, which very few of the inhabitants or visitors can read.

THE FRENCH ARMY ORGANIZATION TESTED.

PARIS, Sept. 16, 1881.

THE general elections have had the result which was anticipated: the minority has been reduced and the majority augmented. The minority will be now composed of only 200 members—100 Royalists or Imperialists, and 100 Intransigeants or Radical Republicans. The new Chamber is composed to a very great extent of the same men as the old one, only they have made more promises and their platform is positive, while at the elections which took place four years ago it had a merely negative character. There is a remarkable sameness in all the programmes which issue from the ministerial fraction of the new majority, which styles itself the Republican Left, or of the Gambettist fraction, which calls itself the Republican Union. The new deputies all speak invariably with more or less warmth of changes in the magistracy, of the future separation of Church and State, but, till this separation can be effected, of the strict observance of the Concordat; of the diminution in the time of the military service.

The clerical question is somewhat dormant just now, as the clergy preserved a noticeable silence during the elections. Still, the Ministerialists would like to continue the *Kulturkampf* rather than do anything else; they are afraid to touch the magistracy or the army, though in their proclamations to the electors they propose to do so. There is in the *Kulturkampf* a certain vagueness which makes it peculiarly eligible for those who would rather talk than act. The President of the Council, M. Jules Ferry, has made the *Kulturkampf* his own question; he is never tired of speaking of the rights of the state, of the rights of science. He is the Dr. Falk of France. He has probably not the slightest desire to go any further than the Concordat; but there is in the Gambettist camp a large number of men who would go further, who would not be satisfied to treat the clergy like a body of functionaries salaried by the state; they would rather have the State and the Church completely separated. Such a separation exists in some countries, but it has as a corollary the independence of the corporate bodies. In France the enemies of the Church would deprive it of its actual salary, which was a compensation for all the Church property confiscated during the Revolution, and they do not recognize the liberty of the

corporations—testamentary liberty, the right of entail—none, in fact, of the guarantees of the churches in other countries. They go so far even as to claim all the cathedrals and churches of France as municipal buildings, as well as all the presbyteries; they would turn the Church naked into the streets, deprive it of its meagre salary, deprive it of all its houses and public places of meeting. They would not allow the Church, as such, to receive any legacy, to organize any system of public teaching or any system of public assistance.

The fact is that these followers of M. Paul Bert and others are absolutely hostile to every Christian church; they look upon all churches as mere schools of superstition and tyranny; they believe only in social science, and they have undertaken to make mankind happy without providing for its spiritual wants. Time only will show what may become of a country in which the new positivist, materialistic doctrines, instead of remaining in the abstract domains of science, take possession of the whole machinery of government; in which the spiritual doctrines which have always been looked upon as the refuge and the consolation of the poor, the weak, the oppressed, will come to be considered as mere phantoms, and mankind will ignore everything except its appetites and its rights. Our generation cannot see the full development of all such ideas, because there is something of the old man—I mean of the spiritual man—even in M. Paul Bert. He can vivisect dogs and crocodiles, but he cannot cut out of his own flesh the seeds which have been planted in it by the past.

The attitude of the French clergy in the present situation is so submissive that we cannot expect many tragical or sensational incidents in the continuation of our *Kulturkampf*. The Chamber will have to find some other question than the clerical. The military question will hardly be very convenient, as we have now Tunis on our hands; and though I do not believe that Tunis will become the Mexico of our Republic, it would be idle to deny that the expectations of our diplomacy have not been fulfilled. We expected to enter Tunis, as the French say, *comme dans du beurre;* but we find that we must occupy the country with a large army, since the authority of the old Bey is merely nominal. Next month operations will begin in earnest, and we hear every day of the departure of fresh troops for the seat of war. The preparations for this Tunisian war have been extremely troublesome. The French army is now divided into nineteen *corps d'armée*, none of which can be mobilized separately. The reserves can only be called for the whole army, and not by the President, but by the Chambers. The mobilization of the whole French army is a measure which can only be thought of in a great national danger. When the Minister of War needs troops for Algiers he can only depend on a certain number of purely Algerine regiments, such as the regiments of Zouaves, Spahis, and Turcos; for the rest, he must call French regiments, or parts of regiments, detailed from the seventeen *corps d'armée*. In this case he had to call in the fourth battalions of almost all our infantry regiments—the depot battalions; but these had to be placed on a war footing; and, in order to do this, a large number of the men belonging to the three first battalions had to be merged in the depot. The depot, which is in ordinary times the centre of recruiting, and the most immovable part of the regiment, became the active part at the expense of the whole regiment. You can easily imagine that such an operation could only take place with much disorder and confusion. The regiments were completely disorganized in order to furnish fighting battalions; and the colonels complain bitterly that they have now only skeletons of regiments in their hands. The fighting battalions have been one by one sent to Algiers. Only a few days ago I met one which was on its way from Dunkirk to Tunis. Once arrived on African soil, these battalions must be united again into regiments, and then new difficulties begin, as they don't know their new commanders, and wear different numbers. They remind us, in fact, of our *régiments de marche* in the Army of the Loire in our last campaign.

All these difficulties, no doubt, will be overcome, as the present war is not against a well-organized European army; we have only before us brave savages, without any organization. The general public, however, and especially the chiefs of the army, cannot but be moved by the defects of the existing organization. We had totally ignored the possibility of an African war when we copied the Prussian system in 1872. We see now that besides our European army, with its *corps d'armée* and its reserves, we must find the means of making an African army on totally different principles. We must augment the number of our Zouaves and Spahis, and of the negro regiments; we must have a light artillery corps. We shall find the elements of this army in the native population and in Corsica. It must be formed of men serving during many years, and attracted by premiums and by the hope of pensions. With a permanent African army, it will be easy to hold Tunis as well as Algeria; without it, our African colonies will also be a source of danger and of uneasiness.

I will not touch now this difficult subject of the African colonies. I am personally of opinion that it is the mission of all the Christian countries of the Mediterranean basin to do on the African soil what the Spaniards once did in Spain. At any rate, though the expedition to Tunis will be attacked by the Opposition in the Chambers, nobody will be found now to recommend the abandonment of Tunis. The question of the army comes before the Chamber with an imperative character; and though it is in the nature of democratic governments to diminish as much as possible the burden of the military service, I doubt if the Chamber will do much at present in this direction. What, then, can it do? The Republicans will probably be content at first to alter the organization of the magistracy in France. They are angry at seeing everywhere on the judicial bench men who were notoriously hostile to their party, when their party was only a party of sedition and of insurrection; men who administered the law under Napoleon III., some even under Louis Philippe. While the public prosecutor, the *Procureur de la République*, can be removed at the will of the Minister of Justice, the judge is still irremovable. He is ill paid, but generally belongs to a good family, and has a good fortune; he lives in an atmosphere of quiet dignity. In the provinces nobody equals the judge in independence and in consideration. He bears a very high character, and the administration of the laws in France is perhaps as perfect as it can be in any human community.

The Chamber would do better if it applied its energy to economical questions. It has become absolutely urgent to settle our commercial relations with England and with Italy. It is almost a shame that the conversion of our five per cent. stock should not yet be made. This stock stood some time ago as high as 120, and is now worth about 116. The Government has a right to repay it at par or to convert it into some stock bearing a lower interest. Why is it not done? In the present condition of France there is no excuse for a delay which costs the people a large sum of money every year. The Republicans are always boasting, and they have a right to do so, of the financial prosperity of France; they can give no better proof of it than by the conversion of the state funds. They can do it better at the beginning of a parliamentary session, as they have now four years before them during which their hands are completely free.

Correspondence.

GROWTH UNDER BLUE GLASS.

To the Editor of The Nation:

Sir: Believers in the blue-glass theory—of whom there are some even yet—might read with profit Dr. Siemens's address before the late meeting of the British Association, describing his experiments with the electric light to ascertain the effect of constant light on the growth of plants. In one experiment he placed plants in several compartments covered with different colored glass. He says:

"The relative progress of the plants was noted from day to day, and the differences of effect upon the development of the plants were sufficiently striking to justify the following conclusions: Under the clear glass the largest amount of and most vigorous growth was induced; the yellow glass came next in order, but the plants, though nearly equal in size, were greatly inferior in color and thickness of stem to those under the clear glass; the red glass gives rise to lanky growth and yellowish leaf; while the blue glass produces still more lanky growth and sickly leaf."

Yours truly, A.

Springfield, Mo., Oct. 1, 1881.

GARFIELD AND GUITEAU.

To the Editor of The Nation:

Sir: To-day the national flag is everywhere draped in mourning, and the hearts of the people keep pace with the majestic funeral procession as it moves towards the open grave at Cleveland. It was once said by an eloquent Southerner at a great political gathering in this city at which there were representatives with their flags from every State in the Union: "We rejoice not because our banners are many, but because our hearts are one." It may be truly said to-day that in the depth of the people's sorrow they still rejoice because now their banner and their hearts are one. The blood of President Garfield, whether shed by a madman or a murderer, has sealed in blood the unity of the nation. And such has been the sorrowing sympathy with the American people of all the peoples, that the brotherhood of nations is felt now throughout the world as it never was felt before.

But the tragic drama has not yet ended. It remains that impartial justice be done on the wretched man by whom the life of the President was taken. Not a few inconsiderate persons, and some newspapers echoing and stimulating the feelings of the hour, are impatient that any obstacles should be interposed between Guiteau and a speedy sentence of death.

The *Nation* has not been carried away by this impulse. On the 7th of July last, after announcing the deadly assault, it added: "All the details of the crime show a cool deliberation which in an ordinary case and with any adequate motive would remove all doubts on the subject of the prisoner's sanity; but there are features in it which look the other way." The *Nation* then proceeded to detail such facts as had come to light. Since then nothing has occurred to remove the doubts thus expressed, and they must remain until a full and careful trial is had in court with the aid of able counsel.

The events which have subsequently occurred

in the jail where Guiteau is confined have, so far as they are known, only served to confuse the public mind. It is plain that he has not been treated like other prisoners charged with similar offences, and that restrictions have been imposed which were not necessary for his safe-keeping; and the struggle between him and his keeper on the 17th of August, in which he is described as attempting to stab his keeper with a knife, and the latter as having accidentally discharged his pistol, has not been satisfactorily explained. The attempt of one of the military guard, set to protect Guiteau, to kill him by firing into his cell was a startling outrage. Until judgment has been pronounced a prisoner is confined for safe-keeping, and not for punishment. However base the accused may be, however strong the facts appearing against him, and however distinguished his victim, the law wisely and humanely holds over him its protecting shield, and declares him to be innocent until he is in court proved to be guilty.

The execution of the madman Bellingham for the assassination in 1812 of Perceval, the Prime Minister, has left a stain on English justice. The trial by court-martial and the execution of Mrs. Surratt as an accessory to the death of President Lincoln have left a still deeper stain on American justice. It is devoutly to be hoped that the trial of Guiteau, which will be memorable in the annals of the country, will be worthy of a great, magnanimous, and just people.

G. W. B.

Baltimore, Sept. 26, 1881.

THE SCIENTIFIC MODE OF TEACHING MATHEMATICS.

To the Editor of The Nation:

Sir: In your review of Professor Simon Newcomb's new work on the Higher Arithmetic, or Algebra, you speak of his method as more direct than that of the great bulk of mathematical text-books. You praise him especially for the arithmetic definition which he gives of the sine and cosine, making them wholly independent of triangles and of the circle also. I have not seen the book itself; but the great desideratum in mathematical text-books, whether on algebra or on geometry, is one that will cut loose entirely from the history of mathematics; that will not teach the branches of the science simply in the order in which they have been discovered and developed, but which will take up the mathematical knowledge of the present day, and teach it simply in the order in which the simpler truths serve as demonstrations for the more complex and distant.

This want was felt by Professor J. J. Littrow, the Imperial Astronomer at Vienna, as long as fifty years ago, and he published two text-books—a larger with some pretence to completeness, and a shorter practical abstract, in which he laid down the plan in the introductory preface, and attempted to carry it out in the course of each treatise, that all the old prejudices about "lower" and "higher" mathematics should be disregarded. He introduces the theory of functions, their development into an infinite series, progressing in the powers of the original variable, and differentials, almost at the very beginning. After explaining logarithms and exponentials, he proceeds to define the cosine and sine of a number: the former as half the sum of the number of which the given number, multiplied by the square root of —1 is the Napierian logarithm, and of the reciprocal of that number; the latter as half the difference of the number having such a logarithm and of its reciprocal, divided by that impossible root. In his algebra he gives but few examples for equations, and avoids those playful, worthless puzzles, in which ordinary algebras abound; in his geometry he avoids those problems and theorems that lead nowhere.

The books were both published in German, while a work of Littrow's on the higher branches alone ('Calculus and its Applications') appeared in Latin. They were, however, all very slovenly in their details, and highly unscientific in leaving theorems unproved the demonstration of which is of the very essence of mathematical science. For this and other reasons the efforts of Professor Littrow have had very little effect, and the mode of teaching mathematics is now almost as historical, and I might say as nonsensical, as it was fifty or a hundred years ago.

When quite young, I began to work on an English treatise in which Littrow's ideas should be worked out to their legitimate conclusions: nothing should be admitted that was a mere *cul de sac*, leading nowhere either in theory or practice; nothing should be demonstrated otherwise than in the most thoroughly scientific way; no examples should be given for the solution of equations that had no practical value. Was it my general want of energy, or was it the difficulty of the undertaking?—I never brought it to an end. At last I came to the deliberate conclusion that a man pursuing an entirely different profession should not meddle with mathematics, and gave up the job, putting my manuscripts away far out of sight. I wish some man like Professor Newcomb, whose authority would be followed, would take up this task, and show, once for all, how the mathematical science of the present day can be taught. There must be no waste in proving theorems by constructions that can be more readily worked out by analysis, or *vice versa;* there must be no fanciful illustrations where nature and art supply so many real cases. The scholars ought never to be led to expect integer numbers as the roots of equations; for where nature herself gives the problem the solution is always broken, badly broken, incommensurable. The scholar will never say then: "Oh! I can do this without algebra"; he will see that the science teaches him a way to find what could not be found without it. He will have time to reach the applications of mathematics to the laws of nature, such as we find in "pure mechanics," to the problems of social life, in the doctrine of probabilities, or to the movements and appearances of the heavenly bodies. Under such methods those who attend classes in mathematics will conceive a respect for the science which they cannot possibly have while in most of its manifestations to the young mind it hardly rises above Chinese puzzles or the now happily forgotten 13, 14, 15. As I have found that the study of pure mathematics ennobles the mind, and drives out low and impure thoughts, I should feel very thankful to any master in the science who would undertake the task of reforming the mode of teaching it—a task which I found too heavy for my own weak shoulders—so that a greater percentage of human beings might drink in the refreshing dew of the most truthful of all systems of truth. With old Boyle I firmly believe: ὁ θεὸς γεωμετρίζει.

L. N. D.

Louisville, Ky., Sept. 26, 1881.

[It must be evident to every one who reads "L. N. D.'s" forcible and interesting letter that it suggests a number of questions the satisfactory discussion of which would form the subject of a book rather than of a brief note in the *Nation*. What we shall say is not so much for the purpose of confirming or refuting his opinions as to show that the subject may be looked at from different points of view, and that there are many encouraging signs of the future realization of his wishes. First, then, we doubt whether any science can be properly learned or taught by one who cuts entirely loose from its history. The individual must, in many respects, travel the road which the race has travelled; but he need not grope through all the forests, wade through all the mire-holes, and lose himself in all the by-paths which have hindered and harassed past generations. We will give a single specimen, which lies near at hand, of what we consider the truly historical method. The school-algebra of Professor Wentworth, the more elaborate treatise of Professor Newcomb, and the 'Calculus of Variations' of Mr. Carll were published almost simultaneously this summer, and have all been noticed in the *Nation*. Each author in his preface makes substantially the same statement as to the method he has pursued. We quote Mr. Carll's, as at once the most compact and complete:

"When a new principle is to be introduced for the first time, a simple problem involving it is first proposed, and the principle is established when required in the discussion of this problem. This having been followed by other problems of the same class, the general theory of the subject is finally given and illustrated by one or two of the most difficult problems attainable; after which another principle is introduced in like manner" (p. iv.)

The statements of Professors Wentworth and Newcomb are essentially the same. Here are Professor Wentworth, for many years a teacher in one of our oldest and best-known high-schools, Professor Newcomb, a practical teacher and of world-wide reputation as a man of science, and Mr. Carll, also a teacher, and who, literally, has double and triple integrals at his fingers' ends, all agreeing as to the best method, at least in one important point. Now let us see what has been the course of history. We quote from the introduction to Professor Jellett's treatise on the calculus of variations:

"This, indeed, is the ordinary history of the great improvements in mathematical science. Some problem, physical or mathematical, is proposed, which is found to be insoluble by known methods; and in the solution of such a problem a new principle is necessarily introduced. It is soon observed that this principle is not limited in its application to the particular question which occasioned its discovery, and it is then stated in an abstract form and applied to problems of gradually increasing generality. Other principles similar in their nature are added; and the original principle itself receives such modifications and extensions as are from time to time suggested by the various problems to which it is applied. Finally, these several parts are grouped together, a uniform system of notation is adopted, and the principles of the new method become entitled to rank as a new science."

Secondly. In regard to the waste of time over "playful, worthless" "Chinese puzzles," Professor Newcomb, in a passage in his preface, too long to quote, has expressed much the same idea, and has assigned to "problems" a very subordinate part.

Thirdly. We should be very careful in deciding what parts of the science of mathematics "lead nowhere." The theory of the conic sections had been cultivated for centuries almost as a mere matter of curiosity, when Kepler's discovery of the laws of planetary motion, and Newton's theory of gravitation, gave to the conic sections an importance

in astronomy and other branches of science which can hardly be overestimated.

Fourthly. The high opinion which "L. N. D." has of the moral effect of mathematical studies we cordially endorse. We believe, nay, we know, there are those who have found a refuge from petty cares, consolation for wrecked hopes, even relief from torturing physical pain, in those sublime speculations which "lead nowhere" except to comfort and peace.

Lastly. We say, in all sincerity, that the perusal of "L. N. D.'s" letter has convinced us that when circumstances forced upon him the conclusion that it was his duty to abandon his mathematical studies, the number of promising mathematicians in the world was decreased by one.—ED. NATION.]

Notes.

MACMILLAN & Co. have in preparation a new work, 'The Graphic Arts,' by Philip Gilbert Hamerton, of which limited editions will be issued in 8vo and in large-paper, and which will contain some fifty illustrations, mostly in facsimile, after masters new and old. Besides conveying the technical information to be expected from the title, the author will aim "to show the influence of technical conditions upon the expression of thought and feeling." The illustrations will imitate lead-pencil, silver-point, various chalks, charcoal, pen-and-ink, pen with wash, sepia, woodcuts, lithographs, etchings, mezzotint, aquatint, line and stipple, etc., etc.——White & Stokes, 1152 Broadway, New York, will publish 'Esau Hardery,' a novel by W. O. Stoddard, author of 'Dab Kinzer'; 'Watching for Santa Claus,' by Mrs. Martha J. Lamb; and 'Good Times,' a series of designs by Miss Dora Wheeler, part in color and part in outline, the latter on water-color paper, and the subject of three prizes offered by the publishers for the best coloring of them.——A "humorous and dashing brochure, profusely illustrated," and bearing the title of 'Summer Rambles,' is announced by A. Williams & Co., Boston. It purports to relate the adventures of two "well-known Boston gentlemen through Florida."——'French Dramatists of the Nineteenth Century,' a volume in which Mr. J. Brander Matthews considers the course of modern French drama from the Romantic revival to the present Naturalistic outbreak, will be published shortly by Charles Scribner's Sons in New York, and in London by Remington & Co.——Mr. Dutton Cook, one of the most competent of English dramatic critics—best known, perhaps, in this country from his amusing 'Book of the Play'—has gathered together a number of brief histrionic biographical sketches, which will shortly be published, in two volumes, as 'Hours with the Players.'——Mr. Austin Dobson is preparing for the "Parchment Series" of C. Kegan Paul & Co. a volume of selections from the British essayists, neglecting the merely literary papers, and seeking especially to gather together those describing manners and customs and social characteristics. The volume will have a frontispiece by Mr. Randolph Caldecott, and will be introduced by a brief preface of the editor's.——For the same series Mr. Andrew Lang is selecting a volume of Poe's verse. Mr. Lang and Mr. S. H. Butcher, whose noteworthy prose translation of the 'Odyssey' will be remembered, are now engaged on a prose translation of the 'Iliad.'——Ellis & White, of London, announce for immediate publication 'Ballads and Sonnets,' by Dante Gabriel Rossetti, and also a new edition, with additions, of Mr. Rossetti's 'Poems.' Both volumes will be bound from designs by the poet.

—A fourth edition (since 1874) of Mr. Frank Vincent, jr.'s 'Land of the White Elephant' has just been published by Harper & Bros. The book has been considerably enlarged by a supplement in which the history of the several countries of Farther India is brought down to date; but this portion is remarkable chiefly for the confident decision of the questions involved in the parallelism between Buddhism and Christianity, and the author's architectural and ethnological speculations in regard to the ruins of Cambodia. We should not consider the book less valuable without these.——That "the great public is sick of reprints" has not proved true in the case of Prof. Goldwin Smith's privately-printed 'Lectures and Essays,' published early in the year at Toronto. The "American" demand for it has been such as to induce the author to arrange for its sale on this side of the line by Macmillan & Co.——Wittemann Brothers, 45 Murray Street, send us a pocket 'Centennial Album of Yorktown and of Richmond, Va.,' a guide and a souvenir for such as may attend the coming celebration on the historic battle-ground of two wars. The subjects for pictorial representation have been well chosen and neatly executed, and a map has not been forgotten.——Mr. L. B. Thomas, 409 West Twentieth Street, has become the American agent of 'Putzger's Historischer Schul-Atlas,' comprising twenty-eight leading and forty-eight side-maps, and to be recommended for the broader aspects of politico-historical changes. Mr. Thomas has overcome an objection to its use by those who are ignorant of German, by supplying a translation of the table of contents and of the geographical terminology, and has added a comparative scale of miles.——No. 93 of the Berlin Geographical Society's *Zeitschrift* contains a map showing the Weser delta about the year 1511, with the present lines of the mainland, and one exhibiting the German communities nestled in the extreme north of Italy, between Lago Maggiore and Monte Rosa. They both illustrate articles devoted to their subjects. A third article may be signalized—G. Niederlein's exposure of significant errors in South American maps. It shows how the ablest geographers are led astray in their delineations, and how their imitators perpetuate their mistakes.——In addition to the usual charts of the State Engineer and Surveyor's annual report on the New York canals, that for 1881 gives a useful map showing the chain of American lakes and the canals—whether of Canada or of the United States—connected with them. An indication of the wheat country to the north and west of Lake Superior is perhaps intended to make the British farmer pause and reflect.——Mr. Frederick Prime, jr., Ph.D., has again issued a supplementary list to his valuable Catalogue of Official Reports upon Geological Surveys of the United States and Territories, and of British North America. The entries are for the most part not recent. Mr. Prime's address is 230 South Third Street, Philadelphia.————We made a serious omission when describing the Q. P. Index to the *Eclectic Magazine*, which we should have said includes also (and this adds greatly to the value of it) vols. 37-148—*i.e.*, the last twenty-eight years—of the cognate periodical, the *Living Age*.——Westermann's *Illustrirte Deutsche Monatshefte* holds a little jubilee over its 300th number, completing its fiftieth volume.——It is unfortunate that Sainte-Beuve's complete works are not published by one firm, who would have an interest in making a uniform and carefully-edited edition. However, MM. Garnier Frères, the publishers of the 'Causeries du Lundi,' 'Portraits de Femmes,' and 'Portraits Littéraires,' have now got out an analytical index to these nineteen volumes, prepared by M. Ch. Pierrot. It fills 388 double-column pages, and is preceded by two hitherto uncollected articles of Sainte-Beuve—one on Madame Tastu, the other on Le Sage and 'Gil Blas'—and by a few other odds and ends of criticism.

—There is always apt to be a good deal of mystery about the profits of dramatic authors and poets. The former are generally believed to be greater now than at any previous period in the history of the drama. The latter are supposed to have risen a little, but not in proportion to dramatic profits. The account given by Mr. McKee Rankin of the pecuniary history of the "Danites" shows that the public have still a good deal to learn on these subjects. The play was announced on its appearance as the joint work of Mr. Joaquin Miller and Mr. Rankin, and it has met with great success. Mr. Rankin now says that Mr. Miller never had anything to do with the play except to contribute the use of his name, for which he has been paid $5,000. Mr. Miller seems in the sale of his name to have behaved in a very handsome way, for all he insisted upon was that the play should be read to him "so that he might at least know something about what he was going to be father of." On its being read to him "he was perfectly satisfied, never making one suggestion of addition or alteration." Mr. Rankin claims the entire authorship himself, though he admits that he "hired a literary man" to do the amanuensis work at $25 an act. This story, we regret to say, is alleged to be open to the objection that it is inconsistent with an earlier account of the origin of the play, in which Mr. Rankin gave a curious description of the manuscript as it came to him from the hands of the great poet. It would be interesting to know a little more about the "literary man" and his "amanuensis work"; he ought to know who wrote the play. The sale of Mr. Miller's name, if it was sold, shows in a rather striking way the increasing commercial value of poetical reputations. There is many a national poet who would be glad to go into dramatic collaboration of this kind on such terms. Indeed, it is difficult to see why it should be confined to poets. Who would not go to see a play—let us say—announced as the joint work of George Bancroft and Lester Wallack, or President Arthur and Augustin Daly, or George Bliss and Edgar Fawcett?

—Cincinnati will have her fifth biennial musical festival on May 16, 17, 18, and 19, 1882. As usual, there will be seven performances, three of which will be in the afternoon and four in the evening. The orchestra, consisting of over one hundred and fifty performers, will be substantially the same as at the last festival. The chorus of six hundred trained singers, which was organized in 1880, has since that time been under the most careful training for the fifth festival. Frau Materna and other distinguished soloists will be secured, some of whom will also appear at the festivals which are to take place the same month in New York and Chicago, under Mr. Thomas's direction. The programmes at Cincinnati will include, on the first night, Mozart's Requiem, Beethoven's Eighth Symphony, and Handel's Dettingen Te Deum; on the second night, Bach's Passion music; on the third, Schubert's Ninth Symphony, Schumann's scenes from Goethe's "Faust," Wagner's "Faust" overture, Berlioz's "The Fall of Troy," and a prize composition which will be selected from eighteen works now submitted to the judgment of Mr. Thomas, M. Saint-Saëns, and Carl Reinecke, of Leipzig. The programmes of the afternoon concerts will be published hereafter.

—Besides the usual number of music festivals which take place in England every autumn, there has been one this year which has been aptly designated as a musical invasion. It was organized by a number of the Orpheon societies of France and Belgium, who came across the Channel to compete at Brighton for various prizes, mostly contributed by wealthy citizens of Brighton, and consisting of medals, silver-gilt wreaths, and other objects of art. All the various classes into which the Orpheons are divided —such as brass bands, mixed bands, orchestras, and vocal societies—were represented, about two thousand members of various societies having come without expecting pecuniary compensation for their travelling expenses, but solely impelled by their love of art, their ambition, and perhaps also a desire to see a little of the world. This is the more noteworthy in view of the fact that most of the members of these societies are farmers and artisans, and therefore amateurs, professionals being strictly excluded except under certain peculiar conditions. One of the rules of these contests prescribes that every society must read at sight a piece composed for the occasion and kept in a sealed package, only ten minutes being allowed the conductor and performers to read over their parts before executing them. The English papers unite in their praise of the way in which this test was stood by most of the societies, as well as of the excellence of their performances in general. England has just as good vocal societies as those heard on this occasion, but she has no instrumental societies comparable to them. The Brighton festival might have been made more interesting still if some of the English choral societies had been admitted to the contest; but this was prevented by the very strict rules of the Orpheon societies embodied in a code of forty-four articles. As for the artistic result of the festival, the London *Times* says that the style of art cultivated by the French and Belgian singers is not of the highest or even of a very high order, because art when taken up by workmen and mechanics is apt to become itself mechanical, as proved by the case of the Meistersingers in mediæval times. These societies, however, provide the raw material for an artist to work with, and they make a love of the art so general in a country as to give rise to the remarkable phenomenon of an excellent opera or concert institute being in France or Germany supported by a town of only a few thousand inhabitants.

—Forty-four years ago there was a lively little controversy going on between Mr. Panizzi, then an extra-assistant at the British Museum, and the Royal Society. Mr. Fagan's report of the matter is the report of a biographer, and is designed to show the capable cataloguer at war with a powerful society, and winning the day by the force of his character and the righteousness of his cause. But now Mr. C. Tomlinson writes to *Nature* to show another side of the story: "Mr. Panizzi insisted on adding to some of the items of the catalogue original comments of his own, to which the Library Committee justly objected as committing the Society to opinions of doubtful value." One instance Mr. Tomlinson gives in which, certainly, Panizzi in a single mistake had included ignorance and carelessness; but it will not do to reason from a single instance. Mr. Tomlinson says there were others, but does not give them. It did not need his letter to prove that Panizzi had an absolute confidence in himself. What we do learn is that his self-confidence was not always justified. Besides the erroneous note cited, Mr. Tomlinson recalls from his own experience what appears to have been a momentary slip of Mr. Panizzi's memory in regard to a famous French chemical author, which, however, unluckily for his posthumous fame, Mr. Panizzi ensured his hearers' not forgetting by treating him with, we fear we must say, his not unusual discourtesy. Still, one would like to see a few more instances of error in the notes which he roundly abused the Committee for not accepting. After all, perhaps the Committee had a right to decide what sort of a catalogue they would print, as they were to pay for it. But the main burden of Panizzi's complaint was that they did not pay him according to agreement till after repeated demands and a threat of legal proceedings, and this Mr. Tomlinson does not at all explain away; so that the effect of his letter is not so favorable to his friends as it is damaging to their opponent.

—One of the English "society journals" has again broached the question, which seems always coming up for discussion and yet which is never decided, whether women, as they become more and more emancipated, are likely to become smokers. The *Herald* attempts to settle it *ex cathedrâ* by saying that "the answer depends upon whether the young woman will want to smoke; if she does, she will." In other words, she is not any longer likely to be prevented by her deference to man's opinion, and her course in the matter must hereafter be determined solely by her like or dislike of the habit. But this overlooks the fact that one of the strongest permanent motives which influence women in society is the desire for admiration from the other sex. Women whose enlightenment and self-reliance have brought them to the point of not any longer caring for what "the men" think about their behavior will undoubtedly smoke or not, as they like tobacco or not; but with the great majority of them one of the strongest influences that actuate their conduct must continue to be the love of man's admiration and approval, and with regard to such a habit as smoking it can be almost demonstrated that its being taken up by women will depend chiefly upon the feeling of men about it. It is pre-eminently a social habit, and secret smoking is never likely to have much charm for anybody, so that it cannot become common among women—as for instance opium eating might—without the fact being generally known. At present there is no dispute that Americans and Englishmen, fond as they are of smoking themselves, dislike the spectacle presented by a lady's smoking. It is distasteful to them. It looks fast and disreputable, and they "frown upon it." A woman who smokes knows that this feeling exists, and consequently smokes either in a state of defiance, or solitarily with a fear of detection and exposure. Now either of these states of mind is fatal to the full enjoyment of tobacco, which requires a mind entirely free from care and anxiety. Hence few Anglo-Saxon women who smoke can enjoy smoking as it ought to be enjoyed, while with the majority the masculine sentiment on the subject prevents them from wishing to enjoy it. If the "coming woman" is to smoke, the masculine feeling with regard to it must in some way first be modified.

—Professor Wm. Dwight Whitney's 'Index Verborum to the published text of the Atharva-Veda' is now published as volume xii. of the Journal of the American Oriental Society, and is a work of 383 pp. in double columns. Volume xi. of the Society's Journal is not yet published. From the introduction we learn that the work was begun in 1851, when the Atharvan manuscripts at Berlin were undertaken by the professor in a way that led afterwards to the publication of the text of that veda by him in connection with Professor Roth, of Tübingen; and the collection and arrangement of it occupied more or less of his time up to 1875. The index was to form part of the second volume in connection with other indexes, notes, translation, etc.; but the second volume waits the collection of other materials and the freedom of Professor Roth, and the publication of the index seemed to need the auspices of some learned society. Hence its publication by the Oriental Society. The first volume of the 'Atharva-Veda Sanhita' was published at Berlin in 1856, and it was followed in 1862 by the publication, as vol. vii. of the Journal of the American Oriental Society, of Professor Whitney's own edition of the 'Atharva-Veda-Prātiçākhya,' text, translation, and notes. The last 40 pp. of the present work are given to a reversed index of roots and stems (index of finals). The various niceties of the work and the difficult labor it bears witness to are rather for the specialist to point out. No small part of this labor consisted in making the printed work, which is in the Roman character, accurate. It may be remarked, however, that the words "published text" in the title refer to another text up to this time represented by a single inaccurate and mostly unaccented MS. on strips of birch bark, now in Professor Roth's hands, and hunted up at his instance a few years ago in Cashmir. The word also refers to the fact that due account is taken of readings of the Roth-Whitney text which do not rest on MS. authority, part of the last two books consisting of "such utter nonsense" that it did not seem advisable to the editors to let the text pass through their hands without some amendment of its numerous and obvious false readings. On the other hand, there are parts of the text of which the material is not included in the index. The most important instance of this is the greater part of the twentieth book, which is made up of extracts taken bodily from the established text of the Rig-Veda, and it seemed to be useless to burden the Atharvan Index with words not peculiar to it. Aside from these exceptions, the Index is intended to be a complete one, giving every word and form (even down to *ca*, and the cases of the demonstrative and relative pronouns) in every instance of its occurrence.

—The superiority of the Germans in learning, and their incapacity for writing anything which in style and treatment is not heavy, dull, and awkward, have become proverbial. There are, however, exceptions on both sides of the equation; there are plenty of Germans who treat serious subjects superficially, and there are a few who write as cleverly as any French or English writer of the same calibre. Heine will at once occur to the mind as the best instance of this; but since his day no one, we suppose, has used his language so advantageously as has Paul Lindau, from its foundation in 1872 till the present day editor of the only German paper which could claim a place in the same class as the *Saturday Review* or *Spectator*—the *Gegenwart*. Many readers besides Germans will learn with regret that Herr Lindau withdrew from this journal October 1.

—While speaking of literary journalism in Germany, it may be worth while, in view of the inaccurate statements frequently printed in this country, to say something on the subject in general, not ignoring in so doing the German-American press. Of the hundreds of Americans who habitually read German books and papers, very few know of the existence of the German periodicals published in this country. Of these the oldest and best known is the *New-Yorker Belletristisches Journal*, a sixteen-page weekly. The eight-page *Sonntagsblatt* of the New York *Staats-Zeitung* is of the same character, though less well printed; and to these has just been added a third, the New York *Figaro*, which typographically is more attractive than either. In all of these the three prominent features are

the sérial novel (which in the *Belletristisches Journal* is often a translation of the popular American novel of the day—at present Mrs. Burnett's 'Fair Barbarian'), criticism of the German stage, at home and abroad, and an easily-read three or four-column article on things in general, corresponding to the *chronique* of Paris papers, and called simply "New York" or "New Yorker Revue." The first number (September 17) of the *Figaro* contains also an article on the most popular of German magazines, the *Gartenlaube*, to which the editor of the *Journal*, Mr. Udo Brachvogel, is a frequent contributor. Among the many proofs of the thirst for knowledge which fills all Americans (except the characters in Mr. Edgar Fawcett's novels), and the wide extent of American culture, the enormous popularity of our magazines, and especially *Harper's Magazine*, is often instanced. Except, however, for an occasional article or novel which seems hardly at home in *Harper's*, the *Gartenlaube* is fully equal to it in literary merit, while its circulation exceeds *Harper's* by one hundred thousand or more. Nor is this enormous popularity due to absence of competition, as we shall see later on. The illustrations are not so good as American woodcuts, but they are good; the miscellaneous articles are generally valuable and always interesting, and, when upon political or religious topics, pervaded by a self-contained but decided liberalism; while the novels, thanks to Mrs. Wister, are as well known in this country as they are at home. Critics have often praised this lady, not only for her literary skill, but for the extraordinary tact displayed in the choice of tales for translation. Praise for the latter, however, is due not to her, but to the lately deceased editor of the *Gartenlaube*, who, as was some years since pointed out in the *Gegenwart*, called into life a new school of novelists, mostly women, writing pseudonymously, and some of whom —"E. Marlitt," for instance, and "E. Werner"—are to-day popular in every European language. It is of course unnecessary to say that this opinion of the *Gartenlaube* is not held universally. The late Johannes Huber, the Bavarian Old Catholic, deemed it sacrilegious and impertinent, and the *Figaro* writer says it represents merely superficial culture and slow politics, while it cramps and emasculates those of its contributors who show signs of originality, and prostitutes its columns to dishonest money-getting by means of skilfully-disguised advertisements.

—We have little room left in which to speak of other periodicals. *Ueber Land und Meer* enjoys great and well-deserved popularity, being much superior to the *Gartenlaube* in illustrations, but generally inferior in literary contents, especially in its fiction. The *Deutsches Familienblatt* and *Daheim* are close and fairly successful imitators of the *Gartenlaube*. The Stuttgart monthly, *Freya*, now dead, was, aside from fiction, better than any of these. Of the now existing monthlies the oldest is *Westermann's*, a periodical of the same style as the ante-bellum *Harper*. It began publication shortly before *Harper's*, and, singularly enough, both adopted the design for their covers from the long since deceased *Bentley's Miscellany*. The *Deutsches Magazin*, of Berlin, was very good during its short life, as was also the still living *Salon* (Leipzig) till within a year or two. The less popular journals, the *Deutsche Revue*, the *Deutsche Rundschau*, *Unsere Zeit*, the *Grenzboten*, *Im Neuen Reich*, and Lindau's ambitious *Nord und Süd*, are too well known to need mention here.

—Seven cities disputed the honor of the birthplace of Homer. They were all pretenders, if M. Théophile Cailleux is right. In his 'Belges et Bataves, leur origine, leur haute importance dans la civilisation primitive,' he has restored the poet to his true country—Belgium! Schliemann has been wasting his money in digging for Troy in Asia Minor; it was in England, near Cambridge. The Ægean was the German Ocean; Ithaca, Cadiz. Homer wrote in Greek, and not in French or Flemish or Walloon, as he would do nowadays, because Greek was the original language of the whole Atlantic coast. Those who maintain the superiority of scientific over classical studies because there is no room for discoveries in the latter, must seek a new argument.

—In illustration of the extremes of climate which the past month exhibited within the boundaries of the United States, we extract the following from a private letter written by a member of a scientific party in the Northwest: "On the 6th inst. [September], we were caught in a snow-storm—eight or ten inches—and this was followed by cold so intense as to slaughter the migratory birds on all sides. The wrens, bluebirds, sparrows, etc., were so chilled as to allow us to pick them from the ground or bushes. You can imagine how much we enjoyed the weather, in summer outfit, without fire or tents."

—The final reports of the Norwegian North Atlantic Expedition are just being received here. Those on Chemistry, by Hercules Tornöe, and on Fishes, by R. Collett, have recently come to hand, and contain data and results of importance. The expedition, between 1876 and 1878, has been doing a valuable work in supplementing the labors of similar expeditions in other regions, and pushing their researches into seas which by common consent are the especial province of Scandinavian investigators. The researches of Svendsen, continued and greatly augmented by Tornöe, considerably enlarge our knowledge on the subject of the air, carbonic acid, and salt contained in sea-water, and are illustrated by maps showing the distribution of salt in the surface-water and at greater depths, as well as the proportion of nitrogen in the deeps. They show essentially that the distribution accords with that of the Gulf and Polar Stream waters, the larger amount of salt and the lesser of nitrogen being the property of the warmer water. The amount of air was found to be related strictly to the temperature, the pressure at great depths having no bearing on the question. The water was obtained by an ingenious, and the first really reliable, apparatus for the purpose, designed by Captain C. Wille, of the Norwegian Navy, who commanded the steamer *Vöringen*, on which the work of the expedition was done. Jacobsen's method was adopted for the determinations. The amount of oxygen was found to diminish with the depth to about 350 fathoms, after which it remains nearly constant, or, if anything, increases a little, in accordance with the results obtained by Buchanan from the *Challenger* observations.

—It was finally determined by Tornöe that, contrary to previous assumptions, free carbonic acid does not exist in ordinary sea-water, which indeed has an alkaline reaction; but that the carbonic acid was present in the form of carbonates, and in a less degree of bicarbonates, which, by the saline mixture present in the water, when at the boiling point became decomposed. These important results were obtained through new methods and by new apparatus designed by the author. In regard to saltness, a remarkable fact was determined, which has a most important bearing on various theories of oceanic circulation—namely, that the excess of salt noticeable and expected in the warm Atlantic current water was not confined to it, but almost equally characterized the deep strata which were reduced to the freezing point. This water is, therefore, not a Polar indraught, as has been supposed, Arctic or Antarctic, but is tropical surface-water which has been cooled; while the Polar water continues equally distinguished from it by its deficient saltness, and appears to allow the cooled salt water of the surface to sink through it without mixing, and to form on the bottom certain portions of what has been called the "cold area." The examination of the fishes by Collett has afforded six or seven new species —a ray, a sucking pout (*Liparis*), several species of *Lycodes*, and a translucent raspberry-colored ghost, with the ventral fins reduced to long bifid filaments attached to the throat, and with no scales, which was called *Rhodichthys regina*. It was brought up from a depth of a mile and a half in the open sea between Jan Mayen and Finmark. The majority of the fishes belonged to the cod, blenny, sculpin, soft cod (*Lycodes*), and flat-fish families, and they comprised in all thirty-two kinds, whose food was found to be chiefly minute crustacea. Both these reports are elegantly printed and illustrated, with the text in parallel columns of Norwegian and English. Others are expected before long.

PARTON'S LIFE OF VOLTAIRE.—I.

Life of Voltaire. By James Parton. 2 vols. Boston: Houghton, Mifflin & Co.

When Mr. Parton appears as an author before the tribunal of literary criticism the judge must at once feel, if he be endowed with any acumen or with any sense of justice, that the case is one which it is difficult to dispose of with perfect fairness; for Mr. Parton has produced a book which is at once one of the worst and one of the best of biographies. The workmanship is in several points deplorably poor, yet the article produced is in many respects deserving of high praise. Of Mr. Parton's volumes it may with absolute truth be said that "you neither can praise them nor blame them too much." A reviewer, therefore, who wishes to act justly at once by the public, who have a right to discriminating criticism, and by a meritorious author, who has a claim to a due meed of praise, finds no other course open to him than to point out with unmistakable clearness what are the defects of Mr. Parton's literary workmanship, and then to dwell with equal emphasis on the merits of a book which, if revised and to a certain extent rewritten, may become for all Englishmen and Americans *the* life of Voltaire.

Mr. Parton's defects are a conspicuous want of critical acumen, and a deficiency in that complete literary training and education which in the present day must be possessed by any man who wishes to take rank with such biographers as Strauss or Morley. Of his deficiency in critical thoroughness one example (which has already been pointed out by other reviewers) may suffice:

"Much ingenuity has been expended upon the derivation of the word Voltaire. A writer in *Le Derby*, a French sporting paper, has the honor of settling this unimportant controversy. While investigating, in 1869, the pedigree of a French horse, he came upon the records of a family named Voltaire, and the family proved to be ancestors of our prisoner's mother."

The solution here suggested of an unimportant but curious riddle may be the right one. The odd point is that Mr. Parton has apparently no authority for the statement he makes except the *Pall Mall Budget* of February 26, 1869. If the London newspaper does contain further references establishing the truth of a curious fact, why are they not given? If the *Pall Mall Budget* merely quotes from the columns of *Le Derby*,

what are we to say of a serious writer who disposes of a knotty question which has vexed men like Carlyle and Strauss by adopting a mere newspaper rumor? The answer is that Mr. Parton here betrays what may be inferred from the whole tone of his writing—that he has not formed a conception of the critical acumen and the laborious research which even on minor points ought to be displayed by any one who is worthy to labor in the field of historical biography.

This lack of critical acumen is closely connected with that deficiency in literary training which constitutes Mr. Parton's most serious fault. The very titles of his chapters, such as "The First Tiff," "The Kind of an Orange," "A Fire of Thirty-Sous Books," suggest a lack of good taste. But he may fairly enough plead that his taste, in common with that of writers as eminent as Mr. Motley, has been somewhat corrupted by Carlyle, and that he has a right to avail himself of the defence contained in the maxim *de gustibus non est disputandum*. A far more serious matter, which, it so happens, is also betrayed by one of his headings, is his curious infelicity, not to say inaccuracy, in the use of the English language. "The Lord of Ferney Communes" is the title at the head of one of the most amusing chapters in the work. We wonder whether any of our readers who do not happen to be acquainted with the incidents of Voltaire's life understand what this heading means. It signifies, or is meant to signify, "Voltaire takes the Communion." This is the interpretation of Mr. Parton's language. Unhappily, though his peculiar dialect is explainable, and may even be called intelligible, it has not the merit of being English. Nor is this a criticism aimed at an isolated verbal conceit. The pages of translation from the French, which form a valuable feature in Mr. Parton's work, are constantly marred by awkwardnesses of expression on the part of the translator.

It is, however, when our author has the misfortune to deal with Latin that his want of complete training appears in the strongest light. When an Italian guest is made to say to Voltaire, "Est ubi peccus," we of course assume that Mr. Parton's printer (who assuredly needs sharply looking after) is responsible for the extraordinary substitution of "peccus" for "peccas." But when we find the Latin sentence translated, "Whence is your fault?" we certainly begin to think that Mr. Parton has, to save himself trouble, used the help of some not very accurate translator. This, it will be said, is a mere verbal criticism. It were sufficient to reply that verbal inaccuracy is no slight defect in an author of high pretensions. But, unfortunately, laxity in the rendering of Latin has at least in one place betrayed Mr. Parton into one of the most curious blunders which it has ever been our fortune to notice. When Voltaire came to Cirey to commence the course of life in which Voltaire himself, Madame Du Châtelet, the Marquis, and ultimately Captain Saint-Lambert each played so singular a part, the poet wrote a Latin inscription commemorating the fact of his concealing himself in the country. The "Latin inscription, witty in itself," writes Mr. Parton, "is also amusing for its observance of the established decorum of the Château. The masculine gender is assigned to the 'lover of virtue, the despiser of the vulgar and the court, the cultivator of friendship who, withdrawn to his estate, was hiding a poet.' The world was invited to take note that it was a marquis who hid the poet, not Madame la Marquise:

> 'His virtutis amans, vulgi contemptor et aulæ,
> Cultor amicitiæ vates latet abditus agro.'"

Need we point out to our readers that the masculine gender is assigned to the "lover of virtue" because the lover of virtue is "the poet"—that is, Voltaire himself? Not a word is said in the lines cited either about the Marquis or about his wife. The whole of our author's far-fetched comment rests upon a mistranslation which certainly would bring condign punishment of some kind on any schoolboy in the upper form of a good school. We are absolutely unable to explain Mr. Parton's astounding slip. That he does not understand Latin is quite incredible; that, understanding Latin, he should have failed to see the meaning of the lines he cites is almost equally incredible. We must in fairness add that this is by far the worst blunder we have noticed in the book. It is, in one sense, a blunder of no special consequence, but it conclusively establishes the existence, to speak in the mildest terms, of a kind of literary laxity on Mr. Parton's part which, one might have thought, was sufficient to disqualify him from composing a work of half the excellence of the book which he has in fact produced.

For, whatever be the deficiencies in Mr. Parton's workmanship, his work has many great and rare merits. It is, in the first place, exactly what it terms itself—a genuine life of Voltaire, and not a critique upon the life and character of Voltaire. In this respect it differs entirely from the works of Strauss and of Morley. These writers have written essays which are each admirable in their way. One might say without much exaggeration that Strauss's 'Voltaire' was, as a set of lectures, a literary gem. It is precisely what lectures ought to be: it gives the main facts of Voltaire's life; it supplies a series of most interesting reflections upon his works, his opinions, his position in literature and in the history of thought; it stimulates, and is meant to stimulate, the hearers of the lecturer to study Voltaire's writings and life. But just because Strauss aimed at producing an admirable set of lectures on Voltaire, he did not aim at producing and did not produce a life of Voltaire. The same remark holds good in a great degree of Mr. Morley's very meritorious essay; his 'Voltaire' must be looked upon as one of a set of volumes which aim at giving the author's estimate of the intellectual movement in favor of free-thought which took place in France during the eighteenth century. And it is, we think, palpable that Mr. Morley, in the biographies of Voltaire, of Rousseau, and of Diderot, is far more intent on explaining, and to a certain extent defending, the moral and intellectual movement of which these writers were the leaders, than on giving a complete life of any one of the three celebrated Frenchmen.

Mr. Parton, on the other hand, is primarily and fundamentally a biographer. He of course must incidentally comment upon Voltaire's position and teaching, and his comments, when he makes them, are those of a liberal-minded man of sense; but his real object is not to tell his readers what Mr. Parton thinks about Voltaire, but to give them full, complete, ample details as to what Voltaire himself did, wrote, spoke, and thought during the course of a long existence, of which not one moment was wasted. Moreover, Mr. Parton has, while giving a complete life of the great freethinker, resolutely abstained from yielding to the temptation to produce that disgusting cross between biography and history known as a "life and times" of Voltaire. Mr. Parton's two volumes are long—some persons might say (though we certainly do not) that they are too long; they might be improved by compression; but they do not contain a page which is not strictly relevant to their subject. You are shown Voltaire, indeed, in every point of view—you see him at school, in the Bastille, as a man of business, as Chamberlain of Frederic the Great, as the defender of the oppressed, as a country squire, as the triumphant man of letters, as a host at Ferney, as the leader of an assault upon the religious prejudices or principles of the age, and, in short, in almost every attitude in which he can conceivably be contemplated. But, while you are shown Voltaire by Mr. Parton in every possible light, you are never shown anything but Voltaire. The result of the conscientious tenacity with which Mr. Parton has clung to his subject is that he has written a book which, whatever its defects, makes the English and American public for the first time acquainted with Voltaire somewhat in the same sense in which they have long been acquainted with Johnson or Scott. They now can appreciate his boundless energy, his resource, his cunning, his audacity, his impatience, his hatred of his foes, his fervent loyalty to his friends, his astounding combination of vanity with dignity (or, at any rate, with the power to hold his own against men of superior position), and of a determination to make his fortune at all costs with an equally firm resolution to fight every kind of injustice to the death. Whoever wishes to see how much his real knowledge of Voltaire is increased by the mass of details collected together by Mr. Parton should study the chapter which treats of Voltaire as a man of business, or the chapters which describe Voltaire's private life at Ferney. No one, we are assured, can study these portions of Mr. Parton's book without coming to the conclusion that he has for the first time learned what kind of man Voltaire really was.

Nor is strict adherence to the duties of a biographer our author's sole merit. He shows throughout his work an amount of sound and calm judgment not always found in men who have devoted themselves to elucidating the career of an author who has been the object of more unmeasured praise, as well as of more unmeasured censure, than any other man of letters. Mr. Parton shows himself fully alive to Voltaire's foibles and vices; he does not conceal any of the traits in Voltaire's life or writings which are likely to offend the taste or the principles of the present generation. On the other hand, Mr. Parton recognizes the fact that Voltaire, whatever his faults, was a king of men, and an author engaged through life in a desperate struggle—mainly on behalf of justice—with classes and individuals who might, it seemed, at any time crush an assailant who wielded no arms but his pen. Mr. Parton exhibits that true impartiality which is an utterly distinct thing from indifference, and from that spurious sort of charity which consists in holding that, at every great crisis which divides men into different and hostile camps, both parties were in some sense in the right. Hence he explains better than any writer we have met with the true bearing and significance of the Voltairean "Écrasez l'infâme." He shows, as it seems to us, conclusively that, despite the Frenchman's follies and even want of principle, Frederic was assuredly not more sinned against than sinning, and by the mere ample and detailed statement of facts makes it clear that if Voltaire was reckless in his assault on religious dogmatism, his attack, savage as it might be, was assuredly not unprovoked. Mr. Parton has, in short, not indeed drawn a picture of Voltaire, but set before ordinary Englishmen and Americans the data from which they may draw something like a portrait for themselves. To have done this is sufficient to atone for the commission of numberless literary faults. Our earnest advice to Mr. Parton is that he should carefully revise the next edition of his work, and seriously reflect whether (considering the class of persons to whom the book is addressed) it would not be well to give the extracts from the works of French writers

in the original French. We still more earnestly advise our readers at once to get and read a book which has the one transcendent virtue of not containing a page which is not filled with matters of interest.

BEACONSFIELD'S POLITICS, WIT, AND WISDOM.

Memorials of Lord Beaconsfield. Reprinted from the *Standard*. With Portrait. London and New York: Macmillan & Co. 1881.

Wit and Wisdom of Benjamin Disraeli, Earl of Beaconsfield. Collected from his writings and speeches. New York: D. Appleton & Co. 1881.

WHEN 'Endymion' appeared we ventured to express in these columns the opinion that the book, notwithstanding the fact that it contained some witty epigram and shrewd observation, was as a whole a very slight performance. The temporary interest excited by it was produced in a great measure by the author's peculiar career and brilliant political position, by the familiarity which these were assumed to have given him with English society, and by the fact that well-known characters were popularly supposed to be introduced into the story. As time goes on the peculiar features of his career must inevitably fade out of the public recollection, and it has already begun to dawn upon the mind of the novel-reading public that, so far as they put any faith in the accuracy of Lord Beaconsfield's descriptions of English society, they were, in plain English, egregiously taken in. That his deception of the public on this subject should have lasted as long as it was profitable to him that it should last, is a singular illustration of his constant good luck; for there is no such mystery about English society as to prevent any one who desires to do so from making himself sufficiently master of the subject to tell the difference between true and false pictures of it. The social world of Thackeray's earlier novels is the social world of Disraeli's as well, and Trollope, by common consent, shows us with minute fidelity the social world of his later period. Any one who examines such books as 'Henrietta Temple' or 'Endymion' can see at a glance that Lord Beaconsfield's opportunities as a social observer were entirely wasted, so far as the public are concerned. He introduces us to lords and ladies, kings and queens, mansions and palaces, and nobody has ever accused him of stinting his descriptive powers when he lets us into the secrets of high life, but the high life, when we examine the details, is too suspiciously like "society" as it exists in the minds of young children, and sometimes even of nursery maids, cooks, and servants, to be of any permanent value. There is not, and never was, any such society as that represented in these novels, and to call them romances only removes the difficulty one single step. Romance furnishes an atmosphere of its own, different from that of real life, but easily recognized when we meet it. A romantic writer deals with sentiments and ideas elevated above the ordinary level of common life, and he is at liberty to select for the material of his plot incidents of a sufficiently unusual and exciting character to make the elevation of the treatment seem natural. There are two qualities which romance cannot have—prosiness and vulgarity—and both of them have from the first conspicuously marked Lord Beaconsfield's stories. If there is anything flat in fiction, it is the career of the hero of 'Endymion,' whose life from first to last presents no feature of interest except a constant success, in which there is not enough luck to excite our curiosity, and no struggle with fortune to excite our sympathy. Of vulgarity the later novels present more glaring instances than the earlier, but all of them are pervaded more or less by that debased admiration of display, in clothes, in houses, in ornaments, in manners, in the conduct of life itself, which is the sure test of a vulgar imagination.

A man of imagination Lord Beaconsfield certainly was, as he was also a man of wit. These qualities would probably lead him to regard with some amusement the memorial performances contained in the first of the volumes whose titles have been given above. The *Standard*'s memoir of the Prime Minister makes him out not merely what everybody must admit that he was, a man of great cleverness as a parliamentary politician, who managed to use one of the great parties of England as a tool for his own advancement with complete success, but as a Tory reformer, who early in life grasped the true conservative theory of the British Constitution and devoted his life to educating the Tories up to it. The writer of the memoir undertakes, as several Tory writers have done before, to explain what this theory was, and as usual he makes very funny work of it. He says that there cannot be the "slightest doubt" that the victory of the Tories in 1874 was largely due to "the principles which he had promulgated exactly thirty years before" in 'Coningsby' and 'Sybil.' Considering that in the next sentence it is candidly admitted that "the Toryism which was presented to the world through the medium of these brilliant fictions was an ideal Toryism, and could hardly have been reproduced in modern England any more than Plato's republic could have been reproduced in ancient Greece," it is at first rather puzzling to the reader to guess what the causal connection between these brilliant fictions and the defeat of the Liberals in 1874 was; still more so as we are next told that this Toryism was "founded partly on a study of Lord Bolingbroke, without due allowance being made for the difference between parliamentary government in the reign of Queen Victoria and parliamentary government in the reign of George II." Bolingbroke "saw only the abuses which flourished under the system of Walpole," and as he "could not foresee the glories of Chatham and his famous son," he very naturally attributed these abuses to the Revolution, and "turned for a remedy to the system which presented the greatest contrast to it—the monarchy, namely, of the Tudors and the Plantagenets"; a revival of which in the middle of the eighteenth century, our publicist thinks, "had not become absolutely impossible." In 1844 and 1845, however, he admits that it had become out of the question, and "the weak point in 'Coningsby' and 'Sybil' was that they vaguely suggested the restoration of such a polity as the remedy for prevailing evils." Thus far we do not seem to have made much of an advance towards a comprehension of the connection between the Tory victory of 1874 and the Tory theories of 'Coningsby' and 'Sybil'; but the next sentence makes it delightfully clear. There was a "more important part of the theory"—"the doctrine, namely, that Toryism and not Radicalism ought to be the popular political creed of this country," and that this part of it "was capable of being adapted to modern politics Mr. Disraeli has himself shown." This is of course true. He has shown it just as often as the Tories in the House of Commons or out of it have had more votes than the Liberals, just as Mr. Gladstone has proved the truth of the equally important but converse proposition, that Radicalism and not Toryism ought to be the popular creed of the country, whenever the Liberals have had more votes than the Tories.

It is impossible to recall the connection between the Conservative party and Lord Beaconsfield without a feeling somewhat like the pity which in private life the spectacle of a respectable, simple-minded country family in the hands of a clever and unscrupulous adventurer excites. At the opening of his career he found the Tories in a position of great danger, but according to his own account full of brilliant opportunities; at its close he left them in a plight out of which their leaders profess to see no road. And certainly no one ever did more to help them on the downward path than Lord Beaconsfield. His mission from the first seemed to be to make Conservatism ridiculous, to make Conservatives do as many ridiculous things as possible, and to persuade them that this was the way to redeem their fortunes. And he succeeded, too, in a most astonishing way. Even the Young England creed, which was too ridiculous for sensible Tories when its inventor first produced it, strikes the author of the memoir before us as having had great merits. With a touch of that fond regret which often lingers in the minds of the honest family at the recollection of the brilliant ideas of the vanished charlatan, he insists that "its sentiment was true. With much that was extravagant on the surface, the fundamental ideas of the Young England creed touched the heart of the rising generation. Men began to feel that the relations between sovereign and subject, between landlord and tenant, between gentle and simple, between priest and parishioner, might be beautified and sweetened. As far as the movement aimed at a revival merely of ancient customs, it was harmless and ineffective, and in some measure was laughed down. But the spirit which those customs had once represented was awakened from a long sleep, and it is impossible to deny that the relations between the different orders of society have benefited by the revival."

Now the social development of England during the last fifty years has been in nothing more remarkable than in the progress that has been made towards completely breaking down the semi-feudal sentiments between the different orders of society which it was the object of the Young England party to revive. For the old feeling that tenants owed their landlords not merely rent, but a loyal respect and deference as well; that religious submission was due the parson apart from any question as to the value of his character or teaching; that social respect was the right of the squire without enquiry into his respectability, has been substituted to a very remarkable degree the modern rationalistic, democratic jealousy of all rights which can show nothing more than tradition or position to rest upon. The sentiment growing out of status has pretty much died out, and there is nothing to take its place but the purely commercial spirit against which the Young England movement was directed. Disraeli himself, as he grew older, was far too clever not to see that a revival of feudal sentiment was an absurdity, and the real problem before the Conservatives was to find a new and modern sentiment as a basis of union between the aristocracy and the masses. He thought that he had found this in imperialism, no doubt being misled by the example of countries in which the spread of democratic ideas had ended in despotism. It would be curious to analyze the causes which seem to make any such political metamorphosis impossible in England; but we have only space now to call attention to the fact that neither the semi-feudal vagaries of his earlier days, nor the imperialistic tinsel of his later policy, ever entirely lost him the confidence of the Tories, who, even now that an English land bill and the disestablishment of the Church are agitated, and all talk of Conservative obstinacy is met by threats of abolishing the House of Lords, do not seem to

see how much the brilliant tricks and devices and political theories of their late leader have helped them on in the fatal road to destruction.

The anthology contained in the second of the above volumes is rather voluminous, for it comprises not only the epigrams, apophthegms, and *pensées* of the late Prime Minister, which really constitute his most valuable permanent contribution to literature, but also long extracts from his novels, apparently selected with the idea of showing his opinions on the subjects to which they relate. If this was the idea of the collector, it was a mistake, for most of the opinions expressed are not those of the author, but of fictitious characters, for whose ideas he certainly cannot be held responsible. It would be as easy to attempt to get at the opinions of Molière or Sardou by extracts from their plays as at Disraeli's opinions through the dialogues in his novels. It is true that from some of the earlier ones a sort of prophecy of his later Eastern policy may be gathered; but we fancy a little ingenuity only would have been required to make them seem equally prophetic had the ultimate result been something quite different from what actually happened. Had Egypt been taken instead of Cyprus, and "peace with honor" been secured by a bloody war instead of a Berlin conference, passages foreshadowing these events might probably have readily been found in 'Coningsby' and 'Alroy.' However that may be, the collection has not been made with much skill, as one or two extracts taken at random will show. It is divided by subjects arranged alphabetically, beginning with "Ability" and ending with "Youth." The book opens with an extract from a speech made at Newport Pagnell in 1874, in which Lord Beaconsfield said: "I pride myself upon recognizing and upholding ability in every party and wherever I meet it." Waiving all questions of the truth of this statement, there is certainly nothing so original about it that it deserves preservation. Under the head of "Action" we find a quotation from 'Lothair': "The Standing Committee of the Holy Alliance of Peoples all rose, although they were extreme Republicans, when the General entered. Such is the magical influence of a man of action over men of the pen and the tongue." This is certainly not very witty, and if it is supposed to record the result of extensive observation of mankind, it is of comparatively little value. Everybody knows that men of action do exercise a powerful influence upon the imagination of men "of the pen and the tongue," and the statement about the committee, from its exaggerated emphasis, is rather flat than impressive. The next is better, from its expression being good—"Action must be founded on knowledge," though in various other forms it is as old as man himself. Under the head of "Advice" we find that Miss Arundel in 'Lothair' is authority for the proposition that "advice is not a popular thing to give," and, strange to say, Miss Arundel's feeling on the subject was shared by the gifted author; for at Aylesbury in 1865 he boldly announced that he did "not like giving advice," because it involves "unnecessary responsibility under any circumstances." Under "Age" we find him declaring in 1864 that "the characteristic of the present age is craving credulity," though in 1873 he had come to regard it as chiefly marked by "the spirit of equality." Under "Americans" 'Lothair' yields the following nugget: "American ladies—I can never make out what they believe or what they disbelieve. It is a sort of confusion between Mrs. Beecher Stowe and the Fifth Avenue Congregation and Barnum"—but this again is not anything that the author himself says. Under the head of "Poetry" we find verses which carry us back to the period when every lady had an album containing lines written by the gentlemen of her acquaintance, which not infrequently afterwards found their way to an immortal obscurity in the pages of the "Book of Beauty" and similar publications. It was hardly fair for the present collector to drag out the verses beginning—

> "Tell me the star from which she fell,
> Oh! name the flower
> From out whose wild and perfumed bell,
> At witching hour,
> Sprang forth this fair and fairy maiden
> Like a bee with honey laden"

—hardly fair either to Lord Beaconsfield or the public, with whom almost any memorial would be more likely to keep the recollection of him a kindly and agreeable one than his poetical efforts.

But although the book as a whole is a failure, the reader will find it worth looking over for the many epigrams and maxims, some of them very familiar, some of them, to us at least, absolutely new, that really show what Lord Beaconsfield's wit was at its best. "Apologies only account for that which they do not alter" is even better than "qui s'excuse s'accuse," for it contains a neat and true explanation of the grounds of the maxim, which the other almost hides behind a play on words. "Next to knowing when to seize an opportunity, the most important thing in life is to know when to forego an advantage," is from 'The Infernal Marriage,' a little-known early satire, full of witty observation and turns of expression. Life is said in 'Tancred' to be "monotonous only to the monotonous"—an amusing idea amusingly expressed, whatever may be thought of its truth. "Those who have known grief seldom seem sad," may not be altogether true, but it contains an amount of truth which to many persons will make it seem at first absolutely so. We have no space for further quotations. It is undoubtedly as a wit, and as a shrewd observer of the tangled skein of motives which guide men in society, that Lord Beaconsfield will be hereafter remembered, when his astounding "pictures of English society" and his "statesmanship" have been long forgotten.

GOOD MANNERS.

Social Etiquette and Home Culture. The Glass of Fashion: A Universal Handbook of Social Etiquette and Home Culture for Ladies and Gentlemen. With Copious and Practical Hints upon the Manners and Ceremonies of every Relation in Life, at Home, in Society, and at Court. Interspersed with numerous anecdotes. By the Lounger in Society. [Franklin Square Library.] New York: Harper & Brothers.

THIS book by no means confines itself to the discussion of the matters suggested by its title. The author has touched upon a wide variety of topics connected not only with good breeding, but with the conduct of life in general. Precisely what "home culture" means may of course be differently decided by different people. But the "Lounger in Society" certainly takes a very wide view of his field when he makes it include advice to ladies and gentlemen on amateur theatricals, on marriage, articulation in singing, on flirtations and proposals at balls, on beards, on the furniture of bedrooms, on gastronomy, on tooth-powders and tooth-brushes, on bathing, on cornet-playing, on cosmetics, on Rowland's "incomparable Macassar" and Hapgood's "Nutritive Pomade." Much as we should like to do so, we cannot follow the Lounger through the long list of subjects on which the time and thought evidently devoted to them entitle him to an attentive hearing, and therefore restrict what we have to say to what gives his book its chief interest—that part of it which relates to the laws of good breeding.

In most books of etiquette, a comical effect is produced by the fact that while the fundamental assumption of the author is that his readers are persons of refinement and delicacy of feeling, a large part of his advice and exhortation seems to imply a belief that the same persons are innately vulgar and hopelessly ignorant of all the usages of decent society. A very amusing instance of this last sort of advice may be found in the present volume, in a quotation from a manual of etiquette which teaches how to acquire good habits at table, by a running and vigorous correction of supposed faults, in the following manner. The imaginary pupil being ready for the meal, the master discourses as follows:

"'The first thing you do,' he says, 'is to sit down. Stop, sir!' he continues; 'pray do not *cram yourself* into the table that way. Come, no nonsense; sit up, if you please! I can't have your fine head of hair filling a side-dish on my table. You must not bury your face in the plate; you came to show it, and it ought to be alive. . . . Your soup you eat with a spoon. Yes, that will do; but I beg you will not make that odious noise in drinking your soup. It is louder than a dog lapping water; *and a cat would be quite genteel to it.* . . . Fish must never be touched with a knife. Take a fork in the right, and a small piece of bread in the left hand. Good! but—? Oh, that is atrocious! of course you must not swallow the bones; but you should rather do so than spit them out in that way. Put up your napkin like this, and land the tailbone on your plate. Don't rub your bread in the sauce, my good man, *nor go progging about* after the shrimps or oysters therein. . . . That is the fourth time wine has been handed to you, and I am sure you have had enough. Decline this time, if you please. Decline that dish, too. Are you going to eat of everything that is handed? I pity you if you do. No, you must not ask for more cheese; and you must eat it with your fork. Break the rusk with your fingers. Good! You are drinking a glass of old port. Do not quaff it down at a gulp in that way. Never drink a whole glassful of anything at once.'"

It is not easy to believe that this pupil would be likely to appreciate delicate shades of etiquette or politeness. He would have to confine himself for the time being to elementary matters, like getting his food properly into his mouth and eating without making odious noises. Maxims and advice addressed to him seem inevitably rather wasted on ladies and gentlemen. There is less of this in the book before us than in most volumes of the kind, but the author does not altogether avoid the danger of seeming to assume that his readers can at one and the same time be complete barbarians and ready learners of what society considers "good form." In his last chapter he has collected some two hundred maxims upon manners, which constitute a sort of summary of what he has to say on the subject. They are generally very good; but it is hard to believe that any one who stands in need of maxim 39, "In passing from the drawing room to the dining room remember that it is the lady who takes precedence, not the gentleman," will be able to grasp the force of maxim 9, "Never give letters of introduction unless you are prepared to be responsible for the persons to whom they are given." Maxim 49, "Never use your knife to convey your food to your mouth under any circumstances," is a sound one, but upon a person who still considers the question as open to argument maxim 50, "If at dinner you are requested to help any one to sauce, do not pour it over the meat or vegetables, but on one side," will be wasted. On the whole, however, as we have said, the author makes this sort of mistake far less than most of his rivals.

Another peculiarity of books of etiquette and manners is the fact that they always contain some advice of an extraordinarily novel and unexpected character relating to matters about which one would suppose there could be no difference of opinion. Of this again we have some curious instances in the volume before us.

According to maxim 10, "the holder of a letter of introduction should not take it in person, but should send it with his card of address," for the reason that the bearer of the letter is bound to give the receiver an "option" to call upon him or take no notice of him whatever. The existence of this "option" will be news, at least, to a large body of long-enduring receivers of introduced foreigners in this country, and they will be glad to act upon it, too, if it can be established that it is the fixed rule in England or any other foreign country. Maxim 52 insists that we must "eat peas with a dessert-spoon, and curry also." This no doubt would be a pretty custom to introduce, and would tend to diminish the pressure on the family fork reserves, which the modern custom of eating ice cream with a fork has so greatly increased, besides which it would furnish an opportunity for much foolish conversation and many flat jokes—always a desideratum at table; but where is it a generally recognized usage in society already? Maxim 53, "As a general rule, in helping any one at table, never use a knife where you can use a spoon," we do not understand. Even a person addicted to the habit of eating peas with his knife could not help them with a knife; on the other hand, it is physically possible to help many kinds of cheese with a spoon, but how seldom it is resorted to. Knives, after all, must in the long run be generally used for cutting, and there is little reason to fear that the habit of "helping" with them will ever become common.

The author devotes a good deal of space to the discussion of a matter which has troubled many other enquirers into the mystery of manners—the question as to what the fundamental constituents of good manners are. There is, indeed, little common agreement as to this beyond what seems to be a generally admitted axiom of breeding, that the most important thing is a willingness to sacrifice one's self in the interest of social ends. Swift lays it down that "good manners is the art of making those people easy with whom we converse," which obviously cannot be done by self-assertion. Lord Chatham defined politeness as benevolence in trifles, and insisted upon the necessity of "sacrificing ourselves" to "the convenience and pleasure of others." Our author, however, goes further than this, for he declares that the "whole secret of good manners" is contained in the divine command, "Do unto others as you would that others should do unto you."

"From this point of view politeness becomes a virtue, and a brilliant one; for it is nothing less than a form of self-denial. You make way for this person, you fall behind that, you give up your seat to a third, because it will please those persons; therefore you consult their pleasure rather than your own. Carry this motive into all your daily conduct, and see how it will be elevated and transfigured. The noblest charity, the loftiest self-denial, the truest generosity, these, we see, centre in and are bound up with good manners."

If this were strictly true, Christianity and civility would be synonymous terms, which cannot be the case, for there are and always have been large numbers of excellent Christians in the world, who not only have no manners, but who regard breeding as a worldly affair with which they have nothing to do, while on the other hand the possession of fine manners has at no time been taken to be a necessary indication of a Christian spirit. This fact has indeed been always a puzzle to many good people, who have been unable to reconcile themselves to the idea of such an apparently unselfish thing as good manners being so often associated with a bad life. It is easy to show, however, that it is at least entirely erroneous to suppose politeness a branch of the moral law. There is nothing in the law of good manners to prevent you from cutting an acquaintance in the street who has offended you, though this may cause him pain, and the pleasure you derive from it is intensely selfish. Until very recently, any one who wished to retain his standing in society as a gentleman, was compelled by public opinion to fight with any one whom he had insulted, just as the insulted person was compelled to make him fight. Even to-day the fact that a man has fought a duel, while it may expose him to arrest, is in no part of the world regarded as a social fault, which it certainly would be if the rules which govern intercourse in society were founded on the principles of Christian morality.

The main difference between Christian self-denial and the sort of self-denial which good manners calls for is one of motive. In one case the motive is religious, in the other purely worldly. In one case selfishness is abandoned altogether, in the other it is subjected to discipline at one point in order that at another it may have its reward. In England, where strict precedence is observed, a person of lower rank goes in to dinner behind a person of higher rank simply because the custom has been found to wound the self-love of all concerned less than any other would: a fixed order prevents unseemly quarrels, and people get along with each other better for it. The person who has to yield the *pas*, however, does it in a spirit of enlightened epicurean self-interest, not in that of Christian unselfishness.

The fancy that good manners may be made out to be a branch of the moral law, though not a distinctly modern idea, has been greatly promoted in the present century by the advance made in simplicity at the expense of "shams" and conventionalities. At the beginning of this century all human intercourse was regulated by a highly artificial system of etiquette, which gave no room for the expression of natural feeling, and was undoubtedly to a great extent a hollow mockery. The relations of parent and child, husband and wife, master and servant, lovers, as well as the details of dress, conversation, and carriage, were all governed by a code of great complexity and intricacy, a minute ritual, the observance of which at all points was essential. Only persons of good birth could lay claim to a full knowledge of it, for its voluminous artificiality made an early education the only safe road to a familiarity with its rules. The great mass of mankind knew no more about it than they did about the dead languages. It was essentially a body of aristocratic tradition. At this period to have seriously argued that the province of Christian morals was conterminous with that of good breeding would never have occurred to any one. No amount of Christian morality would supply the place of a knowledge of etiquette, and the laws of etiquette were clearly based on a realistic view of existing society, while those of Christian morals were based on an ideal view of it as it ought to exist.

But modern democracy, as it has broken down political barriers, has also swept away social distinctions, and has made an aristocratic code of etiquette seem ridiculous. The inheritors of the old traditions as to "fine manners" have been gradually thrust into the background, and as a theory of some kind is always necessary to support any innovation, the modern democratic theory of manners has been invented—that good breeding is nothing more than being good and kind, and gentle, and amiable, and telling the truth, and giving way to your neighbor. It must be admitted that in a democratic country any one who carries this theory into practice will probably come nearer being himself in accord with the requirements of the existing code of good manners than there was ever a chance of his doing at any previous period in the history of the world; still, as we have said, morality and good manners have not become one and the same thing. Democracy is the foe of conventionalities in form, and in the last fifty years it has succeeded in driving conventionality out of society to an extent which, as we look back, seems almost incredible. For the old formalism has been substituted an easy-going, good-humored *bonhomie*, which is no doubt the only possible basis for modern society as it exists, with its curious medley of refinement and vulgarity, of intelligence and ignorance. But we have not yet reached a time when we can go to church to find out how we ought to "behave in society," nor when we can find the moral law between the covers of manuals of good manners

A Beautiful Gift-Book.

Our Familiar Songs,

AND

THOSE WHO MADE THEM.

More than Three Hundred Standard Songs of the English-speaking Race, arranged with Piano Accompaniment, and preceded by Sketches of the Writers and Histories of the Songs. By Helen Kendrick Johnson. 8vo, $6.

"In all respects of size, elegance, copiousness, and curious detail, presents almost as much of a contrast to an ordinary song-book, however good, as a centennial exhibition to an old-fashioned country fair. . . . We have turned the pages of this unique and beautiful volume with delight. . . . Here is a library of the best music for the household. We may return to it again for some of its extremely interesting personal and literary particulars."—Literary World.

The Wandering Jew.

An account of the Legend in various places and at all times. By Moncure D. Conway. 12mo, $1 50.

"The legend . . . the expression of that undying popular hatred of the Jewish race which found vent in the terrible persecutions of the Middle Ages, and which is again showing itself in the Judenhetze which disgraces modern Germany. . . . Mr. Moncure D. Conway, a writer who has earned for himself the right to speak for an expert on questions of folk-lore and demonology, . . . deserves our gratitude for having given a graphic and exhaustive account of this ancient and most curious myth."—London Saturday Review.

HENRY HOLT & CO., New York.

The Nation.

NEW YORK, THURSDAY, OCTOBER 13, 1881.

The Week.

SOME of our contemporaries have indulged in profound speculations about the motives which induced Mr. Conkling to stay away from the Republican State Convention. The very natural explanation, that he stayed away because he knew a large majority of the Convention to be against him, is rejected as not deep and mysterious enough. There are dark hints of some particularly grave and far-reaching reasons of state, which only the distant future will disclose. Not being given to an habitually awestruck state of mind, and believing that a certain class of motives is common to most men, we still think that when Mr. Conkling attended personally to the primary election in his ward in Utica, and "shook hands with everybody," and when he made his friends "bolt" for him from the District Convention to appoint him as a delegate, he meant to attend the Convention personally, expecting to have a majority there in his favor; and that when he found himself in an unexpectedly small minority, he thought he had better stay away. Nobody will deny that this was a sensible conclusion. He has now gone to Washington to attend upon President Arthur, where he expects to be in a majority again. Perhaps the reorganization of the Cabinet may now be taken up. One of his friends is reported to have said yesterday that in the new arrangements Mr. Conkling will not be seen, but he "will be felt." This seems to us impossible. President Arthur may, perhaps, permit Mr. Conkling to make himself felt, but he certainly cannot be felt without being seen.

As Senator Mahone has become the financial guide of the colored voters in Virginia, the doctrine he produced before the members of the Union League Club last week deserves the serious attention of Republicans as a specimen of his teaching. Hardly anything more mischievous or misleading in the way of financial instruction could be communicated to a body of simple-minded and ignorant voters than the assertion that the rate of interest paid by a state on its loans is regulated by its resources, or, in other words, that the poorer a country is the lower the interest it has to pay, and that therefore it has only to talk poor to justify "scaling" and repudiation. It seems hardly possible that Mr. Mahone does not know that the richer a country is the higher its credit—supposing its honesty to be unimpeachable—and the better the terms on which it can borrow; the poorer it is, or pretends to be, the higher the rate of interest it has to pay. We are bound to presume, however, that when he said that this had been the experience of England, France, and Russia he was expressing his honest belief, and that he really thought that England, for instance, being very rich, paid ten or twelve per cent. on its debt, while Mexico, being very poor, paid only two or three. But one who holds such beliefs is hardly a person whom Northern business men can afford to send back to Southern communities endorsed and approved as a trustworthy financial authority. Here at the North we should consider any State in a bad way in which a majority of the voters were under the control of anybody holding Mr. Mahone's peculiar views of the conditions of public credit. We have been fighting for fifteen years, and sometimes very hard, to protect Northern States against any such calamity, although none of them offers nearly such promising material to crazy financiers as Virginia and other Southern States do. We have no right, then, to help to inflict it on any Southern State.

The autobiography of Guiteau published by the *Herald* has no value except from the light that it throws upon his defence in his coming trial. His counsel has announced that he will only rely on the insanity of his client, and we find accordingly that the autobiography makes the killing of the President to have been pretty clearly the result of homicidal mania. There seemed in the first accounts of the crime to be the suggestion of a motive in the failure of Guiteau to get an office; but he now declares that at the very time he shot the President he was applying for the Paris consulship, and, of course, this would have furnished a motive in the opposite direction. He killed the President, he says, because "the idea flashed through my brain that if the President was out of the way, everything would go better. At first this was a mere impression. It startled me, but the next morning it came to me with renewed force, and I began to read the papers with my eye on the possibility that the President would have to go, and the more I read, the more I saw the complication of public affairs, the more I was impressed with the necessity of removing him. This thing continued for about two weeks. I kept reading the papers and kept being impressed, and the idea kept bearing and bearing and bearing down upon me that the only way to unite the two factions of the Republican party, and save the Republic from going into the hands of the rebels and Democrats, was to quietly remove the President."

The French steamer *Canada*, having on board the party of French visitors who are to be the guests of the country during the Yorktown celebration, arrived on the 5th instant, and were met on landing by the Seventh Regiment and escorted to the Fifth Avenue Hotel. The names of many of the civilians who have come over are very familiar to Americans. The Marquis de Lafayette is represented by a number of descendants. The Vicomte de Noailles is the great-grandson of the De Noailles who came to this country with Rochambeau with the rank of lieutenant-colonel, and was commissioner of the French army at the surrender of Yorktown. Curiously enough, the Marquis de Rochambeau who comes to the Yorktown celebration is said to have none of the blood of the original Rochambeau in his veins, as he is an adopted son of a descendant of his. The Comte de Grasse is a grand-nephew of the De Grasse whose name is connected with the French Alliance and the Revolution, and also with the history of several well-known New York families. The Government delegates have of course no connection, except an official one, with Yorktown, but they are very numerous, and represent all branches of the French service. During the afternoon many of the visitors had an opportunity of seeing some of the most distinguished "Stalwarts" and "Half-breeds" at the Fifth Avenue Hotel and in the Convention; but owing to the spirit of harmony, and even tameness, which prevailed, the spectacle was not so startling as it would have been had they been engaged in active warfare. It was, in fact, the old story of the orderly working of American institutions with which our visitors have been familiar from their cradles.

The military reception of the French visitors on Thursday was very successful. The weather was fine, and there were over five thousand men in line, including all the crack militia regiments. The marching was unusually good, and the French officers were much pleased with the spectacle. In the evening General Boulanger sent a despatch to the French Minister of War praising "the citizen soldiers of the United States," evidently regarding the Seventh and Twenty-second regiments as ordinary products of the militia system, which is perhaps fortunate for us. Few of the visitors speak English easily, and as the reporters generally labor under the same difficulty with regard to French, the opportunity afforded by the visit for "interviews" is almost entirely wasted. It is really a splendid field, and it is impossible not to feel a pang of regret when we think what enterprise might accomplish in it if this obstacle were only removed. The public would greatly like to know not only all about the visitors' "home life" in France, but what are their impressions about this country—hotel life in New York, Pullman palace cars and the "check" system, the unwillingness of our citizens to attend "primaries," "Bosses" and "Halls," the search for Stewart's bones, &c., &c. On the other hand, the visitors may congratulate themselves that the difference of language shields them from what they, with their European notions, might possibly regard as impertinent curiosity and an intolerable bore.

It is reported that Mr. Dudley, Commissioner of Pensions, is on the track of a "ring" consisting of clerks in the Pension Office and outsiders, organized for the purpose of putting through fraudulent pension claims and thus robbing the Government. There would be nothing surprising in this discovery. Similar combinations were discovered and the guilty parties punished under Mr. Bentley's energetic administration of the Pension Office, but they will reorganize and be discovered again and again as long as the present laws governing the

examination of pension claims stand upon the statute book. It is almost incredible, but strictly true, that pension claims are now legally adjudicated upon mere ex-parte evidence. This is a direct invitation to fraud, and that invitation has been very extensively accepted. The most watchful man at the head of the Pension Office could not, with the most unremitting exertions, protect the Treasury, for the ex-parte system gives so great an advantage to the fraudulent claimant that the discovery of such practices is in most cases a matter of accident. That there were millions paid for pensions fraudulently obtained has not only been admitted for many years past, but those in charge of the Pension service lost no opportunity to inform members of Congress of their experiences and opinions on that subject. Time and again during the last four years Commissioner Bentley, supported by the Secretary of the Interior, pointed out to Congress the fatal defect in the law, and urgently recommended the substitution for the ex-parte system of substantiating pension claims one permitting a thorough enquiry by the Government and the cross-examination of claimants and witnesses. But instead of acting upon these recommendations, Congress passed the act granting to pensioners arrears of pensions covering the time from the date of their application back to the period of the war. Not only did this act take uncounted millions out of the Treasury, but by offering a greater prize and multiplied opportunities to rascality it increased the abuses springing from the defective laws a hundred-fold.

The Wolfe movement in Pennsylvania is beginning to assume proportions that alarm the managers of the Machine. The Council of the National Republican League of Philadelphia has issued an address calling upon Republican voters to support Mr. Wolfe, in which the danger from the "boss" system—not only to Pennsylvania but to the whole country—is very clearly stated. The address points out that for years the control of parties has fallen more and more into the hands of "bosses"; that the larger cities are almost all in the hands of some one or more of them; that many State Governments are run by them, and the national Government is in constant danger from them. The success of the system means "the virtual overthrow of our free institutions by placing all the powers of government in the hands of a few able and unprincipled men, whose methods would permit them to transfer the authority thus acquired to a practically unlimited line of successors." Mr Wolfe has long been a fearless enemy of the system in Pennsylvania, and though he cannot, perhaps, hope to be elected, he may, if a substantial support be given him, succeed in defeating General Bailey. His success would go far in accomplishing in Pennsylvania, by determined action outside of the regular party organization, what has in great part been accomplished here by an energetic effort of the anti-Machine sentiment in the Republican party. Whether the same result could have been achieved in Pennsylvania in the same way, we do not know. That it must be done in some way is certain, and Mr. Wolfe, who enjoys in a rare degree the personal respect and confidence of friend and foe, is probably the best man to rally the anti-Machine forces for a decisive effort in that State.

During the week the Bank of England advanced its posted discount rate to 5 per cent. from 4 per cent., the rise having been caused by the shipment of specie to Egypt and the decline here in the rates of exchange to the point which warrants the shipment of gold from London to New York. Only a small amount of specie came here ($704,900), and the total imports since August 1 are only $17,094,318 against $31,571,728 in the corresponding time a year ago. Nor have fresh shipments of any amount been made from London since the Bank rate there became 5 per cent. The disbursements of the Sub-Treasury at New York during the week covered by the bank statement exceeded the receipts by the sum of $3,662,195, and yet the banks lost $577,250 in their reserve, so that they lack $3,333,275 of holding a 25 per cent. reserve. The main reason for the reduction in the reserve was the heavy shipment of currency to the West; the speculation in grain at Chicago received a severe check, and prices declined so that a good deal of money was sent from here to strengthen margins at Chicago, in addition to the usual amount required by Western trade at this season. In this condition of the money market, speculators for lower prices of stocks here "manipulated" the rates for loans so that on some days as high as ⅛ of 1 per cent. per day was paid in addition to 6 per cent. per annum. The stringency in the loan market was so severe that, as is usual at such times, the Treasury was implored to "grant relief." It had already been buying $2,000,000 of bonds per week, and it was asked to increase its purchases. This it refused to do, but agreed to begin on October 17 the prepayment, with rebate, of $5,000,000 out of the $20,000,000 bonds called for redemption December 24 next. This as a relief measure was not up to the expectations of Wall street, and failed to have any influence in advancing the prices of stocks. In the markets United States bonds declined ⅛@⅜, and the 3½ per cents at one time sold below par. Railroad investments fell ½@5 per cent. and railroad stocks 2@12⅝ per cent. There is as yet no sign of an early settlement of the railroad war. General trade continues active.

The woman-suffragists held a meeting last week in this city which a Dutch lady enlivened by some new arguments, and by some new applications of the old *ab uno disce omnes* argument. She held that if Senator Mahone, who only weighed ninety pounds, could bear arms and serve in the wars with credit, so could any person of the same or greater weight. Women weigh in most cases ninety pounds or over, and therefore could achieve the fame which General Mahone has achieved. This leaves out of account, however, completely the part played by the heart in a military career. A woman's fighting weight would surely be regulated as a man's really is by the condition of her nerves. "Ordinarily," said a valiant Hoosier, "I weigh one hundred and twenty pounds; but when I'm mad I weigh a ton." So it would undoubtedly be with woman if she undertook to serve as a soldier. When her blood was up, the minutest woman would weigh as much as three Mahones in time of peace. But women of ninety pounds without Mahone's pluck would simply encumber the battle-field. Mrs. Iliohan, the Dutch lady in question, if this be her name, also derived political comfort for women from the fact that men frequently cheat in counting ballots. She predicted that women would not cheat in this way, and as there is no refuting a prophet, she had it all her own way on this point. She also knew of an Albany man who would not let his wife vote at a school election, and then sold his own vote for two dollars. The force of this anecdote seems to lie in the suggestion that man being capable of such conduct as this, the admission of woman to the franchise could not make the world worse than it is. This has a painful resemblance, however, to General Grant's argument against competitive examination—that he knew a man who after passing a very brilliant examination got into the penitentiary. We can assure Mrs. Iliohan, as an answer to this, that we have known scores of men who, while discouraging their wives from voting, refused to sell their own votes, or who, having sold them, used the money in presents for the children. Then, too, in judging a man for selling his vote, we must take his necessities into account. There are probably many cases like that of the poor member of the old Irish Parliament, who, on being reproached at the time of the Union with having "sold his country," so great were his needs, "thanked God that he had a country to sell." Such cases, whatever one may feel about the value of political purity, cannot but excite commiseration.

The Court of Appeals has at length decided that the prohibition of the courts of this State against the guilty party in a divorce proceeding marrying again has no force outside the State, and that marriages of persons divorced here, who go elsewhere to evade the prohibition, are valid in New York. The argument which probably affected the minds of the judges most was drawn from the inconvenient results which would follow from holding anything else. In theory it seems a preposterous state of the law which visits a man with a heavy penalty for marrying in New York, and at the same time informs him that if he will take the trouble to cross the Connecticut State line he can marry there and immediately bring his wife to live with him in New York without any danger from the penalty. But on the other hand the marriage is perfectly good in Connecticut, and the general principle is that a marriage good in one place is good all over the world. With the facilities which exist in this country for procuring divorces, it is perhaps better to have marriages of whatever kind recognized as valid, as the alternative is the bastardizing of children, who certainly ought not to be made to suffer for the laxity of their parents' views on the subject of marriage and divorce. The only

remedy for the present condition of affairs is a uniform law, which is not possible except under a Constitutional amendment, or the introduction of some uniform practice throughout the States by voluntary agreement. The chief obstacle in the way of this is the lack of interest which those chiefly affected, *i. e.*, those who take advantage of the existing chaotic condition of the law, naturally feel in the subject. All they want is to be let alone.

Coudert Brothers have written a letter to the *Evening Post* with regard to the Esposito scandal, in which they insist that the original warrant was perfectly legal, meaning by this that there was nothing illegal in arresting the man in New Orleans on a New York Commissioner's warrant. They say nothing with regard to the execution of the warrant by a private detective, as they had nothing to do with the case at that stage. After he had been committed in New York, he was of course in the Marshal's legal custody, though his capture in New Orleans may have been entirely illegal. Nor does anything they say affect the propriety of trying the question of the man's identity fourteen hundred miles away from his place of residence. The Heinrichs case merely held that the prisoner might legally be brought from Wisconsin to New York. There was no question of identity in it. In the Esposito case, the prisoner's counsel had, we believe, some twenty-five affidavits of residents of New Orleans that the prisoner had been living there at the time of the commission of the alleged crimes, and all this evidence was ruled out because the witnesses could not be produced in court. With the final proceedings by which the prisoner was got out of the country, the Messrs. Coudert had nothing to do, and therefore their opinion on the subject is entitled only to the weight that would be due to that of any other intelligent lawyers conversant with the facts. The whole matter ought to be carefully sifted by the State Department.

We are informed by Atlantic cable that at the Socialist Congress assembled at Chur, in Switzerland, "the American delegate gave a desponding account of the condition of Socialism in America." He said that "the number of Socialist newspapers there had been reduced by one-half since 1877, and that the better times had caused a thinning of their ranks." This reminds us of the reply given by a prominent Communist leader who visited America thirty years ago to the question what he thought of the condition of the working classes here. "It is very bad," said he, "they are so discouragingly prosperous."

Mr. Gladstone has made at last the first one of those speeches which every English politician of prominence is expected to make to his constituents in the recess, giving his general view of the political situation. It is very seldom that a session passes in which Ministers are so far prevented from freeing their minds on all the problems of the day as they have been during that which has just closed, so completely was their attention and that of the House engrossed in the passage of the Irish Land Bill. It is very seldom, indeed, that half a year passes with so few great debates on a variety of questions. This has been probably due to the intellectual weakness of the Opposition in the Commons, but in a still greater degree to the absolute necessity of devoting every available minute to pushing the Irish legislation. It is none the less true, however, that Mr. Gladstone's reputation, great as it was at the beginning, has grown during the session. Opposition newspapers unite with the Liberal in admiring not simply the extraordinary vigor and readiness which he displayed in piloting the Land Bill—with these qualities of his the public had long been familiar—but the extraordinary tact and patience he displayed—for these were qualities which even his friends in time past have not ventured to claim for him. In fact a certain heat and irritability of temper, a tendency to be indignant over folly and absurdity, for which he has hitherto been somewhat noted, seems to be leaving him in his old age, and to be succeeded by a sort of jocular serenity which makes it impossible any longer for the young men of the Carlton Club to have the fun, to which they used formerly to treat themselves, of going down to the House in the evening full of wine, and "drawing" him.

In his speech at Leeds, where he was almost overwhelmed by the cordiality of his welcome, he gave the key to the Liberal foreign policy by saying that it was based on the presumption that the motives of all foreign powers were good, until the contrary was shown, in this differing from the Tory policy, which always assumes the existence of one foreign villain. This villain used to be France ; it is now Russia. But Mr. Gladstone's statement would have been more correct if he had confined it to Christian powers. His Government does not and cannot deal with Turkey on the assumption that she means well. The policy of the great Powers towards her is now and has been for fifty years based on the theory that she means ill, and will only behave decently under threats and watching. On the Irish question he was very strong in his eulogies of those Irish nationalists, like Sir Charles Gavan Duffy, and even Mr. John Dillon, who, while regretting the English connection in its present shape, accept the Land Act as a boon for the peasantry. He was equally strong in his denunciations of Parnell, whose mingled ferocity, duplicity, and tergiversation certainly make him fair game for any amount of vituperation. But Mr. Gladstone nevertheless did not touch the root of the Irish difficulty. If his compliments to Sir Charles Duffy were deserved, and Sir Charles's good word may do much to make the Land Act acceptable, then Sir Charles, or some Irishman like him, ought to be in the Irish Secretaryship. There ought, in short, to be an Irish department in the Government from which "healing measures" would come as native legislation, and not as a "boon" from Englishmen, like Mr. Forster, or for that matter Mr. Gladstone himself, who, however estimable, have as rulers the capital defect of being strangers, and unsympathetic strangers.

The British troubles with the Boers of South Africa are apparently not over. The convention under which peace was concluded with Paul Kruger and his two colleagues, popularly known as "the Triumvirate," had to be submitted to the Transvaal Parliament, or Volksraad, for ratification, and the news now is that the ratification is likely to be refused, on the general ground that the convention reserves too much power to the British Government. It establishes religious liberty, which the Boers, like our early Puritans, appreciate highly for themselves, but do not think suitable for other denominations than their own. They are, in fact, now almost the only real Old Testament Christians left in the world. They are not prepared to surrender all foreign relations, as the convention requires them to do. They are willing to have their foreign relations controlled. but not conducted, by the Queen's Government. Nor are they willing to have the natives assured equal standing in the courts with the Dutch and protected against all exceptional legislation. These objections seem to be partly practical and partly sentimental. The natives by whom the Dutch are surrounded outnumber them greatly, and are in a state of almost complete savagery. To treat them as equals, and relinquish all control of them, is something of which the Dutch have a traditional dread. It was to avoid it that they emigrated from the Cape Colony into the wilderness fifty years ago. In fact they contemplate it very much with the feelings with which the Southerners contemplated negro equality in 1860. Unfortunately, however, they do not possess the adaptability to circumstances and the readiness to accept the inevitable, when once clearly recognized, which delivers Americans out of so many dismal situations. The Boers are emphatically a stiff-necked people. They are real Bourbons, and they believe they have the Almighty at their back.

The resistance of the Volksraad is, however, in all probability largely due to the opinion of their own military prowess which the country Boers have derived from the late contest. The triumvirs who made the convention are men of some education, who have travelled in Europe and know the resources of the British Government. The farmers from the interior, however, are satisfied, like our Indians on the plains, that they had before them in the late contest the whole British power, and that in the three fights in which they defeated Sir George Colley, England was doing her "level best." They think, therefore, they let her off too easy, or rather conceded too much, and that if they hold out she will abate some of her pretensions. There is much reason to fear that this ignorance may hurry the Volksraad into a renewal of the contest. Accordingly the withdrawal of the British troops has been stopped, and if the convention has not been ratified by the 9th of November, the war will begin again. This time, however, the Boers will have few or no friends in England, and even their Dutch cousins will find it difficult to lift up their voices for them after having thanked the Gladstone Ministry for the liberality of its dealings with them.

SUMMARY OF THE WEEK'S NEWS

DOMESTIC.

THE Senate met in extra session on Monday. Owing to the resignation of the two Senators from New York, and the death of Senator Burnside of Rhode Island, the Democrats had a majority. Senator Edmunds, who was spokesman for the Republicans, moved that the new Senators from the above-mentioned States be sworn in before proceeding to the election of a President *pro tem.* This was lost by a strict party vote, and, after an ineffectual struggle on the part of the Republicans, Senator Bayard, of Delaware, was elected President *pro tem.* The Senate then adjourned.

Senators Miller, Lapham, and Nelson W. Aldrich, the newly chosen successor of the late General Burnside from Rhode Island, were sworn in immediately upon the assembling of the Senate on Tuesday.

President Arthur intends to send to the Senate for confirmation the names of nearly all the persons nominated by President Garfield after the Senate adjourned.

It is tolerably certain that two Cabinet changes will be announced when the Senate meets on Thursday, the retiring members being Secretary Windom and Attorney-General MacVeagh.

Secretary Blaine has denied the report that he ever made any efforts to remain in the Cabinet.

Mr. Blaine's letter to President Garfield accepting the Secretaryship of State has been published. It concludes, "However much, my dear Garfield, I might admire you as a statesman, I would not enter your Cabinet if I did not believe in you as a man and love you as a friend."

Mr. Edgerton, who was appointed by the Governor of Minnesota to succeed Mr. Windom in the Senate, will not press his claim on the Legislature. The Legislature will begin to ballot for Senator on the 18th instant, and Mr. Windom's election is regarded as certain.

The United States Supreme Court met on Tuesday. Chief-Justice Waite and Associate-Justices Miller, Bradley, Harlan, Woods, and Matthews were present, and subsequently waited upon the President.

Guiteau has made a long statement to the Washington correspondent of the New York *Herald*, in which he gives the history of his life from his birth to the day on which he shot the President. He says he watched for an opportunity to shoot President Garfield from May 18 to July 2. In conclusion, Guiteau reviews the legal aspects of his case in a clear and deliberate way, which shows that as a lawyer, at least, he is perfectly sane.

The indictment against Guiteau was presented to the Grand Jury on Saturday morning at eleven o'clock. At a quarter before one P. M. "a true bill" was found. The indictment embraces eleven counts.

A copy of the indictment and a list of the witnesses for the prosecution have been read to Guiteau in his cell at the jail. He will be arraigned for trial on Thursday.

Mr. Scoville, Guiteau's brother-in-law and counsel, has been trying to obtain assistant counsel. He has been unsuccessful so far. Guiteau has requested him to telegraph to General B. F. Butler and ask him to take charge of his defence.

The paper upon President Garfield's case which Dr. Bliss has been engaged in preparing, in company with Dr. Shrady of New York, has been published in the *Medical Record*.

The fund for Mrs. Garfield reached $837,334 06 on Sunday. The Michigan Relief Fund reached a grand total of $93,436 84 on the same day.

The executive committee appointed to devise means for building a "Garfield Memorial Hospital" in Washington met on Monday evening. General Sherman presided. Secretary Blaine and Dr. Busey were appointed a committee to draft a national and an international appeal to carry the undertaking into immediate effect.

The New York State Republican Convention met in the Academy of Music, in New York city, on Wednesday. The Convention was called to order by ex-Senator T. C. Platt, *pro tempore* Chairman of the Republican State Committee. Senator Warner Miller and Congressman Hiscock were the candidates respectively of the "Anti-Conkling" and "Stalwart" wings for the office of temporary Chairman of the Convention. Mr. Miller was elected by a majority of 108. This was the test vote, and showed the Anti-Conklingites to be in a sufficient majority to control the proceedings of the Convention. At the evening session Mr. Chauncey Depew was made permanent chairman. The various committees then made their reports. A noteworthy feature of the report of the Committee upon Contested Seats was that the contesting delegation from the First Oneida District, headed by Mr. Conkling, was adjudged not entitled to seats. The motion to lay on the table the resolution referring the question of the reënrolment of the Republicans of New York and Kings counties to the State Committee, with power, was carried by a majority of five votes. The Convention adjourned at 1 A. M. The ticket nominated is as follows: Secretary of State, Joseph B. Carr; Controller, Ira Davenport; Attorney-General, Leslie W. Russell; Treasurer, James W. Husted; Engineer and Surveyor, Silas Seymour; Judge of Court of Appeals, Francis M. Finch. The platform deplores the death of General Garfield, declares the entire confidence of the Republicans of New York in the "ability, integrity, and patriotic intentions of Chester A. Arthur"; calls for the reduction of taxes, but adds that Congress should approach this duty "with due regard to the protection of American industry"; assures President Arthur of the hearty approval of the people in pressing the prosecution of the Star-route frauds; eulogizes the administration of Governor Cornell; favors "submitting to the people the question of making our canals practically free"; and calls for an "equitable system of taxation which will reach corporations as well as individuals."

Mr. George Bliss has addressed an ill-natured letter to the New York *Times* in reply to its comments on his opposing the reorganization of the Republican party in this city. He says his letter two years ago "corrected some abuses," and till within a few weeks he has known of "no new flagrant case of abuse." As many Republicans take part in the city organizations as in the country, and a larger number would not alter the present control to any great extent. He admits cases of prevention of membership, and that there is fraud in voting "at times" at the primary elections, as at State elections. But to reorganize just now would be dangerous to an already divided party. At the Convention he only wished for postponement, though it is an extreme measure to invoke the intervention of the State Convention.

The Massachusetts Democratic State Convention was held at Worcester on Wednesday. Charles P. Thompson of Gloucester and James H. Carleton of Haverhill were nominated for the offices of Governor and Lieutenant-Governor respectively. The platform declares the national debt to be a hindrance to our "commercial well-being"; calls for an "intelligently bold revision of the tariff laws," and declares that the present tariff should give place to "lighter duties more justly distributed." It further declares the intention of the Democrats, so soon as they shall obtain control of the National Administration, to simplify the civil service "from its present overgrown and corrupting proportions"; to regulate appointment to it by law; and to bring it about that "all subordinate officers shall know and feel that during their prescribed term of service they owe all to their country and nothing to party chiefs"; but that "they shall also know and feel that they cannot, any more than Senators and Representatives, fasten themselves as a permanent life burden on the body politic."

The Minnesota Democratic State Convention met at St. Paul on Thursday. Nominations were made for all the State offices. The platform pledges the Democratic party to the payment of all obligations resting upon the State, expresses sorrow for the death of President Garfield, and reaffirms the principles of the last Democratic National Convention.

The Connecticut town elections, which took place last week, show a Republican gain over the similar elections of last year, when the Republicans carried an unusually large number of towns.

Mr. S. J. Tilden, having been importuned to use his influence in behalf of certain would-be candidates for nomination at the New York Democratic Convention, has written a letter in which he disavows any intention of controlling the Convention at Albany so as to obtain the nomination for Governor next year. He concludes by saying: "All I desire for the Democratic party in the coming canvass is that it shall make the best possible choice of candidates, and do everything to advance the principles of administration to which I have devoted so many efforts and sacrifices."

At the meeting of the Minnesota Legislature in special session on Tuesday, a strong resolution in favor of civil-service reform was introduced. It demands an amendment to the Constitution to the effect that officers appointed to fill Federal offices "be no longer subject to annoyance or removal at the whim or caprice of men wielding the appointing power for personal or political ends, but each shall be vested with a Constitutional right to hold any office to which he has been appointed during good behavior, or for a time prescribed by the Constitution."

The International Cotton Exposition was opened at Atlanta, Georgia, on Wednesday. There was a large attendance and much enthusiasm was manifested. Governor Colquitt presided, and Senator Voorhees made a speech which is said to have been the "incident of the day." There will be one thousand eight hundred distinct entries and displays, which will make it the largest exposition, with the exception of the Centennial, ever seen in America.

The French gentlemen who have come to attend the Yorktown celebration arrived in New York on Wednesday. They were received by the State Reception Committee and escorted to the Fifth Avenue Hotel. Governor Cornell and his staff were presented to them in the afternoon. On Friday the United States steamers *Kearsarge* and *Tennessee* took the visitors, together with prominent officials and invited guests, to West Point. From there they went on a tour to Niagara Falls, Elmira, Baltimore, and Washington.

Under the provisions of the Act of Congress relating to the centennial celebration at Yorktown, the sum of $20,000 was appropriated for the entertainment of the foreign guests, and an equal sum was set apart to defray the expenses of the military celebration. The latter appropriation has already been expended, and there will be a deficit of $9,500, which Congress will be appealed to to make good.

A three days' festival incidental to the Yorktown celebration was begun at Baltimore on Monday, an incident of which was the introduction into the city of water from the new works at Gunpowder River.

Mr. Windom has issued a circular giving notice that the United States bonds embraced in the one hundred and fifth call, to the amount of $5,000,000, will be redeemed on and after October 17.

The reports of various cotton exchanges in the Southern States announce the cotton crop to be considerably damaged by the unfavorable weather. It is estimated that there will be a decrease of about thirty-three per cent. in the yield this year.

The Iron Mountain train robbers have pleaded guilty to fourteen indictments, which makes the term of punishment seventy years for each man. The men who captured the robbers found $9,000 in their possession. This amount they divided among themselves, promising to pay $100 a year to the families of the robbers and to leave no means untried to secure their release from the Penitentiary after conviction, on condition that the robbers should keep the matter secret. One of the capturers, however, being troubled by his conscience, revealed the whole thing.

The counsel for the defendants in the Star-route cases have filed papers attacking the information against Brady, and a motion has been made to rescind the order allowing the filing of the information.

A statement just prepared by the Post-Office Department shows for the fiscal year ending June 30 a deficiency of $2,786,340, a gain over the previous term of $320,002. Postmaster-General James's savings in consequence of the Star-route overhauling are exhibited, of course, only in the last quarter, where the net gain appears to be a little more than half a million.

Nothing of importance has occurred in the Malley case during the week. The defence continues to bring forward evidence to prove an *alibi*.

There has been an unusually large amount of hazing at the Annapolis Naval Academy this year, and on Tuesday last the whole third class was put on board the *Santee*, where they remained until they signed a pledge to refrain from any further hazing. It is expected that this will have a salutary effect upon future classes.

A gold life-saving medal has been presented to Mrs. Ida Lewis Wilson for her brave conduct in rescuing two soldiers stationed at Fort Adams, near Newport, who fell through the ice in the harbor.

There was a great fire in New York on Monday night. It originated in the car stables of the Fourth Avenue road, and before it was subdued it had destroyed the greater part of the Morrell storage warehouse, situated on Fourth avenue and Thirty-second street. Much valuable property in the way of books, furniture, and pictures was stored in this building. The loss is estimated at $2,000,000.

The Coudert Bros., counsel for the Italian Government in procuring the extradition of Esposito, have addressed a letter to the *Evening Post* in regard to the two points whether Esposito was kidnapped, and whether he was "smuggled out of the country by means of an imposition on the State Department." They say the legality of the warrant by which he was arrested "was never questioned during the trial," and was even conceded by one of his counsel. Otherwise a remedy by *habeas corpus* lay open. They deny the issuing of a second warrant for rearrest on Esposito's arrival here from New Orleans. The subsequent procedure was in the routine of the State Department, and bears no marks of haste. There was no understanding about an appeal, and there were six days in which to make one.

It is reported that Mr. Jay Gould has secured a majority of the shares of the stock of the Manhattan Elevated Railway and will control the next election.

FOREIGN.

Mr. Gladstone arrived at Leeds on Thursday, and was received with great enthusiasm. He made a speech in reply to eighty-six addresses which were presented to him, in the course of which he referred to the Fair-Trade League. He said that some persons had complained about the American tariff, and that although America sent to England only £3,000,000 worth of manufactures, while England had sent to America from £30,000,000 to £40,000,000, yet the Fair Traders wanted America to cease to be England's customers to that amount. More unfair leaguers, he said, he never knew. He also said that he expected Sir Stafford Northcote to declare emphatically before long whether he favored protection and a corn duty, but that as for himself he would be no party to a retrograde movement. At a banquet given to Mr. Gladstone on Friday he made a speech in which he attacked Parnell, contrasting his course with that of O'Connell. He concluded by saying that Parliament was not going to overturn the principles of public right and public order to please Mr. Parnell. The London *Times* says that these "speeches of Mr. Gladstone, in the present condition of affairs, can hardly fail to be taken as an important political manifesto."

In his reply to an address from the Leeds Chamber of Commerce on Saturday, Mr. Gladstone said that although he could not make an explicit statement in regard to the negotiations for a new Anglo-French commercial treaty, they were in no way surrounded by doubt or difficulty.

It is reported as tolerably certain that the Anglo-French and Franco-Italian treaty negotiations will not be resumed until after the formation of the new French Cabinet.

The Cobden Club is calling upon its friends for a special subscription of £2,000, to be expended upon Free-Trade books and pamphlets to combat the Fair-Trade movement.

A letter has been published in the Paris *Bourse* from Sir Garnet Wolseley, in which he says he earnestly trusts the English Channel Tunnel project may never be carried out, as he feels that its construction would be a lasting source of danger to England.

Further trouble seems to be impending between England and the Boers. The Volksraad objects to a number of articles of the convention with England. The Boer Triumvirate desire that England shall merely have control of, and not conduct, foreign affairs, and shall have no right of approval of the Transvaal laws.

In an address at Wexford, on Sunday, Mr. Parnell referred to the speeches which Mr. Gladstone had been making at Leeds and elsewhere. He characterized them as unscrupulous and dishonest, and declared that Mr. Gladstone had maligned the Irish people, the bishops and Mr. Dillon.

The midland counties of Ireland are still very lawless. "Boycotting" is being carried on with unrelenting vigor, and incendiarism is frequent.

The Land Commission has issued a notice announcing that any tenant evicted since the 23d of February last has the right to ask the settlement of the judicial rent of the holding.

The first notice filed by a landlord has been sent in to the Land Commissioners by the Marquis of Waterford, asking to have the rents of two tenants increased.

A Labor Convention will assemble in Dublin at the end of October for the purpose of forming a national organization of farm laborers to act with and under the direction of the Land League. A few of the prominent leaders of the labor movement will be selected at the Convention as candidates for Parliament.

The directors of the Scottish Chamber of Agriculture have formally approved the draft of the Land Bill for Scotland. They also approved the draft of a bill for the abolition of primogeniture and entail.

Lord Lorne's Western trip has excited great interest among Scottish farmers. The London *Times* says that they have been impressed with the fact that the Canadians are opening up a country which is a promising field for occupation "by people who are still proud to call themselves British subjects."

Foxhall won the Cesarevitch stakes at the Newmarket Second October Meeting on Tuesday. The betting against Foxhall just before the start was 9 to 2.

In the Spanish Cortes on Saturday Señor Guell presented an amendment to the reply to the address from the throne, demanding autonomy for Cuba and the conclusion of a commercial treaty between Cuba and the United States on the basis of absolute freedom of commerce.

General Prendergast has been appointed Governor of Cuba, in the place of General Blanco. He will start for Cuba on October 28.

The Kings of Spain and Portugal met at Valencia de Alcantara on Saturday, and opened the Caceres railway, by which the journey between Madrid and Lisbon is materially shortened.

The Marquis of Northcote invested King Alfonso of Spain with the British Order of the Garter on Tuesday.

The Portuguese court has gone into four days' mourning for President Garfield.

Telegrams have been received confirming the report of a massacre at Wady Zerga by the Arabs. Wady Zerga is a station on the French railway sixty miles from Tunis. The stationmaster, who was an ex-lieutenant in the French army, was burned alive and ten employees massacred. The preparations for operations against Bou-Amena are reported to have been completed. Two thousand camels have been collected at Oran for a long expedition against him in the desert.

In deference to urgent representations by M. Roustan, the French Minister, the Bey finally consented to a partial occupation of Tunis, and on Monday morning the French troops entered the city and occupied the Kashbar and two other forts.

It is reported that a secret council of Ministers has been held in Tunis, and that a scheme is proposed for the surrender of the financial administration of the country to France and the issue of a French loan of 225,000,000 francs.

The Paris *Weekly Medical Gazette* publishes communications from members of the ambulance service in Algeria complaining bitterly of the want of organization in the sanitary arrangements of the army.

The Turkish delegates to Egypt demanded a special court of enquiry into the general state of the country, but the Khedive refused his consent to any interference with Egyptian independence, and the Porte authorized the delegates to withdraw the demand. The Khedive has, however, given his consent to an informal enquiry, which is now proceeding.

Immediately upon being informed of the despatch of the Turkish mission to Egypt, Lord Granville informed France that he was willing to take the initiative in a proposal for joint action in Egypt, and suggested that an identical note be sent to the Porte explaining the perfect understanding existing between France and England, and declaring that while both nations fully recognized the Porte's right of suzerainty, they would not tolerate any manifestation likely to endanger the influence and rights enjoyed by the two powers in the financial administration of Egypt. England and France have each sent an iron-clad to Alexandria.

Negotiations for including the city of Bremen in the Zollverein will begin this week. Herr von Bitter, the Prussian Minister of Finance, has gone to Bremen to pave the way for the conclusion of the arrangement.

The Vienna Regatta Committee have written a letter to the London *Sportsman* repudiating the insinuation that one of the committee was concerned in bribing Shinkel, of the Cornell crew. They declare the statements published in the New York *Tribune* of the 6th of September, and alleged to have been made by Mr. Allen, a member of the Cornell crew, to be falsehoods.

The Committee of the Mexican Congress has reported in favor of the approval of the railroad concessions granted by the President during the recess.

TUESDAY, October 11, 1881.

REPUBLICAN PROSPECTS.

The anti-Stalwart majority which controlled the recent Republican State Convention owed its power to a popular movement against boss-rule in the management of the Republican party. The proceedings of many of the district conventions, and the resolutions passed there, leave no doubt of this fact. It was no mere contest between two factions of the party for the possession of the spoils; at least this was not the motive power with the rank and file on the anti-Machine side. Had it been so, then—as many predicted—the death of President Garfield and the accession of Mr. Arthur to the Presidency would have given the faction with which Mr. Arthur had been identified a great advantage in the election of delegates, and probably the control of the Convention. But the change in the national Administration had no visible effect upon the Republicans in this State. They remained as determined as ever to overthrow the old Conkling machine, and they sent their delegates to the State Convention for that purpose.

Taking the object to be accomplished in a narrow sense, they did what they were sent for. They took the organization of the Convention out of the hands of the Stalwarts. They defeated the attempts of the Conkling men to obtain seats in the Convention by trumped-up contests. They appointed a State Committee with an anti-Stalwart majority, and thus changed the character of the official representation of the party. They showed in a variety of ways, without mentioning any names, that the Republican party of this State very positively and firmly declines to be ruled by the Grant-Conkling combination. This was well as far as it went. But leadership of a higher order would have broadened the objects of the movement to which the majority in the Convention owed its existence. With the exception of an eloquent resolution on President Garfield's death and another one in favor of a railroad commission, which was added to the report of the committee on the motion of a delegate, the platform is scarcely above the ordinary routine standard. The resolution on civil-service reform, instead of being outspoken and specific in its propositions and demands, virtually refers the whole subject to President Arthur for his kind consideration, simply assuring him that if he sees fit to do anything in that line, the Republicans of New York will stand by him. We will not say that the committee which drew up and reported this resolution meant to trifle with the subject, but if it intended to say and do anything for a real reform of the civil service, it was singularly unfortunate in expressing its sentiments. A simple statement of the moral of President Garfield's death would have been very much more pointed and effective. Had the leaders of the majority made this Convention the starting point of a general crusade against the spoils system instead of being satisfied with the destruction of one of its excrescences, they would have made a far deeper impression upon the popular mind and imparted a living and moving interest to the campaign, the lack of which will perhaps be severely felt.

The failure of the resolution entrusting the State Committee with the reorganization of the party in this city and Kings county is not only a lamentable thing in itself, but it puts the leaders of the majority in an almost ludicrous light. The resolution was one of those reported by the Platform Committee. A well-known member of the Machine promptly moved that its consideration be postponed until after the nomination of candidates for the State offices. The purpose of this motion must have been clear to anybody who has ever watched the proceedings of a convention. It is a well-known experience that when the main business is done the delegates become impatient to go home, and the most important things sometimes fail to arrest their attention. But nobody attempted to stop this trick of the Machine men, which was as successful as they expected. Mr. George Bliss was even permitted to put forth, without a word in reply, the astounding assertion that the increase of the Republican vote in this city at the Presidential election last autumn was owing to the efficiency of the district organizations governed by the "Mike" Cregans, the "Jake" Pattersons, and the like. However, in this way the much-needed reorganization of the Republican party in this city was defeated by a majority of five votes, the Machine men raised a shout of triumph, and the rotten boroughs will flourish a while longer, until the reform of party organization is taken in hand by committees of the most respected citizens, and until the leaders of the anti-Machine Republicans in conventions will have learned how to be vigilant and how to use the advantages of a majority. On the whole, this Convention may be looked upon as a forward step, but there is still much more to do.

That the "Stalwarts" were greatly displeased, and that some of them should have indulged in little exhibitions of a soured temper in talk and manner when the control of the Republican party had passed from their hands, is but natural. Such personal demonstrations of disappointment may continue for a little while, as they are apt to do after almost every party convention in which one set of politicians gets the better of another set. But they are not likely to continue very long or to spread very far; and if there be any Democrats who count upon deep and fierce dissensions in the Republican ranks as an element of Democratic strength, they will probably find themselves mistaken. Even if Mr. Conkling himself desired the defeat of the Republican candidates, of which there is a possibility but no evidence, his influence upon the Stalwart hosts, however large or small they may be, will now be vastly inferior to that of President Arthur, and it may be taken for granted that the latter cannot possibly desire a Republican defeat in New York this autumn. The strongest leading influences on the Stalwart side will therefore be in favor of the ticket nominated by the late Convention.

Nor is the Stalwart mind likely to be impressed by the idea that a defeat under the leadership of the anti-Stalwart Republicans would ultimately strengthen their side again. All they might hope to accomplish by such a defeat is to show that they are strong enough, by refusing their active support, to prevent the success of Republican candidates whom they dislike. But in this way they have nothing to gain. If they try it and fail, it will be a crushing demonstration of their own weakness. If they try it and succeed, they will lose their only political capital, which consists in party fidelity. The time is past when they might in such a way persuade the Republican party of this State that victory is possible only with Stalwart leadership, and that therefore the staff of command must be restored to them. The only effect they could produce would be to provoke retaliation, and thus cut off all their own personal hopes for the future; for if the Stalwarts are strong enough to defeat anti-Stalwart candidates, the anti-Stalwarts, with their superiority in popular strength, will certainly be able to defeat Stalwart candidates. It is, therefore, not probable that the Stalwart politicians, who are no sluggards when their own interests are involved, will now do anything to make themselves in any way responsible for a defeat of the Republican party.

But there is danger in another direction. It has been remarked that this year's campaign in Ohio is without spirit and interest; that people will not turn out to attend public meetings, and that the demonstrations attempted are tame and profitless. The same thing is observed in other States. The reason for this is not to be found only in the universal mourning for President Garfield: the people do not take any interest in the campaigns because there are no subjects under discussion which arouse the popular interest. When the question of specie payments was before the people nothing could surpass the spirit and energy of a campaign in Ohio. People would attend meetings every day in the week. So it was all over the country during the last Presidential campaign, when the relation of politics to the prosperity of the country was an absorbing theme. But there is no question of similar interest called up for discussion now, and most people are heartily tired of the old ding-dong about the infinite goodness of one party and the infinite badness of the other. When an election signifies nothing more to the mind of the ordinary citizen than the question whether Jones or Smith is to be Secretary of State, the ordinary citizen is very apt to content himself with the belief that Jones and Smith are both respectable men, and that the republic will not be imperilled by the triumph or defeat of either. The campaign in this State will be virtually in this condition, and, as experience shows, the Republicans usually suffer most from such apathy. The only public topic which has of late been engaging the popular mind and an earnest discussion of which might arouse the interest of the masses, is that of civil-service reform. But since the Republican Convention contented itself with referring that whole subject to the discretion of President Arthur, who, with all the good qualities he possesses, has so far not been known as a friend of a systematic civil-service reform, no practical issue is furnished by the party. While we might make a fit subject of discussion before the people what the President ought to do, we can scarcely argue the question what he is probably going to do so that the Republicans of New York may support him in it. It may turn out that the "practical politicians" who made the platform missed their

chance in this respect. It has not unfrequently been observed that the "doctrinaires" are, under such circumstances, apt to be more practical. But while the want or rather the throwing away of an interesting issue will be unfavorable to the Republicans, we shall not at all be surprised to see the Democrats throw away their advantages by a new, or rather a continuation of the old, quarrel among themselves.

MR. GEORGE BLISS AND REPUBLICAN REORGANIZATION.

Mr. George Bliss is a person who excites a good deal of hostility, for one reason or another, but he enjoys one great advantage over his enemies in that they never know where to find him. The whereabouts of the "little joker" at the fair is not more uncertain to the innocent rustic gambler than Mr. Bliss's political position in any particular month of the year to those desirous either of acting with him or against him. Sometimes he is for reform and sometimes for things as they are, but there are no outward signs by which his exact attitude towards either reform or abuse can be ascertained at any particular moment. There are, of course, laws which govern his motions as the motions of all other created bodies, but nobody knows them but himself, and all questioning about them he resents fiercely.

The Republican party in this city was reorganized in 1871, by Mr. Jackson S. Schultz and Mr. William Orton. Mr. Bliss has since acknowledged that when this reorganization was effected in that year, Mr. Schultz said in his presence, and he concurred, "that the usefulness of the reorganization therein established would not last more than ten years, for the reason that everything degenerates in New York, and nothing so fast as political organization." Nevertheless, after it had been in operation for four years, Mr. Bliss, in a letter to the *Nation* (September 7, 1876), gave this account of the primaries:

> "Since I have had any influence in such matters, I have attended no primary at which there was even an accusation of unfair dealing. In the district in which I reside, which is the only one in which I ever attended a primary, I have procured the adoption of a practice which does away with all secret or close caucuses. Every member of the association is invited to every caucus, and can make himself heard.
>
> "No Republican has, to my knowledge, ever been refused admission to the association. From the indefiniteness of your word 'fixing,' I can only meet it by repeating that neither in primary, caucus, nor convention have I ever been concerned in anything which prevented, or was intended to prevent, the fair expression of the views and wishes of all. I have usually had my own candidates and my own opinions, and have urged the one and expressed the other freely. Sometimes I have succeeded and sometimes I have been beaten. When overruled I have concluded I was wrong, for, not being the editor of a weekly reform newspaper, I have never claimed omniscience. I may add I do not believe that Republican caucuses or primaries or conventions in this city are often 'fixed,' if by that you mean the prevention of the fair expression of opinion."

This is plain enough. He considered the system a great success, and saw no signs of the degeneration he had anticipated. Three years later—in 1879—however, he wrote another letter about it, this time to General Arthur, in which he said that of the 13,355 names on the rolls of the District Associations, nearly half were those of dead men, of men who had removed, and of men who had turned Democrats. "Not six thousand," said he, "should be there." The rolls, too, were full of the names of avowed Democrats, kept there by the managers to perpetuate their control of the Associations. "Desirable members, good Republicans," he added, "were excluded," "sometimes by direct rejection, but oftener by a refusal to act on the names presented, by hanging them up in a committee which never reports." Mr. Bliss then described the other tricks of the "inspectors" and the "henchmen," and wound up with a most dismal wail of despair. "He had tried," he said, "in vain, in his weak way, to bring about that reform from within which he believed to be essential to the usefulness or long continuance of the organization," but "had accomplished little except to receive the sneers and slurs of those who glory in fraud because they profit by it, and whose approval is a disgrace to any honorable man."

We presume there was hardly a reform eye in New York which did not drop what the Colorado man called a "good square tear" over this modest picture of Mr. Bliss's exertions, sacrifices, and final collapse. There was nothing left him in 1879 to boast of, as the result of his toils, but the hatred of the wicked, which is always an unsubstantial trophy. The degeneration predicted by Mr. Schultz had clearly gone far, and the end was near. The period of ten years expires this year, and we thought the time for reorganization had come, and that Mr. Bliss would lead the demand for it in the late Convention.

It now appears that in spite of long and careful observation we little knew our man. He appeared at the Convention as the opponent of reorganization. Moreover, he justifies his conduct in a letter to Tuesday's *Times*, in which he maintains, not that the process of degeneration has been arrested, but apparently that there never was any degeneration at all. The pea is not only not under the thimble we have selected, but it never was under it. Indeed, he does not know what we mean by thimble. Within two years he has heard of no "new flagrant case of abuse." Moreover, although the proportion of the Republicans of the city who take part in the primaries is small, it is, he says, as large as the proportion in the country. Finally, the reason why there are so few names on the rolls is that "you can't get the bulk of the Republicans to take part in any permanent organization," so he does not want any reorganization. The present organization is good enough, he says, for any little reform that may be needed, and he intimates that, if it does not effect it, at some future time—which he is careful not to fix—he will join in asking for the intervention of the State Convention.

What it is which has arrested the process of degeneration described by our erratic friend in 1879, and brought back the halcyon days of 1876, and which has converted Mr. Bliss from a broken-hearted martyr into a smug and satisfied manager, we do not profess to know. It can hardly be any purely human agency. But we would warn those who think they may count on having Mr. Bliss's support in seeking reorganization some time or other, not to be too confident, for it is all but certain that his time will not be their time, and that when they call on him he will give his opinion of them in language, as the reporters say, "the reverse of complimentary."

THE TREASURY AND THE MONEY MARKET.

The present stringency in the money market is due in part undoubtedly to the operations of the Treasury, whereby several millions of dollars have been temporarily locked up to meet the December call for bonds to be redeemed. Inasmuch as these calls and withdrawals of loanable funds are frequent, and as they generally produce an artificial stringency, the question is asked whether means cannot be devised to take the Treasury out of the money market altogether. Too much power and responsibility are lodged in the hands of the Secretary under existing law and practice. Under present arrangements money comes into the Treasury much faster than it goes out in the course of ordinary disbursement. Consequently it becomes necessary to make extraordinary disbursements—that is, to buy in or redeem portions of the public debt from time to time with the surplus The amounts and times of redemption are purely arbitrary, within the limits of the Secretary's available means. Consequently the money market is exposed to occasional jerks and spasms, and the Secretary himself, however unquestionable may be the rectitude of his conduct, is exposed to the suspicion of improper motives, for it would be quite within his power to put the prices of securities and of many staple articles up or down at his will. No such suspicion has attached to Secretary Windom, but the purest man in the world could not escape it forever if, as is sure to happen, some men were enriched and others impoverished as incidents of his official action. It is needless to add that a dishonest Secretary could do an immense amount of mischief without much danger of legal detection.

It is an axiom of fiscal science that the public treasury should meddle not at all with private business. It should operate neither for nor against any class of citizens. It does operate against some and in favor of others when, voluntarily or involuntarily, it takes out of the common stock of trade more money than it has immediate use for. Very likely its influence at the present time has been exaggerated, but it ought not to exist at all. The fault is in the law, or in the absence of law, regulating specifically the method of applying the surplus revenues to the extinguishment of the public debt.

There are two ways of meeting the difficulty. One is to repeal taxes and stop the flow of money into the Treasury beyond the amount needed for the ordinary expenses of the Government. This would put an end to the process of national debt-paying, and would run counter to public opinion on that subject, and would be unwise financially as well as politically. The other way is to establish by law a mode of redeeming the public debt with surplus revenues, which shall conform to Adam Smith's first axiom of taxation—viz., to take out and keep out of the pockets of the people as little as possible. Secretary Win-

dom's success in dealing with the extended 6s and 5s has put $588,000,000 of bonds within reach of the Government at any time. No holder of any of these securities can complain if his bond is drawn by lot and paid off. It has been customary to give two or three months' notice of intention to redeem bonds, but the length of the notice is discretionary. There is no reason for waiting till ten or twelve millions of money is drained out of the channels of trade and then waiting ninety days more to send it back. The ordinary operations of the Treasury—*i. e.*, the accumulations of money for pensions and interest and other regular disbursements—are in themselves sufficiently obstructive to business, as has been shown by a careful analysis in the current number of the *International Review*. But since we have no fiscal agency like the Bank of England to take charge of all Government collections and pay all Government dues—whereby the Government's money is never out of the money market although always on hand when required—we must make shift to put up with this inconvenience. But there is no valid excuse for jerking the money market by successive pulls of ten million dollars. It is not merely "Wall street" that is affected, but every trade centre in the United States, besides many important ones in Europe. To provide means for disbursing the surplus revenues by small instalments and at frequent intervals, is a mere matter of detail. Secretary Windom can add to his renown by making suggestions to this end in his forthcoming report to Congress.

WILL WIMBLES.

Mr. Thomas Hughes's attempt to provide a refuge in Tennessee for the large class of young Englishmen whom he calls "Will Wimbles," after one of Sir Roger de Coverley's friends in Addison's *Spectator*, is said to be a failure, owing mainly to the poverty of the land and the remoteness of the markets. An acute writer in the *Pall Mall Gazette* maintains that there is another and more potent cause to be found in the quality of the Will Wimbles. The Will Wimbles are the young men who are educated in the public schools and Universities, or at least in the public schools, and are turned out into the world between eighteen and twenty-one, without any special training whatever, but with the manners and instincts of gentlemen, and with entire willingness to take to any calling but the lower walks of "trade." The great body of them are the sons of middle-class parents, clergymen, doctors, lawyers, and small squires, whose means are very moderate, and who have to submit to more or less privation in order to send their sons to the public schools at all. They do it in order to launch them in the world unmistakably in the gentle class, and in order to enable them to form their first social relations in that class. Unfortunately, however, as the writer in the *Pall Mall Gazette* points out, the tone and temper of the public schools, and their way of looking at life, are the products of a vague but none the less powerful assumption that every boy is the son of a man with about five thousand pounds a year. The whole atmosphere of the school is permeated with this assumption. The boys' code of manners is formed in it. Their intercourse with each other is more or less influenced by it, and they all look out on the world up to their last day at school with the eyes of youths whose home is a well-equipped manor-house surrounded by a prosperous estate.

The love of the middle-class Englishman of every age for this point of view is curiously exemplified in the social articles not only in the "society papers," properly so called, but in the *Saturday Review*. The troubles and perplexities and minor disappointments of life form a favorite topic with the writer of the "sub-leaders" in this last-named paper, but they are always of the troubles, perplexities, and disappointments of a landed gentleman who keeps hunters, and has a stud groom and extensive covers. He hardly ever examines the state of mind of any one less well-to-do than a younger son whose means only allow him to hunt two days in a week instead of six, and who has to rely on invitations for his shooting. These and their sisters, cousins, and aunts, apparently form the reviewer's entire world, and the only world in which there are any social phenomena worth discussion. It is, in other words, a world made up exclusively of "gentlemen," and of the persons, male and female, who wait upon them. Its sorrows are the sorrows of gentlemen, and arise mostly out of the failure of some amusement, or the loss of the money with which amusements are provided, the missing of some social distinction, or the misconduct of "upper servants." It is, however, really the only world that the English public-school boy or University man sees, or hears of, or thinks about while *in statu pupillari*. This is true, let his own home be never so modest, or the sacrifices made by his father to secure him the fashionable curriculum be never so painful. The result is, of course, that when his "education" is finished, he is really only prepared for what is technically called a gentleman's life. He has only thought of certain employments as possible to him, and all these are exceedingly hard to get. The manners of the great bulk of mankind, too, are more or less repulsive to him, and so is a good deal of the popular morality. In short, he is turned out a Will Wimble—or in other words, a good-hearted, kindly, gentlemanly, honorable fellow, who is, however, entirely unfitted for the social *milieu* in which he must not only live, but make a living.

Mr. Hughes's idea has been that though he dislikes trade, and is a little too nice for it as now carried on, at least on the retail side, he has an innate liking and readiness for agriculture, and that if enabled to till the soil under pleasant, or at least not too novel, social conditions, he would do it successfully. Out of this the Rugby, Tennessee, experiment has grown, and if it has not actually failed, as some say, it is certainly too early to pronounce it a success. At all events, the signs that it is going to fail are numerous. Among them is the deep disappointment of the settlers, few of whom probably realized not only the monotony and drudgery of labor in the fields—these things can be borne by men with stout hearts and strong arms—but its effect in unfitting a man for any kind of amusement. There has been much delusion on this subject in this country, where far more is known by the reading class about all kinds of manual labor than is known in England. The possibility of working hard in the fields and keeping up at the same time some process of intellectual culture, has been much preached among us both by educational projectors and social reformers, though nearly every man who listens to them here knows the effect of physical toil in the open air in producing sleepiness and mental inertness. It is not surprising, therefore, that it should find ready acceptance in England among people who think ability to bear a hard day on the moors after grouse, or a long run in the saddle after the hounds, argues capacity to hoe potatoes or corn for twelve hours, and settle down in the evening, after a bath and a good dinner, to Dante, or Wallace, or Huxley.

Will Wimbles are much less common among us than in England. We fortunately have not a dozen great endowments used in turning them out, or a large and rich society occupied in spreading the gentlemanly view of life. But they, nevertheless, are more numerous than is altogether pleasant. The difficulty which our college graduate experiences in getting room for what the newspapers call his "bark" on the stream of life, is one of the standing jokes of our light literature. We have no schools which take the place of the English public schools in our scheme of education. But the view of life which prevails in the English public schools, and turns out the Will Wimbles, is more or less prevalent in our colleges, and tends to spread as the wealth of the class which sends its boys to college increases. In other words, colleges are to a much greater extent than they used to be places in which social relations are formed, rather than places of preparation for the active work of life. This last character, indeed, they almost wholly lost when they ceased to have the training of ministers as their main function. Scarcely any man who can afford it now likes to refuse his son a college education if the boy wants it; but probably not one boy in one thousand can say, five years after graduating, that he has been helped by his college education in making his start in life. It may have been never so useful to him as a means of moral and intellectual culture, but it has not helped to adapt him to the environment in which he has to live and work; or, in other words, to a world in which not one man in a hundred thousand has either the manners or cultivation of a gentleman, or changes his shirt more than once a week, or eats with a fork.

College education is prevented from suffering as much from this source in popular estimation in England as it does here, by the fact that, owing to the peculiar political traditions of the country, college-bred men begin life in a large number of cases in possession of great advantages of other kinds, such as hereditary wealth. Here they have almost all to face the world on their own merits, and in so far as they face it feebly or unskilfully their defects

are set down in the popular mind to the fact that they went to college. If the discredit ended here, it would perhaps be of small consequence. But it may be safely said that the college graduate is never seen groping about in a helpless and timid way for "a position," and shrinking from the turmoil and dirt of some walks of life, without spreading among the uncultivated a contempt for culture, and increasing their confidence in the rule of thumb. The mere "going to college" is recognized as a sign of pecuniary ease, and of a desire for social advancement, but not as preparation for the kind of work the bulk of the community is doing, and thus makes mental culture seem less desirable, and cultivated men less potent, especially in politics. The question is a serious one for all colleges, and it is not here only, but in England and France, that it is undergoing grave consideration. In Germany society may be said to have been organized as an appendage to the Universities, but here the Universities are simply appendages to society, which is continually doubting whether their existence can be justified.

THE METROPOLITAN CASINO.

THE Metropolitan Concert Hall, although only a year old, is already interesting as the theatre of several experiments in the way of furnishing a place of popular amusement and recreation. Its history illustrates the difficulties which surround all new attempts of the kind in New York, and at the same time the success it has had shows the opportunities which undoubtedly exist here for the development of new varieties of entertainment. Originally planned as a sort of American beer-garden, the first obstacle it encountered was of a peculiarly American description—an unwillingness on the part of some of the subscribers to permit the sale of beer. They liked the idea of a beer-garden, but they were unalterably opposed to the idea of beer. A temperance beer-garden would have been a curious experiment. It would have been a powerful reminder to the thirsty German of the difference between a race which considers amusement an end in itself, and one which regards it with distrust because it amuses. But it was fated that this should not be. The anti-beer party was left out in the cold, and the concert hall fell into the hands of energetic epicureans thoroughly imbued with European ideas on the subject of pleasure, combined with a spirit of enterprise and innovation purely American. Their idea appears to have been to combine the features of a summer beer-garden with an American restaurant, and in thinking how this might be done they hit upon a novel plan, for which they deserve the everlasting praise of every New Yorker, and which we are convinced has a great future before it—we mean the idea of using the roof of the building as a sort of garden.

Hitherto every attempt at a garden in New York had been a ghastly failure. When any one had undertaken to set up a "garden" he generally utilized a back yard for the purpose, which, being enclosed by high walls, always resembled a cellar with the top taken off much more than anything else, and was totally unventilated, close, hot, and generally damp. There was a shocking garden of this kind in connection with Thomas's old concert hall. There was another in Fifth avenue, a few years ago, which was made to seem all the more like a magnified area by being called a *jardin d'été*. There is another in Twenty-third street, where lofty brick walls surround a space in shape something like a tennis court, and in gloom the bottom of a well. Now all these "gardens" were based on a theory the erroneous nature of which the managers of the Metropolitan Concert Hall were first to perceive. The fact is that the price of ground in New York is so enormous that obtaining any large space for a purpose of this kind is out of the question; and yet for a real garden this is absolutely essential. It is economically impossible that the same space should not be turned to a far more profitable account by being built over. Hence the only available spaces for "gardens" are just those spaces which are of least use for such a purpose—little bits of land in the rear of buildings, which cannot very well be built on without making the front building inconvenient—or, in other words, the back yards.

But there is one place which is always accessible, always exposed to the air, always free from surrounding walls, and always cheap. The roof in a city like New York is obviously destined to take the place which in other cities is occupied by gardens on the surface of the ground. It rains very little in New York in summer, and there are few cities in the world where the atmosphere on the level of the street is more unendurable. There is everything in favor of the roof, and nothing to be said against it except that it has not been sufficiently introduced to make the idea familiar. Prejudice is the hardest thing in the world to root out, and it must be confessed that the Anglo-Saxon has a prejudice against the roof, simply for the reason that hitherto in Anglo-Saxendom, the roof has not been utilized in the way we suggest. The founders of the Metropolitan Concert Hall, however, were unprejudiced men, and they determined to make the idea of frequenting and using the roof familiar to everybody. The only mistake they made, it seems to us, was that they did not carry it far enough; they constructed a roof round their building, like an uncovered veranda, and the fundamental correctness of this theory has often been proved on warm evenings, when the interior of the building was nearly empty and the roof thronged with a crowd of people altogether too numerous for it. If they had taken the entire roof, it would have been crowded. The Metropolitan Concert Hall has already proved that the roof theory is right, and if you adopt it, you clearly cannot have too much roof. When we think of the enormous amount of roof space in New York, of the almost universal use of elevators, and the erection of taller and taller buildings, it is impossible to avoid the conclusion that we are on the eve of a great development in the use of the roof as the American substitute for the European garden.

The Metropolitan Concert Hall, having developed the idea of the roof, has now undertaken another experiment, which is as yet perhaps in too early a stage to admit of any very confident prediction as to its success. The plan seems to be to make it into a place of amusement for the winter, combining the features of a vaudeville theatre with a *café chantant*—a place where you can amuse yourself by listening to music, or dine, or smoke, or talk. It is curious that there are no places of this sort in New York, except the German beer-gardens, in which, however, you have only instrumental music. The American theatres which attempt this kind of thing are of a very low order—theatres in which the line between the audience and the performers is not drawn as strictly as it would be at legitimate theatres, and where the vulgarity of the performance makes it utterly uninteresting to persons of cultivation and refinement. To go from the legitimate theatres to these places of amusement suggests the reflection that there is as yet no half-way place with Americans between the stiff and the disreputable; no such thing as careless ease and the harmless pursuit of unconventional amusement. The attempt of the new management at the Metropolitan Concert Hall to occupy this ground will therefore be watched with interest. But the performance on Monday night made the success of the experiment seem still problematical. The place has been converted into a theatre, and a well-known company opened it that night with "Olivette." Of the performance little need be said. "Olivette" and the "Mascotte" occupy at present in the operatic world much the same position that "Pinafore" did a few years since. That is to say, a manager who cannot get up an "Olivette" or "Mascotte" is not worth his salt. The airs are all familiar to the public, and the more familiar they become, the better they seem to be liked. Miss Catherine Lewis, who took the part of *Olivette*, is a favorite with the New York public, and was received by a crowded house with great applause. Her voice has improved within the last two years, and her singing of the "I will obey" song in the second act was as good as anything of the kind we have heard off the French stage. Mr. Howson, who took the part of *Merrimac*, has a great reputation as a humorist of the true English school, and achieves marked hits by extraordinary faces, sudden changes of voice, and a very stiff leg. The choruses were good, and Mr. Paxton's singing of *Valentine's* part was so ludicrously bad that it caused almost an uproar of amusement. But the most noticeable thing about the performance was that after all it was just such an evening's entertainment as might have been had at any other theatre. A stage has taken the place of the restaurant, and the main hall has been filled with long rows of chairs, as any concert hall or theatre is filled. In the rear, under the galleries, and in the boxes up-stairs, people sat at tables, drank beer, ate ices, smoked, and talked. Opposite the stage on the second floor was the restaurant, where people seemed to be actively dining all the evening. But notwithstanding all this the place could hardly be said to be a *café chantant*, any more than Booth's or Daly's. It is a theatre surrounded by a very large café. The two are entirely distinct. As long as you are in the theatre there is nothing either on the stage or in the audience to distinguish the entertainment from any other theatrical performance. The moment you leave the theatre you get into a café, where you look at the performance from a distance, much as you might from the street. The plan has this to recommend it, that you can get away from the theatre without going into the street, but the formality which reigns in the body of the hall is complete; we did not observe a single person get up and leave his seat, except during the *entr'actes*. On the whole, the Metropolitan Casino can hardly as yet be said to have provided New York with a *café chantant* or a vaudeville theatre. It is something different from these, as it is from a beer-garden. Whether it will prove a successful American substitute for all three remains to be seen.

GARFIELD IN LONDON.

LONDON, September 26, 1881.

WE are prone to call ourselves a cynical generation, and to affirm that the worthier qualities of human nature are not much in demand, nor even in great repute. But the effect of President

Garfield's death has been to quash the significance of this jaunty attitude. History holds no record of any scamp, however successful, any demagogue, however blatant, or any complying rogue, however serviceable, whose death has made any memorable ripple on the surface of events. The touch of death has the magic power which either transmutes the man into gold or reveals his essential dross. We look upon Garfield as a hero; and certainly, if any man's claim to the title be valid, his is so. But his heroism consists not in his being above or outside of human nature, but in his being more fully than most men within it. Whatever elements were great in him exist in their germ at least in all men—even in him whose dreary fate it was to be his murderer. And the use which he served to mankind lay not in the practical work he did or might have done, but in the timely indication he gave of the power and possibilities of human virtue. Men who live active lives know how hard it is to be just where injustice is so easy; to be honest where dishonesty is so profitable; and to show moral courage where poltroonery is so fashionable and conciliating. It is the justice, the honesty, and the courage of Garfield—not his ability—that make his memory precious. Because he lived as he lived, and died as he died, it will henceforth be less easy than it was for immorality to appear respectable; and the good that is latent in the race will receive a new impulse and development. The hearty simplicity and kindliness of his disposition, not less than the long duration of his suffering, have vastly multiplied the numbers of those who sympathize with our country's loss. The extent and vitality of that sympathy have astonished even those who feel it. Such an emotion, coming as it does at a political season so full of sinister omens as the present, when the rulers of Europe are glancing threateningly at one another's throats, may conceivably exercise an influence wider than the immediate cause of it can postulate, and destined to be memorable in the moral history of mankind.

The meeting of Americans in London to do honor to the late President's memory was worth seeing and hearing. Exeter Hall is not, indeed, a place especially suitable for such a gathering; and it was suggested (but too late for the hint to be acted upon) that Saint Paul's Cathedral might have been had for the purpose. But this was a minor matter. The hall, such as it was, was filled to overflowing with upwards of three thousand of our countrymen and women. The seats not having been reserved (except a limited number on the platform), this large audience began to assemble long before the hour appointed for the meeting to be opened; and by half-past three all the seats were occupied. An untoward incident occurred at this time—a personage whose speech seemed to indicate English nationality, and whose appearance and vociferousness suggested intoxication, giving way to his feelings in such a manner as to necessitate the interference of a policeman and summary ejection. What sentiments they were that strove to find utterance through him did not transpire. Except for this the audience remained hushed and undemonstrative until, punctually at four o'clock, Mr. James Russell Lowell appeared and took the chair, supported by General Merritt, Bishop Simpson, Rev. Dr. Channing, Mr. Moncure D. Conway, Mr. J. S. Morgan, and others. Mr. Lowell's opening address was in every respect worthy of the deep attention and appreciation with which it was listened to. The American Minister's voice is clear, penetrating, and of measured and just intonation; his language is not more scholarly than it is simple and eloquent. It is not often that a man whose eminence has been attained in other ways has shown so singular a command of the resources of oratory. It was gratifying to see—and the spectacle is not a common one—a man in every way fitted to be the leader and mouthpiece of a great assemblage, acting in that capacity. In Mr. Lowell's position speechmaking is a constant necessity, and the difficulty of saying the right thing at the right time and place is much enhanced by the frequency of the demand. Uniformly felicitous and weighty as he is, however, Mr. Lowell was perhaps never so much so as on this occasion. Deliberate rather than impulsive in manner, and never allowing himself to be carried away by his subject, his every word nevertheless carried the impress of deep sincerity and cordial sentiment, and the impression which he produced of holding power in reserve augmented the effect of all he uttered. The substance of what he said will already have been made known to American readers, and the reports in English newspapers were unusually accurate. It is my object to touch only upon such points of these events as are not likely to find mention elsewhere. A noteworthy feature of his, and of all the addresses delivered on that afternoon, was the quick responsiveness of the audience. It is now many years since the present writer has had an opportunity of mingling with an assemblage of his countrymen; and this sensitiveness of apprehension and recognition, so much more marked than would be the case in a similar collection of Englishmen, strongly impressed him. The sympathies of English people may be as deep as our own, but a certain coldness and stiffness of temperament prevents their giving it adequate expression.

Mr. Lowell was followed by General Merritt, who spoke with manifest emotion; and his speech made its mark, though something seemed to be amiss with his quotation of President Garfield's words during the excitement and consternation following the assassination of Lincoln: "Fellow-citizens, God reigns, and the Government at Washington lives!" No doubt Garfield expressed in some way the truth that "God and the Continental Congress" would not leave the nation in the lurch; but it appears possible that he may have put it in a way less open to the charge of anti-climax. Bishop Simpson's address was full of eloquence of a picturesque type which recalls the earlier and simpler days of the Republic. His voice has the undisguised American intonation which falls so pleasantly on the ear after a lengthened experience of English Parliamentary utterance; and he had the true orator's faculty of perceiving what the audience wished to hear, and saying it with all his heart. His allusion to Queen Victoria called forth a spontaneous and unpremeditated burst of enthusiasm, the like of which is not often seen anywhere. "The Queen of the greatest empire on the earth," he said, "drops a tear beside his widow, and lays a wreath upon his tomb." This sentence was received with cheers; but when the Bishop continued, raising his arms and speaking with great energy, "God bless Queen Victoria for her womanly sympathy and queenly courtesy!" many persons in different parts of the hall started from their seats, and in another moment the whole audience rose in a mass, and cheered repeatedly with all the strength of their lungs. It was a spectacle not easily to be forgotten. And, indeed, the Queen has fully merited the affectionate recognition which she is now receiving from Americans. Her telegram to Mrs. Garfield, her wreath of flowers for his coffin, and her decree of a week's mourning for the President, are evidences of tender sympathy which are only less royal and English than they are human and feminine. But the whole state of feeling created by this tragedy of ours is novel and wonderful, and kindles hopes which outweigh the fears that anarchy and tyranny arouse.

Bishop Simpson drew forth tears from many of his hearers when he told how the President's mother, on hearing of his assassination, cried out: "How could any one be so cruel and so wicked as to kill my baby!" As Mr. Lowell had already expressed it, it was all so human! The formalities and conventionalities of mankind are of great practical convenience, but they do nothing to promote the feeling of brotherhood between men and nations. On occasions like this they appear in the light of very flimsy rags indeed, and the strange fact that all men alike love good and hate evil comes into unsuspected prominence. I have not space to touch upon the remarks made by Channing and Conway, nor to describe the scene on Monday evening, in the church of St. Martin's-in-the-fields, when the Archbishop of Canterbury delivered a touching and eloquent address before a truly gigantic congregation. All England has been in mourning to-day, and we have not yet seen the result in which these things may issue. J. H.

PRUSSIA'S REPRESENTATIVES AT YORKTOWN.

BERLIN, September 24, 1881.

HERR VON SCHLOEZER, having left Rome on the 18th instant, arrived here on the 20th, conferred with Ministers Puttkamer and Gossler, and on the following day started for Varzin to report to the Chancellor the result of his negotiations. As these have been carried on between the Ambassador and Cardinal Jacobini without the interference or presence of anybody else, as the Papal See knows how to keep its secrets, and as the German negotiator is too obedient a supporter of Bismarck to reveal any of his achievements, if there be any, and too eagerly bent upon obtaining the prize sought for by him, nothing of course has transpired, or for the present will transpire, about the terms on which a settlement has been reached. Whatever the papers, therefore, say about their number and character is mere fiction or guess-work. So much only appears certain from the admissions of our official press that it was Bismarck who almost pressed a German Ministership upon Rome. Schloezer is of course a *persona gratissima* to the Pope. In the only audience which the latter granted him, Leo XIII. expressed his ardent wish to receive him soon as the duly accredited and permanent German Minister. This fact proves that an understanding which promises duration has been brought about between Berlin and Rome, for it cannot be supposed that the old diplomatic relations will be taken up again with the intent of breaking them off at the first opportunity.

It would be preposterous to draw from this speedy settlement of old animosities and conflicts conclusions derogatory to the dignity and authority of the German Government, but I cannot deny that the mere fact of secret agreements makes me rather suspicious. It is not customary for Rome to expedite business with foreign powers, but rather to procrastinate negotiations under all possible pretexts and simulations. This quick conclusion of peace is, in the eyes of all impartial observers, *prima-facie* evidence that something is wrong on Bismarck's side. Another fact which does not augur well for the success of his policy is an article published a few days ago by the *Post*, an official paper, which throws all the blame on the Liberals who left the National Liberal party, the so-called Secessionists, if the Government should fail to reëstablish amicable relations with the Papal See. "By separating from their old friends," it says, "they

weakened the Liberal party and threw the balance of power on the side of the Centre." Now it was Bismarck who at the election of 1878 did all in his power to crush the National Liberals and to strengthen the Conservatives, and it was Bismarck, again, who during the sessions of the last Reichstag made the Centre the most important, if not the decisive party in influence and numbers. The secession, however, took place on August 31, 1880, and can of course not be made responsible for a policy which has preferred Ultramontane help to Liberal co-operation. If Rome thus has an undue influence on the interior policy of Germany, it is the Chancellor who has brought about this anomalous state of things, and it is more than ridiculous to make the Secessionists the scapegoats, if Bismarck should really go to Canossa. He likes parliamentary support when it serves him to cover his acts or shield him from responsibility; but in all other respects he considers it a nuisance, with which a statesman must try to get along as well as he can.

In this regard an anecdote characteristic of the Chancellor has lately been made public by a former deputy by the name of Berger, a Conservative and Protectionist. "In 1877," Herr Berger says, "the Chancellor once told me that constitutional government could only be carried on if, as in England, the Prime Minister were at the same time the leader of the majority in Parliament. I," continues Herr Berger, "objected that only the reverse was correct; that on the contrary in England the leader of the House of Commons was made Minister President. Bismarck replied that we could not transplant to Prussia the half-republican institutions which prevailed in England, because the latter was an island, while Prussia's situation between two great military powers was much more exposed. For this reason," Herr Berger again objected, "a parallel could not be drawn between the two powers, as the conditions of their existence were quite different. Bismarck broke off the conversation with the remark that he wanted a majority like that which Louis Napoleon had had in his Corps Législatif."

The meeting of the Prussian Landtag, if not first that of the Reichstag, will throw official light upon the Chancellor's plans, for as soon as he asks for the salary of his Roman Minister he must explain the views and reasons justifying his demand. It is not yet settled whether the new minister is to be appointed in the name of Germany or Prussia. Bismarck, you know, is Secretary of State of both Governments, and can take his choice. If the impending elections for the Reichstag should result in his favor, he will, I believe, apply to it for funds; if not, he will find a ready instrument in the Landtag, where Ultramontanes and Conservatives always have a compact majority for measures of this character, even if the worst apprehensions, which I cannot yet entertain, should be realized.

The death of President Garfield, although anticipated for several weeks and a relief to the noble sufferer, has been received here with the sincerest regret and the deepest emotion by all classes of society. On the day the news arrived our Foreign Office addressed a note of condolence to the American Chargé d'Affaires, Mr. Everett, and men prominent in science and in politics called at the Legation; moreover, the citizens of the United States residing in Berlin, German-Americans, and Germans are preparing a celebration commemorating the services and merits of the deceased President. What will take place here is announced from other cities, like Hamburg and Bremen, Leipzig and Dresden, Stuttgart and Frankfort. The German newspapers do not look on Mr. Arthur's succession with pessimistic eyes, and on the whole agree with your opinion, that a fair chance ought to be given to the new President, who, they expect, will turn out much better than his reputation while Vice-President. In short, the sympathy of the whole German nation, without a single exception, is now as deep and general as it was sixteen years ago, when Abraham Lincoln fell a victim to the assassin's ball.

Another event which will greatly contribute to strengthen the good feelings between the two countries is the invitation which Secretary Blaine, in the name of your Government, has extended to the namesakes and relatives of Baron Steuben to participate in the centenary celebration of the surrender of Yorktown. As it was the sturdy old General to whom Lord Cornwallis made the first overtures of capitulation, and as the descendants of other prominent actors in that great drama have been invited as guests of the nation, the consideration shown to the Steuben family is a tribute of gratitude which in itself is not extraordinary. It, however, assumes a higher importance from the noble-hearted and appreciative motives with which Secretary Blaine has set forth the disposition of the American people towards Germany and the German-Americans. It is chiefly due to the exertions and tact of your late Berlin Minister, Mr. Andrew D. White, that this flattering testimonial to the services of Baron Steuben has been proffered to his family, and through them to the German people. The original invitation of July 30, having been published by your papers, needs no repetition on my part, but allow me to state the other side of the story, the comment of Prince Bismarck, his report to the Emperor, and the resolution based on that report.

The officers invited are Colonel von Steuben, commander of the Seventy-ninth Regiment (Third Hanoverian), at Hildesheim; Captains von Steuben of the Fourth Regiment of the Guards, at Spandau, and of the Ninety-eighth Infantry, at Brandenburg, and three Lieutenants von Steuben of the Thirty-ninth, Twenty-second, and Seventy-ninth Regiments, sons of the above-named colonel. The Chancellor having been summoned by the Emperor to give his views on the subject, says that in his opinion the invitation is an enviable acknowledgment of the services of a former prominent German officer which cannot be appreciated too highly, and which, in the eyes of the world, adds a new laurel wreath to the previous history of the Prussian army. He especially dwells on the modest manner in which the American Secretary attributes some of the greatest results of the Revolutionary war to the merits of Steuben as a disciplinarian, and compares it with the unjustifiably haughty tone in which almost all Englishmen treat the decisive intervention of the Prussian army in the battle of Waterloo, although it was solely won by the timely participation of old Blücher. The Chancellor therefore most heartily recommends acceptance of the flattering invitation, and giving a furlough to the above officers accordingly. This acceptance would not only please the United States Government, but would at the same time give universal satisfaction to our officers, who piously cherish the traditions of the times of the great Frederic, to whose favorite disciples Steuben had belonged. Besides, he thinks it impossible that the acceptance of the invitation should cause any uneasiness in England, as that country took a lively interest in the Philadelphia Exhibition, which had been expressly held for the centennial celebration of the Declaration of American Independence. Consequently the capture of Yorktown, crowning the efforts of a long war, could not form an exception to the rule which the English Government observed in its relations towards its former colonies.

In keeping with this memorial, the Emperor issued his decree, and expressed his special desire that all the Steubens should go to Yorktown in order to represent there the Prussian army and the whole German Fatherland. Without waiting to be asked for it, he has given an eight weeks' furlough to the above-named six officers, who will sail next week from Bremen for New York. The news of this extraordinary invitation has for several days been the principal subject of talk among our officers. The other day a jovial young captain complained to me that his mother's maiden name was Steuben, but that unfortunately it had not devolved on him, for otherwise he would have made the trip to America with his cousins, which would, of course, have offered him really "feudal" pleasure and "Titanic, glacier-like, pyramidal" enjoyment with those fellows yonder. The Steubens, however, who will be your guests are worthy representatives of our country, and will, I am sure, win the esteem and respect of your people. +++

THE EGYPTIAN CRISIS.

CAIRO, Sept. 20, 1881.

IF the teachings of Oriental history are to be believed, the events of the past week are merely the prelude to a crisis which must form an epoch in Egyptian annals. Aside from purely political reasons, Western influence, enterprise, and management have gained the ascendancy in Egypt with a rapidity utterly incomprehensible to the Turkish and Egyptian officials of the old régime. Although distasteful to many of the native Egyptians, it is this influence alone which distinguishes Egypt from all other Eastern lands, and which promises to rescue her from the blight of Moslem stagnation. When Ismaïl Pasha was deposed, the five great Powers of Europe undertook to make themselves responsible for the good government and administration of Egypt. By the establishment of the Control-System the Powers delegated to England and France the task of enforcing upon Egypt a government compatible with Western progress. The Control-System became a *fait accompli*, and England and France maintained it by holding forth the terrible but vague alternative of some kind of foreign intervention. For two years this was sufficient, but the events of the 9th of September now show that nothing less than military force is competent to support the position which Western civilization has assumed in Egypt; and if England and France find it impracticable to make use of such force, then they must stand aside, relinquish their trust, and together with the other powers play a subordinate rôle in the struggle between the effete and decaying civilization of the Moslem and the progressive and vivifying civilization of the Frank.

Last February an Egyptian regiment, on account of grievances partly imaginary and partly real, revolted, and demanded and obtained the removal of the Minister of War. On September 9 the whole Egyptian army, some nine thousand troops of all arms, surrounded the Palace, and held the Khedive and his ministers prisoners, while Ahmet Bey el Araby, an Egyptian colonel, but the *de facto* dictator of Egypt, sword in hand, demanded the dismissal of the Riaz Ministry, a Constitution and Parliament, and an immediate increase of the army. The first demand was conceded, and the other two were, by mutual consent, referred to the Sultan. For three days all order was paralyzed, and it was impossible to form a new Ministry. At last Sherif Pasha consented to take office, and he is at the present moment doing his best to conciliate all parties, and to act as a stopgap until some permanent arrangement can be arrived at. So long as the

power rests with the army there can be no guarantee for the future. Last February the colonels demanded the dismissal of one unpopular Minister; to-day they demand a total change not only of the Ministry, but of the form of Government; and what may they not demand to-morrow? The situation is most critical, and can only be solved by the complete disbanding of the army—a measure not likely to be agreed to—or by European or Turkish intervention, which is fraught with European complications of the most alarming nature. Well-informed persons feel confident that Araby Bey's action is connected with a great Mohammedan rising in Northern Africa—a movement fomented and directed by certain influential personages in Constantinople; and the *Hedjaz*, a Panislam journal published in Cairo, significantly speaks of Araby Bey as the second Prophet, who is to reëstablish the Arab Khalifate. The same journal warns Europeans not to meddle with the internal affairs of Egypt, and complains of the large number of European employees of the Government. It says if Europeans act badly, Egyptians can act worse, and calls for a radical change in the status of Europeans in Egypt. Since last spring Araby Bey has been in communication with the Bedouin chiefs of Upper Egypt, and it is said that recently he has won over the Bedouins of Lower Egypt also. These Bedouins take no interest in matters at Cairo or Alexandria, but would be only too glad of any opportunity to steal and plunder. They are by no means a tranquillizing element in the problem, and happily there is no immediate fear of their intervention.

Araby Bey is not influenced by personal ambition. He is a fanatic, who knows the Koran by heart, who speaks eloquently, and who feels that he is entrusted with a mission to deliver Egypt from foreign influence. The army obeys him blindly, and believes him to be gifted with divine inspiration. As head of the army, he issued a circular to the foreign consuls on the 9th of September, assuring them that Europeans had no cause for fear. The order and regularity with which the military movements were executed are sufficient evidence of his complete authority.

Correspondence.

MR. PARTON AND HIS PRINTER.

To the Editor of The Nation:

Sir: I am much indebted to you for pointing out my error in the translation of the Latin lines placed by Voltaire over his laboratory at the château of Cirey. The error was egregious, and well deserved rebuke. "Peccus" was an oversight, but this was a deliberate and inexcusable mistake, owing to the rusty condition of my Latin from long disuse. You intimate that the "printer" and the "proof-reader" may be in fault, and should be "sharply looked after." Not so. It is they who looked sharply after me, and enabled me to produce the 'Life of Voltaire' reasonably free from verbal mistakes. The critics have corrected several errors, for which I thank them; but my vigilant proof-reader of the Riverside Press saved me from many more.

Respectfully yours,

James Parton.

Newburyport, Mass., Oct. 8, 1881.

MANLY AND WOMANLY BEAUTY.

To the Editor of The Nation:

Sir: In the reply of the Editor to "C. D. M." on "The Sexual Theory of Games," in the *Nation* for September 1, you make use of the same argument (fallacious, *me judice*) which women use to explain the generally admitted lower activity of the female intellect, to account for the hypothetical higher perfection of female beauty—*i.e.*, heredity. Will you permit me to question this higher perfection, to begin with, and, even if compelled to yield, on the principle of *de gustibus*, etc., to dispute any such tendency of heredity to develop such supposed difference between the sexes?

Let me, as a traveller who has seen much of the earth's surface and many of the races on it, state the result of my experience in the matter of the relative beauty of the sexes—viz., that the higher the civilization, and the more woman is removed from severe physical effort in her constant occupations, the higher the average of that peculiar type of beauty which we recognize as the "womanly," while that type which we consider the "manly" predominates in races whose lives are passed in vigorous athletic struggle. In certain races manly beauty is far more common than womanly, and *vice versa*, if any common standard of criticism were acknowledged; but I apprehend that when we consult women we shall find that the manly type is ranked higher, and with men the womanly type will be. At any rate, I remember that one of the most remarkable women I have known for subtlety of thought and critical faculty, when I asked her which type of beauty she regarded as the higher, replied that she did not regard women as really beautiful—she reserved the epithet for men. We must bear this distinction in mind, though the accepted nomenclature of æsthetics does not define it. I deny, therefore, that woman has a "superior beauty"; and if the two types are to be taken together, I deny equally that as a general rule women have a higher average of the quality than men. On the contrary, possibly owing to the fact that men are freer to follow their normal lives, I have found that in a majority of the countries I have visited there are more handsome men than beautiful women. This is peculiarly the case with the modern Greek, and was, if antique sculpture could be accepted as witness, with the ancient.

But supposing that the fact of superior beauty were admitted, it cannot be accounted for on the grounds you suppose. As in the case of explaining the intellectual inferiority of women by heredity and the generations of lower culture, you assume that nature has two processes of development for the two sexes, whereas the functions of father and mother in the process of reproduction are precisely the same for son or daughter, and the inheritance, whether it come by "tissue" or mental communication, is precisely the same in both cases. The daughter inherits just as much from the father as the son does, though to hear the champions of woman's "equality" we should imagine that the women had had for some generations sires of their own sex, or that nature had provided some way of imparting the father's brain tissue alone to sons, and the mother's to the daughters. The fact is that, whether in reference to beauty or intellect, there is no such distinction as a diverse sexual *heredity* would imply: a beautiful daughter as often derives her beauty from the father as from the mother, and so of a handsome son. All we know is that nature is excessively freakish, and that while in some families all the children resemble the father, in others all resemble the mother, and in others still the sons resemble the mother, and the daughters the father; and if the daughter of a talented man is not as intellectual, as a rule, as her brother, it is only because sex in some mysterious way interferes with the development. The most beautiful woman in the circle of my acquaintance resembles her father, and the most beautiful boy I ever saw resembled his mother surprisingly; while, on the other hand, one of the most intellectual men I have known borrowed all his intellectual characteristics from his mother.

But "C. D. M." is utterly wrong, as a matter of fact, in supposing that women have any superiority over men in enjoyment of nature, and particularly in perception of color. Among the women who have most successfully practised art the dominant quality has not been delicacy of perception of color or refinement of treatment—the highest attainment of those qualities invariably belonging to men. And among the whole range of female artists (and we have many here in England) I do not know more than two who have shown the genuine color-feeling in a noteworthy degree. Still more widely is "C. D. M." at variance from the facts, so far as art work shows them, in attributing to women finer perception of forms; for in all women's work the element of form, as elaborated in composition or in ideal form, is rather remarkable for its absence, no woman having ever produced a composition of the highest order, or attained the highest rank in the subtle characterization of form or feature which we find in Chavet, Plassan, Meissonier, Cruikshank, Millet, Raphael, Holbein, Titian, Masaccio, Carpaccio—all varying one from the others, but presenting a collective ideal of refinement of perception and delineation of pure form which no woman has ever approached at any point. In fact, the one quality in which alone woman's art has been excellent is that of sentiment, not perception of any kind: one might say that women do not see, they feel.—Yours truly, W.

London Sept. 22.

[In claiming for man alone that discrimination in sexual selection to which we attributed the superior beauty of women, we were guided rather by a humorous than a serious intention. The question, however, has its serious side, and "W.'s" contribution to it is of interest. We do not propose to discuss the matter here, as that could not be done fully in anything short of a magazine article. It is quite true that the physical and mental characteristics of the parents are often transmitted indiscriminately to their offspring of both sexes. Schopenhauer asserted that children derive their intellectual qualities chiefly from the mother, their character from the father; but in this opinion he was largely influenced by the fact that it was so in his own case. But we know as a fact that among the lower animals beautiful colors and other ornaments are usually transmitted to one sex only. Still, the whole question of heredity is involved in the greatest darkness. Ribot's book left the subject exactly where it had been left by Darwin. We will merely add that Darwin, while admitting that women transmit most of their characters, including some beauty, to the offspring of both sexes, yet remarks: "As women have long been selected for beauty, it is not surprising that some of their successive variations should have been transmitted exclusively to the same sex; consequently, that they should have transmitted beauty in a somewhat higher degree to their female than to their male offspring, and thus have become more beautiful, according to general opinion, than men" ('Descent of Man,' part iii., chap. xx.).—Ed. Nation.]

THE IDEA OF GARFIELD.

To the Editor of The Nation:

Sir: In your editorial in the *Nation* for September 29, entitled "What President Garfield would have done," you say: "If President Arthur, therefore, wishes to carry out either what a mourning people now vaguely think President Garfield would have accomplished, or what his recorded utterances justify us in believing that he would have accomplished, he will not confine himself to imitating what his predecessor actually did during the confusion of the first months of a Presidential term."

The topic of "what his predecessor actually did" you have discussed in a manner which leaves the mind satisfied so far as you go. It is quite probable that you thought of a further item which has occurred to me, but which you may have dismissed as being in your estimation too conjectural. It is this, that President Garfield deliberately played a game with Mr. Conkling, and skilfully beat him. It is known that the ex-Senator resigned because of one of President Garfield's movements—the displacement of Mr. Merritt for Mr. Robertson. Was this a movement designed to drive Mr Conkling into his act of political suicide? I think this theory has confirmation so ample that it may be admitted among the topics that concern the idea of President Garfield. You yourself give Mr. Garfield unqualified praise for the thoroughness of his attainment in reference to his situation. You have asserted that he could have filled any of the departments himself. In this article again you assert, in speaking of what was done in the Treasury and Post-Office departments, that "neither [cabinet officer] could have done the work without the instigation and support of a President who saw the value of it, and could have done it himself if necessary." Thoroughness in the mastery of every situation in which he was placed was a leading trait. As the "raw colonel" he drove the veteran Marshall out of Sandy Valley. At Chickamauga he was the master spirit. When on the Committee of Ways and Means, of Banking and Currency, on Appropriations, and when he was heading the minority, still was he unresting until he was master. And are we not to believe that he made himself master of that situation in which he found himself placed with reference to the spoils system when he came to be President? Did he not take measures to acquaint himself thoroughly with the fortifications of that system? And did he not perceive that the heaviest blow he could strike would consist in his driving Mr. Conkling from his stronghold? Would he not then make Mr. Conkling his study, as he made the regions of Sandy Valley and Chickamauga; or as he made the subjects to which his attention was drawn in Congress?

It is easier to believe this than that he was "overpowered during the canvass and after his inauguration by what seemed to him overwhelming practical considerations, such as the need of some sort of reconciliation and harmony between the leaders of the party which elected him, and the impossibility of bringing this reconciliation and harmony about except in the traditional way of 'recognition' in the distribution of patronage." The practical considerations were weighty. It would have been a dire result, in his view, had he become the agency of disruption in his party. But the man who had already "taken his political life in his hands" was not to be swerved now from honesty, especially since he had made the situation his study, and had discovered the springs of action in the character of Mr. Conkling. President Garfield did not call Mr. Blaine to the chief seat in the Cabinet for the purpose of bringing about "reconciliation and harmony between the leaders of the party which elected him"; he did not do this in the way of "recognition." Was not everybody saying at the time that the call of Mr. Blaine would fail to secure this end? In his secret purpose, thinking his way along, with light dawning on him as he went, independent of popular criticism, sole mover on his side the checkered board, President Garfield checked Mr. Conkling with Mr. Blaine. Players have felt provoked at chess. Senator Conkling was provoked at this game. He had been the autocrat at play before. To meet his equal was an outrage. Angered, he grew confused. Had not President Garfield read this possibility as existing among the qualities of that mind? But this was a check. The next move must be a checkmate. Mr. Conkling must be provoked into greater confusion of mind, to foolish action. The appointment of Mr. Robertson was the move that ended the game. We must grant to President Garfield all this deliberateness of purpose, or else believe in the existence in his character of an element too unnaturally contradictory. He cleared the way of the most formidable obstacle to civil-service reform. In doing so he took the risk of not being understood in case of failure, but he risked his reputation for the sake of the people. If we can let this enter into the idea of the man, let us. A nation needs models. Let us not fail to give a model American the fullest recognition.

W. W. Tufts.

Warwick, Mass., October 3, 1881.

CHANGE OF PUBLIC SENTIMENT IN IRELAND.

To the Editor of The Nation:

Sir: Some phases of the Irish question are difficult to understand, especially by those who are not in the country. The letter of your London correspondent "Y.," in the *Nation* of September 8, contains some very just remarks on the tendency to a change in the views of Englishmen in regard to relations with Ireland. In the din of battle between extremists I think sufficient attention has not been given to the change which is gradually working its way in the minds of moderate and thoughtful Irishmen in regard to the relations of Ireland with Great Britain.

As an Irish-American, during a sojourn of some months in my native country, I have been profoundly struck by the altered tone of old acquaintances, and the deeply-rooted disgust expressed by men who idolized Mr. Gladstone when he was in Opposition, at the course of the Government in consigning Michael Davitt to a convict's cell, and being so ready to resort to coercive in advance of ameliorative legislation. In the freedom of the social circle I have again and again been surprised to find men, who a few years ago scouted the idea of home rule as chimerical, expressing the opinion that British legislation and administration had broken down, and that some radical change was necessary for the welfare of Ireland. The fact is referred to with bitterness that the direct administration of the affairs of Ireland is in the hands of a man who has the support of no section of the Irish people. The people whose opinions I refer to are for the most part Protestants and business men having no interest in land—some of them Quakers. Opinions as to a remedy vary much, and I shall not take up your space with their discussion. What is felt to be wanting is some system or understanding whereby Irish public opinion would be more felt than at present in shaping legislative and administrative measures. I do not find that my friends are much frightened by the suggestion that any concession of partial self-government would almost inevitably lead to such a demand for complete autonomy as would be difficult to resist. Evidently the cry of "Home Rule! Home Rule!" which seemed to settle the question in the minds of most Irish Protestants a few years ago, has lost its terrors. It is seen that in no Catholic country at the present day does Rome rule, and the inference is inevitable that in a self-governed Ireland the influence of the priests would be less than at present. Indeed, in the present land movement the priests have been compelled to follow rather than to lead.

Moreover, the establishment of practical independence in most of the British colonies, and the continued success of constitutional government in France and other countries where the bulk of the people are Catholics, has had a marked effect upon the minds of many Irish Protestants. Even in Ulster there are not wanting indications that the idea of a united and self-governed Ireland is gaining ground, especially among the Protestant youth. The theory so freely put forward by Mr. Gladstone at the time of the disestablishment of the Irish Church and since—that Ireland should be ruled according to Irish ideas—has accustomed people to regard Ireland as a political unit. At the same time, the failure of the Imperial Parliament as an exponent of Irish opinion is more and more manifest.

These are some of the ideas I have found floating on the surface of men's minds here in Ireland. Will they bear fruit? I have purposely avoided reference to the Land-League agitation, because the subject is so vast. It remains to be seen what effect the recent pronouncements of the Land-League Convention, looking to the wholesale spoliation of landlords, will have upon moderate Liberals who have anything to lose, or who believe in fair dealing.

Yours respectfully,

Richard Webb.

Dublin, Sept. 24, 1881.

HOW TO DETECT THE *NATION'S* JOKES.

To the Editor of The Nation:

Sir: I presume that you are heartily sick of the "Flipper Case," but as an old subscriber I feel puzzled by the fact that among your intelligent readers so few can appreciate a joke unless it is labelled. I am afraid that anything like wit will be banished from your pages, and am not willing to accept even successful prediction in its place without a protest. I thought your "Flipper articles" very enjoyable, and at no time supposed that you were assailing the reputation of Col. Shafter.

I am inclined to think that a steady perusal of the political editorials of our extreme party papers, which I suppose are jokes to their authors, but cannot, unfortunately, be detected as such by their readers, together with the implicit belief in them which so many seem to have, totally unfits the mind for any appreciation of satire unless it strikes in accordance with their political creed. That I, a reader of the New York *Tribune*, could understand your joke, is probably due to the fact that I read similar papers of the Democratic faith, and enjoy the jokes in both.—Yours truly, P. B. Spring.

Melson P.O., Talbot Co., Md., Oct. 10, 1881.

Notes.

J. B. Lippincott & Co. have in press the 'Charles Dickens Birthday Book,' being a selection of extracts and original designs by his daughter, Mrs. Perugini; 'The Honey-Ants of the Garden of the Gods, and the Occident Ants of the American Plains,' by Henry C. McCook,

D.D., who has already described the agricultural ant of Texas; and 'Capturing a Locomotive,' an incident of the late war, by the Rev. Wm. Pittenger.——'A History of Rome for Young People,' by W. L. Alden, of the N. Y. *Times;* 'The American Citizen's Manual,' by A. Johnston, author of the 'History of American Politics'; and several novels—'Joseph's Coat,' by David Christie Murray, 'The Vicar's People,' by Geo. M. Fenn, and 'Esau Runswick,' by Katherine S. Macquoid—are announced as forthcoming by G. P. Putnam's Sons.——Mr. Hubert H. Bancroft, whose library of 35,000 volumes relating to the Pacific Coast has been lately transferred to a new fire-proof building, isolated from all others, on Valencia street, San Francisco, will begin publishing next year his 'History of the Pacific States,' including Central America, Mexico, New Mexico and Arizona, California, Utah and Nevada, Oregon, Washington Territory, Idaho and Montana, British Columbia, and Alaska.——Harper & Bros. will shortly have ready the 'Complete Works of Oliver Goldsmith,' in four volumes, edited by Peter Cunningham, and heretofore an exclusively British publication; and a 'History of Educational Theories,' by Oscar Browning.——We have the prospectus of the *Polaris*, "an undenominational, independent weekly journal of sixteen pages," to be published in Portland, Oregon. The singular name appears to have been determined by the fact that Lieut. F. G. Schwatka is among the contributors, and that he is an "Oregon Arctic explorer." This is honoring a prophet in his own country.——'Schwatka's Search: Sledging in the Arctic in Quest of the Franklin Records,' is the title of a work by W. H. Gilder, second in command, to be published by Charles Scribner's Sons.——The *Art Interchange* Publishing Co. has founded a monthly magazine, *Art-Work Manuals*, edited by Mr. Charles G. Leland. This title also is curious, but is explained by the fact that each number is devoted to a single topic, as, Ceramic Painting, Tapestry Painting, Wood Carving, Art Needlework, etc.——No. 12 of the *Bibliographical Contributions* of the Library of Harvard University is occupied with a list of the publications of the University and of its officers during the decade 1870–80. The arrangement of the second part is personal and alphabetical.——Three bulletins have just issued from the U. S. Entomological Commission at Washington, Nos. 4 and 5 being monographs on the Hessian Fly and on the Chinch-bug, by Prof. A. S. Packard, jr., and Dr. Cyrus Thomas, respectively, and having, among other illustrations, maps showing the range of these pests. No. 6 is a welcome and much-needed General Index and Supplement to the nine reports on the Insects of Missouri, by Dr. C. V. Riley. It embraces, besides the index proper, tables of contents to the several reports, errata, the description of new species and varieties, and sundry notes and additions.——The October number of the *Magazine of American History* is wholly devoted to Yorktown, with the usual supply of maps, portraits, and other engravings; and in the current issue of M. Jules Lévy's *Le Français* will be found a genealogical notice of 'Les Lafayette.'——In the same number of *Le Français* M. Alfred Mercier, of New Orleans, announces his intention to publish next month a romance entitled 'Les Saint-Ybars, ou Maîtres et Esclaves en Louisiane,' which ought to furnish an interesting comparison with Mr. Cable's Creole tales.——A genealogical account of the Newhall Family, of Lynn, Mass., a prolific stock, is begun in Vol. xviii., Nos. 1, 2, 3, of the Historical Collections of the Essex Institute.——The Salmagundi Sketch Club will open its fourth annual exhibition of works of art in black and white at the National Academy of Design on Dec. 2, for three weeks. Exhibitors must send their pieces to the rooms of the Club in University Building from Nov. 21 to Nov. 24.——Dietrich Reimer, Berlin, in addition to an earlier good-sized map of the Regency of Tunis, has just issued one on a smaller scale, but more comprehensive, as it embraces also Algeria. It is compiled by Dr. H. Kiepert, which is a guarantee of its being based on the latest and best authorities. B. Westermann & Co. are the American agents for it.

—Feuerbach's 'Essence of Christianity,' written in 1843, and translated in 1854 by George Eliot, then Miss Evans, which has been long out of print, is handsomely republished, without change, by Houghton, Mifflin & Co., in the "English and Foreign Philosophical Library." It is a work which has attracted great attention, and is devoted to the Left-Wing Hegelian or extreme Tübingen argument that Theology is really Anthropology, or that knowledge of God is at bottom self-knowledge. With great patristic learning and more ingenuity, the author seeks to show that the Church fathers shared his insight.——From the same publishing-house, and in the same series, the third and last volume of Lange's 'History of Materialism' has just appeared, six years after the author's death and the publication of the second, greatly revised, edition in German. Lange represents the critical, as Laas does the positivistic, side of the only current of German thought that has sought and found its way through and beyond current materialisms. The former does justice to his theme throughout the wide and diverse fields of physical, natural, ethical, and social science, with surprising knowledge and insight, only to show in the end the untenability of the materialistic hypothesis as commonly conceived. His work is by far the most important contribution yet made to the history of philosophic thought in our own time.——'Anim l Physiology,' for schools, is the title of a unique little book of 112 pages, by J. Milner Fothergill, M.D., just published by G. P. Putnam's Sons. Technical language is discarded, and the "story of the body" is admirably told for children of upper grammar-school grades and higher, with the aid of about sixty well-chosen woodcuts. In gathering his material from the wide fields of anatomy, histology, and hygiene, as well as physiology proper, the writer has shown both tact and knowledge. It is the best primer we have yet seen in this department, and should be the occasion of introducing this study far more widely into our public schools.——The same house has reprinted, in a shape that almost of itself compels reading, the remarkable 'Autobiography of Mark Rutherford, Dissenting Minister,' which was reviewed at some length in No. 831 of the *Nation*.——Björnson's delightful story of 'Arne' has been before the American public in a readable version for a dozen years, and is now retranslated by Prof. Anderson, in the complete edition of the author's works which he has undertaken (Boston: Houghton, Mifflin & Co.). A peculiarity in the present rendering is the reproduction of the interspersed songs in the metre and rhyme of the original; and Prof. Anderson hopes that those who admire them will be tempted to procure his 'Norway Music Album,' in which the music composed for them by Rikard Nordaak is given. It seems a pity that the melodies could not have accompanied the songs in this volume.——Charles Scribner's Sons have materially reduced the price of Mr. F. R. Stockton's 'Roundabout Rambles' and 'Tales Out of School,' two well-known illustrated children's books, among the very best of the class made up *after* the plates instead of before them, and full of humor, fancy, and instruction. They have in press 'The Floating Prince, and Other Fairy Tales,' from the same pen.——The Ticknor & Fields illustrated edition of Thackeray's 'Ballads,' of 1855, has been enlarged beyond the author's original collection, and brought out anew by J. R. Osgood & Co. Time's marks on the stereotyped letter-press are compensated by an elaborate and tasteful binding. The first of these ballads, by the way, the stirring "Chronicle of the Drum," is being honored with a holiday edition by Chas. Scribner's Sons, with the aid of eminent designers and engravers.——Mr. Paul Barron Watson's 'Bibliography of the Pre-Columbian Discoveries of America,' already mentioned in these columns, has been reprinted in a thin quarto by the author, and may be procured of him at 30 Winslow St., Roxbury, Mass.——Harper & Bros. test the popular regard for the poetry of Byron by issuing in their Franklin Square Library the selection recently made by Mr. Matthew Arnold.——Mr. Leypoldt's 'Publishers' Trade-List Annual for 1881' has made its appearance, with the usual catalogues, classified summary, and annual reference-list—a store of bibliographic information.

—The "Committee on Appeal" have issued a circular address to the friends of Swarthmore College, lately destroyed by fire. They state neither the estimated loss nor the insurance on the building, which is to be immediately restored, while temporary arrangements have been made for continuing instruction at Media, two miles distant. They say, however, "a loss of twenty-five thousand dollars will probably be incurred in this year's business; that is, the unavoidable current expenses will, under the circumstances, probably exceed by that amount the current revenue of the year." The committee think that not only this should be met, but the unissued one hundred and sixty thousand dollars of the five hundred thousand dollars of authorized capital stock should be taken, and the endowment fund largely increased. Contributors will have the option of directing their money to the stock, the fund, or the current deficit; and subscriptions may either be paid in cash or in three monthly instalments. The treasurer is Robert Biddle, and checks to his order should be sent to Isaac H. Clothier, No. 801 Market street, Philadelphia, for George L. Maris, clerk of Committee on Appeal.

—Collectors have already begun to bind together the public prints relating to the assassination of President Garfield, and in company with them Mr. Moses King, of Cambridge, has gathered and issued in a thin pamphlet 'The Poets' Tributes to Garfield.' The basis of this collection is a "symposium" got up by the Boston *Globe*, to its own great satisfaction.

"Who could analyze all this? who could formulate a proper interpretation of the symbolic features of this terrible national affliction? Who but the poets? And so we went to the poets, and asked them individually and separately to pass this great mass of undefined sentiment through the crucible of song, and explain to the people the secret of their sorrow. They have done so. . . . The *Globe* has inaugurated a new departure in journalism. We think it will prove beneficial to the public and to the poets."

We have grave doubts as to the benefits of this sort of interviewing, and whatever may befall the public, the poets, we are sure, will suffer by the "new departure." So many great reputations have been damaged by falling—or, as in the case of poets-laureate, by being driven—into the pitfall of "occasional verse," that our native bards may well pray to be delivered from the added temptation of a sensational editor offering to put money in their purses. Both the dozen contributors to the *Globe* and the thirty-odd more spontaneous poets (English and American) whose productions have been subjoined by Mr.

King do nothing to enhance their reputations—where they had any. If we get what we might have expected from Donn Piatt, neither Dr. Holmes, nor Joaquin Miller, nor John Boyle O'Reilly, nor Julia Ward Howe, nor Charlotte Fiske Bates, nor Dr. J. G. Holland, nor Walt Whitman, nor the Harvard class poet, nor the London prize poet, gains by having spoken instead of keeping silent. Almost all the pieces err by being too long; the great majority are so vague as to fit almost any dead hero as well as Garfield, and the range of ideas is extremely limited. That never was there such universal mourning before; that the dead President was a self-made man; that he was a student and bookish; that his taking off unites North and South—these are the chief results of passing a "great mass of undefined sentiment through the crucible of song," and it cannot be said that plain people who have to converse in prose needed this enlightenment as to "the secret of their sorrow." A single poet, we observe, makes allusion to the connection between the President's death and an unreformed civil service. On the whole, we do not know that there is any better verse in this collection than that taken from *Puck*, unfavorable as the conditions may seem to have been; and we shall quote only from the stanzas of Mr. W. D. Kelly in the Boston *Pilot*, who should not be confounded with the great apostle of protection, though more about him we cannot premise:

"The South shall vie in praises with the North,
The East yield not in worship to the West,
But all alike pay homage to his worth
Who, if he failed in some things, stood the test
Of his last, greatest trial, and went forth
Out of his own land, mourned by all the rest."

—Mr. James Jackson, "archiviste bibliothécaire" of the Paris Geographical Society, has issued a new edition of his 'Liste provisoire de bibliographies géographiques spéciales,' increased by diligent researches in American libraries to 1,557 articles, the titles being given with absolute fulness, including even the number of pages, and the author indicates whether he has himself seen the books. (This has been the case with five-sixths of them.) The titles are arranged geographically, and provided with an index of authors, in which great pains have evidently been taken to obtain full Christian names; a list of periodicals; and a list of those works which another person might have classified differently from Mr. Jackson. And all these 340 pages are filled, not with a list of geographical works, but with a list of lists of geographical works! What is the (literary) world coming to? The multiplication of books, which such facts as these indicate, would not be of so much importance if we had as much storage-room as our fathers. But the Great American Desert is filling up, and Africa, which used to have inexhaustible empty space, is now found not to be hollow, and is, moreover, declared by the latest traveller to be "the coming continent." The Arctic and Antarctic regions will soon be the only places left capable of relieving the overflowing book-shelves of the twentieth century, if literature widens and the world narrows in their present increasing ratio.

—Dr. George Grove, who shares with Schumann the honor of having discovered and given to the world many important but forgotten manuscripts of Schubert, has published in the London *Daily News* a letter which seems to establish, on satisfactory evidence, that there must exist somewhere a tenth symphony by this composer; namely, the work which he dedicated in 1826 to the Musik-Verein of Vienna, and which has always been supposed to be the Symphony in C. The question can only be definitively decided by reference to the Society's ledger, where the 100 florins voted to Schubert on this occasion would naturally be entered. The year 1826 is that in which he composed the D minor and G major quartets and the Fantasia Sonata in G, and the new symphony may be expected therefore to be of the same style and excellence as these works. "The B minor Symphony," Dr. Grove continues, "was hidden at Gratz unsuspected till long after his death. The oratorio of 'Lazarus' suddenly made its appearance in 1859, and the complete 'Rosamunde' music, a noble work, was dragged by Mr. Sullivan and myself out of a cupboard in Vienna in 1867 in a huge parcel, an inch thick in dust, which had apparently not been unpacked since the original performance in 1823. I make these facts public in the hope that they may attract the notice of the collectors and musicians of Vienna, who are more interested than any one else in recovering a possible masterpiece of one of their greatest composers."

—The fifty-fourth assembly of German Naturalists and Physicians at Salzburg opened on September 16 with an address by Professor Pettenkofer on the "Soil and its Relations to Health." The professor, who is perhaps the greatest living authority on what might be called meteorological hygiene, prefaced his remarks by saying that the first consideration of air, water, and soil in their sanitary relations dates as far back as Hippocrates—two thousand years ago; but hitherto our hygienic practices have been guided almost entirely by instinct and what is called common sense, and it is only recently that a scientific basis has been secured for them, chiefly through the germ theory of diseases. It has heretofore been assumed that the hygienic condition of the air deserved the first consideration, then that of the water, and finally that of the soil; but it now seems as if this order would have to be reversed. It has been found that there are some cities which enjoy a complete, or almost complete, immunity from certain epidemic diseases, such as cholera. Salzburg is one of these cities and Lyons another. Whenever the cholera makes its appearance in Paris or Marseilles the rich inhabitants go to Lyons, which, although it is situated just between these two centres of infection, remains intact. And it has been proved that this is not due to superior cleanliness, better water, or more favorable atmospheric conditions, as it is only some twenty years since the city was first supplied with filtered Rhone water, while the plateau of Languedoc is not protected, even by the frequent storms that visit it, from the disease. The average rate at which air moves is about three metres a second, and if this air contains in one locality noxious germs which it does not contain in another, they can only be derived from the soil. As the air moves along they disappear through diffusion or dilution just as, in the Seine, which is polluted by the sewage of Paris, no impurities whatever are found at Meulan, a few miles below Paris. As for the water, many cases of infection are known where its agency was strictly excluded, so that, although it would not do to pronounce dogmatically against the water-theory, it must be said that as yet it lacks cogent evidence.

—The influence of the soil in predisposing to disease is also strikingly shown on shipboard, where only those persons who come from certain localities are attacked; so that it is regarded as the best measure for the ship to cut off all communication with the shore at once by going to sea, where the disease as a rule soon disappears, because the ship in itself must be classed among those localities which do not spontaneously breed the disease. Experience has shown that alluvial soil is the favorite resort of certain infectious diseases. This is due to the fact that such soil is very porous and therefore contains a large amount of air, water, and organic material, which conduces to the rapid growth and multiplication of the microscopic bacteria whose introduction in the human system gives rise to disease. The fact that large, heavy buildings are often erected on soil a third of whose volume consists of air, shows that the porosity of the soil is greater than is usually imagined. It shows also the importance of protecting houses from the poisonous germs which are bred in these pores of the soil. In winter and on many summer nights, when the air in our houses is warmer than the ground, the houses act like flues in sucking up the gases contained in it. Pettenkofer regards the system of canalization now adopted in most cities as an important safeguard against danger. The opponents of this system urge that the network of canals can never be made complete and absolutely free from leaks, so that the soil will always be polluted to some extent after all; but the answer to this objection is that so small an amount of pollution is neutralized by the activity of certain kinds of bacteria which act as a sort of scavenger in destroying the noxious bacteria. "These lowest representatives of organic life can therefore be made useful to us, too, and we must not be surprised if in future times the useful bacteria will be actually cultivated and only those that are noxious thwarted in their struggle for existence." This last sentence is the most striking one in the lecture, and one cannot help associating it with the prophecy uttered by Pasteur at the late Medical Congress at London, that the recent discovery that vaccination is useful in several infectious diseases besides smallpox points perhaps to a general law, by which the influence of one kind of microbe may be counteracted by that of another kind.

YORKTOWN.

The Yorktown Campaign and the Surrender of Cornwallis. By Henry P. Johnston. New York: Harper & Brothers, 1881. Large 8vo, pp. 206.

THE appearance of Mr. Johnston's monograph upon the Yorktown campaign and the surrender of Cornwallis is certainly opportune. Published in time for the Yorktown centennial, the work will materially aid in supplying the demand for information concerning the last act of our revolutionary drama. As in novel-reading, so in history, interest usually deepens towards the end of the tale. The *dénouement* at Yorktown will work more powerfully upon the imagination of students than does the formal opening of the plot in Independence Hall. Since the Philadelphia centennial, the history of the American Revolution has been in great part reconstructed. The articles of Mr. Stevens, and of his corps of contributors to the *Magazine of American History*, have placed many old battle-grounds of the Confederation in a much clearer light. Mr. Johnston's illustrated account of Yorktown, while representing his own extensive and original researches, is also the scientific combination of a host of detached studies.

The prelude to the concerted movement of Washington, De Grasse, and Rochambeau in October, 1781, was Lafayette's summer campaign in Virginia. This modern example of Fabian policy, exhibited by an enthusiastic, impulsive Frenchman, scarcely twenty-four years of age, who was matched by his Commander-in-Chief against England's ablest general, the Earl Cornwallis, then a man of forty-three, is graphically described by General Henry B. Carrington in the May number of Mr. Stevens's magazine, and also by Mr. Johnston in the third chapter of his 'Yorktown Campaign.' Lafayette had been sent to Virginia by Washington, with twelve hundred of his choicest Continentals, taken chiefly from New England regiments. With this detachment the glory-seeking La-

fayette was to oppose the inroads of Phillips and Arnold, who had been sent South by Sir Henry Clinton in order to divert Washington from New York to the defence of his own State, and also to support the operations of Cornwallis in North Carolina, where he was supposed to be out-generalling Greene, as he had done Gates at Camden. But the Earl was really doing nothing of the sort. In fact, he had rather the worst of it. Another such victory as that at Guilford Court House, said Fox in the House of Commons, would ruin the British army; and Cornwallis afterwards declared the contest in the Carolinas to be "impracticable against the rebellious inhabitants." He wrote to Phillips that he "was tired of marching about in search of adventures." He wanted to undertake more "solid operations" in Virginia, believing that, if that province could be secured through the aid of uprising Tories, the whole Southern section could be isolated from the final centre of operations about Philadelphia.

The germ of the method of conducting the Yorktown campaign may perhaps be found in Washington's scheme for Lafayette to beleaguer the forces of Arnold upon the shores of the Chesapeake, and, by co-operating with a French fleet, which was to be sent down from Newport under Destouches, to capture the traitor and his army. Arnold took up his position at Portsmouth; Lafayette was ordered to wait at the head of the Chesapeake until the fleet should sail into the bay. But before reaching its destination the French fleet encountered the English, and was so crippled that it was obliged to return to Newport. Thus the scheme of Washington at first miscarried, but in idea the proposed blockade of Portsmouth was a foreshadowing of the siege of Yorktown. Lafayette, with his detachment, was now recalled, but the order was soon countermanded, and he was instructed by Washington to push forward into Virginia and coöperate with Greene in the Southern campaign.

Lafayette, with his eight Massachusetts companies, marched from Baltimore on the 19th of April, 1781—a date already significant, and which has since become still more so in connection with that city. He had been fêted by society there and had obtained abundant supplies. Rich men like William Patterson, Charles Carroll, James McHenry, and others, advanced two thousand pounds to purchase summer clothing for his men. "The ladies of the city," says Johnston, "offered to make up the shirts and blouses for his soldiers." It would have been strictly accurate if he had said that they actually made the garments in question and sent them to the New England troops in Virginia. The practice of forwarding such supplies across the Potomac appears to have been revived during the late war by Baltimore ladies. Advancing towards Richmond by forced marches, Lafayette occupied the heights of that town upon the 29th of April, a few hours before the forces of Phillips came up. The latter thought it prudent to withdraw, and upon his death, which happened soon after, Arnold took command. By an arrangement preconcerted with Phillips, Cornwallis formed a union of the British troops at Petersburg, when Arnold was sent back to New York. Johnston sharply defines the resultant situation: "Lafayette facing Cornwallis—a meagre, incomplete American force opposed to the British veterans of Camden and Guilford Court House, united with the strong detachments brought down by Arnold and Phillips. All eyes were now fixed upon this field, watching the development of the enemy's designs."

Cornwallis advanced upon Richmond. "Lafayette cannot escape him," wrote Clinton to the British ministry. From this expression, according to Bancroft, has developed the saying accredited by all historians to Cornwallis, "The boy cannot escape me." It is to be observed that Mr. Johnston comes to the rescue of the old story by showing from a manuscript letter of a soldier of the period that, in camp, the noble Earl was reputed to have called the young Frenchman "an aspiring boy." But whatever Cornwallis said or thought, Lafayette eluded his adversary. The wary youth wrote to Washington, "Were I to fight a battle, I should be cut to pieces, the militia dispersed, and the arms lost. . . . I am therefore determined to skirmish." Cornwallis had under his command not far from seven thousand troops. At first, Lafayette had only his twelve hundred New Englanders; but these were soon joined by Steuben with a thousand militia from Virginia; a thousand more flocked over from Maryland; and Wayne, with eight hundred trained Continentals, came down from Pennsylvania, so that, in the end, Lafayette had under his orders about four thousand men. Having the sympathy of both Virginia and Maryland, this force was easily maintained, and it grew stronger every day under French and German discipline. Cornwallis, on the contrary, although he harried the Old Dominion, destroying three million dollars' worth of property, was constantly growing weaker, and was, moreover, losing his hold upon the Tories. Stealing race-horses and cutting the throats of fine colts was no way to retain the affections of Virginians. The only brilliant British exploit in the entire campaign was Tarleton's raid upon Charlottesville, then the seat of the Virginia Assembly. With two hundred and fifty troopers mounted upon Virginia horses, he rode seventy miles in twenty-four hours, and would have surprised and captured the leading politicians of the State, together with Governor Jefferson at Monticello, if it had not been for a faster rider, Captain John Jouett, the Paul Revere of the South, who reached Charlottesville before Tarleton and gave warning to the town.

As midsummer approached, Cornwallis began to move down the York peninsula towards the sea. Probably, as in North Carolina, he had again become tired of marching about in search of adventures, and possibly, like Lord Beaconsfield, he was also tired of atrocities. Lafayette and his light infantry hung now upon the flanks of the retiring enemy. "I had an eye upon European negotiations," wrote the wily Frenchman, "and made it a point to give his Lordship the disgrace of a retreat." In the early part of August, the British forces appeared at Yorktown and began to fortify that place, together with Gloucester, upon the opposite side of the York River, in order to secure a good naval station for English vessels, which Cornwallis had every reason to expect would support him as they had supported Arnold at Portsmouth. With adequate naval coöperation, Cornwallis would have been entirely safe at Yorktown. The responsibility for his capture lay in the inefficient management of the English fleet, which was divided in the pursuit of small ends, when it ought to have been united in repelling De Grasse. Clinton afterwards charged Cornwallis with violating instructions in not occupying Old Point Comfort as well as Yorktown, and Johnston intimates that the Earl might perhaps have escaped the toils that were gathering around him by crossing over to Portsmouth as soon as he heard of the arrival of the French fleet. But without the support of English ships, even this step would not have saved Cornwallis, for he might have been shut up in Portsmouth according to the original plan for entrapping Arnold. The whole issue turned upon the presence and superiority of the French fleet at the right moment.

Washington's sudden change of base from New York to Yorktown was a master-stroke of military genius. The movement was a total surprise to both Cornwallis and Clinton, and it brought disaster and ruin to the British cause. The swift combination of the American forces about Yorktown and their co-operation with the fleet of De Grasse, which came up the Chesapeake from the West Indies, decided the success of the American Revolution. The origin of this brilliant strategy has been disputed. Mr. Stevens, in the *Magazine of American History* for January, 1880, says: "It is to Rochambeau himself as the author of the campaign that the chief honors are due. It was his advice that directed De Grasse to the Chesapeake, his request that brought reinforcements from the West Indies to assist in the siege of Yorktown." There is no better chapter in Mr. Johnston's monograph than that in which he essays to prove that the Yorktown campaign was not the inspiration of any one man, but "a development" conditioned by circumstances. It had been agreed in May at the Wethersfield conference between Washington and Rochambeau, as the former told Greene, "to make an attempt upon New York, with its present garrison, in preference to a Southern operation, as we had not the decided command of the water." If, at the time Cornwallis first invaded Virginia, Washington had been confident of naval superiority over the English, there can be little doubt that his plan of operations would have turned southward. During the early summer he was in constant receipt of letters from Jefferson and Lee, urging him to come home and defend Virginia. But Washington understood well that by threatening New York with his Continentals in conjunction with the French forces from Newport under Rochambeau, he should either capture the city or divert a portion of the British troops from the South, and thus ensure American victory there. Johnston quotes a letter from Washington to Lafayette, dated July 30, showing that the Commander-in-Chief was even then preparing to coöperate, if necessary, in the Southern campaign:

"From a change of circumstances with which the removal of part of the enemy's force from Virginia to New York will be attended, it is more than probable that we shall also entirely change our plan of operations. I think we have already effected one part of the plan of campaign settled at Wethersfield; that is, giving a substantial relief to the Southern States by obliging the enemy to recall a considerable part of their force from thence. Our views must now be turned towards endeavoring to expel them totally from those States, if we find ourselves incompetent to the siege of New York."

Early in August, we find Washington making enquiries of Robert Morris as to means of transportation from Philadelphia southward. And here it may be remarked that without the energetic financial policy of this new treasurer, who not only secured transportation, but supplies and hard cash for the dispirited troops, probably Yorktown would never have been won. There are too many factors in the successful conduct of any campaign to justify a monopoly of merit for any one leader. The beauty of the Yorktown campaign lies in the coöperation of allied forces and the concurrence of many events. To regard Washington or Rochambeau as the sole author of it, is a one-sided view. To be sure, the latter was the man who recommended De Grasse "to enter the Chesapeake on his way, as there might be an opportunity of striking an important stroke there," but this suggestion was entirely in harmony with the plan of operations agreed upon by Washington and Rochambeau. To assume in any way the direction of an American campaign was contrary to the French method of procedure, as was evinced at Yorktown. The probable truth is that Washington, Rochambeau, and De

Grasse acted with as perfect an understanding as was possible under the circumstances. Washington afterwards wrote:

"A combined operation of the land and naval forces of France and America for the year 1781 was preconcerted the year before. The point of attack was not absolutely agreed upon, because it would be easy for the Count de Grasse, in good time before his departure from the West Indies, to give notice by express at what place he could most conveniently touch to receive advice; and because it could not be foreknown where the enemy would be most susceptible of impression, and because we, having command of the water, with sufficient means of conveyance, could transport ourselves to any spot with the greatest celerity."

There can be little doubt that Washington himself preferred on the whole a combined attack upon New York, but he distinctly asserts that he would never have attempted it unless success had appeared "infallible." He had long been watching for "some splendid advantage," either in the North or at the South, and when he learned that the Count de Grasse was on his way to the Chesapeake and could only remain upon the coast a short time, he renounced all idea of attacking New York, and determined to remove his forces to Virginia with all possible secrecy and despatch. Not even his own soldiers knew of their destination at the outset, and all pains were taken to deceive Sir Henry Clinton. In view of securing "some splendid advantage" in the South, it is possible that Washington concealed the knowledge of this alternative scheme even from his best friends and highest officers. Perhaps it was known at first only to Rochambeau. Johnston might have strengthened his position in regard to this alternative plan by quoting the following passage from one of Washington's letters: "It was determined by me nearly twelve months beforehand, at all hazards, to give out and cause it to be believed by the highest military as well as civil officers, that New York was the destined place of attack, for the important purpose of inducing the Eastern and Middle States to make greater exertions in furnishing specie supplies than otherwise would have been done, as well as for the interesting purpose of rendering the enemy less prepared elsewhere." Undoubtedly Washington was determined by the force of circumstances to revert to his long-cherished plan of entrapping the enemy upon the Chesapeake by a combination of forces on land and sea, as in the scheme against Arnold, upon which sufficient stress has never been laid by the historians. The point to observe in Mr. Johnston's account of the genesis of the Yorktown campaign is that Washington was perfectly prepared for a movement southward, and realized that with a superior fleet victory was a foregone conclusion.

The story of the march of the allies southward has been minutely described by Mr. Stevens and Mr. Johnston, and need not be repeated here. Into the military details of the Yorktown siege, into an enumeration of forces, commanders, and ships, into an account of Cornwallis's surrender the reader can enter with the assurance of fullest detail by perusing Mr. Johnston's interesting monograph. Never before has the story been so well told. The work contains excellent maps, plans of the siege, portraits of the leaders, extracts from Washington's journal, and other contemporary sources of information. With such an historical field-glass the student can review, from a safe and comfortable distance, the operations which went on in that Yorktown peninsula, where a great host of sight-seers is now gathering, and where the descendants of Rochambeau, Lafayette, and Steuben, representatives of France and Germany, will soon visit together the field where American independence was won. This concourse of peaceful citizens and foreign envoys, conveying expressions of international good-will, signalizes a greater victory than that gained in 1781 by the combined armies of France and America, and by the military science of Germany displayed by Steuben in the conduct of the siege. A recent utterance in the London *Times* indicates how fully the descendants of the defeated are united with us in sentiment: "We have quite as much reason as the Americans to share in their centenary thanksgiving." It is noteworthy that three of the most prominent nationalities in modern Europe were engaged, with the united colonies of America, in that *Voelkerschlacht* at Yorktown. France was there arrayed against England; and the Germans were there, although divided against themselves. These three nations, together with America, have decided four of the most important battles that have been fought during the last hundred years. Yorktown, Waterloo, Sadowa, and Sedan constitute an historical quadrilateral, forming with their diplomatic results the ramparts of the nineteenth century.

PARTON'S LIFE OF VOLTAIRE.—II.

Life of Voltaire. By James Parton. 2 vols. Boston: Houghton, Mifflin & Co.

MOZART wrote to his father on the 3d of July, 1778: "I must give you a piece of intelligence which you perhaps already know, namely, that the ungodly arch-villain Voltaire has died miserably, like a dog—just like a brute. That is his reward." Howard, the philanthropist, thus expressed himself a few years earlier: "I returned to Geneva. There are some exemplary persons; yet the principles of one of the vilest of men, Voltaire, with the corruptions of the French who are within a mile of the city, have greatly debased its ancient purity and splendor." When Boswell told Johnson that he had visited and was pleased with Rousseau, the English moralist roared out: "Rousseau, sir, is a very bad man. I would sign a sentence for his transportation sooner than that of any fellow who has gone from the Old Bailey these many years." When Boswell asked: "Sir, do you think him as bad a man as Voltaire?" Johnson replied: "Why, sir, it is difficult to settle the proportion of iniquity between them."

Here we have four samples of the sentiments with which a large proportion of the European world regarded Voltaire during his life and after his death. Nor can it be denied that in England and America at least the feeling of abhorrence for the great French freethinker survives among large classes even unto the present day. Yet any one who candidly and with an open mind considers the details of Voltaire's life, as they are laid before the public with unsparing minuteness by Mr. Parton, will, in our judgment, of necessity come to the conclusion that whatever be the estimate which mankind may ultimately form of Voltaire, the idea that he was "a brute," the "vilest of men," a thoroughly "bad man," a person whose life was steeped in "iniquity," prevalent though it has been, and still in many quarters may be, is one of the strangest, though not the most unaccountable, historical misconceptions begotten by theological hatred. For though no one can for a moment maintain that Voltaire's life and career has not its bad, and even its very bad, sides, it is perfectly futile, in the face of patent facts, to deny that it has also a very brilliant and good side, or to overlook the fact that his existence was in the main a continuous struggle in favor of what he held to be truth, justice, and humanity, and that his foes were, at least as often as not, the opponents of what every man of sense now holds to have been the cause of right and of equity. It were indeed, as has been before this pointed out, equally easy and equally useless to make Voltaire the subject of vehement invective or of unmeasured eulogy. There are aspects of his career which lend themselves easily to either purpose. It is a better expenditure of time to take the information presented to us by Mr. Parton, and attempt to ascertain from Voltaire's own life what are the causes which make it difficult for Englishmen to form a fair estimate, either for good or bad, of a thinker whose character was more distinctly un-English than that of any literary man who has attained world-wide influence and renown.

"In Voltaire," writes Goethe, "nature produced a man most eminently endowed with all the qualities which characterize and honor his nation, and charged him to represent France to the universe." This dictum admirably sums up the nature of Voltaire's talents, but it also suggests the reflection that his genius was in a very singular way national rather than universal. You cannot read a line of Voltaire's without remembering that he was a Frenchman, and a Frenchman of the eighteenth century. And a great deal which is incomprehensible to Englishmen arises from the whole of Voltaire's taste and sentiment being essentially French. It is sometimes almost impossible for a modern English or American reader to believe that a light, scoffing, irreverent writer could have written with a real, serious purpose. Pope perhaps is, at his best, as light and witty as Voltaire; but Pope, though he struck sharp enough blows against literary incompetence, cannot be credited with a very serious purpose. Swift offends against our modern ideas of decency and reverence, but Swift's savage and morose humor, just because it is savage and morose, seems to Englishmen akin to earnestness. The feature in Voltaire's character which it is hard for us to understand is the combination of a light, scoffing, flippant mode of expression, thought, and feeling, with the most vehement earnestness in waging war on what he held to be oppression or prejudice.

To call Voltaire a "bad man" in the sense in which Rousseau might assuredly be called "bad," were it not for the doubt whether he was not to a certain extent mad, is an abuse of terms. But there is no denying that Voltaire's language and conduct often justified the severest reprobation. The committee of admirers who, on the centenary of his death, published a cheap collection of the most typical of his works, have given but very sparing extracts from the 'Pucelle,' and one may presume that there are few of Voltaire's admirers prepared to defend the tone and language of this poem or of many others of his writings which, like the 'Pucelle,' gave keen delight in Voltaire's day, not only to his disciples, but to the whole of good society in France. The whole of his relation, again, to Madame du Châtelet, though not morally more blameworthy than many connections between celebrated men and women which have escaped severe censure, is almost incomprehensible to modern students. How the Marquis, Madame, Voltaire, and finally Saint-Lambert, could live together on good terms, and how the Marquis, without being hopelessly disgraced, could accept before and after his wife's death pecuniary benefits from the poet, are problems which, if they can be answered at all, can be solved only by studying and realizing in one's imagination the moral or immoral condition of French society in Church and State during the reign of Louis XV. Nor are Voltaire's private irregularities the only blemishes in his character which rightly offend modern critics. His training under the Jesuits was, as has been constantly noted, not without its effect. He of set purpose turned their own arms against

the priesthood. To equivocate, to pretend, to lie, cost him nothing. He had imbibed from his generation and from his teachers the notion that to lie for what he considered a good end was, to say the least, a harmless act, and that a wise man, while warring with prejudice to the death, should never be such a fool as to let himself be made a martyr rather than apparently conform to the foolish and superstitious practices enjoined by men in power. Voltaire must, indeed, in fairness be acquitted of all hypocrisy. When he dedicated 'Mahomet' to the Pope; when he "communed," as Mr. Parton has it, at Ferney; when he "confessed his sins" on his death-bed, he assuredly neither deceived, nor meant to deceive, any one: in the first instance, he meant to obtain a patron; in the second, he apparently wished to throw derision on the ceremonies of the Church; and in the last, only aimed at securing a peaceable and decent burial, though why he should have cared so much to be buried in sacred ground is one of those matters which an Englishman and a Protestant finds it very hard to understand. The real and valid charge against Voltaire is not that he was a hypocrite, but that he fatally discouraged that system of open protest against all religious acts in which a man does not believe, which in the long run is the only effective mode of attacking falsehood or of establishing truth. Voltaire was not a Christian, but his Catholic education had completely guarded against his becoming in any sense a Protestant. The avenger of Calas never understood the principle which had kept Calas and his family from conforming to Catholicism.

Voltaire's own faults or vices have obscured the better side of his character and of his influence; his reputation has also suffered in the nineteenth century from two misconceptions for which he is not responsible. The follies, the errors, and the crimes of the Revolution have been charged by English writers to the *Philosophes*, and especially to their leader. Now in this matter, as regards Voltaire, at any rate, a double injustice is committed. The moral corruption of the *ancien régime* was no doubt, in a great measure, the source of the Revolutionary horrors, but the social maladies under which France labored existed when Voltaire was born, and were at least as much mitigated as aggravated by his teaching. The cruelties of the Reign of Terror were the direct fruit of the savage system of criminal law which had long disgraced France. It is ridiculous to attribute them to the man who had labored through life for the reform of criminal procedure and the abolition of torture. The speculative mistakes which contributed to grave practical errors were for the most part the mistakes, not of Voltaire, but of Rousseau. The absurd worship of nature is certainly not a doctrine to be learnt from the author of 'Candide,' or from the teacher who, from the very first, exposed and derided Rousseau's fallacies; the worship of "the people" was assuredly not a lesson taught by a man who lived on intimacy with monarchs, and looked for reform rather to the influence of an enlightened despot than to the efforts of democratic leaders. The contempt for political experience was not due to the teaching of the writer who first forced Frenchmen to turn their minds to the lessons to be learnt from the laws and the philosophy of England. Voltaire, further, was the consistent foe of war and violence. One of the misfortunes of France was that, politically, the theories of Voltaire did not obtain predominant influence. Neither Robespierre nor Napoleon was a disciple of the patriarch of Ferney.

The error which ascribes to Voltaire moral responsibility for the calamities of the Revolution is far less serious than the misunderstanding of the real nature of the contest which made up the serious business of his life. Whoever wishes to understand the scope of Voltaire's efforts should read with care Mr. Parton's excellent chapters on "*Écrasez l'Infâme*," "The Provocation," "The Calas Tragedy," and "Ferney a Refuge for the Oppressed."

"The *Infâme* which Voltaire had in his mind was religion claiming supernatural authority, and employing it to enforce the claim, the power, and resources of Government. It was religion with the Bastille and the rack at its command. It was religion owning two acres of every five in France—usually the best two—and able to expel from the other three the noblest Frenchmen who called in question its tenets. . . . It was religion killing religion, and making virtue itself contemptible by resting its claim on grounds untenable and ridiculous. It was religion wielding the whole mass of indolence, ignorance, and cowardice, and placing it, solid and entire, in the only path by which the human race could advance. It was the worst thing that ever was in the world. It was *l'Infâme*."

This passage, extracted with curtailment from Mr. Parton's book, expresses as nearly as can be expressed the spirit to which Voltaire was opposed. It cannot, of course, for a moment be concealed that he clearly believed that all religious dogmatism was likely to beget persecution; that he disbelieved and derided beliefs which all Christians respect, together with a host of beliefs which were in his time thought essential parts of Christianity, but which to-day are practically given up by men who would indignantly deny the charge of not being Christians. But the feeling which roused Voltaire to battle—a sentiment which clearly increased in intensity as his life advanced and as his character manifestly gained in weight and depth—was intense indignation at every form of theological persecution. To understand the vehemence of this ruling passion, one must remember that Voltaire was born within forty years of the close of the Thirty Years' War; that the revocation of the Edict of Nantes was at his time no distant event; that the insurrection in the Cevennes took place in his lifetime; that look where he would he saw traces of the misery brought on mankind by religious fervor or intolerance; and that, when an old man, he was roused to indignation as virtuous as it was just by some of the most outrageous acts of iniquity, inspired for the most part by theological prejudice, which the world has witnessed. The names of Calas, of Espinasse, of De la Barre, are each enough to recall the transactions which kindled his righteous indignation. It must, further, be remembered that he was a man to whom injustice of all kinds, even when absolutely unconnected with any theological question, as in the case of Lally-Tollendal, was absolutely hateful, and that he was one to whom no victim of oppression ever appealed in vain, and who never spared money, time, or labor in the effort to obtain justice for the oppressed. When all this is borne in mind, even the "Écrasez l'Infâme" has a very different effect from that which it generally produces on the feelings of Englishmen.

But he erred at any rate, it will be said, in supposing that religious intolerance was the peril of the day. In some degree this, no doubt, is true. Men's principles and sentiments are formed in youth, while no one can give effect to his principles till he has reached mature, it may be advanced, age. Hence it is the constant mistake of teachers, no less than of statesmen, to combat the dangers which are past while overlooking the perils of the present or the future. Few are the warriors of politics or literature who have not wasted their strength in slaying the slain. Some of Voltaire's friends thought that he too wasted the last efforts of his life in a war with ghosts. In one house where he called during his last visit to Paris, "the mistress reproached him for the obstinacy with which he continued to assail the Church and its beliefs. 'Be moderate and generous,' said she, 'after the *victory!* What can you fear at present from such adversaries? The fanatics are prostrate [*à terre*]; they can no longer injure; their reign is past.'" To these words, softly spoken by the lady, herself not long to live, he replied:

"'You are in error, madame; it is a fire that is covered, not extinguished. Those fanatics, those Tartuffes, are mad dogs. They are muzzled, but they have not lost their teeth. It is true, they bite no more; but on the first opportunity, if their teeth are not drawn, you will see if they will not bite!'"

Was Voltaire's judgment right? Most persons will answer in the negative; but there are one or two facts deserving consideration before one makes a decided reply. Louis XVI. was on the throne, and not yet under any fear of the Revolution. Yet at the moment when Voltaire spoke he was liable to be banished without trial from Paris, and his banishment was half threatened by the King. Voltaire died in the midst of such an ovation as has never been received before or since by any man of letters, yet his death remained for weeks a secret, because the Government forbade the publication of the fact. France was not yet under the rule of law; persecutors might at any moment have become supreme. In 1791 Voltaire's bones were publicly buried in the Pantheon. In May, 1814, the priesthood had such influence that the bones of Voltaire and of Rousseau were taken by night out of their coffins to a piece of waste ground and dropped into a pit filled with quicklime. This outrage on the feeling of the French nation—for it can be called nothing less—was carried out under the orders of the Government, and kept secret till 1864. No one after this will undertake to assert either that the spite or that the power of the priesthood in France is even yet at an end. Voltaire was at least right in believing that his foes would still bite if they could. Meanwhile every critic, of whatever school, who wishes to understand Voltaire, should make it his first study to understand the nature and power of that spirit of theological intolerance of which Voltaire was the untiring and, frequently enough, unscrupulous foe.

BOOKS ABOUT THE STAGE.

Edwin Forrest. By Lawrence Barrett. With Illustrations. Boston: James R. Osgood & Co. 1881. Pp. 171. [American Actor Series.]

The World Behind the Scenes. By Percy Fitzgerald. London: Chatto & Windus; New York: Scribner & Welford. 1881. Pp. 320. [Wanderer's Library.]

Original Plays. By W. S. Gilbert. Second Series. London: Chatto & Windus; New York: Scribner & Welford. 1881. Pp. 338. [Mayfair Library.]

Recollections of an Equestrian Manager. By Charles W. Montague. Edinburgh and London: W. & R. Chambers. 1881. Pp. 108.

Cornebois. Par Edgar Monteil. Paris: Charpentier; New York: F. W. Christern. 1881. Pp. 344.

In these days of brief biographies, it was high time that there should be a series of lives of eminent actors and actresses. In the English "Men of Letters," and in "Ancient" and "Foreign Classics for English Readers," the dramatists have had their full share of attention, and there are rival series of biographies of philosophers, of musicians, and of painters. It is not a little odd that we should have had to wait thus long for a series of histrionic biographies, especially when

we remember that from the 'Apology' of Colley Cibber to the 'Reminiscences' of Macready the autobiographies of actors have been among the most entertaining specimens of that always interesting department of literature. The "American Actor Series," of which the first volume has now made its appearance, is edited by Mr. Laurence Hutton, author of a pleasantly-written book on the 'Plays and Players' of New York. The series is to contain volumes on the Jeffersons and on the Wallacks, by Mr. William Winter; on the Booths, by Mrs. Asia Booth Clarke (who has already written a book about her father); on Charlotte Cushman, by Mrs. Clement; and on Mrs. Duff and her contemporaries, by Mr. Ireland. Other volumes are in preparation, including one on Charles Fechter, by Miss Kate Field. Fechter has no more right to be ranked as an American actor than George Frederick Cooke, who likewise came here to act for a while, and then to die here before his time; and he has surely less title to a place in this series than Thomas Abthorpe Cooper, the pupil of William Godwin, who, though an Englishman by birth, was the first of American actors, being criticised as an American when he returned to play a short engagement in London. It was on Cooper that Edwin Forrest at first founded his style, and one may doubt whether the pupil ever surpassed his early master. No book about Cooper is as yet announced in the present series, which begins with one about Forrest, written by Mr. Lawrence Barrett.

While nothing is more common than an actor's writing a book about himself, scarcely anything is less common than an actor's writing a book about another actor. Tom Davies, to be sure, wrote a life of David Garrick; but Davies was rather an author and publisher than an actor. Indeed, the only other precedent we can recall now is to be found in the collection of "Mémoires sur l'Art Dramatique," published in Paris fifty years ago. It was for this collection that Adolphe Thiers wrote an essay on the life of George Anne Bellamy, a notorious stage beauty of the last century, to precede a translation of the autobiography she had written or had had written for her. Now, in this same collection are the memoirs of Lekain, preceded by "Quelques Reflexions sur Lekain et sur l'Art Théâtral," by Talma, who was Lekain's successor as the chief tragic actor of the Comédie-Française; and even this essay of Talma's is more in the nature of a preface than a biographical sketch like Mr. Barrett's. The life of Forrest was already a twice-told tale; but Mr. Barrett's book is in many respects better than either of its predecessors. It is in every way superior to the rhapsodic eulogy of Mr. James Rees, and it is simpler and, on the whole, more satisfactory than the two ponderous tomes of the Rev. W. R. Alger. Perhaps the first impression one gets from it is that it is an honest performance. The author has a high opinion of Forrest's abilities, and not a low opinion of his character; but he supplies frankly and freely abundant material for the correction of his own judgment. In pages 130-139 Mr. Barrett quotes at length the diverging opinions of Forrest expressed at various times by Macready, Douglas Jerrold, H. F. Chorley, James E. Murdoch, Charles T. Congdon, Wm. B. Maclay, F. C. Wemyss (in his 'Theatrical Biography'), and H. P. Phelps (in his 'Players of a Century'). In narrating the incidents of Forrest's theatrical career, and in considering the awkward facts of the riot and the divorce, Mr. Barrett sets down nothing in malice, nor does he extenuate more than is any biographer's right. He treats the divorce with praiseworthy reserve, and in the account of the Astor Place riot there is no attempt to disguise Forrest's mistakes in taste, if in nothing else. It is to be regretted that the files of the *Examiner* were not searched to see exactly what basis there was for Forrest's accusation that John Forster, as a friend of Macready's, had attacked the American actor "even before" he "had appeared on the London boards, and continued to abuse" him "at every opportunity afterwards" (p. 69).

Altogether, this recital is interesting and very instructive, particularly in regard to the progress in civilization made in these States since Forrest first came on the stage. Indeed, we doubt whether a career like his is now possible, and we are sure that a character like his would now have a wholly different discipline and development. Mr. Barrett's inexperience as a writer is to be detected occasionally, but the main story is, with here and there a little misplaced rhetoric, told in a straightforward and manly fashion. There is an ample and admirable index of nearly thirteen pages, and there are seven illustrations, consisting of portraits of Forrest at twenty-one, at forty-five, and at sixty-five respectively, and of Mrs. Forrest, a view of Fonthill, and fac-similes of a letter and of a London play-bill. The book worthily begins the series.

Mr. Percy Fitzgerald is an industrious compiler, to whom we owe eight or nine volumes about the drama, including a discreditable 'Romance of the English Stage' and an inadequate 'Life of David Garrick.' The latest, cited above, is a queer hodge-podge. Although the author does not inform us, most of the matter has already appeared in various periodicals. We recognize, for instance, parts of a series of papers published in the *Art Journal* on the arrangement of theatres, and others published elsewhere on stage-mechanism and illusions, and on the Charles Mathews pictures now owned by the Garrick Club. The nominal classification into five parts is of little or no assistance, as any one can see by considering the table of contents: I. Stage Illusions—Mechanism; II. Spectacles, Féeries, etc.; III. The Actors: their Lives, Tastes, and Accomplishments; IV. Theatres: the Grand Opera at Paris and other Houses; V. Authors. This last division, comically enough, consists of twenty-two pages on the plays written by Charles Dickens or adapted from his novels, two and a half pages on dramatic criticism in London, and a list of English adaptations from the French, so full of errors of omission and commission as to be almost valueless. It is introduced by a remark that at this moment the English stage is virtually subsisting on the French, the fact being that there is more original work done now on the English stage than at any time during the past thirty years. "What a contrast this," exclaims Mr. Fitzgerald, "to the old days of exuberant native production, when Dibdin, dying so lately as 1841, was stated to be the author of two hundred pieces, and Mr. Planché of over one hundred." From this we may fairly infer that Mr. Fitzgerald does not know that nearly all Dibdin's pieces were adaptations either from English novels or from French and German plays. As for Planché's hundred plays, we question if a score of them were original in any exact sense of the word.

As though to bear witness against Mr. Fitzgerald, the most popular of English dramatists has put forth a second volume of original plays. It contains "Broken Hearts," a somewhat slight fairy comedy in blank verse not unlike the "Wicked World" in the preceding series; "Engaged," "Sweethearts," and "Dan'l Druce," all familiar to our playgoers; "Gretchen," a reworking of the Faust legend, with omission of the poetry; "Tom Cobb," a burlesque comedy of the "Engaged" type; and three operettas, "The Sorcerer," "H. M. S. Pinafore," and "The Pirates of Penzance." All these nine plays, including comedy, farce, drama, and comic opera, have been acted, more than half of them with great success; and all are original save the obligation of "Gretchen" to Goethe, and the equally acknowledged borrowing of an incident in "Dan'l Druce" from "Silas Marner." To our mind, "Sweethearts" easily holds the first place among these various attempts, and we should not be at all surprised if it should prove to be the one English play written in the last decade destined to survive the century.

Books about the circus are rare. When one notes Frost's 'Circus Life and Circus Celebrities,' just reprinted in the "Wanderer's Library," and the life of old Astley, and Dickens's 'Hard Times,' and Goncourt's 'Frères Zemganno,' and one of Albert Smith's novels, one has well nigh exhausted the list. Mr. Montague's 'Recollections' have already appeared, if we mistake not, in *Chambers's Journal*. They contain not a few amusing anecdotes of circus life in England—a very different thing from circus life here in America, where the national fondness for a "big thing" has delighted in expanding the legitimate show. The book is written in an easy and unpretending manner.

To those who know anything of French theatrical life, and desire to know more, M. Monteil's 'Cornebois' can be recommended. It is an amusing book in itself—a little boisterous at times, not to say coarse; and it gives a truthful picture of the French actor, as he fights his way through the Conservatory to the Théâtre Français. It may be as well to say that it is not intended for young ladies, although it is not tainted with the "naturalism" now prevalent in French fiction.

The Wandering Jew. By M. D. Conway. New York: Henry Holt & Co. 1881. Pp. 292.

It seems to have been quite as hard for mankind before clear notions of a future life had arisen, or science had assumed the persistence of force, to conceive of an absolute beginning or end of life as it is now for us. The gradual unfolding of living organisms, and now Evolution, help us out in the attempt to comprehend origins; but the abrupt, absolute fact of death, especially of friends or heroes, is essentially inconceivable. The instinctive belief was first, according to Mr. Conway, in an earthly immortality, and found expression in the myths of sleep prolonged perhaps for generations, of transmigration, of trance, of secret removal to distant lands (like the stars above), of prolonged pilgrimage, or of the great age ascribed to Antediluvian patriarchs. From these grew the earlier forms of belief in the life after death, while the numbers for whom immortality was claimed grew, and paradise necessarily ascended to an aerial realm. Survivals of this primitive stage, perhaps of widely different ethnic origin, abound and illustrate what is more fully expressed in the legend of the Wandering Jew. Myths as diverse as The Wild Huntsman, King Arthur, Rip van Winkle, Teiresias, Yima, as well as the stories of Cain, Seth, Enoch, the transfigured Elias, John who was to "tarry" till Christ came again, and probably even Shylock and Punch and Judy, and countless others, "exchanged connotations" with the tale of Ahasuerus, until the latter gradually became a popular type of the fate of the Jewish race, and after its dispersion the Eternal Jew became the Wandering Jew. Nearly a score of writers in Germany alone have given the theme a more or less detailed literary treatment, and it seems to have been one of the most popular "mythic forms" in the folk-lore of all times and countries. Ahasuerus is repre-

sented now as vainly seeking every conceivable form of death, now as a philosophizing pessimist, now as a penitent whose pardon had been long delayed, but came at last. Now he symbolizes humanity unconsciously opposing itself to God, but doomed to endure till submission to Christ is complete; again, he is immortal man, in whose unbroken consciousness all history is embodied, a conception expressed in such phrases as "Ancient of Days," "Son of Man," etc. Mosen's poem represents the wanderer as a hero of humanity, warring against Christ at the head of Mohammed's troops; Köhler's Jew is a prophet of freedom; Klingemann finds purification by suffering to be the lesson taught; Anderson preaches the restlessness of doubt and unbelief; Heller puts the hero through many phases of Hegel's phenomenology: the intellectual world ever decays, consumed by doubt, and the heart ever brings it forth anew. Quinet, we are told, wrote his Ahasuerus on foot, on horseback, in the gondola, at sea, etc., as he was travelling in despairing search after a lost faith, typifying his hero, as he thought, and using motives from Faust. Eugene Sue's Jew is the workingman sentenced to drudgery, and finding at last relief. But it is Shelley's Ahasuerus, the author tells us, who is dignified beyond all others, because he defies the divine tyrant with true Promethean vigor. Although the Jew had "arisen as a spiritual type before nearly every fine mind living at the beginning of the last generation," only Shelley made a real hero of the Wanderer for his scorn and defiance of the Christian deity.

Mr. Conway prefers to regard the hero of all these tales as a type of the Jewish race, and in the last chapters enlarges on the German persecutions, although, it must be said, in a rather incoherent way. He divides the blame with great impartiality between Christian and Jew. These persecutions are denounced as unreasonable bigotry, but it is urged that the Christian has learned his intolerance from the Jew. The Hebrews of the Old Testament slew the Canaanites and Baalites, imagining themselves the "chosen" people, and their laws and institutions divinely revealed. In persecuting the Jews, Christians are only practising what is taught them by Jewish precept and example. The great error, however, is that the Jews insist upon keeping their "small provinces of moulded faith," "seek strength and happiness in isolation, and are withheld by their traditional system and dogmas from co-operation with mankind in its nobler aims and tendencies. So long as they are marked off in the human world in this way they will not find rest." Their religion is more narrowing than Christianity only because it is intensified by racial instincts and prejudices.

Here, but for what is implied in this latter clause, we must dissent from the author. Indeed, it seems doubtful if the religious question is now in any way involved in the German issue. The question there, however, does seem to be becoming central whether the Jews are as public-spirited, as ready to coöperate in mankind's nobler and more unselfish aims and tendencies, as others; or whether, on the other hand, they are materializing, or, in Du Bois-Reymond's intolerable phrase, "Americanizing" German society and life. This is a fair question respecting any class of citizens, provided it could be raised without degenerating into vulgar passions of race or creed. It is significant that Dr. Felix Adler, whose radicalism is as obnoxious to the orthodox Jew as is Mr. Conway's to the orthodox Christian, has condemned the *auri sacra fames* as very few clergymen in any Christian denomination would have the courage to do. Whether this argues more fearlessness on his part or more occasion, we will not even conjecture.

Sir John Franklin. By A. H. Beesly. New York: G. P. Putnam's Sons. 1881. Sm. 8vo, pp. 238, with three maps. [New Plutarch Series.]

THE "New Plutarch" includes among its heroes one which to the old Plutarch was unknown. That species of heroism which impels its possessor to visit sterile and inhospitable climes, to endure hardship and privation without murmuring, and, once escaped thence, to volunteer again—all in order that the sum of human knowledge may be slightly increased without benefit to the explorer—such heroism is the product of the higher civilization. No one more worthy to typify it could have been chosen than the subject of this memoir. The literary work has been neatly done. The language is clear and sufficiently sympathetic without gushing; the compiler seems to know the art of letting a story tell itself. A trained hand is shown in small details: thus, it is pleasant to see the name of Bering spelled as Bering was wont to spell it. We have noticed no errors in names; there are not too many references to authorities, and the writer does not linger long in theorizing over uncertain matters, such as the secrets of that last fatal march of Crozier's party. There is a good index, the maps are fair, and the only serious omission we note is the absence of a portrait.

Few, indeed, have not some idea of Franklin's Arctic services, of his terrible journey on the Coppermine River, and of his last voyage, his death, and the melancholy fate of his associates. But even among those who have a good knowledge of his Arctic work we think there are many who will be surprised to be reminded that his first explorations were on the coast of Australia, that he fought with Nelson at Trafalgar, and was wounded at the attack on New Orleans, where he earned his promotion to a first lieutenancy. Perhaps few will remember that in the interval between his second and his last expeditions he was the choice of Arnold of Rugby for the Governorship of Van Diemen's Land, then a penal colony. This post was accepted by Franklin in 1836, and its difficult duties were performed with sagacity and zeal. So far in advance of his time were his reforms that the gradually enlarging number of his opponents came, at last, to include his official superiors, and the opposition culminated in his recall in 1844. During these years his services, together with those of his devoted wife, had been inestimable to the people and institutions of the colony. Besides social and legal reforms, many of which ripened only after his departure, he instituted an unsectarian college, a scientific society, a museum of natural history, and a magnetic observatory. On his departure he walked to the pier attended by an immense assembly, at whose head were the Bishop of Tasmania and the new Colonial Secretary, and which included representatives from every part of the island. These joined in blessings and acclamations. Nine years afterwards the Tasmanians showed that time had not weakened their sense of his worth by sending as their contribution to the search fund of Lady Franklin the sum of £1,700.

BOOKS OF THE WEEK.

Flower, Prof. W. H. Fashion in Deformity. New York: Macmillan & Co. 75 cents.
Fragoletta: a Tale. Philadelphia: J. B. Lippincott & Co. $1 25.
Franklin, Rev. B. The Creed and Modern Thought. New York: E. & J. B. Young & Co.

Johnston, H. P. The Yorktown Campaign. New York: Harper & Bros.
Keeler, B. C. Short History of the Bible. Chicago: Century Publishing Co.
Lasar, S. English Anthems. New York: Biglow & Main.
Martin, Prof. H. N., and Moale, Dr. W. A. Handbook of Vertebrate Dissection. Part I. New York: Macmillan & Co. 75 cents.
Mémoires Inédits de Lamartine. New York: F. W. Christern.

A BEAUTIFUL GIFT-BOOK.

Our Familiar Songs,

AND

THOSE WHO MADE THEM.

More than Three Hundred Standard Songs of the English-speaking Race, arranged with Piano Accompaniment, and preceded by Sketches of the Writers and Histories of the Songs. By Helen Kendrick Johnson. 8vo, $6.

"In all respects of size, elegance, copiousness, and curious detail, presents almost as much of a contrast to an ordinary song-book, however good, as a centennial exhibition to an old-fashioned country fair. . . . We have turned the pages of this unique and beautiful volume with delight. . . . Here is a library of the best music for the household. We may return to it again for some of its extremely interesting personal and literary particulars."—LITERARY WORLD.

HENRY HOLT & CO., New York.

The Wandering Jew.

An account of the Legend in various places and at all times. By Moncure D. Conway. 12mo, $1 50.

"The legend . . . is the expression of that undying popular hatred of the Jewish race which found vent in the terrible persecutions of the Middle Ages, and which is again showing itself in the Judenhetze which disgraces modern Germany. . . . Mr. Moncure D. Conway, a writer who has earned for himself the right to speak for an expert on questions of folk-lore and demonology, . . . deserves our gratitude for having given a graphic and exhaustive account of this ancient and most curious myth."—LONDON SATURDAY REVIEW.

HENRY HOLT & CO., New York.

Putzger's One Dollar Atlas

Of Ancient, Mediæval, and Modern History. 76 maps, etc., in colors. Leipzig, 1881.

L. B. THOMAS,
409 W. Twentieth Street, New York.

Cheap Clearance Catalogue of Theological Text-Books and Rare Divinity just issued.

The Portable Bookcase manufactured solely by Lockwood, Brooks & Co., 381 Washington Street, Boston, Mass., is the most perfect thing of the kind, it being easily moved, and adjustable for books of all sizes. Send for circular or call and see it.

UNMOUNTED PHOTOGRAPHS

Of ANCIENT and MODERN WORKS of ART, embracing reproductions of famous original paintings, sculpture, architectural subjects, etc. Price, cabinet size, $1 50 per doz. Send stamp for catalogue of 1,600 subjects. JOHN P. SOULE, Publisher, 338 Washington St., Boston, Mass.

THE HYGEIA HOTEL, Old Point Comfort, Va., situated 100 yards from Fort Monroe. Open all the year. Equal to any hotel in the United States as a Summer Resort or Cold Weather Sanitarium. Send for circular describing hygienic advantages, etc.

The Nation.

NEW YORK, THURSDAY, OCTOBER 20, 1881.

The Week.

No progress, or next to none, has been made in finding out what President Arthur's "policy" is to be. It appears to be tolerably certain that he will provide himself with a brand-new Cabinet between now and the meeting of Congress, partly because the members of the old Cabinet will not remain, and partly because he naturally wishes to have a Cabinet of his own choosing. But whether the new Cabinet will be Stalwart or Anti-Stalwart is something on which the newspapers have made no approach to agreement. The prevailing opinion seems to be that it will be Stalwart, or in other words will be composed of persons who admire General Grant in politics as well as in war, and think Mr. Conkling a very great man, in spite of all that his enemies say about him. If Stalwart, too, of course there will be no "civil-service reform nonsense" about it. On the other hand, many believe that President Arthur will perform the great feat of both satisfying General Grant and Mr. Conkling and reforming the civil service. At all events, he appears to be expected "to do something for the reformers"—that is, set off one department in which they can try their experiments without damage to the saner portion of the body politic—a sort of padded room like that kept at asylums for violent cases. This is all speculation, however. What is certain is that thus far the President has walked with much care in his predecessor's footsteps. He has sent in all President Garfield's nominations; and though expressing his willingness to consult Senators about appointments, as indeed General Garfield did, is taking pains to "put none but good men in office." The only really bad sign of the times—although the Administration may not be responsible for it—is the reappearance of assessments on the clerks in the Custom-House and Post-Office by the Republican Committee, on account, the circular says, of that exceedingly usual thing, the "unusual importance of the approaching election."

The President has done a strikingly good and encouraging thing in asking for Mr. Tyner's resignation as Assistant Postmaster-General. If it be true that Mr. Tyner found out the Star-route abuses two years ago himself in a trip he made, and that he made a report on the subject, of which his superior took no notice, and of which he himself subsequently took no notice either when he became Acting Postmaster-General for a considerable period, his responsibility is plain. In fact, the way in which the whole matter was kept quiet was very singular, and especially the silence on the subject of the Democrats in the last campaign, although their members of Congress had had Brady many times before them pleading for "expedition" in the mails, and ought to have known as much about it as anybody else. President Arthur's action towards Tyner is the more creditable because Tyner is a "Stalwart of the Stalwarts," and, according to the commonly accepted view of Stalwart morality, ought to be pardoned a multitude of sins, in consideration of his soundness on the main question—though what the Stalwart main question is, few, if any, outside the inmost circle know.

It was supposed at first that the publication of Mr. Blaine's letter accepting President Garfield's offer of the Secretaryship of State, in somewhat effusive language, indicated that Mr. Blaine was preparing the way to stay in the Cabinet without disrespect to President Garfield's memory, or was preparing in a general way for his candidacy in 1884, by showing how close and cordial his relations with the deceased President were. These theories, however, seem to be set at rest by a positive announcement that the letter was printed without Mr. Blaine's knowledge or consent. One of the rumored arrangements was that he was to be sent to England in Mr. Lowell's place, and the difficulty of disposing of Mr. Lowell was met by making him Secretary of State. The same authority has assigned to General Grant complete control of all consulships, missions, and agencies west of the meridian of Washington, while Mr. Conkling is to have the privilege of running around "behind the throne," and preparing what the Irish call "all sorts of divilmint."

The preparations for Guiteau's trial, which have got as far as making him plead to the indictment, have revealed the fact that his counsel, who is also his brother-in-law, meant to fortify the plea of insanity by the plea that the late President's wound was not in itself mortal, but was made so by malpractice, and in support of this, if he could get money from the Government for the expense, to summon the various doctors who did not approve of the treatment from a distance. He has since announced, however, that he will not raise this point. There appears to be a little more willingness in the public mind than there has been to admit Guiteau's insanity, but we are constantly forgetting that insanity does not always prevent knowledge of consequences and fear of consequences. In other words, if an insane man fears punishment, it is a tolerably good sign that it ought to be inflicted, as it may be a warning to other insane men in the same stage of lunacy. Apropos of the character of the wound, one of the Methodist ministers has accounted for the inefficacy of the prayers offered up for President Garfield's recovery, by the assertion that the wound was "in its nature mortal," or in other words, apparently, that the consequences of certain wounds are settled by a Fate which no power can overrule.

Mr. Scoville has asked for the professional assistance of General Butler, who refuses, on the ground of other professional engagements, in a very edifying letter, in which he sets forth the undoubtedly sound view that no lawyer is at liberty to refuse to defend a criminal through horror of his crime, or because of the odium which surrounds him in the public eye. A member of the bar is not only a man who follows the trade of an advocate for hire, but also an officer of the court, and it is part and a very important part of his business to see that cases are properly tried—that is, that the prisoner's rights under the law are asserted. Rules of evidence and procedure are intended, though some people seem to forget it, for the benefit of the bad as well as for that of the good, and we are all as much interested in having Guiteau fairly tried as in having him tried at all. If it should be established that he is insane to a degree which destroys moral responsibility, he is as much entitled to the benefit of the rule of our criminal jurisprudence which makes such persons exempt from punishment as any other person. His having killed the President does not modify this rule, though it may show that we should diminish the temptations which our civil service now holds out to lunatics.

Some of our contemporaries are inclined to discredit the statement made by Mr. Dudley, Commissioner of Pensions, that while there are corrupt combinations formed for the purpose of robbing the Government by means of fraudulent pension claims, he has entire confidence in the fidelity and trustworthiness of the clerks in the Pension Office. It is argued that a pension claim has to go through many hands before it passes, and that therefore the co-operation of many persons in the Government offices, or a "ring" among the clerks, is required to secure the passage of a fraudulent one. This is by no means true. As we observed recently, pension claims, under existing law, are adjudicated on ex-parte testimony. When a pension claim comes into the office and all the legal requirements in the way of affidavits as evidence are strictly complied with, it will be examined and granted in good faith on the ground of the evidence furnished, and yet every one of the affidavits which on their faces have such an honest look may be false. The fraudulent claim may pass while every man in the Pension Office does his duty in the most conscientious manner, the corrupt combination to rob the Government consisting entirely of outsiders who get up the false affidavits. Sometimes frauds of the most barefaced character are discovered by mere accident. We remember hearing of the case of a man who, upon the affidavits furnished, had been awarded a pension for total blindness, and who was accidentally discovered by some one connected with the Government hunting in the fields, and upon further inquiry was found to work as a proof-reader in a newspaper office. Yet his claim as it appeared on the records was perfect. Accidental discovery was made of a man in New England who had for years been personating ten or a dozen soldiers' widows in whose names he had made applications for pensions, furnishing the necessary affidavits in perfect order, although every one of them was forged, and then regularly

drawing pensions for them. It was the regular business he lived on. He was sent to the penitentiary. Several cases of this kind have come to light. There are undoubtedly a great many more that have not been discovered and, unless some lucky accident intervenes, never will be discovered until the ex-parte system of evidence is supplanted by other and better methods. Such methods have for years been urgently recommended to the attention of Congress, but in vain.

It is amusing to observe the sudden change of tone in the organs of both parties with regard to Senator David Davis. It was a standing joke in Republican papers to represent the somewhat bulky Senator from Illinois perched on a fence, not knowing which way to dismount, but dismounting in most cases, when he could make up his mind to it, on the Democratic side. The wit discharged at him seemed frequently designed to produce contempt. But now, since Mr. Davis has permitted himself to be elected President of the Senate by Republican votes, good points are discovered in him in wonderful number, and we may soon hear that, although not always understood, he was a statesman of remarkable sagacity all the time. On the other hand, our Democratic contemporary the *World*, after having spoken of Mr. Davis with great respect as long as he voted on the Democratic side, has now found him out to be "a man who, chosen to the Senate by Democratic votes, has become an open trader upon the capital of the position thus acquired." Nobody knows what depth of depravity he may still be destined to reach, but the *World* grows quite indignant over it beforehand.

General Mahone has published a letter excusing himself for not fighting General Jubal Early, because the latter is unworthy of his recognition in any other character than that of a distinguished Confederate general; and even this is not sufficient to warrant a hostile meeting. He says nothing about duelling being a silly business, or about its inefficiency as a means of refutation. He evidently does not consider Virginian opinion as prepared for this view of the practice. It would be a good thing if some of these fighting Southern politicians would in some manner demonstrate the utility of duelling. It clearly does not stop calling names and bringing charges; nor does it disprove the charges; nor does it establish a man's character for courage, for a man's having fought one duel does not exempt him from the necessity of having to fight others. In fact, it is probably the most absurd of all the survivals of barbarism, almost as absurd as the Zulu belief that when you kill an enemy you must rip him open to prevent yourself from being bewitched.

There are not many Englishmen who had a larger circle of loving and admiring American friends than the late Dean Stanley. An effort is being made in England to convert a training school and home for hospital nurses founded by his wife into a memorial both of her and of him by putting it on a permanent footing, and erecting for it a suitable building which shall serve as a monument of the founders—for the Dean shared Lady Augusta's interest in it. Those among us who would like to join in this most appropriate tribute to their memory can do so by addressing the Rev. Phillips Brooks in Boston.

A large meeting was held Sunday night at Steinway Hall by the Land League of this city to receive Mr. T. P. O'Connor and Dr. Egan. Mr. O'Connor made a speech in which he stated that Ireland was in a state of siege, that the authority of the English Government was merely sustained by the troops, that the real Government was the Land League; and predicted that the struggle would not end until the landlords were driven from the country and Ireland were free "from the centre to the sea" from landlordism and a foreign garrison. Mr. Ecclesine moved a resolution which, considering its source, may be set down as very moderate in tone, calling for a petition to the Government of this country asking its "prompt international mediation" in behalf of "our suffering countrymen now deprived of all the guarantees of constitutional government and exposed to the brutal and irresponsible despotism of military rulers." Unfortunately he did not explain what sort of mediation he meant, and it is difficult to imagine a case where mediation is less likely to be undertaken, or would prove a more useless and thankless task.

During the week $1,808,900 foreign gold arrived here, making $19,501,722 received since August 1, against $34,901,015 in the corresponding time last year. The Treasury, during the week covered by the bank statement, paid out more money than it took in. The New York banks contracted their credits $7,775,000 during the week, and their deposit liabilities were so reduced that the reserve was increased $810,000, or to within $2,522,000 of 25 per cent. of their liabilities. The Treasury continued its weekly purchases of $2,000,000 of 3½ per cents, and in addition redeemed at Washington $5,600,000 of these bonds, so that during the current week covered by the next weekly bank statement the sum of $7,600,000 in money will be received by the banks from the Treasury. The prospect of so much money lowered the rates for call loans to 4 to 6 per cent. but did not reduce those for time loans. At the close of the week the rates for foreign exchange advanced above the point at which gold can be imported, owing to the scarcity of commercial bills, and to the settlement of 60-day credits about maturing. General trade continues active, and the tonnage of the principal railroads is larger than last year. There is, however, yet no sign of a settlement of the railroad war. At the Stock Exchange United States bonds advanced ¼@¼, railroad bonds 1@9¾ per cent., and speculative stocks 1@10 per cent., or, including the stock of the Manhattan Elevated, 16⅝ per cent. The latter advanced because of a readjustment of the relations between the three companies interested in the elevated railways of this city. The price of silver was about steady in London at 51⅞@51 13-16d. per ounce. The bullion value here at the close of the 412½-grain silver dollar was $0.8681.

Judge Jameson's charge to the Grand Jury at Chicago on the subject of "corners" in the grain market may be good in law—reference being had to a specific statute of the State of Illinois, which makes "cornering" a misdemeanor and imposes a trifling penalty for it—but is open to criticism in the forum of morals as well as of trade. "The thing which we know as a corner in the market," says the Judge, "may be briefly described as a process of driving unsuspecting dealers in grain, stock, and the like into a corral and relieving them of their purses. The essence of the offence consists in the party securing a contract for the future delivery of some commodity at his option, and then, by engrossing the stock of such commodity in the market, making it impossible for the other party to complete his contract except by purchasing of his adversary at his own price, or paying in cash the difference fixed by such adversary. As was said of another great wrong, if this is not wrong then nothing is wrong." This sweeping characterization assumes that the party contracting to deliver the commodity at a future time is under age, or *non compos mentis*, or in some way entitled to peculiar protection at the hands of lawmakers and judges. Complaining to the courts when one has sold property which he does not possess is denominated, in street parlance, "pleading the baby act." The infants over whom Judge Jameson proposes to throw his ample shield are, in ninety-nine cases out of one hundred, gamblers in the same sense that the cornerers are. They are the "bears" of the market, and if their operations tend to make bread cheap for the consumers, they tend to prevent farmers from getting the highest price which a free market would afford. To compare a transitory corner in the grain market to the institution of slavery, is one of those gross exaggerations which do not greatly surprise us in the newspaper press or on the stump, but which are very much out of place in the deliverances of the judicial bench.

Governor Pillsbury of Minnesota has urged the Legislature to re-enact, with such modification as the judgment of the Supreme Court may have made necessary, the bill in relation to the payment of the State railroad bonds. This bill is in substance an acceptance of the offer of Mr. Chamberlain, who owns the greater part of the bonds, to take half of the amount due. Governor Pillsbury is impatient for the Legislature to close with this proposal, because unless they do so "they will be confronted with the cold choice between total payment and naked repudiation." This is a shabby attitude for the Governor of a great State towards a question of common honesty. Between "total payment" of a debt and "naked repudiation" of the whole amount, or disguised repudiation in the form of the acceptance of a forced offer to take half or go without anything, honorable men and honorable States will find no room for a "cold" or any other kind of choice. Minnesota is abundantly able to pay the whole debt, and if she fails to pay it or compromises on a swindle of fifty per cent., she will be disgraced before the world.

The British Ministry, after a Cabinet con-

sultation, has taken the extreme and doubtless wholly unexpected step of arresting Mr. Parnell for instigating to intimidation and violence and the breach of lawful contracts. This determination has probably been brought about by numerous proofs that Parnell's popularity was increasing; and no one who knows Ireland doubts that the increase is largely due to the belief, which he has taken pains to spread, that the Government is afraid of him. Mr. Dillon, who is generally recognized as one of the sincerest and most disinterested of the Land Leaguers, announced after the passage of the Land Act his intention to retire from public life for a time at least, owing to his fear that the Act would destroy popular interest in political agitation. Parnell's success as an opponent of the Act has, however, caused him to change his mind, and he has formally and publicly recanted, and says he is about to go back into his old business. Intimidation and outrages, too, are on the increase, and Parnell has been making semi-royal progresses through the country. In other words, he has evidently succeeded in persuading a large part of the population that if they keep up a little longer the game which won the Land Act, they will get far more than the Land Act, perhaps even that total abolition of "landlordism," or in other words that confiscation of the fee of the land, which he has long announced as the goal of his striving.

The approval of Parnell's arrest by the best portion of the French press as the only course open to the English Government, surely ought to set the Land Leaguers both in this country and elsewhere to thinking a little more seriously about their work than they have yet done. On the land question in Ireland, the most reflective and liberal-minded and best-informed men of all civilized countries sympathize with the tenants, and sympathize with the efforts which have been made in the direction of giving them greater freedom and independence. But it is equally true that the organization which conducts the agitation on the tenants' behalf has now no friends of character or weight in any civilized country. In fact, what is called the public opinion of every civilized country may be said to be dead against them. It is not possible for the Parnells, Healys, Sextons, Fords, and Rossas to find friends in any part of the civilized world outside of the circle of their own countrymen. They are frowned upon and repudiated as much in republican America and France as in monarchical Germany and Italy.

This is an almost unprecedented state of things. The Leaguers are, we believe, the first unmistakably oppressed and long-suffering people who have managed by their conduct to alienate mankind, or all that portion of mankind which knows anything about them. Now, in the presence of these facts, one would expect the confidence of the most enthusiastic Land Leaguers in the policy of the leaders to be somewhat shaken. It cannot be that what all civilized countries consider odious and ridiculous is, when practised by Irishmen, respectable and appropriate. The French Republicans used in old times to be the warmest friends of Irish Nationalists. The cause of Ireland, too, from the Revolution down to 1848, excited more or less enthusiasm in this country, and procured a warm welcome during fully half a century for its apostles and martyrs. This is now all changed. An Irish patriot of the Parnell stamp has really not much more "show" in the United States than he would have in Prussia. Nobody takes to him except the half-crazy speculators who would like to abolish property and cut off one hundred thousand heads. None of the class which in every country carries on the work of civilization—the class which labors, saves, foresees, and makes and executes the laws—cares to have much to do with him, any more than with an escaped lunatic. They even refuse to believe the undoubtedly true stories of the wrongs of his country, and are now gradually beginning to doubt whether Ireland ever had any just ground of complaint at all.

The crisis in Ireland seems to be taking the usual course. There is considerable concentration of troops in Dublin, and Mr. Forster is provided with a military escort, and the guards around Kilmainham jail, where Parnell is confined, are doubled. The Land League is also doubling the fury of its proclamations and threats and the solemnity of its exhortations, but there is no likelihood that anything more serious than this will occur, and things as serious as this have occurred in Ireland a score of times before. Much more significant and important is Mr. Gladstone's speech at Guildhall, where he went to receive a non-partisan address, and where his reception was most enthusiastic. His mention of Parnell's arrest called forth uproarious cheering. He said that he "would rejoice at the adoption of any form of local government for Ireland which did not impair the supremacy of the Imperial Government." It is to be hoped that if he would rejoice at anything of this kind, enough of years and strength are left him to enable him to create this form of local government, and that whatever he does he will do speedily. The only way out of the Irish difficulty is to put on Irishmen the responsibility of governing the island. Its government by an English dictator of Quaker origin, surrounded in Dublin by a military guard, and arresting people on his own warrants, is a spectacle of which Englishmen ought to be ashamed, and of which Mr Gladstone must see the absurdity. The Cabinet are said to have been unanimous in ordering Parnell's arrest, which shows that even Mr. Chamberlain recognizes the impossibility for any Government which means to govern, of allowing itself to be insulted and defied by a man like Parnell. But as things now are, the Irish express their detestation of Forster by obeying Parnell. In fact, without Mr. Forster, Parnell would probably collapse.

The Land League has launched its last bolt in the shape of a proclamation calling on the farmers "to pay no rents until the Government relinquishes the existing system and restores the constitutional rights of the people." This is a vague phrase, but it probably means that they are to pay no rents until the Coercion Act is repealed, or until the persons imprisoned under it have been released. There is no doubt that if the farmers chose to organize and carry out a general strike against rent, it would be impossible for the Government to meet it or put it down by any force at its command. The only adequate remedy would be eviction on a scale too large for any Government to attempt. Of the legitimacy of such a strike we do not need to say much. It would simply be an immense private swindle under the guise of political revolt. It would be robbery of thousands who are no more responsible for the Coercion Act than for Mr. Gladstone's last budget, and as such would give an immense stimulus to the immorality which always crops out in times of political disorder. The nearest recent approach to it is the refusal of the Southern retailers to pay their debts to Northern creditors when the war broke out, though this had the sanction, we believe, of belligerent usage. The move is, however, a dangerous one for the League, because if it fails—that is, if the strike is not resorted to or only reaches manageable proportions—the game will clearly be up, and the leaders will come out of jail to meet a much disenchanted people.

Nothing could give a better idea of the nature of Turkish rule than the fact that, in the provinces lately ceded to Greece, the bands of brigands which had been desolating them had to enter into negotiations with the Greek Government like lawful belligerents. On finding they could not make terms, a portion of them retired with the Turks, and others laid down their arms, and are shut up at Pharsala, like prisoners of war, waiting for the meeting of the Chambers to decide on their fate. Niko, a famous brigand, who recently carried off an Englishman engaged in farming near Salonica, and extorted a large ransom from him and the British Government, went on what is called an "extended European tour" with the proceeds. After visiting the different capitals, he came to Athens, and was there about to engage in some kind of mercantile business when he was recognized and arrested. He is said to feel that his case is a very hard one. He had retired from brigandage, and was going to invest capital in some honest industry when the police came down on him.

The Pope took the opportunity afforded by the presence of the Italian pilgrims in Rome on Monday to make another pathetic statement with regard to his "captivity." He says that he has the alternative before him of continued imprisonment, daily growing harder and harder, or of exile. He insists that he is no longer secure in his palace, and that he is subjected to outrageous indignities in a thousand ways. The earnestness of the Pope is said to have made a profound impression on his audience, and as he closed his address he raised his arms to Heaven, as though imploring help. The Roman mob, however, was very differently affected by the speech, and pelted the pilgrims vigorously as they were going away, shouting, "Down with the Vatican."

SUMMARY OF THE WEEK'S NEWS.

DOMESTIC.

On Thursday the Senate elected Senator David Davis of Illinois President *pro tem.* Senator Logan offered the resolution, and it was adopted by 36 yeas to 34 nays. Senators Bayard and Davis did not vote. In executive session the Senate confirmed the nomination of Hannibal Hamlin of Maine for Minister to Spain.

The Democratic Senators met in caucus on Monday to discuss the question of the Secretaryship of the Senate. There was barely a quorum, and the caucus adjourned without taking any action.

The Ohio and Iowa State elections took place on Wednesday. The Republicans carried both States by large majorities. Governor Foster's plurality in Ohio is estimated to be in the neighborhood of 20,000. The "scratching" of both the State and local tickets is reported to have been almost unparalleled. In Iowa, Sherman was elected Governor by about 40,000 majority.

The Virginia political campaign is an exceedingly lively one. "Scurrilous attacks" upon prominent politicians abound in the newspapers, and duels are becoming very frequent. On Saturday a "hostile meeting" took place between Captain H. H. Riddleberger and G. D. Wise. It was bloodless, however, and after four rounds had been fired "mutual explanations and an amicable adjustment followed." On the same day Senator Mahone was arrested in Washington on the charge that he was going to fight a duel with General Jubal A. Early. Mr. Mahone denied, however, that he had any such intention, and was released on his personal bond.

There has been much trouble over the "Blair letters" in Virginia — two letters, namely, which were said to have been written by Frank S. Blair, the Readjuster candidate for Attorney-General. These letters contained sentiments which would damage Blair in the campaign, and were used to show his contempt for negroes. Blair has from the first denied the authorship of the letters. Wilson, the man who originally produced them, is said to have come out in the Richmond *Whig* with a card in which he confesses the letters to be a forgery. The Richmond *Whig*, however, is a Readjuster organ, and the air of Virginia is so thick with accusations of lying and forging, that it is extremely difficult for an outsider to make out who is "lying" and "forging," and who is telling the truth.

The New York State Democratic Convention met at Albany on Tuesday, October 11, and completed the session on Wednesday. Three different organizations sent contesting delegations from New York county, namely, Tammany Hall, Irving Hall, and the County Democracy. The Committee on Contested Seats adjudged the representatives of the County Democracy entitled to seats. This defeat of Tammany and Irving Halls was the only incident of any importance in the organization of the Convention. The Hon. Erastus Brooks was made permanent chairman of the Convention. The platform "again declares" the fidelity of the Democratic party of New York to the "principles set forth by the State Democratic Conventions of 1875 and 1876"; denounces in strong language the Republican party in general and the Republican majority in the State Legislature in particular; renews the "demand for the refunding of the national debt at the lowest possible rate of interest," and declares that "the New York Democracy, as always, stand by gold and silver as the legal-tender of the Constitution." It further demands a "thorough and immediate investigation into the Star-route and other frauds upon the Federal Treasury," a reformed civil service, and the supervision of "chartered monopolies" by commissioners established by public authority. The platform concludes by denouncing centralization, and challenging a comparison of the record of the Democracy of New York with that "furnished by the factions which were once the Republican party of this State." The following officers were nominated: Secretary of State, William Purcell; Comptroller, George H. Lapham; Attorney-General, Roswell A. Parmenter; State Treasurer, Robert A. Maxwell; State Engineer, Thomas Evershed; Judge of the Court of Appeals, Augustus Schoonmaker.

The Nebraska Democrats met in Convention on Thursday and nominated a Supreme Court Judge and two Regents for the State University. The platform declares for Free Trade, honest money, and an economical administration, and against a high-license liquor law.

Governor Pillsbury of Minnesota has sent a message to the State Legislature entreating it to provide for the payment of the State bonds. He says in his message that unless something be done at once the State will be "confronted with the cold choice between total payment and naked repudiation," and recommends the reënactment of the bill of last winter.

Secretary Windom has offered himself to the Minnesota Legislature for reëlection to the United States Senate, but a strong opposition to his election is being developed. Several Republican members of the Legislature have made an arrangement with the Democratic members, by which the Democrats agree, in case there is an open fight on the Senatorship, to vote for whatever candidate may be put forward in opposition to Mr. Windom. Ex-Lieutenant-Governor J. B. Wakefield is said to be the candidate of the alliance against Mr. Windom.

The New Jersey Constitutional Commission met on Friday. A committee was appointed to prepare amendments to the articles in the State Constitution relating to the Judiciary, the Executive, and the Legislature.

The celebration at Yorktown was opened on Sunday by religious services. The services were conducted by Bishop Keane of Virginia. He was to have been assisted by Archbishop Gibbons of Maryland and the Rev. Dr. John Hall of New York, neither of whom, however, was present. An interesting feature in the exercises was that the prayer used by Bishop Keane was composed by Archbishop Carroll, the patriot priest and friend of Washington. Bishop Keane delivered a sermon which he closed with an eloquent tribute to France. People are crowding into Yorktown, and the accommodations are said to be insufficient. The military part of the celebration begins on Thursday. President Arthur, accompanied by Secretary Hunt and Postmaster-General James, left Washington for Yorktown on Monday.

Mr. T. P. O'Connor, member of Parliament for Galway, and Dr. Dillon Egan have arrived in this country. They are on a special mission as representatives of the Land League.

The German officers, relatives of Baron von Steuben, who have come to this country to be present at the Yorktown celebration arrived in New York on Thursday. They witnessed a torchlight parade in their honor in the evening, and started for Washington the same night.

Five million six hundred and six thousand dollars of the 3½ per cent. bonds called for redemption on December 24 were received at the Treasury Department on Monday. In the circular issued last week the Secretary limited the amount of these bonds to be accepted to $5,000,000, but as the amount offered was comparatively little in excess of the limit, it was decided to accept all that were offered.

The Controller of the Currency says that while the report of the National Banks of the city of New York for October 1 is in some respects a strong statement, showing as it does a large increase in deposits and a decrease in loans and discounts, as compared with the report of June 30 last, and also of October 1, 1880, yet as regards the reserve it is the weakest statement received from the National Banks since the establishment of the system.

The members of the bar of the Supreme Court of the United States met in the court-room at Washington on Monday to pay respect to the memory of the late Mr. Justice Clifford. Senator David Davis was appointed chairman. Brief eulogies were pronounced by several gentlemen, and appropriate resolutions were passed.

The Star-route cases came up before the Court in Washington on Friday, but owing to the absence of Mr. Bliss and Mr. Brewster, counsel for the Government, proceedings were postponed for two weeks.

The assassin Guiteau was arraigned before the Criminal Court on Friday, displaying abject cowardice while being taken from the jail to the court-room. He pleaded not guilty, and tried to read a statement which he had brought with him, but the Court told him that this was not the proper time for it. Mr. Scoville, Guiteau's brother-in-law and counsel, read his affidavit. It states that the defence will, in addition to the points of law which may be made, undertake to prove that the defendant was insane, and that the wound inflicted was not necessarily mortal and was not the cause of President Garfield's death. Mr. Scoville will bring forward witnesses to testify to these two points. He asked that he might be furnished with money to pay the expenses of carrying on the defence and with counsel to assist him in it. The Court fixed November 7 for the opening of the trial, and said that the preliminary argument on the question of jurisdiction should be held some time before the 30th of October.

Colonel George E. Waring, jr., has made a report in regard to the defective drainage of the White House, which was published in the *Sanitary Engineer* on Saturday. The report shows the condition of things, so far as the arrangement of pipes, location of fixtures, and means of ventilation are concerned, to be wretched. The *Sanitary Engineer*, in commenting upon the report, says that until the antiquated and defective system of drainage is "pulled out and entirely reconstructed, the White House will be behind our better class of New York tenement houses in this important particular."

General John C. Fremont has resigned the Governorship of Arizona. It is thought that General N. P. Banks may be his successor.

The Committee of Twenty-eight, appointed to consider the advisability of holding the World's Fair in Boston, met on Thursday. A report was read which stated that Beacon Park had been offered as a site for the fair. The report concluded with a resolution, which was adopted, to the effect that it was expedient to hold the fair, provided the sum of $5,000,000 could be secured.

The evidence for the defence in the notorious Malley case has been closed. Witnesses testifying in rebuttal of the evidence for the defence are now being examined.

A trotting match which excited much interest and drew a great crowd took place at Jerome Park, New York, on Saturday. The well-known gelding St. Julien, who has a record of 2:11½, trotted against Trinket, a mare, also well known on the turf, and who has a record of 2:14. St. Julien won in three straight heats.

The Scotch cutter *Madge* has received her first defeat since she arrived here. She was beaten at Newport on Friday by the Boston yacht *Shadow*. On Saturday, however, the tables were turned and the *Madge* defeated the *Shadow*.

There have been heavy rains and floods in the West during the week, and many washouts have occurred. The Mississippi River has been rising rapidly.

The total number of immigrants to the

United States from the principal foreign countries during the three months ending September 30, 1881, was 171,803, and during the corresponding period in 1880 it was 155,233.

Dr. J G. Holland, one of the most widely-known of recent American writers, died in New York on Wednesday. Ex-Governor Wiltz of Louisiana, Captain E. P. McCrea of the United States Navy, commander of the *Tennessee*, the flagship of the North Atlantic squadron, and Mr. E. B. Morgan, a prominent New York merchant, also died during the week.

FOREIGN.

The English Government has begun to take active measures for the suppression of the Land League. On Thursday Mr. Parnell was arrested at his hotel in Dublin on a warrant signed by Mr. Forster, Chief Secretary for Ireland. He was taken to Kilmainham jail. It is believed that Mr. Parnell's speech at Wexford on Sunday before last furnished the Government with technical justification for the arrest. On Saturday Messrs. Dillon, Sexton, Quinn, O'Kelly, and O'Brien were arrested. They are all prominent members of the Land League, and Dillon, Sexton, and O'Kelly are Members of Parliament. It is inferred from Quinn's arrest that the total suppression of the Land League is aimed at, for Quinn has made no speeches, but has confined himself to purely clerical work: he is, therefore, no more culpable than any other member of the organization. There has been great excitement in some parts of Ireland, and on Sunday and Monday there were serious riots in Dublin and Limerick. In England, however, the Government's course is generally approved, by Conservatives as well as Liberals. There was a general feeling that the time had come for decisive action on the part of the Government in the Irish matter.

Mr. Sexton has declined the offer of the Government to release him from imprisonment on account of his health, provided he leaves the country. It is not considered probable that the members of Parliament in Kilmainham jail will be detained beyond three months at the most.

The latest reports from Ireland state that the riots which took place in Dublin and Limerick upon the arrest of Parnell were largely due to the exasperation caused by the brutal conduct of the police, most of whom were intoxicated. A deputation from the Corporation of Dublin, headed by the Lord Mayor, visited Mr. Forster, Chief Secretary for Ireland, to protest against the ostentatious display of police force.

Sir Stafford Northcote and Lord Salisbury, speaking at Newcastle-on-Tyne last week, both denied that they had ever advocated protection, but Sir Stafford Northcote maintained that by the adjustment of local rates the distress of the agriculturists ought to be mitigated. Lord Salisbury said that if he found that by raising the duties on luxuries, or threatening to raise it, a pressure could be brought upon foreign governments to reduce their rates, he should throw orthodox formulas to the wind.

Mr. Sackville West, the New English Minister to the United States, will sail from Liverpool to Philadelphia on the 22d of this month.

There is some likelihood that the British Government will co-operate in an international expedition in search of the Arctic exploring steamer *Jeannette* next year.

One of the most disastrous storms in many years visited England and Ireland on Friday. Telegraphic communication was interrupted all over the country and great damage was done to property. It is estimated that between sixty and seventy lives were lost. On Friday all cable communication with America was stopped for some hours.

It is reported that the French Ministerial crisis will be brought to an end for the present by the resignation of General Farre, Barthélemy-Saint-Hilaire, and Sadi Carnot, who are to be replaced by three more energetic ministers. It is said that Gambetta will not be in the Cabinet, but will assure it of his support. A mass meeting of Socialists to demand the impeachment of the Ministry, and which alarmed many timid people in Paris, passed off on Sunday in a quiet manner.

The French Government has fixed November 20 for the election by the Municipal Councils of delegates to elect Senators to replace the seventy-five who retire this year. The final election will take place on January 8.

M. Roustan, the French Minister, has addressed a circular to the representatives of the Powers, informing them of the occupation of Tunis by virtue of an understanding with the Bey. The occupation is to be purely military, and the administration is to continue as heretofore. The Italian consul protested against the occupation, and the protest was supported with great enthusiasm by the Italian colony in Tunis; but it is believed that the Italian Government will disavow the action of the consul. The insurgents have burned two more railway stations, and have attacked a strong French fort near Susa, inflicting some loss.

It was officially announced that the French march to the holy city of Kairouan, in Tunis, would begin on Tuesday.

The jury of the International Electric Exhibition in Paris has awarded gold medals of the highest class to Edison and Brush for dynamo-magnetic machines, and a gold medal to Maxim; also gold medals to Edison, Brush, and Maxim for arc incandescent lights. Edison takes five gold medals in all, which is more than any other exhibitor.

Alphonse Daudet has just published a new novel called "Numa Roumestan." Over 20,000 copies are said to have been already sold or ordered.

During the coming session of the Prussian Diet no ecclesiastical bill beyond that providing for the renewal of the law of July last will be presented, as the Government believes that fresh legislation at present would tend to restrict the scope of direct negotiations with the Vatican. The scheme of Herr Bitter, the Minister of Finance, for increasing the direct taxes will not be introduced into the Diet for some time, as the Ministry has decided to await the fate of the Tobacco Monopoly Bill. Herr von Puttkamer has been appointed Vice-President of the Ministry in the place of Count von Stolberg-Wernigerode resigned. He will also retain the position of Minister of the Interior.

Herr von Hobrecht, the ex-Minister of Finance, has formally taken stand against the Government and is especially fighting against the tobacco monopoly.

Germany and Austria have agreed to fresh proposals made by Russia in regard to the extradition of political criminals, and negotiations are being made with France in regard to the same matters.

The trial of the four Russian Nihilists who were indicted for secretly printing a revolutionary paper has terminated. A woman and two of the men were exiled to Tobolsk, while a fourth one was sentenced to four months' imprisonment.

An imperial ukase has been promulgated by the Czar granting Count Valuyeff's request to be relieved from the presidency of the Committee of Ministers on the ground of ill-health. He will remain a member of the Council of the Empire and will retain the rank of Secretary of State. M. de Reutern, a Privy Councillor and Secretary of State, has been appointed President of the Committee of Ministers in Count Valuyeff's place.

The Pope delivered an address to some Italian pilgrims at St. Peter's on Sunday, in the course of which he said that the "present deplorable state of affairs" placed before him the alternative of enduring continual captivity, made harder daily, or of going into exile. He therefore asked Catholics to watch and pray for his liberty and independence. He concluded by saying that he was no longer secure in his palace; that he was outraged in his person and dignity in a thousand ways. The gravity and earnestness of the Pope are reported to have made a profound impression upon the pilgrims.

It is reported that Señor Comacho, the Spanish Minister of Finance, will present to the Cortes a bill for the reform of the customs duties in the direction of Free Trade. He will also propose a reduction of the tariff on stamped papers, letters, and telegrams.

General Prendergast, the new Governor-General of Cuba, will start for Havana by November 10. He is reported as saying that he will undertake a "liberal conciliatory policy, humoring colonial ideas and free speech."

The Turkish delegates to Egypt have been recalled. They will terminate their labors as soon as possible, and are expected to embark for Turkey on Thursday.

The Boer convention with England has not yet been ratified. Public feeling in the Transvaal is reported to be unsettled, and the Boers have seized the wagons of such as remained loyal to England during the late war.

The last advices report the situation in Peru to be unchanged. Troops are said to be mustering in the interior with the purpose of making an attempt to expel the Chilian invaders. The latter are daily increasing the strength of the army of occupation by the arrival of fresh troops. A correspondence has taken place between the secretary of the Dictator Pierola and General Hurlbut, the United States Minister to Peru. Pierola's secretary wrote to General Hurlbut asking him to recognize Pierola's government as the legitimate one, but the General replied at some length to the effect that Pierola had obtained his dictatorship by revolutionary and lawless acts, and that his recent "barbarous and inhuman" decrees in regard to the persons and property of those who did not recognize his Government "place the Government which adopts such measures beyond the pale of the law." General Hurlbut goes on to say that while the Government presided over by Señor Calderon does not pretend to be regularly and perfectly established, still it is an "effort towards the reëstablishment in the country of a regular and constitutional Government," and advises all true Peruvians "to unite in support of Señor Calderon for the purpose of saving the country from imminent ruin, restoring peace, and the orderly and pacific reign of the Constitution and laws."

Don Domingo Santa Maria was proclaimed President of the Republic of Chili, in the presence of both chambers of Congress, on the 30th of August.

Advices from China report the construction of the telegraph line between Shanghai and Tientsin to be progressing satisfactorily. The presence of Government officers checked whatever feelings of hostility the natives may have had for such an innovation. It is expected that the line will be open for business by the end of the year.

A silk guild has been formed by the Japanese. The guild insists that all silk sold shall be inspected and paid for on its premises. Foreign buyers are strongly opposed to the rules and conditions imposed by the guild, and thirty-three European firms have bound themselves not to buy until the terms of sale are modified.

The news of President Garfield's death caused a feeling of sincere regret among men of all nationalities in Japan. Flags were displayed at half mast throughout the foreign settlement at Yokohama.

Typhoons have caused considerable loss of life and property in the interior of China and on the coast of Japan.

The Servo-American treaty of commerce was signed on Friday, Mr. Schuyler acting for the United States.

TUESDAY, October 18, 1881.

A HUNDRED YEARS AGO.

THE anniversary of the surrender of Yorktown presents to the imagination, if not more important, certainly more numerous, points of interest than the anniversary which was celebrated at Philadelphia five years ago. The difference between the Declaration of Independence and the surrender of Cornwallis was the difference between the beginning and the end of a great drama, which grew steadily to a climax of absorbing interest. Much as modern historians have endeavored to divert our attention from the merely picturesque events in the world's progress, and to fix it rather upon the underlying social developments and changes of which these are the effects rather than the causes, the imagination, rightly or wrongly, still clings to the old dramatic landmarks of history, the rise and fall of dynasties, the appearance and career of great men, the victory and defeat of armies; to the brilliant and decisive scenes which close forever some long and hard-fought struggle in overwhelming disaster or brilliant success. Solemn and significant as the Declaration of Independence was, it was neither picturesque nor decisive. Though every man who signed it took his life in his hands, and though to this country it was destined to hold in the affections of coming generations a place something like that held by Magna Charta and the Bill of Rights among their ancestors, it was after all a paper declaration, passed by a deliberative body safe from immediate danger, after the usual amount of debate and opposition, as any law or resolution might be passed to-day. It contained a list of grievances the memory of which time has long since effaced, and some general propositions on the subject of human rights which, in the progress of modern enquiry, have either come to be regarded with indifference as truisms or to be rejected altogether as founded in error. We feel no glow of indignation as we listen on each recurring Fourth of July to the long catalogue of crimes which it lays to the charge of the stupid king who occupied the English throne at the time, and the "self-evident truths" which it embodied are not of a character to stir the heart or warm the blood, apart from some immediate oppression produced by their denial.

The event, on the other hand, which the Yorktown anniversary commemorates, appeals not merely superficially but profoundly to the imagination. It was the decisive conflict of a struggle which had lasted five years, and left victory on the side which had seemed from the outset doomed to defeat. It was the sudden, unexpected, and overwhelming defeat, by superior strategy, of the general who had been picked out as best fitted to give the rebellion its quietus. The King's Government had good reason to think that the time for this had come. The war, obstinately as it had been carried on, had thus far mainly resulted in an exhaustion of the American resources. Disaster after disaster had been suffered in the field; the sufferings of the half-clad and almost unpaid troops had been so severe as to produce among them a discontent very nearly mutinous; the paper money which had for a time served as a source of credit had long since become worthless, and finally disappeared altogether from circulation; the only source of supply, in fact, left was France, and the French Government loudly protested against the drafts made upon their treasury by their unfortunate allies. The principal ports of the country were in the enemy's hands; its commerce was destroyed, intervention to prevent the further unnecessary waste of life and ruin of property was pressingly suggested by Germany and Russia, and the air was full of talk of the futile character of the struggle. Had not something occurred at this critical moment to turn the tide, the Revolution must have collapsed, the names of the great men whom we revere as the founders of a new nation would be known to the present generation as those of unsuccessful rebels, the United States would have had no existence, and the history of the last hundred years would have been diverted into a course the nature and direction of which we can now only dimly conjecture.

It was at this moment that the sudden appearance of the French fleet under De Grasse, the junction of the armies under Washington and Rochambeau, and the investment of Yorktown, decided the long struggle. Had the surrender of Cornwallis occurred at an earlier stage in the war it would hardly have had any other effect in England than to confirm the obstinacy of the King and his packed House of Commons. Indeed, this had been the actual effect of the destruction of Burgoyne's still larger army four years before. But now the effect produced in England was far more important than the immediate military results of the surrender. Popular feeling began to make itself felt even in Parliament. Although the King's speech showed no signs of a change of temper, on the first vote taken on the question of prolonging the war the Ministry could only get together a majority of forty-one; a few months later a motion for an address to the King to put a stop to the war was only lost by one vote. Immediately afterward a similar motion was carried. The Ministry fell; Lord Rockingham came into power, and the independence of the United States was assured.

The historic picturesqueness of the event is greatly increased by the presence on the scene of the foreign troops, with their little band of foreign officers, the French "boy" who had left the happiest of homes in the most polished and luxurious court in Europe to draw his sword for the sake of an oppressed people, and the stiff Prussian martinet who had, for seven long years, fought for King and country against the allied armies of Europe, and to whom discipline had perhaps become an ideal almost as fondly loved as Liberty in France or Independence in America.

It is the historian's common moral that it is fortunate for man that he cannot see far into the future. Yorktown fell, and the existence of the United States was secured by the aid of France; but how little aid France would have rendered us if she could have guessed what were to be the consequences upon her own soil of our success—if it could have been foreseen that the same love of liberty which fired the heart of the people with sympathy for us was destined to lead in a few short years to the tumult and chaos of the Revolution, the bloody anarchy of the Directory and the Terror, and to place Europe under the heel of a military despot. Could the curtain have been lifted but a moment, it would have disclosed a future so filled with disaster and terror and ruin that our allies might well have shrunk from helping it forward. But they saw nothing more than that our success was the discomfiture and diminution of England. It was their conviction of this that secured at Yorktown the future of free government.

THE PROBATIVE FORCE OF THE DUEL.

WHEN one reads the somewhat ludicrous stories of campaign duels which are taking place, or are going to take place, in Virginia between opposing politicians, one cannot help asking once more, In what condition, in the Southern mind, does the duel leave the proposition out of which the duel arises? General Jubal Early, for instance, says General Mahone is a "liar and a thief," and it was for a while thought that this would compel Mahone to fight him; in fact, it appears that but for Early's great age he would have fought him. Now if he had fought him, would it have proved anything beyond the fact that Mahone did not like being called "a liar and a thief"? Would it have proved that he was not a liar and a thief? Riddleberger, the late Republican candidate for the Sergeantship-at-Arms of the Senate, in the great and memorable struggle for "principle" which Mr. Dawes carried on last spring, has just been fighting two duels in one day, both arising out of the fact that two gentlemen made allegations of a similar character about him. Now, where have the duels left these allegations? They have been made by men of good standing, and made with deliberation and with the utmost publicity. We see that they make Riddleberger angry, but this we knew already. But we do not see, in consequence of anything that has occurred, that they are not true. The various essays and pamphlets which have at times appeared at the South on "the Code" contain nothing whatever as to the probative force of a duel as a piece of evidence, and yet it is only as a piece of evidence that a duel fought by a politician has any interest whatever for the public at large. As a sign of his courage it has no interest for any one but his personal friends. In old times single combat had probative force. It was held that the result of the fight decided the truth or falsehood of the statement out of which the fight arose. If A said B was a rascal, B not only sought to punish A by fighting him, but to satisfy all spectators that A had lied. On the other hand, if A vanquished B, it showed that A's charge was true. The ordeal of battle, therefore, like the process of walking blindfold and barefoot over nine red-hot ploughshares, was a useful process. It supplied the public with materials for forming a correct judgment about the character of two men of note. It was, moreover, a process of great dignity, because it solved by physical experimentation moral problems which, in a

large number of cases, could not be attacked by judicial enquiry.

If the modern campaign duel as practised at the South served any such purpose, we feel sure it would meet with a great deal of approval even at the North. We doubt much whether even religious people would seriously object to it. If every man who made a campaign charge could prove or had to prove the truth of it by a fight with the man against whom he made it, it would certainly result in a wonderful clearing of the political atmosphere. It would, too, put it in the power of many men to get rid of a load of obloquy under which they have labored for years, through inability to disprove by the ordinary methods accusations brought against their character by political opponents. But, so far as we know, no Southerner claims this power for the duel. No mention is made of it in any eulogy of the duel we have ever seen. According to the light we have on the subject, it tells us nothing we care to know about a man. Nobody cares a rush in these times whether Mahone or Riddleberger is a brave man or not. Physical courage is not of any great importance in ordinary times under modern government. The country is full of eminent and useful citizens who have no more stomach for fighting than Bob Acres.

But we should greatly like to know beyond peradventure whether what Wise says about Riddleberger, and what Jubal Early says about Mahone, is true or false. If the duel would reveal this, it would very usefully take the place of libel suits, because it costs nothing to anybody but the parties concerned, and takes up nobody's time but that of their intimate personal friends. If any of our Southern contemporaries can say that the duel does this, and can recall any cases of it, we should be glad to hear of it. It would, for one thing, be an interesting addition to our knowledge of that very obscure subject, the connection between the material and moral nature of man. If by hitting a man with a bullet at ten paces on the 16th of October you can prove that for some years previously his disposition had been vicious, or that on the 16th of April last he had told a deliberate lie, it is easy to see that there must be more laws of the human mind than are described or assumed in the ordinary manuals of logic.

THE ILLINOIS GRAIN-GAMBLING ACT.

There are weighty moral and commercial objections to the Illinois grain-gambling act, recently brought to the attention of the Chicago Grand Jury by Judge Jameson. But the statute as a mere specimen of criminal legislation is also open to serious criticism, and as it is likely, in time of excitement over the doings of unscrupulous operators, to be copied in other States, it may be worth while to examine its provisions somewhat in detail. It provides that "whoever contracts to have or give to himself the option to sell or buy at a future time any grain or other commodity, stock of any railroad or other corporation, or gold, or forestalls the market by spreading false rumors to influence the price of commodities therein, or corners the market, or tries to do so in relation to any of such commodities, shall be fined not less than $10 nor more than $1,000, or confined in the county jail not exceeding one year, or both."

This, it will be seen, is intended to cover three distinct things: the purchase and sale of options, forestalling by means of false news, and cornering or trying to corner the market. With regard to the second of these, the statute is drawn in such a way that it will probably be impossible to enforce it at all. The old offence of forestalling consisted in buying or contracting for merchandise or grain coming to market, or raising prices by keeping goods out of the market, or spreading false rumors with the intent to enhance the value of any article. The essence of the offence is an artificial inflation of prices. The Illinois Legislature, however, does not make this inflation itself a crime, except it can be proved to have been effected by means of false news. It would seem to be necessary, therefore, in order to secure a conviction under such an act, to prove not only that the market had been forestalled, but that it had been done by means of false rumors, spread for that purpose. In most cases this would be impracticable. It would be necessary for the District Attorney to show not only that the person indicted had spread false rumors about the commodity, but that the rumors had had an effect on the market. Of this the jury would necessarily be the judges, and the causes which affect prices are so numerous that in nine cases out of ten it would be impossible to prove any immediate connection between the rumors and the rise in price. It may be urged in reply to this that the courts would construe the statute to mean that the offence should consist in merely spreading false rumors, without regard to their effect upon the market. But even if they did so, there would still be the fatal obstacle in the way of a successful prosecution that the prosecuting officer would have to prove criminal intent. It is absurd to suppose that any jury would convict a man for merely repeating as a rumor what he hears as a rumor, without some evidence that he knows it to be false. No such conviction would stand for a moment. But how can such knowledge be proved? The "market" is always a mass of rumors, some false, some true, and all repeated from mouth to mouth, and published in the press from hour to hour. The origin of these rumors is seldom traceable, and to punish people for circulating them would simply be to put a stop to business.

Again, the Illinois statute, while it provides a punishment for spreading false rumors to forestall the markets for commodities, is totally silent on the subject of spreading false rumors with regard to the stock market. There is certainly just as much reason for punishing the one as the other, though no doubt grain-gambling attracts most attention in Chicago, just as stock-gambling does in New York. Everybody knows in both cities, however, what "giving points" means, and it may be worth while, by the way, to remember that the astute operator may often gain his end by giving true points rather than false ones. He may even effect his purpose by cautioning people not to spread the rumors which he desires to have set afloat. Everybody has heard of the story of the late Daniel Drew, who, when in control of the Erie Railway, once gave a valuable "point" to a deacon in his church, with a strict injunction to let it go no further. The deacon, of course, as his informant anticipated he would, repeated it to all the other deacons of his acquaintance, who all took advantage of it to their great ultimate pecuniary loss and Drew's gain. The first deacon came to Drew with a very long face and complained of the disastrous result. Upon which Drew, acknowledging that he might have been mistaken as to the information he had given, paid him his losses in full. "But," said the deacon, "there are Deacon Jones, and Deacon Brown, and Deacon Smith, who have lost heavily too." "Yes," the benevolent operator replied, "but I told you not to tell them." This anecdote, whether true or not, as a stock-market fable is invaluable, and should be brought to the attention of every legislator who feels called upon to deal with the offence of spreading false rumors.

The remainder of the Illinois statute is so carelessly drawn that it would probably require a very liberal construction to make it capable of effective enforcement. A contract made by an operator to "give to himself the option to sell or buy," would be a legal as well as a commercial curiosity, and the offence of "trying to corner" the market may mean anything at all or nothing. The market is "cornered" by means of buying and lending stock, so that any buyer or lender of stock might be suspected of an attempt to corner the market; but buying and lending stock are in themselves perfectly legitimate and harmless things. By "trying to corner," the Illinois Legislature probably meant a combination and conspiracy for the purpose of cornering. In a statute of this kind it is certainly essential that technical and precise terms should be used. "Squeezing the boys" has a definite meaning on Wall street, but it would be a mistake to incorporate it in a criminal statute.

Another objection to the Illinois statute is the extraordinary discretion given to the judges, who may either impose a fine of ten dollars or throw a man into jail for a year for committing any of the offences specified in the act. It is curious to see a statute of this kind making its appearance in an American community at the present day. It is a hundred years since all laws of the sort disappeared from the English statute-book. The objections to them are not new or difficult to understand. They cannot be enforced, and making their language vague and loose is not likely to make prosecutions under them any easier.

GAMBETTA IN THE MINISTRY.

The long-pending change in the French Ministry has, it is now announced, taken place. M. Gambetta has been requested by the President to form a Cabinet and has consented. In fact, the request seems to have been made some time ago, but M. Gambetta thought it hardly etiquette for the present Cabinet to resign, or for the President

to accept their resignations, until the Chambers had met and there had been a debate on a vote of confidence. This was, however, probably not the only reason of the delay. Time has been required to bring about harmony between the Left and the Republican Union, two "groups" whose union is necessary to give Gambetta a working majority, and might also bring Jules Ferry into the new Cabinet.

Gambetta's accession to office has long been expected, and of late strenuously demanded by a certain portion both of his friends and enemies, the former because they thought the premiership his proper position, and the latter because they believed he was exercising power without responsibility. But he would doubtless have managed in some way to postpone the crisis which brings or rather forces him into office until he had time to test the temper of the new Chambers, if the present Ministry were in a condition to face them. The fact is they are not. The meeting of the Chambers has been postponed at their urgent request by the President to the last moment allowed by law, the 28th instant, in order to give time for something to turn up that would put a good face on their position. Among the things, for instance, which M. Ferry was looking for as probable and likely to help him was some important success in Tunis, such as the capture of Kairouan. But the news from Tunis has of late been so bad as to dry up this source of hope completely. Military successes cannot be achieved to order. Preparation was made for the last elections by the conclusion of a sort of snap treaty with the Bey, but nothing of this sort is now available. The Arab insurgents do not wait for the French generals to capture or destroy them. They fight and run away, and fight again.

What makes all this the more unfortunate is that it is the Tunisian business which has fatally dislocated the Ministry. It was not very homogeneous to begin with, but it might have held together with a certain show of decency if the Tunisian expedition had not been undertaken. From the moment it was discovered that the marauding Kroumirs did not exist, a great cloud of scandal settled on the affair, first abroad and then at home. Frenchmen themselves were naturally surprised and humiliated at finding that there was not a more presentable excuse for the invasion. The friends of the Government, however, held their tongues, or descanted on the advantages or the cheapness of the annexation, or whatever it was called. Its enemies began a series of explanations intended to show that the war was really undertaken in the interests of a band of speculators with whom the Ministers were in collusion; that the scheme had been over ten years on foot; that the long residence at Tunis of a "pretty American" (formerly well known in New York society) was one of the first moves in their game, and that it is only now that they have been able to bring their plans to maturity.

The Ministers, unhappily, have not been able to make a united defence to all this, or indeed to agree on any defence. They have not been able to agree on any explanation of the non-appearance of the Kroumirs, or on any theory of the relations of France with the Bey. The Minister of Foreign Affairs, M. Barthélemy-Saint-Hilaire, has always maintained that the treaty with the Bey and the promotion of M. Roustan, the French Consul-General, to a sort of supervisorship of him, was a triumph of French diplomacy. The Minister of War, General Farre, on the other hand, has maintained that whether it was worth much or worth little, it was a triumph of the French arms, having been imposed on the Bey by a general of cavalry. M. Saint-Hilaire was, for similar reasons, eager to have the treaty prove a final settlement, and General Farre to show that such it could not be, and that the complete conquest of the country was necessary to a lasting peace.

Anyhow, events have favored the military view up to a certain point. The treaty did prove worthless, but the operations undertaken in consequence of its failure have not succeeded. No striking advantage has been obtained over the Arabs. The French troops hold the ground they camp on, and not a hectare more —not even what their rifles can sweep—for the Arabs burn and pillage and murder under the noses of their sentries. The capture of Kairouan will be a great *coup*, which General Farre believes will end the war. But then the General is not a religious fanatic, and cannot enter into the feelings of Mussulmans who have seen their holy places profaned. He is, therefore, probably grossly mistaken about the effect which will be produced on the insurgents by the storming of the place. At all events, M. Ferry does not care to go before the Chambers and defend either view of the situation. The charges of collusion with the speculators are, in the meantime, likely to be investigated in the courts, as M. Billing of the Foreign Office has begun a suit for defamation against the *Événement*. The trial will certainly result in some entertaining revelations.

M. Gambetta will go into office without these burdens on his shoulders, and will probably excite enough curiosity in his new position to turn public attention away from them. He will be free, too, from the curious difficulties into which M. Tirard has brought the present Ministry over the Treaty of Commerce with England, and which are apparently the consequence of the failure of "a game of bluff" on the part of a man who did not know how to play it.

THE WINE INTEREST IN FRANCE.

On the tenth of this month there met at Bordeaux what the French call "Le Congrès Phylloxérique," to take into consideration the present condition of vine-culture in France, and the measures that should be adopted to save what is left of that important industry. There is a special fitness in holding such a congress at Bordeaux, for the interests of that city are closely connected with the industry, and, as the emporium of the wine trade, it owes to it in great part its wealth and prosperity. How severely the wine-growers have suffered from the ravages of the phylloxera can hardly be imagined from any array of figures that can be produced; for in attacking the vines the scourge has attacked the chief source of the agricultural wealth of France, and the effects are not confined to the wine-producers and merchants, but involve also a large number of trades and occupations subsidiary to and dependent upon the wine industry.

The vineyards of France are estimated to cover 4.27 per cent. of the total surface of the country, and comprise in area 2,300,000 hectares. More than 500,000 hectares of vines have been totally destroyed by the phylloxera, and as many more have been attacked with little hope of being saved. A great change in the value of land has resulted. The *Statistique Officielle* recently stated that for the whole of France the average value of land fit for vine culture ranged from 1,783 francs per hectare for poor soils to 3,564 francs per hectare for the best, and if a limited extent of territory be considered, as in the department of the Gironde, in which there are 172,000 hectares devoted to vines, the value reached as high as 7,000 francs per hectare. In this department 20,000 hectares have been entirely destroyed so far as they can be used for wine culture; and if the value of the land be estimated at 2,000 francs per hectare—and that is the average price of land when not devoted to special uses—there has resulted a loss of 5,500 francs per hectare, or 110,000,000 francs for this district, without taking into consideration the extent of territory attacked by the pest, which amounts to 136,000 hectares. But nothing can more clearly give an idea of the losses entailed than the following table, which is extracted from a recent issue of *L'Économiste Français*:

Departments.	Hectares once cultivated.	Hectares attacked.	Hectares destroyed.
Hérault	180,000	29,500	131,600
Gard	98,500	...	97,800
Var	90,300	14,000	50,000
Charente	116,200	39,000	42,000
Vaucluse	59,000	13,600	37,300
Bouches-du-Rhône	46,000	6,500	40,500
Charente-Inférieure	169,000	50,100	40,000
Drôme	28,000	6,000	26,000
Ardèche	34,600	6,500	23,200
Gironde	172,000	136,000	20,500
Lot-et-Garonne	140,000	60,000	12,000
Dordogne	98,000	27,000	12,000
Lot	65,800	20,000	8,200
Rhône	46,000	10,000	5,900

Thus the wine culture in the departments of Gard, Ardèche, Bouches-du-Rhône, Vaucluse, and Drôme may be said to be destroyed, and in six other departments the injuries have been such as to entail enormous losses. It is believed that to-day there are half a million vine-dressers thrown out of employment or living on starvation wages, and the wages of these people were much above the wages paid to other classes of agricultural laborers.

Of the various experiments made to destroy or at least check the phylloxera, not one has produced a safe and definite result. Chemistry has been applied in the form of numerous insecticides, composts, and soil dressings, but with no satisfactory results. The Government allotted a credit of nearly a million francs to carry on these experiments; and though this amount has been nearly expended, little progress has been made in finding a sure remedy against the pest. Private capital, too, has been employed in vain attempts to check the progress of the phylloxera. But the vineyards are generally held in small properties, and the proprietors cannot afford to expend much of their capital on uncertain experiments. Out of the half million hectares under the influence of the scourge, but 15,000 hectares have been treated.

It has been said that a sure remedy is found in the hardier American varieties of the vine, which will withstand the attacks of the phylloxera, and in some cases the introduction of these new vines has been attended with excellent results. A great objection is the large expense involved in making this change, estimated to be 1,500 francs per hectare, which will put this remedy beyond the means of the majority of the small proprietors. But 6,441 hectares have been planted with American vines, and to the attacks of a new pest, the mildew, which promises to be more destructive to the vine than the phylloxera, these vines are particularly open.

But if France has lost by this scourge, Italy and Spain have gained. The wine-producing area of Italy is now larger than that of France (1,870,000 hectares), and the annual production amounts to 20,000,000 hectolitres. The value of the exports of wine from Spain in 1879 was only 170,000,000 francs; in 1880 it had risen to 225,000,000 francs, an amount equal to the value of the exports of wine from France. It is a curious fact that the exports of wine from France have not been affected by the great decrease in the quantity produced. This will appear from the following table:

Years.	Production (francs)	Exports (francs)
1874	70,000,000	237,400,000
1875	84,000,000	252,300,000
1876	44,000,000	246,200,000
1877	55,000,000	225,500,000
1878	49,000,000	207,100,000
1879	26,000,000	264,900,000
1880	29,000,000	285,700,000

On the other hand, the imports of wine into France have increased nearly ten-fold since 1874, and in one year (between 1879 and 1880) more than doubled.

The production for 1881, it is believed, will show a slight increase over that of 1880, and will serve to inspire a little hope among the wine producers that the worst is over, though it will take many years to make good the losses that have been incurred since 1879. We fear that the congress will seek aid from the Government, in accordance with their idea of the objects of a government, and wish to make good the losses of the last three years by a tax imposed upon the whole country in the interest of the wine producers. A more healthy sign of independence is shown by the recent founding, at Beaune, of a school of viticulture, where the matter is to be made a special study.

THE NEXT STEP IN IRELAND.

THE *Pall Mall Gazette* very justly remarks that if the Land Act will not restore peace to Ireland, the question of a new kind of government for Ireland must come up, "because it is intolerable, even impossible, to govern by a series of spasmodic *coups d'état*." There is no doubt that the situation there is serious and puzzling, although the accounts of the disturbances are grossly exaggerated. But whatever peace there is is due mainly to the employment of an enormous military and police force. A régime of this kind cannot be maintained indefinitely. The new kind of government for Ireland which suggests itself to those who think a new kind of government may become necessary, is what is known in England as the government of a Crown colony—that is, arbitrary government by a Governor aided by an appointed council. This is the way such of the colonies as have never received a legislative charter are governed; and in the small colonies, like Jamaica or the Bermudas, it works well enough. As a matter of fact, Ireland is really for the moment under this government now, but only as a temporary makeshift, and nobody can say that it works well. Its establishment as a permanency, or even as a prolonged experiment, is something from which all reasonable Englishmen doubtless shrink, because every Englishman knows that it could not last always, and that it is one of those expedients which, like holding the bull by the tail, in no way prepares for its own termination. It could not prove a measure of reconciliation. It would be full of daily irritation in all sorts of ways for all classes of Irishmen, and full of shame for all classes of Englishmen. Coercion, every one admits, is not a remedy; it may put off the evil day, but it does not diminish the dread of it. It would take, too, fifty thousand men to enforce it, and would either hasten the flight of capital from the island or prevent its coming. It would, in fact, leave the Irish problem just where it stands to-day.

Nevertheless, the performances of the League since the Land Act was passed have probably reconciled a good many Englishmen to seeing something like Crown-colony government tried in Ireland, not as a good thing, but as the least of all the evil things they now have to face. Mr. Gladstone is being criticised sharply for calling what he is now trying in Ireland "the resources of civilization." There is no doubt that what he is trying is force, and people who are scandalized at hearing force called "a resource of civilization" forget that civilization rests on the fact that the preponderance of force is on the side of security for person and property. If it cannot be exercised through the courts, it has to be exercised somehow. It has been clearly demonstrated in Ireland that it cannot be exercised through the courts. If this failure worked complete impunity for robberies, murders, and intimidation, civilization in Ireland would disappear. But soldiers and policemen acting outside the ordinary law are a resource of civilization when the ordinary law has proved insufficient; and this is what Mr. Gladstone is trying. He cannot allow himself as Prime Minister to be supplanted by Mr. Parnell. One or other of them has clearly, in the present crisis, to go to jail; and in troublous times, of two political opponents the proper man to go to jail is the man who has least force on his side. Mr. Parnell's whimpering over his being beaten in a game of his own contrivance is childish, as childish as the lamentation of the Southerners over the destructiveness of war, after their own soil had become the theatre of hostilities. The mistake he has made lies in his having, by his new demands, alarmed people about the security of all property. There is doubtless many an Englishman, who was ready to concede a fair measure of legislative independence to Ireland, who recedes from it, or is prepared to resist it at any cost, if he finds that it would probably mean the confiscation of the landlords' property by the forcible reduction of their rents to a mere trifle, having no relation to the productiveness of the soil. The whole performances of the League during the past month have helped to increase the class of Englishmen who are prepared for anything, however desperate, sooner than surrender a large body of their fellow-citizens to spoliation at the hands of demagogues.

Mr. Gladstone is, however, pledged not to rest satisfied with trying force in Ireland. There is another resource of civilization still at his command, and for which he declared himself ready in his recent speech at Guildhall, and that is the relegation of Irish affairs to Irish members of the House of Commons, and the appointment of Irishmen to be chief executive officers, from the Secretaryship down. This ought to have been the accompaniment of the Land Act. It is the one sure remedy, as all constitutional history shows, for the deep-seated discontent. Great Britain has found it successful in Scotland, and in most of the great colonies. She lost America because she was not willing to try it here. She would have lost Ireland for a similar reason if Ireland had been bigger and further off. Owing to deep-seated prejudices, born of a long course of unchecked oppression, many Englishmen feel as if its trial in Ireland was an impossibility, but it is an impossibility they will yet have to swallow if they are ever to get rid of the Irish difficulty. If the bulk of the Irish people have no confidence in the Ministry as at present constituted, the time-honored and well-tested remedy is to put into the Ministry men in whom they have confidence, and let them manage Irish affairs. It would, for instance, wild as the suggestion may seem, be a masterstroke of statesmanship if Mr. Gladstone were at this moment to ask for Mr. Forster's resignation, and let him give up his bodyguard of dragoons and come home, and in his place put Mr. Parnell, and leave him, and men like Mr. Shaw, or Mr. Russell, or Sir Charles Duffy, to settle among themselves what legislation Ireland needed. This would probably at first shock what is called "English opinion" about Ireland, but English opinion would very soon become thankful for it, because it would bring peace. If any Irishman wanted to justify Irish discontent in the eyes of foreigners, he could not do better than exhibit to them the last three Irish Secretaries—Sir Michael Beach, Mr. James Lowther, and Mr. Forster. The first two were actually filled with unmitigated scorn for the country whose affairs they administered; the last has a kindly but hopeless incapacity to understand his turbulent subjects, and occupies towards them that in our time most exasperating of attitudes towards a dependent community, the attitude of a superior being who knows what is good for them better than they do themselves.

THE PRIVATE LIFE OF IMMANUEL KANT.*

THERE exist well-known biographies of the eminent philosopher; but besides the remarkable

* From a paper read before the Boston Thursday Club by Dr. H. A. Hagen, of Harvard University.

facts given in these there are many little anecdotes and stories preserved by tradition in the families of Kant's friends, or published in small local papers, never or rarely to be found abroad. Part of what I shall relate are family traditions; for my grandfather was for many years a colleague and friend of Kant, and an uncle of mine was for years a frequent dinner-guest of the philosopher. His memory still lives in his native city. His house is unchanged save by an inscription on a marble tablet stating the fact that he lived there. It has been for a long time the property of a dentist—as somebody wittily said, to complete Kant's philosophy, which is a remedy for all aches except the toothache. The owner has had the good sense to leave untouched the interior arrangement of the house, and near by is placed a beautiful statue of Kant in bronze by Rauch.

After Kant's death, thirty of his friends resolved to celebrate his birthday every year by a dinner just like those given by the philosopher himself on that day. The dinner was at first given in the same rooms and in similar fashion. The president was charged with the duty of making a speech bearing upon Kant's philosophy or upon his works. Before the end of the dinner the president of the next year was chosen in the following manner: A cake was brought in, in which a bean had been baked, and of which each member had to eat a slice. Whoever found the bean was called King of the Bean, and had to preside the coming year. But the original members became every year less in number, and new ones were admitted. In 1848 died the last of Kant's dinner-guests. The custom is still in vogue, and some years ago the subject of the oration was Kant's little work on Eternal Peace, showing that in the settling of the *Alabama* claims Kant's principles were followed for the first time eighty years after the publication of the work.

Immanuel Kant was born in Königsberg, in Prussia, April 22, 1724. His father was a saddler in very humble circumstances, the more so as eleven children were to be provided for. The house of his birth was burned in a very large and disastrous fire in 1811. There is very little known about his childhood or boyhood, and that little is without interest. It is remarkable that none of his teachers either in school or in the University were of any prominence. After having been obliged for want of means to serve for several years as instructor in private families in the country, he decided in 1755 to join the University as *Privat-docent;* that is, he had no salary except a small fee paid by his students —about four thalers the term when he was already famous, and perhaps only about half that sum in the beginning. Eleven years later he got his first appointment from the University as second librarian, with the marvellous salary of sixty-two thalers a year. At forty-six years of age, after having lectured for fifteen years with a success entirely unprecedented, he was promoted to a professorship, with a salary of four hundred thalers, which was raised in his sixty-fifth year to six hundred and sixty—never higher. Nevertheless, as the number of students in the University attracted by his fame became twice as great as before, he was able to amass a fortune of twenty-one thousand thalers. Of course the income from his books may have made up the larger part of this sum, but they only became profitable after he was sixty years old. At the same time he had always supported his relatives in a noble manner, and lived comfortably. Times have changed: the above-mentioned sum Gladstone received a short time since for a pamphlet written in a few days.

Kant's lectures generally filled from twelve to sixteen hours a week, winter and summer, from seven to ten in the morning. He spoke extemporaneously, with only a small paper with notes and dates before him, and he liked to make his lectures more interesting and attractive by numerous quotations and facts, and, when in place, even by jokes. His success was enormous. The large lecture-room became too small in the second year, and students wishing to have a good seat were accustomed to be an hour beforehand in the room; *i.e.*, at six o'clock in the morning. He was accustomed, when particularly absorbed in thought, to keep his eyes fixed on some object, his favorite being a church steeple to be seen from his study-window; and in the same way, when, in his philosophical lectures, his mind became deeply engaged, his eyes grew more serious, and his forehead more thoughtful, he used involuntarily to fix his gaze upon one individual student. Once the student was not one of the most interested, and happened to yawn. This lack of good manners disconcerted the philosopher to such a degree that he remarked angrily: "It would at least have been polite to cover your mouth with your hands." The unhappy fellow changed his place with another student at the next lecture.

The apparatus used by Kant for his studies was comparatively small. His library consisted at the time of his death of only a few hundred volumes, which he bequeathed to a friend. Among them is still preserved his copy of the Bible. As the edition is dated 1751, it can only have come into his hands about the time he began his University lectures. It is evident that he must have studied the whole book very much, as many passages are underlined. Very often he made notes and remarks, mostly in Genesis and in the four evangelists.

Once, when the philosopher Fichte was at a party in Königsberg, a well-educated officer of high rank engaged in a conversation about the immortality of the soul, expressed his doubts on the subject, and added as a proof that Kant had only been able to give a probable evidence of it. Then Fichte, who had not joined in the conversation, interrupted the speaker, and in his blunt way said: "You have not read Kant; he has given incontestable evidence," and he tried in a detailed way to prove his statement by quotations from Kant's works.

Kant was small—less than five feet high; his chest very hollow, the right shoulder somewhat bent backward. His head was not remarkably large, but his blue eyes were splendid; his hair was blond, his complexion very fresh; his cheeks ruddy, even when he was old. His hearing was very acute, his voice not loud but soft, and able to stand much fatigue till his seventieth year. His memory was remarkable, his manners particularly refined. Even in the earlier days of his fame the public waited for the moment of his going to the meeting of the council. He was always very neatly dressed, and his serious face, his head bent somewhat to one side, his regular but not too slow step, gained the respect of the waiting crowd. He preferred a sand-colored coat, later a brown one, a powdered wig, carrying invariably his small three-cornered hat in his hand or on the top of his gold-headed cane, and always wore silk stockings, and shoes after the fashion of the time. A pair of these, marked in his handwriting, is still preserved in the collection of shoes of prominent men at Dresden.

His health was good, probably on account of the regularity of his mode of living. He rose summer and winter at five o'clock in the morning, and never once failed in this custom in thirty years. For breakfast he took nothing but two cups of very weak tea, smoked a pipe, and worked for his lectures, which began, as I have said, at seven and finished at ten. After the lectures he worked again till he dressed for dinner at one o'clock. This was his only meal for the whole day, and was therefore large and substantial, to which he added a pint bottle of claret. After dinner he invariably took an hour's walk, and on his return looked over the mail and newly-arrived books, then worked again and retired at ten o'clock, or somewhat earlier in winter. He believed that seven hours of sleep, including the earlier hours of the night, were necessary for health. His mind dominated over his feeble body in a surprising manner, and allowed him to forget even in intense exertion his weak constitution. It was not only a theory with him to master sickly feelings, but he put it in practice by his own strong will; and what he had once decided upon as a maxim he followed persistently without deviating from it. He was kind, benevolent, and of a pure and childlike disposition. He respected the character and capacity of other men, and, considering his own prominence, criticised others with a rare modesty. When Fichte sent him the manuscript of a philosophical work he had dedicated "to the Philosopher Kant," asking him to cancel what he did not agree to, the only word that Kant struck out was the word "Philosopher" before his name. It was his nature always to see the good in everything, and his custom to impress upon his pupils to do the same. He was so conscientious that he felt disturbed for a long time for having declined an invitation, saying he was engaged, when such was not the case.

Concerning his lectures he used to say: "I lecture not for the man of genius—he will work his own way through, nor for the stupid fellow, because it would not be worth while; but for those students who stand midway between the two, and who desire to be educated for their future profession." Kant respected freedom in thought everywhere, and hated adulation. He tried to learn more every day; the thought of a standstill in culture he abhorred. Eloquence he declared dangerous, and called it the sophistry of persuasion. Of literature he preferred the satirical part: Butler's 'Hudibras,' 'Don Quixote,' Swift, Juvenal, Horace, and of course a number of German authors, he liked above all; in philosophy, Locke, Pope, Hume, Hutcheson, Montaigne, and Rousseau; but in later years works on natural history and voyages formed his principal reading. Favorite passages of poetry he retained long in his memory. The one he most enjoyed was an epithalamium, a funny apotheosis of bachelorship. Kant was a bachelor, but, it is said, was twice on the point of proposing, but both times could not come to a decision till it was too late.

His remarkable self-control once saved his life. In one of his solitary walks, an insane butcher, a large knife in his hand, rushed at him furiously. Kant looked straight at him, and asked: "Is to-day butchering-day? I believe it is to-morrow." Happily the insane man was thrown off his guard by the reference to his calling, and allowed the philosopher to pass undisturbed.

The unrestrained development of freedom as a right of man, combined with strict obedience to authority, made up Kant's political code. At the time of the American Revolution he was entirely on the side of the Americans. Once, defending in society the American cause, he was strongly opposed by an Englishman, who was a stranger to him, and who warmly vindicated his country. The respect that Kant showed for the stranger's feelings in this dispute was the beginning of a lifelong friendship, which was not lessened by some peculiarities of Mr. Green. They had once planned to drive into the country together. Kant was late, and, meeting Mr. Green

in his carriage in the street, beckoned him to take him in. But Mr. Green bowed formally, and passed the philosopher, who was left behind without resenting the rudeness.

Kant was always much displeased when he received badly-written letters, because, as he said, it was always doubtful if the contents were worth the trouble of deciphering. He lived alone with his servant Lampe, a queer fellow, who in later years became a drunkard, and so obnoxious that Kant was obliged to dismiss him after thirty years' service; but he paid him the same wages, on condition that he should never more appear in his house. There exist many funny little stories about this curious fellow. Once, going home from a dinner-party with Lampe, who had probably made better use of his time with the bottle in the servants' room than his absent-minded master, they were stopped at the corner of a street by a trench, until Kant became aware that it was only the shadow of a newly-erected lamp-post.

Kant liked to take his dinner in company, and had every day a few invited guests—commonly two, never more than six, except on his birthday, when the number was increased to nine. In his work on Anthropology he asserts that the number at dinner should never be less than the number of the Graces, never more than the number of the Muses. At the table the guests were obliged to help themselves—a custom then unknown in Germany. His dinners were plain, of three courses and dessert, and before every one of his guests was a pint bottle of claret. But he used carefully to remember whether his guests preferred red or white wine, and when his memory began to fail he noted such things on little slips of paper. There were some peculiarities in his taste: the meat must have been one day old in the house, as he said he did not like to eat live meat. French fruit he liked to such an extent that he was once strongly displeased when some fruit ordered for him by a friend was eaten by the crew of the ship, which was detained by rough weather and shortness of provisions. But he was ready to acknowledge the next day the impropriety of his displeasure. He believed the right preparation of mustard for the table of importance, and was accustomed to do it himself. Almost the best small likeness of him is an aquarelle, now in private hands, showing him standing with the mustard-pot in his hands. Some friends, wishing to have this portrait, ordered it to be engraved, but thought it more appropriate to put a book in his hands, upon which, by a curious mistake, the title was put: 'Critique of Sound [instead of Pure] Reason.' In consequence of this mistake the engraving was ordered to be destroyed, and copies of it are very rare. A large Swiss cheese presented to him gave him great trouble, as he could not think how to manage the enormous wheel-shaped mass. Finally he ordered it to be divided with a saw. He was very moderate, and drank nothing but water, except at dinner. He liked to remain long at dinner and eat slowly, in the manner of the Romans—*ducere cœnam*. He enjoyed talking at dinner, and was accustomed to lead the conversation in a pleasant and interesting manner. When he remarked that the conversation was becoming too transcendental, he changed it in a humorous way. It is stated that Kant's conversation at this time often contained the most brilliant and remarkable thoughts.

In his earlier days, Kant used to take his after-dinner exercise in a very solitary place near the city, called up to this time "The Philosopher's Walk." But as the beggars, to whom he gave too generously, became at last so numerous as to disturb his meditation, he changed to another place. He was accustomed to pause and take a little rest always at the same spot, and the owner of a house near by, noticing this, placed a seat, which he daily used. In later times he walked in a garden-square near his own house. An old lady of my acquaintance told me the following interesting anecdote: As a young girl, her greatest desire was to see and to speak to the great philosopher. She decided to offer him a rosebud with a few words. As she stood behind the bushes near his accustomed seat she was much disappointed by his infirm and broken appearance; but when she handed him the flower he looked up at her, and his large eyes had such a wonderful expression that she forgot all her prepared speech, and, though usually unembarrassed, remained dumb before him. Kant acknowledged her kind intention, and his few benevolent words of thanks were treasures for her even in her old age. It is a remarkable fact that Kant never took a journey and never saw a city besides his native one. All the rich knowledge of the world in his possession he had acquired by the study of books.

The influence of Immanuel Kant on the development of Germany—I may say on knowledge and progress in a much larger part of the world—has been immense. The fact is notorious and has never been denied. Perhaps it will not be uninteresting to show the way in which his philosophical lectures immediately influenced the destiny of Prussia and Germany. Prussia, by the peace of Tilsit, gave up to France about one-half of her population, and was at once subjected to a system of plunder and outrage such as no nation, I presume, was ever before subjected to, and which soon brought her to the verge of despair.

"In the dark and melancholy winter of 1808, when the measure of French power and European suffering were alike full, at a moment when all hope of relief seemed to have fled from the Continent, and Prussia herself to have been marked out as the peculiar object of French vengeance—at this moment, when the rest of Germany lay in abject subjection, the Ministry of Prussia conceived and announced the determination of making up in moral what they had lost in physical strength. From that moment the character of Prussia began to change. The means were no sooner wanting than they were found. A new university was founded at Berlin, from which a free spirit has gone forth that has wrought like a fever through all Germany."

Surely, as Mr. George Ticknor, whose words I have just quoted, says, the means for moral improvement were no sooner wanted than they were found; but these means were almost without exception young and intelligent men, disciples of Kant; and I must remark here that the rising against Napoleon was first started at Königsberg, in Eastern Prussia, while this province was still in the iron clutch of the conqueror. The principal influence of Kant's philosophical lectures falls between 1780 and 1790. It happened, fortunately, that, when the King was obliged to appeal to the people, a large number of Kant's pupils were just of age to be employed in the most important positions. But a fact not known, I believe, is that up to 1840 most of the leading and prominent positions and offices in Prussia were in the hands of pupils of Immanuel Kant, certainly to the greatest advantage of the culture of the country. Perhaps more astonishing than the founding of a university in such sad circumstances was the founding of the first observatory in Prussia—a result of the exertions of Kant's students. It was the observatory at Königsberg, celebrated by its first director, Bessel; and I remember very well when, later, he showed me a voluminous and very important correspondence with his distant friend, Professor Bond, of Cambridge, Mass.

The influence of Immanuel Kant in a larger range does not date back of 1782. It is a curious fact that his masterpiece, the 'Critique of Pure Reason,' was about to be sent to the paper-mill as waste-paper, because it did not sell, when a detailed criticism in the *Literatur-Zeitung* drew the attention of the world to this treasure. From this time Kant's philosophy ruled unquestioned for the next twenty years, and much of the barrenness of the literature of that time must be undoubtedly charged to its account. Respect for Kant's genius, however, was not limited to the learned part of the population. For several years everybody knew of his declining health, but the more unavoidable the separation became, the more anxiously the whole community looked forward to it. The bad news that he had departed in the forenoon of February 12, 1804, spread rapidly. The community had lost its most reputed son and citizen, the world had lost its philosopher. The sky was clear and bright; only one small cloud was to be seen in the blue zenith. And it is related that a common soldier directed the attention of the people to it, saying: "There is Kant's soul going to heaven."

HERMANN AUGUST HAGEN.

ENGLISH AND FRENCH RELATIONS IN THE EAST.

THE ENGLISH VIEW.

LONDON, October 6, 1881.

DURING the last month foreign affairs have again come somewhat unexpectedly to the front. It is perhaps a characteristic of the democratic times in which we live, when Lord Beaconsfield's celebrated phrase that "the world is governed by sovereigns and states men" has ceased to be true, that it is almost impossible for the public to keep up a continuous interest in matters which are not constantly brought before its notice. In home affairs it is different. The grievance which has brought about a cry for reform continues to be felt till the reform comes, and there is no abatement of interest in the question till it has been dealt with. But the interest in foreign affairs is necessarily spasmodic; it is out of all reason to suppose that the grievances of (say) Armenians or other misgoverned subjects of the Porte, or even British interests in some remote corner of the globe, can succeed in keeping their hold on the public mind for long periods together. These things are left to the executive, which acts on its own responsibility, subject to the chance of popular displeasure if it makes mistakes; and hence public opinion is alternately keenly excited by some incident abroad, or profoundly lethargic about this whole class of questions.

After the settlement of the Greek and Montenegrin difficulties, there was no pressing question to keep up interest in the affairs of Eastern Europe; for such questions as the Armenian question could scarcely be called pressing in the sense of imperatively demanding immediate action, and the public were lapsing into a lethargic state of mind on foreign affairs. The revolt of the Egyptian colonels on the 10th of last month has, however, made a complete change in public feeling; once more a foreign question of first-class importance looms on the horizon, and the organs of the press are full of articles and discussions upon it. The events which took place, and the temporary arrangement which has been made, will be in the recollection of your readers, and I need not recapitulate them; but I will call attention to one or two matters which still require clearing up. Who inspired the colonels to take the step they took? Was it due to intrigues of the Porte, or some other occult influence? This is one point on which a great deal will be said, but on which positive information will be as hard to get as it

is in most intrigues of which Constantinople and the Palace are the centre. Another point which requires clearing up is how far the revolt is the outcome of a *bona-fide* national movement of Arabs against Turkish rule, or how far it was a revolt against the European Control. That there is a very strong feeling among the Arab population against the Turks and all their works is, I believe, incontestable; but the important question for us is how far this feeling extends to the European Control. It may be that the Control, connected as it was at the outset with the direct action of the Porte, has an extra share of unpopularity attaching to it from its origin, and that if the influence of Europe were put forward in the direction of securing the independence of Egypt, this element of unpopularity would disappear. Sufficient light has not yet been thrown on this point, though enough has come out to make it clear that something in the nature of the uprising of a spirit of nationality is one of the elements which will have to be reckoned with. However this may be, the state of things is sufficiently serious to have set the whole country a-thinking what had best be done.

It is satisfactory to note that public opinion is unanimous on one point—viz., in holding that it is impossible for us to practise absolute non-intervention in the affairs of Egypt. It is acknowledged on all hands, even by those who are thoroughly opposed to anything like Jingoism, that our interest in the freedom of the Suez Canal, and in retaining the fullest facilities for our communications with India, is so paramount that we cannot afford to allow any power to obtain so great an influence in Egypt as we have ourselves. Our interests in this international highway are greater than those of any other nation, and we cannot suffer it to be brought under the control of any power whose possible hostility might incommode us. The feeling is, however, more that of a wish to say "hands off" to other nations than of a strong desire to occupy the country ourselves, though it is felt that if intervention of such a kind there must be, the intervening power should be England. On another point there seems to be practical agreement, and that is, that we ought never to have entered into our present partnership with France. It is a partnership primarily of a purely financial kind. To ensure the good government of Egypt and the payment of interest to the bondholders (your readers will put the one or the other object first, according as they are of a cynical or philanthropic turn of mind), England and France have undertaken, with the consent of the Porte and of the present Khedive, the management of its finances, but there is no security that the arrangement entered into will be permanent beyond the fear of what the two Powers may do if it is forcibly broken through. Recent events have shown that that security cannot be found either in the good intentions of the Khedive or his ministers, and that the fear of what the two Powers may do is considerably lessened by the known difficulty they have in acting at all. Hence there is a general condemnation of the partnership entered into by the late Government which has made it necessary for us to take action, and yet seriously hampered our freedom to take what action we may think our interests demand.

Various modes of dealing with the present crisis have been suggested. The first which was put forward was Turkish intervention; but it was felt at once that for a Government like the present one, the leading motive of whose policy in Eastern Europe has been to restrict the rule of the Turk within the narrowest possible limits, to propose to resuscitate that rule in a country where it had become almost nominal, would be an act of grave inconsistency, and would really do little to settle the question. The recent action of the Porte in sending Commissioners to Cairo has quite confirmed this impression. It has been received with marked disapproval, and may lead to consequences which its promoters little anticipated. Another proposal has been that there should be a joint intervention by England and France; but, besides the fact that France is understood to have refused, there is the general objection to such joint action, in which divergent interests soon begin to make themselves felt, and there is the particular objection that in this case France has raised up such a spirit of indignation against her among all Arab races, on account of her action in Tunis, that her intervention in Egypt would excite the greatest hostility in the native population, and that our task would be rendered proportionately more difficult. A third course which has been suggested is that the Powers should declare the independence of Egypt and guarantee its neutrality, as has been done in the case of Belgium and Switzerland. A step of this kind would, it is urged, satisfy all that is "national" in the present movement; it would gratify the country by ridding it of the rule of the Turk, while at the same time it would commit the Powers to a definite agreement calculated to restrain their mutual encroachments. I am inclined to think that our policy is likely to take this direction. The action of the Porte in sending over its Commissioners is likely to precipitate matters, and the Assembly of Notables which the Khedive has summoned may also work in the same sense. It must be borne in mind, however, that the independence of Egypt would not solve all difficulties. Independent Egypt may turn against the Control, and in that case the Control must either be abandoned or upheld by force. To abandon it while the reasons—*i. e.*, the claims of the bondholders—which made it necessary in the first instance still remained in force, would be almost impossible, while to uphold it by force involves the question, Who is to apply the force—England or France, or both? The balance of power on the Mediterranean has been so much altered in favor of France by her protectorate over Tunis, that it might be thought not unreasonable that a preponderating influence should be given to England elsewhere. But the French can scarcely be expected to see things in this light, and England's interests are too paramount to allow her to wait upon the good pleasure of her ally. The only conclusion, therefore, which can be drawn from this position is that there are here the elements of a rupture which it will require all the good sense of both nations to avert. The probable failure—for so I must regard it—of the negotiations for a commercial treaty will not improve matters, but, on the other hand, it will make it less incumbent on this country to make concessions to France in so vital a matter as that of Egypt. The Prime Minister is to speak at Leeds this week, and the country will look with eager anxiety for his deliverances on this question. An absolutely quiescent or *laissez-faire* foreign policy, which would leave the impression that the Government had no firm purpose, but were drifting on from day to day with a hand-to-mouth policy, would produce a most unfavorable impression; whereas, on the other hand, tokens of a firm and resolute attitude would be welcomed, and much strengthen the position of the Government in the country.

H.

THE FRENCH VIEW.

PARIS, September 30, 1881.

THE European sky is overcast, and there are on every side what M. Rouher used to call "des points noirs." It would perhaps not be respectful to class the interview at Dantzig as a "point noir," since the Russian and German official papers represent this solemn interview as a mere guarantee of peace. Still, as Austria is now completely in the orbit of Northern Germany, and as the interview at Dantzig is to be followed by another interview between the Emperors of Russia and Austria, if not of the three Emperors, it is clear that the great Continental alliance, which was interrupted by the Eastern war, is to be resumed; and it will be resumed under new circumstances, as Austria's policy is now more closely connected with that of Prussia, and Russia enters the alliance with a sort of humility which she has never shown before. Under the circumstances created by the Eastern war, by the assassination of the late Czar, and by the conspiracy of the Nihilists, the alliance of the Emperors means in reality the hegemony of Prussia in Europe; and Prince Bismarck, though he has shown that he can assume heavy responsibilities, must be now almost afraid of the political weight which is placed upon him. He has to direct the movement of Austria towards the East, and to watch in a sense over the destinies of the Russian Empire, which implicitly implores his moral help; and he must do so with an almost certain knowledge that there is no gratitude between nations, and that Russia, having once reorganized her administration, and emerged from the dark abyss of crime and revolution, may one day become a formidable enemy of the German nationality. The alliance of the three Emperors has a certain air of mystery; it is surrounded with so much glamour that the very word is apt to excite some uneasiness in the western nations, and especially in England. England does not like to be kept outside of any great European combination; she likes to have her hand in all negotiations, and suspects danger as soon as she feels ignorant. Her power is in many respects imaginary, and she instinctively hates solid, heavy, material powers, such as those which a European coalition might set up, if she cannot, as she did under Napoleon I., subsidize them or direct their blows. And, though there is nothing aggressive in the modern alliances of sovereigns, England does not regard them with much favor. She feels at once drawn towards France when she hears of them, and she remembers the days of the Crimea, when France and England together dictated terms to Russia, and, it may be said, to Europe.

It is curious to see how similar circumstances may arise under a French Republic and under a French Empire. English statesmen now look upon the leaders of the French Republic with the same sentiments with which they looked upon the followers of Napoleon III.; the same incense is burned before them, the same temptations are offered, the same Olympus of aristocracy, of wit, of beauty, of intelligence, of delicate and refined life is opened to them; the new *parvenus* are treated with the same consideration—the same objects are to be attained, and, possibly, by the same means. It would be unjust to see any hypocrisy in such conduct: England shows in her own domestic affairs that she feels a genuine regard for the successful efforts of all men; that she can distinguish talent, eloquence, courage, wherever they are found. Her aristocracy is incessantly invigorated by democratic additions. There is a real, sincere interest felt in English society for the *new* men of our Third Republic; and I should not be far from the truth if I said that Gambetta was more popular in England than in France.

Two circumstances, however, have thrown a chill, as the French say, on this situation—the Tunisian affair and the Egyptian military revolt. The Tunisian intervention threatened at one moment to change the feeling of friendship now existing between the two nations into a feeling

of absolute hostility. The anger of England was somewhat soothed by the great difficulties which France encountered in the occupation of Tunis. These difficulties have culminated in the necessity of sending a whole army to Africa, and of planning a campaign the result of which can hardly have been quite foreseen. It seems hardly possible to understand why England should object to the extension of the French provinces in the north of Africa. The conquest of Tunis will probably be not quite so long and so difficult an enterprise as the conquest of Algeria, for "vis crescit eundo"; but we may be sure that it will not be an easy matter. We may go to Kairouan and take it by force, but France will never fairly be mistress of Tunis till she has made roads, built railways and forts, and created all the instruments of civilization which are absolutely wanting in a province perhaps the most barbarous in northern Africa. The inconvenience of the occupation will always be the neighborhood of Tripoli, for Tripoli is still the Porte, and whoever is neighbor of the Porte is, so to speak, the neighbor of all Europe. It is no secret that the Sultan, who decidedly thinks himself destined to play a great part in the Mussulman world, is constantly sending troops and ammunition to Tripoli. We shall probably find behind the heavy walls of Kairouan, the holy city, guns sent from the Dardanelles. We are obliged to shut our eyes on these hostile proceedings of the Sultan, because we cannot now choose to quarrel with him; but we must be prepared to meet constantly the secret opposition of the Porte in Tunis. The conquest of this province must therefore be looked upon as a "big job," and those who desire to see France engaged in a difficult affair may be fully satisfied. Surely, England, who undertakes to rule over so many millions of men, and who thinks that her manifest destiny is to govern so many races and countries, cannot find fault with us if we attempt to give more security to our African provinces. She, if anybody, must know that one annexation calls for another: "abyssus abyssum vocat."

In fact, England is secretly afraid lest Egypt be at the end of this chain of annexations; but her fears are very idle—the distance between Tunis and Alexandria is very great. The military revolution in Egypt has, nevertheless, revived many old jealousies. France and England have established in Egypt a *condominium*, and it is said that all *condominia* end badly, as Austria learned to her cost after the joint occupation of the Danish Duchies. The financial arrangements which have restored the prosperity of Egypt have been taken too independently of the national interests. It seemed to the Controllers that the only thing to do was to diminish the expenses of the Government, to receive the taxes, and to send as much money as possible to the English and French creditors. This was a superficial view of the case. Behind or beside the Controllers, who treated Egypt merely as a joint-stock concern, there were the Consuls of the European Powers, who did not forget their old rivalries, and who suffered in their pride and in their professional honor; there were the new international tribunals, which were constantly at variance with the Controllers. This situation was full of danger; the question of the army was the first symptom of a very perilous situation. The Controllers had but one wish, to diminish the army and to provide for its final destruction. But some of the Consuls did not consider the question from a purely financial standpoint. France in old times helped Mehemet Ali; she was ready to go to war in order to defend the independence of Egypt against the Porte and against England; she had always treated Egypt as an independent power, and a power which proclaims itself independent must be ready to fight for independence. M. de Ring, our Consul, disagreed with the Controllers; he showed them that it was very imprudent to drive so many officers and men, for whom the army had become a career, to despair. The Controllers answered that the army was worthless: the regiments had fled before the Abyssinians, they had fled before the Russians. M. de Ring answered that they were unwilling to fight for the Porte, but in old times the Egyptians had showed themselves to be tolerable soldiers. At any rate, the Controllers were advised to act prudently, and not to force the army to rebel. M. de Ring notified the French Government that the Colonels would rebel, and that they would almost perforce constitute themselves the representatives of a national party against the European Powers. He was recalled, as the French Government was anxious, above all, to maintain perfect harmony between the Controllers, and the result is known. The ministry which was looked upon as a mere tool of the Controllers, has been replaced, at the dictation of the army, by a ministry which is looked upon as representing purely Egyptian interests. It is evident that the situation is grave. England and France are now both desirous to work harmoniously in Egypt, but a new administration in either country may have other desires. England might be tempted to secure for herself a better position in Egypt; France might be obliged to lean more on Egyptian interests and to return to her old policy. The ex-Khedive, who lives in Italy, can and probably will work upon the feelings of Italy, who resents very much not having been admitted to the Egyptian *condominium*.

THE POLITICAL CONDITION OF GREECE.

ATHENS, September 28, 1881.

A CURIOUS fatality seems to follow the Greeks in all their attempts to assume the position in the political world to which their intelligence and capacity for progress really entitle them. No nation has ever, in so short a career, been called on to struggle with so many adverse circumstances, and kept up hope and courage through them all. Their political existence is a curious political problem, and one of the shrewdest westerners I know in Greece said to me a few days ago: "I have lived in Greece forty years, and every day find that I do not yet know the Greeks." As I only know them for sixteen years, I will not be so bold as to profess to be able to solve the riddle—only to guess around it a little.

The Greek is a born democrat and republican—words not always synonymous—and the institutions of royalty have never had any hold on him. The monarchy, with its fictitious glitter and Bengal lights, has never deluded his shrewd sense of reality; he has no reverence for one man above another, and he never forgets that the King is a mere convention. Here is the first and most telling incongruity—monarchy growing with no soil for its roots, a huge parasite, sapping, and, what is worse, corrupting the national vitality. Again, the Greek is the most individual of men, one unlike every other—shrewd and prosperous alone, paralyzed and lost in association. The communes are individual states in which the greatest co-operation of which the race is capable is obtained, and all the progress made in Greece is in the prosperity of the commune. This is circumscribed by a general government whose centralization is a caricature of that of any elsewhere now existing constitutional government. The commune is not free to build a bridge or repair a road or pier without the consent of the Government at Athens. Incongruity the second. The Greek is, moreover, the most easily governed of all European races—moral in most respects to a remarkable degree, peaceable and even amiable in his dealings with other men; but his Government is built on the model furnished by the Bavarians fifty years ago—law tempered by military despotism—the third incongruity. The country is poor and needs all the thrift and energy with which its people as individuals are gifted. The Government, by the inherent vices of its construction and the constitution of the kingdom, is one of the most corrupt in Christian Europe, and its civil service, carried on on the American principle, wastes a large proportion of its resources in the most flagrant ways. The centralization of every branch of administration—national, provincial, and communal—at Athens, under the rule of change of employees with every change of Ministry, when Ministries may change, and sometimes do, every three months, gives the maximum of facility for peculation, as well as inducements to it.

The incongruities do not end here, but it will be seen that a country so situated can hardly be expected to show results in its economical condition such as its people can be proud of. And the misfortunes of Greece have not been limited to the chapter of incongruities; graver misfortunes awaited it in the personality of its sovereigns. Otho was a little despot, of the old-German school, who hated the idea of constitutional government, and even when compelled to accord it revolted against its restraints. To maintain himself in his autocratic temper and neutralize his enforced concessions to popular liberty he surrounded himself by the men brought up in the old Pasha school of politics—the palikars and Turk-fighters—men who had no conception of legality, and to whom government was only an advanced form of klephtism. His highest care was to demoralize the people so that the popular power might in practice not interfere with his autocracy. Still he had some pride as King, and labored hard for the aggrandizement of Greece, thought of the interests of the country as far as his prior claims permitted, and felt himself, as he really was, King of Greece, as far as king could fit the headship of a race utterly averse to royalty.

Driven out of the country by a spontaneous revolt of public feeling, the Greeks naturally turned westward to find his successor, as they saw that England was really the arbiter of their destinies; and when an English representative suggested a prince of the House of Denmark the Greeks caught with enthusiasm at the notion, and, with their usual want of practical common sense, instead of finding a man whose character had been proved and developed, chose a boy who had nothing to show to prove his fitness, and who finally only proved the folly of going to the spoiled and demoralized younger sons of half-effete royal families; sure in any case only to be accorded some member of the family whose worthlessness to his own country made his departure no loss.

That the change from Otho to George was from bad to worse is now acknowledged by everybody in Greece. The new King, in addition to the usual demoralization of princes, was a weak, vain, and pleasure-loving youth, profoundly selfish and with only one strong point—his obstinate adherence to his own whims. No despotism is so disastrous as that of a weak character; and George has already shown that he knows how to take advantage of the defects of the Greek Constitution to enable him to evade all the most onerous responsibilities of his position. The first impression his personality gives to an observer not in awe of royalty is that of being nearly a simpleton; in fact, his intellectual attainments beyond languages are scarcely above those of an average American schoolboy of twelve. He

hates study and books, submits to the superficial cramming which is necessary to his position with bad grace, but absolutely refuses to acquire a thorough knowledge of anything except horses. He is not, however, devoid of a certain cunning, which enables him to present always a good face to the diplomatic corps, whom he succeeds in persuading that he is the victim of the jealousies of his people; and to play off one set of Ministers against another when he has any particular object to gain. The fact that a ministry can always be made of men who have no views beyond the advisability of holding office, and the power the King possesses of dismissing a ministry and dissolving a Chamber if it does not meet his views, make constitutional restraints a mockery. In fact, nothing prevents the King from doing what he pleases, and as he takes no interest in the country and has a dominant passion—avarice—which he gratifies at the expense of the nation in the most undignified ways, giving rise to the common saying at Athens that he is scraping up funds for his exile, it may easily be understood that he has long ago exhausted the loyal enthusiasm of his subjects. He is, in fact, cordially detested by the better part of the population, and a very slight provocation might determine his departure from the country, which is to him simply a farm from which, knowing the insecurity of his tenure, he is getting all he can while it lasts.

His constitutional timidity, or what we should in plain people call cowardice, is the real key to the failure of the good intentions of the western powers and the really heroic efforts of the people to secure a satisfactory solution of the recent Turco-Greek crisis. The King had from the beginning determined not to fight or even to go to the frontier, and as Greece is really as to foreign matters governed by one or other of the diplomatic corps through the King, he naturally fell into the plan of that diplomatic agent who promised so to manage things as to avert war. As Greek ambitions conflict with Austrian plans, the latter, backed by Bismarck, of course prevailed; and Epirus, important to Austria in her possible contest with Italy for the dominion of the Adriatic, was sacrificed by the King and Coumoundouros really because the former was afraid to lead his army across the frontier. The blue-book discloses the curious fact that the Greek Government took the lead in urging the reduction of Greek claims to the point at which they were settled, in order to avoid a war which the large majority of the nation had desired, and which all were ready to enter into if need were. To those who knew the extraordinarily timid nature of the King there was no puzzle in the matter, but as kings rarely have the truth told about them, the world at large credited him with the sincerity of his professions of warlike purpose. His habitual surrounding always foretold that there would be no war, and some gave as the reason "that the King was a coward." The fact is, however, that he takes no interest, and has never taken any, in the advancement of the kingdom or in its prosperity. He never visits any public institution or works, and in the whole period of the preparations for war, which the nation was assured by him and the Ministry were serious, he never followed the drilling of a single battalion, took the slightest interest in the organization of the army, inspected a single ship of the navy, or even paid the cheap compliment to the opinion of the army or people of visiting a hospital. Of course, with such dispositions even a brave man would be indifferent to the results of a war; but George was more than indifferent.

It is no wonder that Greece is ill governed; it would be remarkable if it were otherwise with a Government based on a Constitution totally unfitted to the country, with a King utterly careless of its interests or its honor, and always under the control of a diplomatic corps which does not contain one sincere friend of Greece, or one Minister who would not sacrifice the internal order and prosperity to the furthering of the intrigues of which Greece is constantly the object. The opinions of the people stand for nothing in the matter, for so great is the pressure which the Government can put on the electors that a Ministry is certain of having a majority, no matter what its views, and the corruption of the civil service generally suffices to control even an assembly originally hostile, while if refractory the Ministry can dissolve it at will. And this absurd Constitution is hedged in by as great precautions as if it were the wisdom of revelation. A project for amendment can only be entertained by a constituent assembly, and this can only be called by the agreement of three successive legislative assemblies. But with the present complication in the Government no constituent is possible, as the King will consent to no changes which menace his prerogative. Without a revolution, therefore, no reform or progress in the country is possible, because both King and Constitution combine to prevent them.

Notes.

THE last in the field of the American bibliographical series was perhaps among the first conceived. Henry Holt & Co.'s "Lives of American Worthies," now announced, opens up a wider field than its predecessors, and of course overlaps them at certain points. The peculiarity, however, of this series lies in the choice of writers from among the conspicuous humorists of the country, as the list will show: Columbus, by W. L. Alden of the New York *Times*; Captain John Smith, by Charles Dudley Warner; William Penn, by Robert J. Burdette of the Burlington *Hawkeye*; Washington, by John Habberton; Jackson, by George T. Lanigan of the New York *World*, etc. Until a sample is before us we hesitate to decide upon the motive of this singular conjunction of subjects and authors, nor will we undertake to guess what worthies have been assigned to Dr. Holmes, Mr. Howells, Mark Twain, or the Danbury *News* man.——Under the title of 'Common Sense about Women,' Lee & Shepard will publish for Col. T. W. Higginson a selection from his contributions to various journals on the theme which interests him so deeply, and which he has notoriously treated with more candor and discrimination than any person who has written anything like so much about it. A portion of the matter will appear for the first time.——Dr. Geo. R. Entler, of Franklin, Delaware Co., N. Y., is now revising for the press the translation, on which he has been engaged for several years, of Scholten's (Dutch) 'History of Religion and Philosophy.'——In the simultaneous publication of Paul B. du Chaillu's 'Land of the Midnight Sun' in several countries and languages, Harper & Brothers will have the American edition, in two volumes, profusely illustrated.——Following their 'Longfellow Leaflets,' Houghton, Mifflin & Co. have brought out 'Holmes Leaflets,' in prose and verse.——The entertaining 'Life of Lord Campbell,' edited by his daughter Mrs. Hardcastle, which was reviewed at length in Nos. 822, 823 of the *Nation*, has found American publishers in Frederick D. Linn & Co., Jersey City—an unusual quarter for such an enterprise. The work, in two volumes, is manufactured in New Jersey, and is very presentable.

—There is a difference between the English and American library conferences. The English are decidedly antiquarian in tone, the American exclusively practical. The English delight in papers that relate the history of some library, enumerate the great men who have been connected with it, and describe its manuscript treasures and its incunabula. We do not recollect a single paper of this sort in the five meetings which the librarians have held in this country, one reason probably being that so few of our libraries have any history, any manuscripts, or any incunabula. This disposition is reflected in the account given in *Notes and Queries* of the conference just held in London. The historical papers are abstracted at some length, but three practical matters are dismissed with the remarks that one session was occupied with the dry details of cataloguing, that the motion for opening libraries on Sunday was advocated only by its mover and seconder, and that the proposal of the Council of the Association to establish examinations and give a certificate of qualification for librarianship was received, but not approved. Sunday opening has never been discussed in the meetings of the American Library Association; individual libraries have settled the question for themselves. One has had its reading-room open for more than seventy-five years. In the same city the public library has been open for several years. The practice is very slowly extending through the country, with no remarkable results one way or the other. Perhaps the most useful end accomplished by opening on Sunday is to serve as a safety-valve. Not many persons wish to visit libraries on Sunday; but those who do are discontented if they cannot, and a certain number of people of the progressive class are very much discontented for them. Open the libraries, and this irritation is appeased at once, and nobody is injured. The town or city where the change is made is as quiet as before on the holy day; there is a little less lounging in the streets, and the churches are as full, or as empty, as before. It is merely a question of expense, and, so far as we have observed, the use made of libraries on the Sunday is sufficient to justify the extra expense. When our English cousins learn to look at the matter in this light—which they will do after a time, when a few more libraries have tried the experiment—they will not have their conference annually agitated by persistent efforts to secure the approval of the Association for this desecration (we use the word simply in its etymological sense, not meaning any reproach). The policy of making the innovation wherever public opinion will allow it (as has been done at Manchester, with entire success), and not attempting to force reluctant and timid brethren into it, will be found the most effectual and the quickest. The next generation, or the next but one, will wonder that such a move should ever have provoked opposition.

—The other matter tabled was a greater loss. The Committee on the Examination of Library Assistants had proposed a very sensible plan for examining candidates in certain subjects the knowledge of which is indisputably necessary to librarians. Two sets of subjects were proposed, and certificates of two corresponding grades to be granted. That this should not be done is very greatly to be regretted. Even if the thing proved a failure, it would have been worth the trouble it had cost to demonstrate that it was impracticable. But it would not have failed. There are strong and not wholly unjust prejudices in England against competitive examinations. Everything human is imperfect, and some examiners have asked very absurd questions, and the general outcome of the system has been an alarming increase of cramming and cram literature. But we may remark, in parenthesis

that the opponents of the present movement have never proved that the competitors, if they had not been crammed, would have acquired any well-digested knowledge. If we may believe the accounts of the ante-examination period, the present method, unsatisfactory as it is in some respects, is an improvement, even in respect to learning, and leaving entirely out of view the abolition of patronage. The opponents of examinations urge that they cannot enquire into the most important qualifications. For certain situations a head librarian would rather have a man who can see a thing at a glance, can take an idea from a half hint, can put two and two together, and understand how circumstances alter cases, who has common sense and "gumption," than one who has passed successfully all the examinations that the Chinese and the British empires combined could devise. In other situations the main qualification is a capacity for passive obedience and a Chinese literalness in following commands. Examinations, we are told, do not reveal these things; but this objection misses the point. There is a decided difference between a competitive examination for a given place, in which the one who gets the most marks may be by no means the one best able to perform the duties, and an examination such as the Council proposed for a certificate of competency, which simply excludes unfit candidates, but leaves the choice for any particular post to be determined among the qualified by other considerations. Their plan, we take it, was strictly analogous to the physical examination of a recruit before he is received into the army, or of a fireman in some of our cities. There is certain elementary knowledge without which the most capable man in the world is not fit to do library work; and if a man lacks that, he should be made to go and get it before he can have any chance of appointment anywhere. When the assistants are appointed by the librarian, it will give him a better body to choose from; when they are appointed by another person or body it will diminish the evils of patronage. The examination proposed corresponds to that which precedes the degree of B.A., or M.D., or LL.B. It is a safeguard which the learned professions have found it absolutely necessary to require. The Council, no doubt, desire to make librarianship a learned profession. Their plan, if adopted, would have had an excellent effect. It would have raised the tone of the craft; it would have put a bar in the way of favoritism; it would have contributed to spread the idea among library committees that the work does need some special training, and to remove the prevalent impression that any broken-down minister, or pupilless teacher, or low-salaried clerk, is capable of taking charge of a library.

—The following letter, addressed to the editors of the *Evening Post*, we publish as a curious illustration of the delusions which exist on the subject of copyright:

SIR: There is one feature of the international copyright question which I am surprised to find receiving so little attention. English authors and publishers are very averse to what they call the unfair proposition to insert into an international copyright law the provision that English works to be copyrighted here must be published here, and many free-trade advocates support them in their opposition. Let us see how a law of international copyright without such a provision would operate. An English author copyrights a work in this country, thus effectually stopping all American reproductions, except as he shall authorize. He does not choose to publish in this country (and no Englishman will publish here unless compelled to do so). Under a simple international copyright law American purchasers must purchase English copies at English prices. The English author can freely bring in his English-published books and sell them at any rate the English publisher may demand. "But the rule will work the same way on the other side," you may say. Wait and let us see. An American writer takes out an English copyright for *his* work, and tries the same game as his English cousin. At the very first landing in Great Britain he meets a customs officer, who prohibits the entry of the American-published books and confiscates any copy. The English copyright has made the American author's work an English book, and foreign reproductions of English books are piracies and as such are forbidden entrance into Great Britain. To be allowed a sale in England at all a work copyrighted in England must be published in England. Our free-trade cousins are very protective in the book tariff, as the American author will find to his cost if such a provision as English authors and publishers oppose be not insisted on. As Pat would say, the reciprocity of this arrangement seems to be all on one side.

I am neither author nor publisher, and write wholly from the point of view which seems to be that of independence and FAIRNESS.

The fact is that the law on the subject of importing copyrighted books into this country is the same as the law in England. It is in substance that the author can import and sell and no one else can. 5 and 6 Vict., c. 4–5, sec. xiii., makes importation of foreign copies of English copyrighted works by "any person not being the proprietor of the copyright, or some person authorized by him," illegal. Substantially the same provision was contained in 8 Anne, c. 19, the original English copyright act, passed in 1709. Similar provisions are to be found in U. S. R. S., sec. 4,964: "Every person who, after the recording of the title of any book as provided by this chapter, shall, ... without the consent of the proprietor of the copyright first obtained in writing, signed in presence of two or more witnesses, . . . *import* . . . any copy of such book, shall forfeit every copy thereof to such proprietor, and shall also forfeit and pay such damages as may be recovered in a civil action by such proprietor in any court of competent jurisdiction." These provisions of law were enacted, not as "Fairness" supposes, to protect manufacturers of books, but owners of copyright.

—We suggested a fortnight ago that the controversy about the authorship of the "Danites" would not be complete until the "amanuensis" who was said to have been hired at $25 an act was heard from. It is impossible, it seems, for him to come forward, for he is dead, but his widow is living, and she insists that her husband wrote the entire play himself. Whenever there is a dispute as to the authorship of a play, there is also a good deal of mystery surrounding its identity, and such turns out to be the case with regard to the "Danites." An attempt was made last week to settle this as well as the other various matters at issue with regard to the drama by the somewhat indirect means of a criminal libel suit against a gentleman who may be said to have an entirely accidental connection with the case. It seems that Mr. A. C. Wheeler, who is a dramatic publisher and critic, found it necessary in the course of his professional duty to publish a letter from Mr. Joaquin Miller, making the somewhat novel charge against Mr. Rankin that he was "the most colossal liar and the most impudent thief that ever made use of the practices of both without the necessary skill of either." Mr. Rankin, after a careful examination of this charge, came to the conclusion which most laymen would probably have reached, that it was criminally libellous, and got out a warrant returnable before that learned magistrate, Mr. Justice Flammer, at the Essex Market Police Court. The case came up on Thursday, and developed some very interesting features. A preliminary objection was made that the language of Mr. Miller did not constitute a criminal libel, but Justice Flammer, no doubt feeling that the literary interest in the case was too great to let it be disposed of without hearing the evidence, decided to let the witnesses testify first and decide whether he could hear the case afterwards. The testimony of Mr. Rankin was most interesting, but leaves us in much doubt, as we have said, as to the identity of the play. The germ of the "Danites," it seems, Mr. Rankin found in a story called the "First Families of the Sierras," but there was a great deal of evidence on the subject of "49," "Old 49," "The Two Orphans," "Nanil, the Dutch Orphan," and "California Gold," the exact drift of which we do not understand, unless it was to show the colossal and at the same time unintellectual character of Mr. Rankin's literary thefts. However this may be, it is a satisfaction to know that Mr. Rankin's title to the authorship of these various plays does not rest upon any claim on his part that he is a "literary man," for on the question being put to him whether he was that sort of a man, he replied with some heat that he did not wish to be insulted. When the proceedings had reached this stage the learned justice suddenly dismissed the case. He stated that he had consulted with the District Attorney, and had reached the conclusion that to call a man a colossal literary thief was not criminally libellous. This decision is of interest to dramatic authors as well as to critics and publishers, as under it they may as well abandon all idea of criminal proceedings in future. Mr. Rankin is accordingly now going to begin a civil suit for damages.

—The late Dr. Josiah G. Holland will be more widely mourned than if he had been a greater poet or a more original prose writer. No literary man in America, perhaps, was so accurately fitted for his precise work or filled a limited sphere so well. He had the immense advantage of keeping on a plane of thought just above that of a vast multitude of readers, each one of whom he could touch with the hand and raise a little upward. Thirty years ago, when John P. Hale was at the height of his political popularity, and a public dinner was given to him in Boston, Mr. Emerson was present and saw Hale for the first time. Studying the face and form of the burly New Hampshire statesman with keen interest, the philosopher said to his next neighbor at table, "See what an average man he is! He looks just like five hundred other men. That is the secret of his power." It was thus with Dr. Holland: he thought just the thoughts of the average American citizen, of the type unjustly called Philistine by Matthew Arnold; he stated those thoughts with admirable good sense, and he fortified them with a moral standard uniformly high. Hence his popularity really travelled westward on the wave of our national civilization. To the more staid and critical East it was a constant amazement to see the extent of his fame; but once beyond the Alleghanies his books sold by scores, and perhaps hundreds, where even Longfellow and Whittier sold by twos and threes. He inevitably reaped his reward, not merely in fortune and fame, but in that which his conscientious nature prized even more—a great personal influence over an enormous constituency. It is also to be remarked that this great popularity was not won by the slightest conscious or unconscious sacrifice. There was no deliberate lowering of aim or intellectual standard. He did not make that sad discovery which Goethe and Schiller confided to each other: "We make money by our poor books." Dr. Holland made money by all his books, and not one of them was, from his point of view, a poor one. No doubt, this easy fame affected his estimate, and he was a little tempted to assume that, if any author was less popular than himself, it was the author's fault. Still, there were traces both in his writ-

ings and in his conversation of an ambition not quite satisfied. There is reason to think that, having conquered the many, he would have liked to end by conquering the few. It is probable that the classification made by the critics did not quite suit him: no man permanently enjoys being ranked with Tupper. But it is hard for any very successful author to rise far above the level of his copyright account; after all, one writes to be read, and is not that the best writing which has most readers? Add to this that Dr. Holland had no quick sense of humor; he sometimes gambolled a little in his writings, but the really funny things in them were often those most seriously written—as where, in one of his longer poems, he follows up a pretty little lyric about the baby in the cradle with some dreamy and ideal verses about the salt-pork in the barrel. Now no man without a sense of humor can properly calculate the difference of altitude between himself and Shakspere.

—The real strength of Dr. Holland—that which made even his most mediocre works respectable—was in his moral nature. Everything he did was thoroughly and earnestly done. In his literary work he had the method of a man of business, and all his business ambition was to create in the United States an honest and conscientious national literature. He never slighted anything he did, and he was always trying—though always on his own plane—to improve and enlarge his work. All his novels had a purpose, and so had all his editing. He showed real moral courage both in the liberal way in which he construed his own evangelical creed and in the frankness with which he admitted into his magazine some papers—as those of Dr. Blauvelt—which were at the time censured as heretical. Recognizing that most of his literary fellow-workers held creeds less conservative than his own, he yet tried very hard to do justice to them; although in the case of some, as of Thoreau, he found this constitutionally hard. Some of his most intimate associates were moreover those whose intellectual tastes and methods were quite unlike his own, and here also he was manly and tolerant. He was thoroughly conscientious in all his personal standards; he stood at the opposite extreme from all the traditional weaknesses and irregularities of the literary class, and yet he was never pharisaical or uncharitable. This is saying a great deal, and one of whom it can be said deserves to be remembered. It is not probable that much of his purely literary work will long survive him. His fame is likely to decline rapidly, now that he is gone, like that of the late Henry Theodore Tuckerman, with whom he is in some respects to be classed, and of whom it is now almost impossible to believe that he died only ten years ago. But the service rendered by Dr. Holland to American literature by the fidelity and high purpose of his life was out of all proportion to either his genius or his permanent laurels.

—M. Émile Zola has written a farewell letter to *Figaro*. By the terms of his contract he was obliged to furnish a weekly letter for a year without being bound in any way by the doctrines which *Figaro* advocates, and which in many respects clash with his own. He chose *Figaro* simply because it is the most widely read paper in all classes of French society. His aim was to defend the idea of naturalism, which like every other idea requires for its triumph the whole life of a man. If he attacked politics, it was not the Republic he had in mind (for he believes that to be the only just and possible form of government), but the clamorous mediocrities, the ambitious individuals who seek to advance their own ends to the detriment of public tranquillity. In our times politicians occupy a position of too great and unnatural prominence. Politics are only of relative importance, letters are the absolute. The politicians do not make the period; the savants and writers make it. In literature, he insisted on the progress of naturalism, which has transformed history, criticism, the novel, the drama. Genius itself makes no progress in course of time. The genius of Homer was equal to that of Shakspere, and there is nothing to show that we are to-day more capable of producing masterpieces than the ancient Greeks and Romans. But our materials and means of expression have made progress, and our conception of man and nature has become more exact. Music furnishes a striking illustration. Lulli, Rameau, and others of their period no doubt possessed a genius equal to that of Beethoven, Meyerbeer, and our great contemporary composers; but science had not yet placed in their hands the same powerful and varied means of expression. In painting it seems to be different; but if our artists would consent to become chemists and not rely on artisans for the preparation of their colors, who knows but that their resources might be enlarged by new and striking effects? The progress we have made in literature does not lie in our superior ink and pens, or in the new words added to the dictionary. It lies in the exact analysis of persons and things, in the application of the scientific method to our literary studies. After defending this method for a year in *Figaro* he had said what he had to say, and he preferred to avoid repetition. It is now fifteen years since he began to work for the papers. At first he had to earn his bread by hard work in every department of them, from the items to the Parliamentary report. Afterwards, when he might have lived on the profits from his books, the love of fighting for an idea still kept him in the ranks of journalists. One result of this was to give him a thorough insight into the nature of the press. It was a common but erroneous complaint that the press was the enemy of literature; that it corrupted language and was the agent of universal depravity and folly. The press is not free from those shortcomings, but it makes full amends for them by its grand achievements. To every young writer who consulted him he would say: "Throw yourself headlong into the press, just as one throws himself into the water to learn to swim." It is the only school for a man at this day. In it you get hardened by constant friction, and in it you forge your style on the terrible anvil of the article that must be ready for to-day. Journalism is accused of making its devotees superficial and keeping them from more serious work. This is only true of indifferent talents; it is not true of those who work and have a will. Let these engage in journalism without fear; they will return from it as soldiers from the battlefield covered with wounds, but masters of their profession and experts in the science of human nature. One always returns to journalism as to his first love.

—Paul Lindau, as we lately made mention, has severed his connection with the Berlin *Gegenwart*, of which he has been the editor ever since its foundation. The latest number received contains a retrospective article from his pen. Ten years ago, he says, when George Stilke and he conceived the idea of starting a paper which was to be devoted exclusively to discussions of the political, economical, ecclesiastical, and scientific questions of the day, without the aid of illustrations or fiction, the failure of the enterprise was predicted on all sides. Thanks, however, to the active coöperation of distinguished authors and others who took a sort of personal interest in the existence of such a periodical, the *Gegenwart* soon became self-supporting and flourished. Many of these authors have since died. Among them were Dingelstedt, Freiligrath, Gutzkow, Anastasius Grün, Hackländer, Doering, Holtei, Kossak, Mosenthal, Hugo Müller, Karl Rosenkranz, Arnold Ruge, David Strauss, and many others. The *Gegenwart*, however, still reckons among its contributors many of the leading German writers, and will probably maintain its popularity even without the experienced editorship of Herr Lindau, who, since the establishment of *Nord und Süd*, has not been able to devote so much time to it as previously. This, however, stands in no apparent connection with his retirement. He again contradicts the rumor that political differences of opinion between him and the proprietor caused his retirement, and says the matter is of a purely personal nature, and was amicably arranged. Since the *Gegenwart* was first issued five hundred and four numbers have been printed, containing articles by nearly six hundred contributors. Herr Lindau enumerates many of these, and adds that more than four hundred of the articles, covering two thousand columns, are from his own pen.

—One of the most remarkable features of the literary activity of our age is the great demand for cyclopædias and the success which such publications achieve. If we except the periodical press, and the issuing of school-books, there is no department in the field of literature in which such a keen competition exists as in the business of cyclopædia-making. The most striking evidence of this has just been furnished in the sudden appearance of the first fascicule of the thirteenth edition of Brockhaus's 'Conversations-Lexikon' (New York: L. W. Schmidt). Not two years have elapsed since the completion of the final volume of the last edition. It is the competition of other cyclopædia publishers, the inroad which Meyer's 'Conversations-Lexikon' has made into the domain of the great Leipzig publishers, that has led them to take this unprecedented step. Some seven or eight years since, when the publishers of Meyer's and Pierer's cyclopædias simultaneously started new editions, such was the careless haste with which Pierer's 'Universal-Lexikon' was brought into the market that the first volume had actually to be withdrawn in consequence of the pamphlet attacks of its rival. In the present edition, Brockhaus's 'Conversations-Lexikon' will be remodelled so as closely to resemble Meyer's in external appearance. The work is printed in double columns, with closer type than heretofore, and the sixteen volumes (instead of fifteen) of which it is to consist will contain about twenty-five per cent. more matter than the last edition, or than the text (exclusive of cuts) of the sixteen volumes of the 'American Cyclopædia.' It will be furnished with four hundred plates and numerous maps, and, where necessary, woodcuts will be inserted in the text. It is impossible from the single number before us, which advances to *Abraham*, to form any exact idea of the scope of the remodelled publication; but it is evident that much more space than formerly will be devoted to the treatment of scientific and technological subjects. The scientific notices in the present number, which are necessarily very brief, are somewhat fuller than in the last edition; and the insertion of a full-page article under the head of *Abflusswasser*, treating of the pollution of watercourses, points to the increased range of the publication. This change of plan is indicated not only by the greatly enlarged size of the work and the introduction of engravings, but also by the condensation of biographical and geographical notices. Thus *Abd-el-Kader*, *Abd-ul-Asis Chan*, and *Abd-ul-Medschid* (the beginning of every cyclopædia bears an Oriental as-

pect), have been reduced to one-half, or even one-third, of the space allotted to them in the last edition. *Aachen*, which could well stand abridgment, has been cut down to nearly one-half. Among the new biographical titles are *Abd-ul-Kerim Pascha*, *Abd-ur-Rahmân*, *Abeddyn Pascha*, and *Aberdare*. That feature of the work which consists in the lexicographical explanation of technical and foreign expressions will be retained. The first number has been well brought down to date, the article *Abd-ul-Asis Chan* (written *Khan* in the former editions) mentioning the trial of Midhat Pasha in June last. Three of the plates of the first volume are furnished with the first number. They present respectively two views of the Alhambra, eight illustrations of ornamental hanging-plants under the title *Ampelpflanzen*, and ten illustrations of antelopes (the last marked *Antilopen. I.*). There is a map of Northwest Africa, on the relatively large scale of 1 : 20,000,000. Five years will be devoted to the publication of the work.

—Nearly a century has now elapsed since the first edition of the 'Conversations-Lexikon' was undertaken. Its aim was to supply information on the subjects connected with the ordinary reading of the educated classes, to furnish an explanation of anything puzzling that might occur in books or conversation. The various editions up to the present time have been chiefly devoted to biography, geography, and history, while in regard to science and the technical arts nothing like an adequate treatment has been attempted. The 'Conversations-Lexikon' style of cyclopædia was well adapted to the age in which it was conceived, when the mind of the people was mainly occupied with stirring political events and great movements in literature and philosophy, while comparatively little attention was paid to science. The 'Conversations-Lexikon' was received with great favor, and for a generation or more formed a marked feature in the intellectual home-life of Germany, serving also as a model for cyclopædias in foreign languages. In our age of science, however, this kind of cyclopædia has become altogether antiquated, and we congratulate the firm of F. A. Brockhaus on having finally reached this conclusion themselves. We trust that the high standard of accuracy which has distinguished the 'Conversations-Lexikon' will be maintained in the present edition.

—Other managers would perhaps have chosen "Mignon" for the first night of their opera season, "Carmen" for the second, and "Lohengrin" for the third, thus securing time for rehearsal of the last work. Not so Mr. Mapleson. "Lohengrin" sounds well, it is sure to draw a crowded house, and so it was set down for the opening. The audience at the Academy of Music on Monday evening was not only large and fashionable, but it entered thoroughly into the spirit of Mr. Mapleson's artistic intentions. Many came in late, thus spoiling the beautiful orchestral introduction for those who had come early to hear it. Others kept up a noisy conversation, being doubtless under the delusion that they were in their own parlors and listening to the opera through a telephone. When *Lohengrin* first appeared in his swan-boat the exquisite music of the scene was three times rudely interrupted by applause in honor of the great Campanini. In Germany such demonstrations would be regarded as very vulgar; but as the Americans are the most æsthetic people in the world, and never, of course, do anything that is vulgar, their conduct on this occasion must have been guided by an appreciation of Mr. Mapleson's new policy, which called for a corresponding change of conduct on their part. In justice to some of the artists engaged, it must be admitted that the performance was not a complete failure. Miss Minnie Hauk's impersonation of the loving, inquisitive, and unhappy *Elsa* had much that was charming. It is not her best rôle, perhaps, but it is one of her best, and one in which she has made a successful appearance in many German cities. Her personal appearance admirably fits her for the part, even if the ideal *Elsa* should be a trifle less substantial. Her voice has lost none of its sweetness, purity, and sympathetic quality. Her rendering of the tender and pathetic passages was exquisite. Where she failed was in those *ensemble* parts where the soprano should float clear and loud above chorus and orchestra. Here her voice lacked power. Indeed, Miss Hauk did not succeed in arousing any great enthusiasm during the evening, in spite of the beauty of her voice. This was perhaps due in part to certain imperfections in her acting and facial expression, but to a large extent it was due to the fact that, thanks to the uncertainty and incorrect intonation of the chorus and occasionally the orchestra, she found herself surrounded by such a howling wilderness of discord that sympathetic and artistic acting was almost out of the question. Campanini's version of *Lohengrin* is too well known in this country to need much discussion. In the simple, melodious parts his fine voice is very effective, less so in the more declamatory passages. He takes fewer liberties with the score than some other Italian tenors, yet he needs to be reminded that Wagner's cadences call for no alterations. Unfortunately, he knows nothing of mimic expression, and looks more like a professional sentimental tenor than like the heroic Knight of the Swan. Signor Galassi's fine voice gained him new admirers, but, like the rest of the cast, he failed to invest his part (*Telramund*) with any life. This is true also of Mlle. Kalas's version of *Ortrud*. In appearance she succeeded in assuming a semblance of this sombre and revengeful character; but her voice, which has some good notes and gave occasional evidence that in more lyrical parts she might be successful, has not the necessary dramatic power and intensity to do anything like justice to this most difficult part. A successful *Ortrud* must not only be a powerful vocalist, but also a perfect actress, like Frau Materna or Frl. Brandt. Mlle. Kalas is neither. Signor Monti's stentorian voice well qualified him for the part of the *Herald*, but Signor Novara as *King* was beneath criticism: one might have suspected him of being a member of the chorus in disguise. The orchestra is such an important factor in "Lohengrin" that success or failure depends largely upon its achievements. We cannot agree with all Signor Arditi's *tempi*, nor have we any particular weakness for wood wind instruments or organs out of tune with the rest of the orchestra, or for oboes playing their solos in a wrong key. But, generally speaking, the orchestra was well enough managed and satisfactory from a mechanical point of view. What it lacked was that life, spirit, and animation without which an operatic entertainment bears the same resemblance to a spirited performance that a wax flower does to one that blooms in field or forest.

—Many foreign critics assembled at Munich to hear the recent two cycles of Wagner's operas. The London *Athenæum*, which used to be one of the organs most hostile to the new German school, has published several highly eulogistic letters on the "Meistersinger," "Tristan and Isolde," and their predecessors. But the most curious thing is the attitude of the Paris papers. The *Figaro* correspondent says that it was worth a journey of two hundred miles merely to hear *Walter's* prize-song in "Die Meistersinger." *Le Français*, speaking of the "Flying Dutchman," says that the score is clear and intelligible from beginning to end, and that it would be praised to the skies in Paris if it were given under the name of Gounod. This critic even indulges in exclamation points about the beauty of the famous and oft-denounced scene between *Ortrud* and *Telramund* in the second act. M. Octave Fouqué says in the *Ménestrel* about "Lohengrin": "Shall I tell you what struck me most in hearing this work? The extraordinary tenderness of this music! Only twice or thrice during the evening does the orchestra attain to its full force, and then so well prepared and so beautifully led up to that the fulness seems no more than just enough. This will doubtless surprise many of your readers who imagine Wagner as a blowing, storming, and trumpeting monster."

—The following curious advertisement is to be found in vol. 18 of Bachaumont's (Mouffle d'Angerville's) "Mémoires Secrets":

"30 Décembre, 1781. Le Sieur Duval, Confiseur du Roi, au Grand Monarque rue des Lombards, continue à offrir au public un cours d'histoire en sucrerie. Il annonce qu'on verra chez lui le mois prochain dans son magazin d'étrennes: *la flotte françoise bloquant la baye de Chesapeac, l'investissement d'York & Gloucester par les armées Françoises & Américaines, la reddition de Lord Cornwalis, le défilé des troupes Angloises rendant les armes.*"

Or in English:

"December 30th, 1781. M. Duval, confectioner to the King, at the sign of the Grand Monarch, Lombard Street, continues to offer to the public a course of history in sugar-work. He begs to announce that next month will be found in his stock of New Year's presents *the French fleet blockading Chesapeake Bay, the investment of Yorktown and Gloucester by the French and American armies, the surrender of Lord Cornwallis, and the English troops defiling to lay down their arms.*"

REIN'S JAPAN.

Japan nach Reisen und Studien. Von J. J. Rein. Band I. Natur und Volk des Mikadoreiches. Leipzig: W. Engelmann. 8vo, pp. 630.

It is a curious fact that, though Prussia and Austria were among the last nations to enter into diplomatic relations with Japan—the former in 1860 and the latter not until 1868—yet the first systematic writers about the Japanese were Germans. Kämpfer's book was, and still is, a classic, while Siebold's 'Archiv' is a mine of richest ore to the student. The Japanese appreciate it highly, and for his monument, recently erected in Vienna, they sent as their token of regard an undressed boulder of native rock, suitably inscribed by one of their own scholars. Dr. Rein's book before us is a proof that the literary evidences of German interest in the Far East keep pace with the steady advance of German commercial and political influence in that part of the world. Count Eulenberg, the present Prussian Minister of the Interior, made the first treaty of navigation and commerce between Prussia and Japan. His attaché, Von Brandt, returned to be consul at Yokohama, and later became Minister Resident of the German Empire at Tokio, having as his secretary Mr. Ernest Kempermann, the accomplished writer on Shintō. Mr. von Brandt, having been in 1875 transferred to Peking, was succeeded by Mr. von Eisendecher. There are now several hundred German residents in the Mikado's domains, who carry on a direct trade with the Fatherland, in their own vessels, while German men-of-war make the black-white-and-red flag familiar to those natives who enjoy the study of the "thunder-ship's" colors. In the academic, and especially the medical, schools German professors are fairly numerous, and

highly appreciated. A flourishing Asiatic Society (*Deutsche Gesellschaft für Natur- und Völkerkunde Ostasiens*), whose twenty or more portly *Mittheilungen* lie before us, prove that the exiles from Fatherland are not so absorbed in trade as to forget the German's sacred duty of increasing knowledge.

The friendly relations between Kaiserreich and Mikadoreich have rarely been strained. After the German Empire had been proclaimed at Versailles, however, some foreigners in Tokio, not French, suspected that the diplomatic pressure to secure berths for Prussian schoolmasters, and otherwise to advance Prussian influence, passed the bounds of modesty. Nevertheless, the Mikado's ministers, though often charged with fickleness, maintained their French military corps of instruction. German did *not* become the predominant medium of culture in place of English; Bismarck did *not* buy Formosa; and as the milliards were one after another paid, it became somewhat more pleasant to meet a Prussian, whether in diplomacy or in social life. Japanese lads are now to be found in the medical, law, and mining schools of Germany, and on the Prussian men-of-war. The Mikado has chosen German as his favorite foreign language, and, though English is the prevailing tongue of his best-educated subjects, yet the speech of Schiller and Goethe is familiar to hundreds of the rising men of Japan.

Prof. Rein, who fills the chair of geography at the University of Marburg, spent the years 1874 and 1875 in making several long, but not rapid, journeys in the southern and central parts of Japan. His work was done under the order of the Prussian Minister of Commerce, and he expects to follow this volume of 'Travels and Studies' with two others on the industry and commerce of the Japanese. He evidently made many friends among his compatriots abroad, who have liberally assisted him with material, advice, and criticism. To these he makes ample acknowledgment in his preface, and also to Mr. Ernest Satow, the Secretary of the British Legation in Tokio, without whose help no gentleman's book on Japan can be considered complete. From all other sources he has also gathered whatever was for his purpose worth collating, and, being himself a diligent scholar and a critic of acumen, he is able, fortunately for the reader, to control his authorities. The result is a narrative and summary of absolute clearness, in a superbly printed and illustrated octavo of 650 pages. It is, in addition, furnished with two large maps, both minutely correct, and executed in the best style of the German cartographic art. Prof. Rein's contributions to *Petermann's Mittheilungen* have accustomed his readers to a standard of excellence by which the present work can well afford to be judged. Before criticising it we cannot help comparing the altered state of Japanese opinion with that of the last century. In 1786 Rin Shihei, the patriot, made the first complete coast-line map of Japan, having traversed the empire on foot. For this crime alone he was seized and thrown into prison, out of which he never came alive. His books and papers were confiscated, and the plates broken up. In 1874 a foreigner is allowed to travel unmolested in the same country, with his theodolite and camera; and in 1876 the Mikado orders a monument to be erected to Rin Shihei's honor, while a prince of the blood is president of the Tokio (Japanese) Geographical Society, whose proceedings are published to the world. "The frog in the well," at last, "knows the great ocean."

Borrowing the title of his first volume—'Nature and People of the Mikado's Empire'—from a well-known American work, the author devotes 240 pages to the physical features of the country. A well-equipped scientific traveller, and no hasty tourist in a *jin-riki-sha*, he gives us valuable chapters on the geology, physical geography, hydrography, fauna and flora. We know of no other book in the Japanese library containing so rich and orderly an arrangement of data valuable alike to the man of science and the general student. In treating of the people, Prof. Rein devotes a chapter to each of the following subjects: History, Ethnography, and Topography. Here, though he gives the best summary of Japanese history to be found in the German language, he is hardly fair, certainly not generous, to the American authority from whom he borrows the titles of some of his chapters, and the facts and coloring of especially those portions of his narrative which treat of events and heroes in the province of Echizen, since no acknowledgment of the personal investigations made by the American writer are anywhere stated.

In one respect the historical part of Dr. Rein's work reminds us of the standard criticism on most commentaries on the Bible—"Good, except for the difficult passages." There is one arid stretch of Japanese history—a kind of alkali and grease-wood desert—which both to foreigners and natives is like the "Pelasgian" period in classic, and the mediæval portion of Church, history. How many historians, like Schaff and Neander, bravely write the story of the Apostolic or Nicene age, but stop at the morass of the Middle Ages; or emerge with unwearied interest to tell us about the Reformation, while the Dark Ages remain doubly dark. So, those who essay to write Japanese history plunge gloriously into prehistoric mist, and hold their way finely until the Ashikaga dynasty (1334–1573) is reached. Then, with a sudden leap, they are voluminous with the story of the times *since* 1540, leaving two whole centuries in just enough light to make darkness more visible. Though this era of civil war is repulsive to the student, because so full of confused details, it is nevertheless exceedingly important as containing the germs of many of the modern institutions of Japan. Now, since every foreign writer hitherto had leaped the bog, or gone around it, we opened Prof. Rein's book, turning first to the chapter on the Ashikaga dynasty, in hopeful expectation. Surely, we thought, German patience and thoroughness, so often vaunted, will give us the clue to the labyrinth, the "open sesame" to the unexplored cave. But no; disappointment awaited us. The nine scanty pages treating this period of two centuries contained nothing new, or not to be found printed in accessible books. We think the author, coming last, ought to have served us better.

Nevertheless, our satisfaction at the wonderful accuracy and spirit displayed in marshalling multifarious facts is great, and we do not hesitate to pronounce this work the best for reference on Japan, and heartily recommend it for translation. In the chapter on Ethnology Prof. Rein points out, rightly we think, in spite of Mr. Aston's opinion to the contrary, the affinities of the Japanese with the Malay stock. To form that mixed race inhabiting the Japanese archipelago, the blood of several races has entered. The most remarkable fact about the woodcuts, representing ethnic types, Aino, Corean, Riu Kiu (Loo Choo) islander, and Japanese, is that in them one cannot detect any German "personal equation." French artists Gallicize a Japanese drawing, a British draughtsman Anglicizes it, so that one is "Frenchy" and the other savors of John Bull. The impossible noses and African cast of visage so often put upon the faces of the Mikado's subjects in American books are here absent, and with exquisite delicacy as well as genuine expression, the woodcuts tell the truth they are meant to represent. A good index completes this scholarly and readable work, which so well illustrates the remark of the Cambridge professor of history, that "Good books are usually made in Germany."

MISS GORDON CUMMING IN FIJI.

At Home in Fiji. By C. F. Gordon Cumming. 2 vols. With map and illustrations. Edinburgh: Wm. Blackwood & Sons. 1881.

WITHIN a twelvemonth there have appeared at least four works either wholly or in great part devoted to the Fiji Islands. This unusual interest in a part of the world so remote and seemingly so unattractive is not unnatural, considering its present relations to Great Britain. So long ago as 1859 the islands were offered by the chiefs to the English Government for various reasons, the principal of which was the difficulty of controlling the European settlers—mainly Englishmen of a somewhat lawless type. At that time, however, their possession was deemed of little or no value, and the offer was declined. In 1871 a new tide of emigration set in from Australia and New Zealand, in consequence of the commercial depression which had prevailed for some years in those countries, and the troubles of the chiefs were greatly increased. About this time a constitutional government, under Thakombau as king, with a ministry and council formed of foreigners and natives, was established. This utterly failed to secure the ends of good government, and Great Britain was again asked to assume the protectorate. At length, in 1874, an unconditional cession was accepted, and Sir Arthur Gordon, son of the Earl of Aberdeen, was sent out as governor of the new crown colony. He reached Levuka, the capital, in June, 1875, at a time when the islands were reduced to the greatest straits. The measles had been introduced in the previous January, and had swept away nearly fifty thousand of the natives, or about a third of the population of the whole group. In some districts almost all had perished, and the few survivors were too weak to get food for themselves. It was not that the disease was of such a malignant type, as that it was impossible to induce the sick to take proper care of themselves. An irresistible desire to bathe proved fatal to almost all who were attacked. The foreign settlers were in many cases hardly better off. The cotton and sugar plantations, on which most sanguine hopes had been founded, had failed to be profitable, and their culture was being largely abandoned. In addition, there were innumerable disputes between the planters and the natives in regard to land-titles and the labor contracts. The difficulty of obtaining labor of any kind was very great, and is still the greatest obstacle to the commercial prosperity of Fiji. The natives will only in rare cases hire themselves out to work upon the land, and in this they are encouraged by the present Government, which aims at creating a large class of native planters. The dependence of the foreign planters has been hitherto upon the Polynesians, who are hired for three years, but this source of supply has become very limited and costly. The solution of the problem will no doubt be found in the introduction of coolies, which has already been done to a limited extent.

Sir Arthur Gordon appears to have been eminently successful in his five years' administration (he is now Governor of New Zealand), the revenue of the colony having been raised from £16,000 in 1875 to £75,000 in 1879, while the exports in this latter year exceeded £200,000 in value. Of the future prospects of the islands, commercially, he says: "After a careful investigation, extending over more than a year, it

has been reported to me, by most competent and most cautious scientific authority, that the annual value of the agricultural exports of the colony, when its powers of production have been fully developed, will probably exceed £10,000,000 sterling." Mr. Horne, author of 'A Year in Fiji,' who was employed by Sir Arthur to report on the formation of a Forest Department, says that "the total area of land in the group suitable for growing sugar-cane is approximately estimated at 1,000 square miles. . . . When capital has been attracted to the colony, and these cane-lands are fully occupied and planted with canes and proper works for crushing the cane and making sugar, it may be anticipated that about 200,000 tons of sugar will annually be made in Fiji. The value of this sugar, together with that of molasses and rum, will amount to over £5,000,000 sterling." He adds that 2,000 square miles are available for coffee, which "thrives remarkably well in Fiji, and its value as an export will ultimately be second only to sugar, and may be expected to amount to between £3,000,000 and £4,000,000 sterling." Some of the islands produce a remarkably fine quality of sea-island cotton. That from Mago "gained the gold medal both at the Paris and Philadelphia International Exhibitions." The great cost involved in its culture, however, makes it a less promising crop than those just mentioned. The principal exports in 1878, in the order of their importance, were coppra (a preparation of the cocoanut), cotton, sugar, and maize. There are also increasingly large exports of fruits, especially bananas and oranges, to New Zealand and Australia. "The present population of Fiji, in 1880, is estimated at 110,000 natives, 1,902 Europeans, and 3,200 Polynesians."

Miss Gordon Cumming's 'At Home in Fiji' is undoubtedly the best work on the islands for the general reader, though that of Mr. Horne, or 'Coral Lands,' by H. S. Cooper, may be better for the intending colonist. Her position as a member of the Governor's family gave her unusual facilities for seeing every part of the group, of which she availed herself to the utmost. She also accompanied the superintendent of the Wesleyan mission and his wife in several of their missionary tours. Her book is made up of the letters written to different members of her family in Scotland. She has a pleasant, vivacious style, describes well, with an artist's eye for color and grace of form (the illustrations are from her own sketches), and seems to be as good a traveller as her brother the famous hunter, or her friend Miss Bird. She is rarely tiresome, though her work is not free from the faults, almost inseparable from its form, of needless repetitions and passages of a purely personal nature. It is probable, also, that she gives a too favorable view of the native character, but otherwise she seems entirely trustworthy. The true Fijian seems to be more nearly allied to the Papuan than the Polynesian. He is singularly gentle and courteous in his manners, and, according to Miss Cumming, strictly honest and thoroughly sincere in his profession of Christianity. Many of the men, especially the chiefs, are tall and handsome. The ex-king, Thakombau, of whose cannibalistic tastes horrible stories are told, is described as "a very fine old man, stately and chief-like in his bearing, and with clear, penetrating eyes." A friend of the present writer says of Maafu, the powerful chief of the Windward Isles, known as the "Bismarck of the Pacific," that "he was the finest-looking man he ever saw." He stands six feet six inches high, is finely proportioned, and has a very noble head. The women, when young, are often pretty and graceful, and are scantily but becomingly clothed with native cloth, fringed with garlands of ferns and leaves. Physically and intellectually, they are superior to all the other races of the Pacific, with the possible exception of the Tongans. They show considerable skill and taste in the construction of their houses, in their carving and their "paper-cloth painting," and, in some districts, in their pottery. This is all made by women, and "entirely by hand—nothing of the nature of a wheel being known." "The objects vary in size, from small bowls or water-jars, six or eight inches in height, to great cooking-pots, three feet deep; and the colors range from richest golden to a deep red, running into green, the color being chiefly due to the glaze." The decoration consists either of an "elaborate geometrical pattern," or "raised work, almost like clusters of grapes." In the common articles for daily use conventional forms are used, but in "fancy articles every potter follows her own taste, and the same exact form is very rarely reproduced."

In the same village from which came the best pottery, Miss Cumming saw a woman painting a very large and heavy piece of *tappa* or native cloth, intended for a curtain in a chief's house:

"She had designed an admirable and most intricate pattern, which she cut out on a heated banana-leaf, laid this on the cloth, and rubbed it over with a scrap of *masi*, dipped either in vegetable charcoal and water, or in red earth, liquefied with the sap of the candle-nut tree—*i.e.*, the silvery-leaved croton. It is simply a form of stencilling, and only requires taste in arranging the patterns and colors, and a neat hand in executing them. But the result is handsome and artistic. And a great curtain of *tappa* hung across a native house is such a striking and uncommon-looking kind of drapery that it is certainly a matter of regret to know how surely this art is fated to die out before the influx of common English or American goods."

The doorways and rafters of the houses are often bound with colored *sinnet* (a kind of coarse string), "interwoven so as to form most elaborate patterns, extremely artistic in effect. The ridge-pole of a new house is frequently wreathed with long trails of the exquisite God-fern, the *Wa Kalo*." Perhaps the most striking evidence of the Fijians' love for the beautiful is to be found in their dances. These are, in fact, ballets descriptive of some scene or story. "Each district has certain dances peculiar to itself, and the people of one neither can nor will join in the *mékè* of another." One which Miss Cumming saw while accompanying the missionaries on a tour of inspection was full of poetry:

"The idea to be conveyed is that of the tide gradually rising on the reef, till at length there remains only a little coral isle, round which the angry breakers rage, flinging their white foam on every side. At first the dancers form in long lines and approach silently, to represent the quiet advance of the waves. After a while the lines break up into smaller companies, which advance with outspread hands and bodies bent forward, to represent rippling wavelets, the tiniest waves being represented by children. Quicker and quicker they come on, now advancing, now retreating, yet, like true waves, steadily progressing, and gradually closing on every side of the imaginary islet, round which they play or battle, after the manner of breakers, springing high in mid-air, and flinging their arms far above their heads to represent the action of spray. As they leap and toss their heads, the soft white *masi*, or native cloth (which, for greater effect, they wear as a turban with long streamers, and also wind round the waist, whence it floats in long scarf-like ends), trembles and flutters in the breeze. The whole effect is most artistic, and the orchestra do their part by imitating the roar of the surf on the reef—a sound which to them has been a never-ceasing lullaby from the hour of their birth."

Other subjects were "the rising of the stars," "a flock of flying-foxes in the act of robbing a garden of ripe bananas," and "a pig-hunt." These dances are given on almost every occasion which brings the people together, except the Sunday service, as, for instance, on the visit of the Governor or any great chief, a missionary meeting, or a school examination. On one of these latter occasions the subject of the dance was the "capture of Jerusalem." The men make admirable soldiers, regarding the drill as a *mékè* or dance.

Miss Cumming has of course much to tell of the cannibalism which prevailed in the islands till within a few years. In many places the ovens are still standing, together with the upright stones marking the number of bodies eaten. One chief had erected lines of stones "which even now number eight hundred and seventy-two, though at least thirty have been removed." Some thrilling stories are told of the courage displayed by the missionaries in their endeavors to put an end to these atrocities. In 1849 two ladies, Mrs. Calvert and Mrs. Lyth, with a single native Christian, their husbands being absent, rescued five women, nine having already been sacrificed, from the very hands of the butcher. Captain Erskine, R.N., who touched at the islands a few weeks after, says:* "Regardless of the sanctity of the place, it being 'tabued' to women, they forced themselves into old Tanoa's [the father of Thakombau, and an inveterate cannibal] chamber, who demanded, with astonishment at their temerity, what these women did there? The Christian chief, who well maintained his lately adopted character, answered for them, that they came to solicit the lives of the surviving prisoners, presenting at the same time the two whales' teeth." After some hesitation Tanoa said: "Those who are dead are dead; those who are alive shall live." "If anything could have increased our admiration of their heroism," adds Captain Erskine, "it was the unaffected manner in which, when pressed by us to relate the circumstances of their awful visit, they spoke of it as the simple performance of an ordinary duty." Human flesh was always cooked with the leaves of a certain shrub and those of two trees, which had the effect, the natives said, of assisting digestion, and was eaten with forks, this flesh alone being never touched with the fingers on account of the fear of a skin disease. These forks were "of dark polished wood, with handles richly carved," and were heir-looms, having names often obscene.

As has been already intimated, Miss Cumming gives the Christian Fijian a very high character for honesty and sincerity. Though she saw him under the most favorable circumstances, yet other writers agree with her that the conversion of the islanders is genuine, and not, as one at least asserts, a merely political action of the chiefs. Under the superintendence of the Wesleyan mission, established in 1835, there are in the whole group "about fourteen hundred schools and nine hundred churches." According to Mr. Cooper, at least a third of the people belong to these schools, and all are practically attendants on public worship. The practice of morning and evening prayers is almost universal. In 1876 an insurrection of the hill tribes was quelled by a force of about one thousand natives, gathered from every part of the group; thirty men being the contingent asked of each chief. "Every morning, at the very first streak of dawn, each separate tribe composing that little army mustered in array to join the teacher in saying the Lord's prayer, and a short prayer suited to the requirements of the day. And every evening, after the excitement of the day was over, each house separately had reading of the Scriptures, singing, and prayer, and every man in the force knelt as reverently as he would have done at family worship in his peaceful village home." Their regard for Sunday is as strikingly exhibited. "Not a canoe will put

* 'Journal of a Cruise among the Islands of the Western Pacific.'

to sea except to carry a teacher to a place of worship, nor will a native climb a tree to fetch a cocoanut, even when bribed with much-coveted silver." So when the great "Balolo festival" came on a Sunday for two successive years not one of the canoes of the Wesleyans went out. The *balolo* is a small sea-worm which rises to the surface only twice in the year, in small numbers in October, and in countless myriads at the high tide of the full moon in November. Then "the whole sea, to the depth of several inches, is simply alive with these red, green, and brown creatures, which form one writhing mass, and are pursued by shoals of fish of all sizes, which come to share the feast with the human beings. . . . As the day dawns, these mysterious creatures with one accord sink once more to their native depths, and by the moment of sunrise not one remains on the surface; nor will another be seen for a twelve-month." The natives wrap them in bread-fruit leaves and cook them in ovens.

There are many passages in Miss Cumming's entertaining volumes which we had marked for quotation, but want of sp ce forbids. In an appendix on the folk-lore there is given a fable, told to Sir Arthur Gordon, which reminds one of Uncle Remus:

"The crane and the crab quarrelled as to their powers of racing. The crab said he would go the fastest, and that the crane might fly across from point to point, while he went round by the shore. The crane flew off, and the crab stayed quietly in his hole, trusting to the multitude of his brethren to deceive the crane. The crane flew to the first point, and seeing a crab-hole, put down his ear and heard a buzzing noise. 'That slave is here before me,' said he, and flew on to the next point. Here the same thing happened, till at last, on reaching a point above Serua, the crane fell exhausted, and was drowned in the sea. Ratu Tabusakiu capped this by an almost exactly similar story—only in this case the competition was between a crane and a butterfly. The latter challenged the crane to fly to Tonga, tempting him to do so by asking if he was fond of shrimps. The butterfly kept resting on the crane's back, without the crane knowing it, and whenever the bird looked round and said to himself, 'That *kaisi* (low-born) fellow is gone; I can rest and fly slowly now without fear of his overtaking me,' the butterfly would leave his back and fly a little way ahead, saying, 'Here I am, cousin,' till the poor bird died exhausted; and the butterfly, who had no longer his back to rest on, perished also."

Another legend accounts for the introduction of cannibalism in precisely the same manner in which Charles Lamb attributed the discovery of roast pig to the Chinese.

Among the Sioux of Dakota. Eighteen Months' Experience as an Indian Agent. By Captain D. C. Poole, Twenty-second Infantry, U.S.A. New York: D. Van Nostrand. Pp. 235.

DURING the early part of Grant's first term as President, army officers not needed with their regiments were assigned to duty as Indian Agents. Captain Poole was one of these, and for a year and a half did duty in Dakota, at the Whetstone Creek Reservation, among the Sioux. The band of Brule-Sioux who recognized Spotted Tail as their chief was among those who were under the charge of Captain Poole, though they were not encamped at Whetstone. Other bands of Ogallalas, Brules, and Minneconjous, all parts of the same nation, were on the reservation at the agency. The Captain's charge consisted, therefore, of from three to five thousand of the fiercest and most uncivilized of the Indians of the Great West.

Spotted Tail was a chief of no ordinary character, and impressed all the officers of the Government who came in contact with him as a man of more breadth of judgment and intelligent discernment than are often found among uneducated men of any race. This he had proved by adopting a peace policy when the other bands of Sioux made war in 1867. He had so well established a reputation as a warrior and chief that he was able to control a large part of the Brules, and led them from the line of the Union Pacific Railway near North Platte to the Upper Missouri reservations. His great rival in the favor of the Sioux was Red Cloud, an Ogallala chief, who conducted the war of 1867, but who also had intelligence enough to discern at its close that further fighting with the whites would be ruinous. Both these chiefs have earnestly favored peace for more than a dozen years, and the fighting which has since been done by Sioux has been by fragments of bands, or small bands uniting for a campaign under a leader like Sitting Bull, whose supremacy over the united force only lasted during the actual hostilities.

Captain Poole's book is a vivid and interesting account of his experience, which not only included the common events of the Agent's life, but covered also the period of the noteworthy visit of Spotted Tail and Red Cloud to Washington in 1870. He does not conceal the fact that he shares the scepticism common among army men in regard to the possible civilization of the Indian of the plains, and seldom loses an opportunity for a "slant" at the policy of making farmers of the red men. Still, the narrative bears the evidence of truthfulness on every page, and the more familiar the reader may be with Indian affairs, the stronger will be his confidence that the Captain has told things as he saw them.

The book brings out with a good deal of felicity many of the most striking traits of Indian character, such as the difference between the wildest of the savages and those who have felt some of the influences of contact with civilization; the stubborn resistance of the men to all efforts to make them labor at farming or other work, which they look upon as squaws' employment; and the impulse towards strife and excitement which tempts the young men to steal away upon a raid in the hope of gaining importance in the tribe by warlike deeds. The family life of the Indian, his domestic virtues and social traits, are well drawn, and leave one with the feeling that his affection for his family, his fidelity to his friend, and his devotion to his tribe and his home are scarcely less than those of his civilized neighbors. His grief at a bereavement is as deep as any one's, and shows itself not only in giving away the things in which he has delighted and by which he has set great store, but in sincere sorrow, which shuns society and shows that he really carries a heavy heart that corresponds to the voluntary squalor of his dress.

The following description of Spotted Tail's encampment is not without an attractive glow of comfort and a picturesque gleam of primitive simplicity:

"Looking around the village, I found everywhere an air of quiet contentment. It was situated in a sheltered place, and the rays of the spring sun were warm, so most of the Indians were out of doors: the elder ones smoking as they basked in the sun, the young bucks, divided into two parties, enjoying their favorite game of foot-ball, and the boys whipping tops or practising with their bows and arrows. The women were working and gossiping, always at a distance from the men, and the girls too small to carry burdens were playing with their rude dolls or acquiring knowledge of the needle with dried sinews for thread. Some of the young maidens, I noticed, lingered a little as they carried wood and water, casting shy glances on the young athletes running after the ball. In the distance herds of ponies grazed on the prairie, watched by sentinels posted on high buttes to see that they did not stray too far, and to give timely warning should an enemy approach."

The unsatisfactory character of the annuity system is shown in several grotesque and striking scenes, and the mischief done by strong drink is illustrated by a night brawl in which Big Mouth, a noted Ogallala chief, assaulted Spotted Tail, and met his death at the hand of that doughty chief.

The journey of the Sioux chiefs to Washington, the character of their negotiations with the Government, and the brilliant assembly at the White House when President Grant gave them an evening entertainment, are all told with fulness and accuracy. Captain Poole's observations upon the effect of the journey upon the Indians, and the classes of things which arrested their attention and were educational in effect upon them, are all very shrewd and discriminating. In short, the book is one of which it may fairly be said that it enlarges our knowledge of the Indian and his character in a valuable way, and is at once entertaining and instructive. The author's theorizing is only incidental, while the facts he gives so well will help his readers to form their own opinions upon the nation's great problem.

Newfoundland to Manitoba. By W. Fraser Rae. New York: G. P. Putnam's Sons. 1881.

THIS book is a reproduction of letters written to the London *Times* concerning the material resources and prospects of the extreme portions of the Canadian Dominion—Newfoundland, Nova Scotia, New Brunswick, and Prince Edward Island on the coast, and Manitoba and the Northwest Provinces on the prairies. The inhabitants of the maritime provinces are staid, conservative people, clinging to traditional habits, possessing but little aggressive energy, devoting most of their attention to the fisheries, and allowing their mineral and other wealth to be turned to profit by more venturesome neighbors from the United States. In the wheat-growing valleys of the Red and Saskatchewan rivers there is a very different story to tell. Here for about ten years there has been a process of development similar in kind, but, owing to various causes, inferior in degree, to that which has built up the great States of our own Northwest. In 1870 the village of Winnipeg, or Fort Garry, contained 300 people; now it is a thriving town of 15,000 inhabitants, and in the same interval the population of Manitoba has increased from 12,000 to 40,000. The province, however, is of enormous extent (as large as Texas), and this increase is a small matter when compared with the early growth of Kansas, Nebraska, or Minnesota. In the same ten years the population of Dakota has increased from 14,000 to 135,000.

The author takes a very just view of the resources of the vast region between Lake Winnipeg and the Rocky Mountains, discarding equally the rose-colored pictures of the railway land-agents, who represent it as a paradise, and the gloomy predictions of Hudson's Bay officials, who certified that the land was worthless. In fact, the valleys are unsurpassed for wheat-growing; the borders of the Rocky Mountains (the former home of millions of buffaloes) afford excellent grazing; there are extensive beds of lignite nearly equal in value to coal, and iron ores have lately been discovered which give great promise. It is estimated, without exaggeration, that the whole region can support on the average one hundred inhabitants to the square mile, or 200,000,000 in all. Its future depends entirely upon the Canadian Pacific Railway, and the other roads which will follow it. It can grow enough wheat to feed all Europe, and with transportation by rail to Hudson's Bay, and thence by steamer, wheat can be placed in Liverpool at 28s. a quarter with the same profit that is now

obtained from United States wheat at 48s. "Should that day arrive, the British farmer must renounce growing wheat," and the present struggle between British and United States farmers will give place to one between Canada and the United States.

The future of Canada, as the author says, "is a tempting theme, but its adequate discussion is not easy. . . . The settlement of Manitoba, the construction of the Pacific Railway, the opening of steam navigation through Hudson's Bay to Europe, are elements of the greatest moment in determining the destiny of Canada, and several years must yet elapse before the influence of these elements is apparent. . . . It is clear to my mind that the future of Canada is in the hands of the Canadians. . . . Should they fail in making Canada what it may become, the fault will be their own, and not that of their magnificent Far West." The recent journey of Lord Lorne will probably give a fresh impetus to the Pacific Railway and to Canadian immigration, and the temperate and well-considered statements in this little book afford a great deal of useful information on those subjects.

Metrical Geometry. An Elementary Treatise on Mensuration. By George Bruce Halsted, A.B., A.M., and ex-Fellow of Princeton College; Ph.D. and ex-Fellow of Johns Hopkins University; Instructor in Post-Graduate Mathematics, Princeton College. Boston: Ginn, Heath & Co. 1881. 12mo, pp. xiii–232.

FROM the fact that Mr. Halsted is an ex-Fellow of so young an institution as the Johns Hopkins University it may be inferred that he is himself still a young man. Such being the case, whatever merits his book may possess are all the more creditable to him, and he has time before him in which to remedy such defects as he or others may discover. The book is dedicated to Prof. J. J. Sylvester, "in token of the inestimable benefits derived from two years' work with him." The wording of this dedication leaves it uncertain in what relation Mr. Halsted stood to Prof. Sylvester during these two years. It is quite as fitting to an associate as to a pupil; but perhaps Mr. Halsted took it for granted that the relation of Prof. Sylvester to any young mathematician could hardly be supposed other than that of teacher to pupil. In his preface the author says: "The competent critic may recognize signs of a Berlin residence; but a considerable part, it is believed, is entirely new." It is not, perhaps, exactly "good form" to anticipate, in a preface, what "competent" critics may do; and then Mr. Halsted exposes himself to the insinuation on the part of ill-natured and incompetent critics that this is but an awkward way of letting people know that he had resided in one of the great capitals of Europe.

In the first paragraph of his introduction, after giving a definition of mensuration, Mr. Halsted says: "It has been called that branch of applied geometry which gives rules for finding the length of lines, the area of surfaces, and the volume of solids, from certain data of lines and angles" (p. 1). It will thus be seen that mensuration is an art rather than a science. It is practical. It tells us what to do in order to find out what we want, but for the most part it refers to geometry for proof of the correctness of the rules which it tells us to follow. It is evident from this statement that a treatise on mensuration is not the place to introduce new definitions of terms, the meaning of which has long been settled, nor new demonstrations of propositions which are demonstrated in every ordinary treatise on geometry, except under peculiar circumstances. The sole object of introducing anything new should be to show how to do something which before could not be done at all, or to show how to do things in a more practicable manner than heretofore. Now the first thing that strikes one who takes the pains to read Mr. Halsted's book is the great number of new words, new symbols, new definitions, and new forms of English, introduced apparently in accordance with no systematic principle.

On page 3 is a table of reference embracing all the small letters of the alphabet, and explaining in what sense they will be used as symbols. On page 28 is a similar table embracing all the capital letters, and several arbitrary symbols, some of which have heretofore been used in mathematical works, others of the author's own invention. On page 83 is still another table, embracing all the small letters of the Greek alphabet, with three exceptions, and some more symbols. But the reader must not suppose, when he attempts to decipher one of Mr. Halsted's formulæ, that these tables will certainly help him out. The tables in many cases explain the use of the letters by means of new-coined words unaccompanied by any reference to the place where they are explained—*e. g.*, ô signifies a *perigon*, U signifies "volume of *quader*," etc., etc. If he wishes to know what a "perigon" or a "quader" is, he must search till he finds. During the perusal of the book we had noted for remark a great number of new words, strange ways of expressing old truths, and queer forms of speech; but the accumulation of material was too formidable: we have bundled our notes into the waste-basket, and will give only a single specimen. The Greek word σφαῖρα (English, *sphere*) has been in use in the Greek language from Homer down to the present day. Under slightly different forms it has passed into nearly if not quite all the languages of the civilized world. Its signification has always remained essentially the same; in mathematics its meaning has not varied from Plato down to Peirce. For the word *sphere* as the universally-acknowledged designation of a well-defined solid, Mr. Halsted (p. 71) substitutes the word *globe*, and by a formal definition limits the word *sphere* to the designation of a surface. This of course necessitates a reconstruction of the language of spherical geometry. All this he does without intimating that he is in any way departing from received usage. But, what is inexcusable in a mathematical work, he does not adhere to his ôwn definition. After drilling his new definition into the reader through several pages, he turns to other matters. On page 110 he resumes the consideration of the sphere, and now in the most formal manner he uses the word in its old familiar sense. He first gives a rule "to find the volume of a sphere"—that is, according to his first definition, to find the *volume* of a *surface!* Turning over to page 195, we find several problems like the following: "Find the sphere whose radius is 12.6156 meters." As we are now uncertain whether it is the volume of a solid or the area of a surface that he wishes us to find, it is only by assuming one of the two meanings, working out the problem on that supposition, and comparing the result with the answer which he gives, that we discover that he has returned to his first love. If these are the results of a Berlin residence, would it not be advisable for Mr. Halsted, the next time he visits Europe, to try Göttingen or Leipzig? The truth is that the rage to invent new symbols and to coin new words without any real necessity, arising from the desire of expressing new ideas, has reached such a point that mathematicians have not only become unintelligible to well-educated people, even when treating familiar subjects, but they are fast becoming unintelligible to each other.

The following extract (p. 14) will show Mr. Halsted's notion of what is convenient, his knowledge of ferry-navigation, and his felicity of illustration. He is treating of the limits of variable quantities:

"EXAM. 14. The variable may be likened to a convenient ferry-boat, which will bear us just as close as we choose to the dock—the constant limit—but which cannot actually reach or touch it; for if they touch, both explode into the unknown infinite."

We hasten to jump ashore.

Fashion in Deformity: as Illustrated in the Customs of Barbarous and Civilized Races. By William Henry Fowler, LL.D., etc. With Illustrations. London and New York: Macmillan & Co. 1881. [Nature Series.]

THIS lecture, delivered last year before the Royal Institution of Great Britain, well deserves its present permanent form. Like any history of primitive superstitions, it shows the living connection between the lowest savage and the proudest heir of all the ages. We mutilate and deform both the lower animals and ourselves in deference to standards of beauty alike unnatural and absurd, and in spite of a world of pain and suffering, voluntary and involuntary. The check-rein is a survival of the period of docked and cocked tails in horses (see Cruikshank, *passim*); sailors emulate the Polynesians in tattooing; the lady's earring is one extreme of a practice of which the other is recorded in the case of "a man on one of the islands near New Guinea, the holes in whose ears had been extended to such an extent that the lobes had been converted into great pendant rings of skin, through which he could easily pass his arms"; the French still rival the Flathead Indians in artificial compression of the skulls of infants, and with results vastly more disastrous to health and intellect. So Professor Fowler leads his readers from point to point of his indictment against our humanity and our reason, beginning with the hair and nails, and ending with tight lacing among women. What he has to say of the barbarous treatment of the feet it would be well for mankind if the "anatomical shoemaker" could read and profit by, and the stocking-maker as well. "The great error in all boots and shoes made upon the system now in vogue in all parts of the civilized world lies in this method of construction upon a principle of bilateral symmetry." The result is often a deformity little short of that purposely attained by the Chinese by swathing the feet of their women.

"The English mother or nurse who thrusts the tender feet of a young child into stiff, unyielding pointed shoes or boots, often regardless of the essential differences in form of right and left, at a time when freedom is especially needed for their proper growth and development, is the exact counterpart of the Chinook Indian woman, applying her bandages and boards to the opposite end of her baby's body, only with considerably less excuse. . . . Any one who recollects the boots of the late Lord Palmerston will be reminded that a wide expanse of shoe leather is in this country, even during the prevalence of an opposite fashion, quite compatible with the attainment of the highest political and social eminence" (pp. 72–73).

In an aside, Professor Fowler remarks that the sculptor's making the second toe longer than the first is a pure conventionalism, "derived from the Greek canon, which in its turn was copied from the Egyptian, and probably originally derived from the negro. It certainly does not represent what is most usual in our race and time." Moreover, "As in all ages—in fact, in all other animals—the first toe is considerably shorter than the second, a long great toe is a specially human attribute, and instead of being despised by artists, it should be looked upon as a mark of elevation in the scale of organized beings."

This little work merits the widest possible circulation.

Wood Magic: a Fable. By Richard Jefferies. New York: Cassell, Petter, Galpin & Co. 1881. 'WOOD MAGIC' is a taking title, and Mr. Jefferies has written books of exceptional charm about sylvan things, of which he has great knowledge. But those who have read his 'Gamekeeper at Home' or 'Wild Life in a Southern County' will be disappointed in the present work. It is a fable for children; but Mr. Jefferies's fabling consists in little more than the personification of English birds, beasts, and insects under the popular conceptions of their respective moral characters. It is quite the Ruskinian method: the weasel, for instance, embodies all that would be false, cruel, and cunning in a human being; but of the weasel as a parent, a provider, the possessor of a sharp appetite, and as our own kin in perhaps every respect save moral responsibility, Mr. Jefferies does not conceive at all. It is not the weasel's accidental relation to his own poultry-yard which forms a sufficient theme for the fable-teller of our day; we look for more than this in any study of animals, whether poetic or scientific, by observers so well informed as Mr. Jefferies has shown himself to be. Nor has his writing the charm of the older method, as La Fontaine used it—the keen simplicity, the "lurking archness," which give his fables permanent interest as satires upon human life. From either the sentimental or the Darwinian point of view a man of Mr. Jefferies's gifts might have made a better "fable" than the present one, which suggests an ancient definition (Bruno's, we believe): "Fable est uns contes que l'on dit des choses qui ne sont pas voires ne voiresemblables." It is scarcely true, or probable, for instance, that a child of four years could have talked like this: "'Sky,' said Bevis, 'I love you like I love my mother.'" But this is perhaps the worst thing in this volume, which has the look to us of being earlier work than the excellent productions by the same author which we have noticed heretofore.

BOOKS OF THE WEEK.

Avery, Prof. E. M. Elements of Chemistry. New York: Sheldon & Co.
Baragiola, A. Crestomazia Italiana Ortofonica. Prosa. Strassburg: C. J. Trübner.
Babcock, Emma W. Household Hints. New York: D. Appleton & Co. 60 cents.
Bjömson, B. Arne: a Tale. Boston: Houghton, Mifflin & Co. $1.
Bunce, O. B. Bachelor Bluff: His Opinions, Sentiments, and Disputations. New York: D. Appleton & Co. $1 25.
Buxton, B. H. Sceptre and Ring: a Tale. New York: Harper & Bros. 20 cents.
Cornwall, Sarah J. Roses and Myrtles. Poems. New York: D. Appleton & Co.
De Forest, J. W. The Bloody Chasm. New York: D. Appleton & Co. $1.
Fowler, Prof. T. Bacon. New York: G. P. Putnam's Sons. $1 25.
Publishers' Trade-List Annual. 1881. New York: F. Leypoldt. $1 50.
Rosenthal, Dr. R. S. The Meisterschaft System: German. New York: I. K. Funk & Co.
Rossetti, Christina G. A Pageant, and Other Poems. Boston: Roberts Bros. $1 25.
Rousselet, L. The Two Cabin-Boys. Boston: Roberts Bros. $1 50.
Urwick, Rev. W. Indian Pictures, Drawn with Pen and Pencil. New York: Thos. Nelson & Sons.
Warner, Susan. The Letter of Credit. New York: Robt. Carter & Bros.
Watson, P. B. Bibliography of the Pre-Columbian Discoveries of America. Roxbury, Mass. $1.
Williams, A. M. Poets and Poetry of Ireland. Boston: J. R. Osgood & Co.

Greece and Rome.

THEIR LIFE AND ART.

By Jacob von Falcke, Director of the Imperial Museum, Berlin. Translated by William Hand Browne, Associate of Johns Hopkins University. 4to, illustrated, $15.

In portraits of interesting objects, and "restorations" of places and occurrences in Athens, Rome, and Olympia, this book is believed to surpass in interest and artistic merit anything of the kind before published in English.

Mythology and Folklore.

An Introduction to the Science of Comparative Mythology and Folklore. By the Rev. Sir George W. Cox, Bart., M.A. 12mo, $1 75.

HENRY HOLT & CO., New York.

The Hero of Cowpens.

A CENTENNIAL SKETCH.

This book presents a complete history of the lives of heroic Daniel Morgan and of Benedict Arnold. These Revolutionary characters are viewed in varied lights, and the author has produced a most captivating historical sketch, as interesting as a romance.

"It is a capital life of Morgan. It paints him as the humble teamster, and makes him a living reality again in every scene in his eventful life."—*News and Courier, Charleston, S. C.*

Illustrated. 300 pages, 12mo, cloth, price, post-paid, $1 25.

A. S. BARNES & CO., Publishers,
111 and 113 William Street, New York.

The Rejected Gospels.

The first revision of the New Testament was by the Council of Nice A.D. 325.

We publish from the original tongues (giving authority for each) Twenty-three Gospels which the early Fathers then rejected.

Illustrated with thirty-two engravings from ancient missals. Cloth, $1 50; paper cover, $1. Free by mail.

GEBBIE & CO., Philadelphia, Pa.

Wadsworth Bros. & Howland,
IMPORTERS AND DEALERS IN
ARTISTS' MATERIALS
And Architects' and Engineers' Supplies of every description,
84 WASHINGTON STREET, BOSTON.
☞ Catalogues free on application.

GUITEAU'S CASE.

READ

The Punishability of the Insane,

By DR. WM. A. HAMMOND,
Ex-Surgeon-General, U. S. A.,
IN THE
International Review,
NOVEMBER, 1881.

Price by mail, post-paid, 50 cents. Address

A. S. BARNES & CO., Publishers,
111 and 113 William Street, New York.

THE
Sunderland Library,
THE PROPERTY OF THE
DUKE OF MARLBOROUGH.
PART I.

MESSRS. PUTTICK & SIMPSON

Will SELL BY AUCTION, at their Rooms, 47 Leicester Square, London, England, on December 1 and nine following days, the first portion of this very important historical library, which is specially rich in early printed books, many of them on vellum and in fine bindings. Catalogues *raisonnées* are now ready, and may be had, post-free, price $1 25, of Messrs. TICE & LYNCH, 34½ Pine Street, New York, or from the Auctioneers direct.

The Critic.

"The first literary journal in America."—*London Academy.* No. 21, out to-morrow. A pen-and-ink portrait of Rossi, as *Hamlet*, drawn in Italy by Robert Blum; with interesting personal sketch by P. M. Potter. Also portrait and brief biography of the late Dr. J. G. Holland. Editorial on "The Writing of Many School Books." Book-reviews, literary news and notes, and criticisms of Art, Music, and the Drama. Sold everywhere. Ten cents a copy; $2 a year. For specimen copy address 757 Broadway.

Oneida Community, Limited.

Canned Fruits, Vegetables, Jellies, etc.

Now is the time to order the year's supply. Assorted cases a specialty. Send for price-list. Address as above, COMMUNITY, N. Y.

THE HYGEIA HOTEL, Old Point Comfort, Va., situated 100 yards from Fort Monroe. Open all the year. Equal to any hotel in the United States as a Summer Resort or Cold Weather Sanitarium. Send for circular describing hygienic advantages, etc.

BUNDY'S

Life of Garfield.

12mo, cloth, price $1.

WASHINGTON, D. C., Oct. 3, 1881.

GENTLEMEN: Of the many lives of the late President (I have seen ten or twelve) published during the campaign last year, that of Major Bundy may be signalized, as regards authenticity and general interest.

It is within my knowledge that Major Bundy had access to a large mass of correspondence and private memoranda, which afforded him unusual facilities in the preparation of his work—in fact, a labor of love—which, in my judgment, was well and faithfully done.

In making this statement I do not undervalue the work of other writers who, with the material at their command, tried to illustrate a life which has become a sacred memory in the hearts of the American people.

Very truly yours, A. F. ROCKWELL.

Messrs. A. S. BARNES & Co., Publishers, 111 and 113 William Street, New York.

New English Books

At 25 Cents to the Shilling,

Sent, post-paid, direct from London, on receipt of price of publication in bankers' draft, currency, or post-office order.

The recent Custom-House and Post-Office Circulars permit all printed matter to be mailed to the United States with safety and economy, and the duty, if any, to be collected from addressees.

Stevens's Priced List of nearly 500 English, French, and German Periodicals, with fuller Announcement for supplying books by mail or freight, is distributed gratuitously to every public library in the United States, by TICE & LYNCH, 34½ Pine Street, New York, and F. F. STEVENS, American Library and Literary Agent, 4 Trafalgar Square, Charing Cross, London, England.

Putzger's One Dollar Atlas

Of Ancient, Mediæval, and Modern History.

76 maps, etc., in colors. Leipzig, 1881.

L. B. THOMAS,
409 W. Twentieth Street, New York.

Cheap Clearance Catalogue of Theological Text-Books and Rare Divinity just issued.

F. W. CHRISTERN,
37 West Twenty-third Street, New York,

Importer of Foreign Books, Agent for the leading Paris Publishers, Tauchnitz's British Authors, Teubner's Greek and Latin Classics. Catalogue of stock mailed on demand. A large assortment always on hand, and new books received from Paris and Leipzig as soon as issued.

DAVID G. FRANCIS,
17 Astor Place, Eighth Street, New York,
DEALER IN NEW AND OLD BOOKS.

PRICED CATALOGUES, containing valuable standard literature, as well as rare, curious, and out-of-the-way books, are issued from time to time, and will be forwarded to any address.
BOOKS PURCHASED.

The Nation.

NEW YORK, THURSDAY, OCTOBER 27, 1881.

The Week.

THE most noticeable feature of the proceedings at Yorktown on Wednesday was the very neat and graceful speech of the President. He succeeded in expressing, in a very few words, the idea which the centennial is intended to commemorate and the grateful sentiments aroused by the presence of the foreign guests, and in giving prominence to the fact, which it was certainly important to dwell upon, that the anniversary was celebrated with no feeling of exultation or rancor against England. Surely, as he said, "no such unworthy sentiment would find harbor in our hearts, so profoundly thrilled with expressions of sorrow and sympathy which our national bereavement has evoked." A still more emphatic method of expressing the real nature of the national feeling towards England and the Queen was taken at the close of the celebration, when, by order of the President, the British flag was saluted by the land and naval forces at Yorktown.

The rest passed off very successfully. The Yorktown centennial, as we pointed out the other day, possesses an historical picturesqueness which prevents it from being commonplace; and the presence of foreigners with titles and uniforms, combined with the military pageant, makes just that contribution to the spectacular effect of the occasion which was wanting at Philadelphia, where whatever was picturesque and attractive to the eye was almost swallowed up in the dull monotony of the huge and typically American crowd. When we come to the set speeches on such occasions as these, the supply of original thought with regard to the "lessons" taught by them was long ago exhausted, while our patriotic emotions have been subjected to so many centennial strains that their elasticity has become somewhat weakened. Mr. Winthrop succeeded better than might have been anticipated in making an address which went over some very familiar ground in a way that, if it did not fire the heart or quicken the pulse, was sensible, dignified, and appropriate to the occasion.

The report of the committee appointed last May by Mr. Windom to examine into the contingent Treasury expenses was submitted to the Senate on Monday. The committee found that for several years there had been in the department an officer known as the "Custodian," who, with the chief clerk, had been responsible for the contingent expenses. The office and salary of the Custodian (Mr. O. L. Pitney) the committee reported as entirely without authority of law. In making purchases and incurring expenses the committee found generally that there had been looseness and waste. In detail, they say that 118¼ yards of carpet had been paid for twice over; that one Moses had been paid for 637½ yards of carpet which already belonged to the United States, and which he, on having his attention called to the fact, at once replaced with 637½ yards of inferior quality; that "Woodruff file-holders" had been paid for as "ice," but that the file-holders had never been delivered; and that the custodian "refused to furnish any explanation," stating that a "personal explanation" would be made to Mr. Windom; that a purchased barrel of bay rum was put down as "deodorized alcohol," though what became of it does not appear. Other items of the same sort are given. Notwithstanding the committee's statement as to its illegality, it seems from a communication from Mr. Upton, chief clerk of the Department, that the position of Custodian is an old one. Mr. Windom, however, decided at once to abolish the office. This report of petty pilferings in the Department derived its principal importance from the rumor that Mr. Sherman was in some way personally involved in the "Custodian's" doings; but there seems to have been no foundation for this whatever.

Mr. Francis A. Walker has resigned his position as Superintendent of the Census for the purpose of taking charge of the Institute of Technology in Boston. The presidency of that institution was offered to him several months ago, and he accepted it, so that his leaving the Census Office causes no surprise. The work of the census is sufficiently advanced to require no longer the active control of the master hand. Mr. Walker may be regarded as an excellent model of the scholar in politics. The independence of his way of thinking on political questions could not make him a favorite with the ordinary party man, but his large and varied attainments pointed him out on more than one occasion as a man of eminent usefulness. He was for some time Commissioner of Indian Affairs under President Grant, and left the office for reasons very honorable to himself, and twice he has been put at the head of the Census of the United States, universally recognized as by far the ablest and best equipped man to superintend that important work. The last census was taken under a law the principal provisions of which were devised by Mr. Walker himself, and it may be said to be not merely the most comprehensive and best, but the first really valuable census this country has ever had.

In an order issued last week with regard to assessments for party purposes, Postmaster Pearson directs the attention of his subordinates to an official ruling of the Post-Office Department, issued under the last Administration, laying down the principle that the salary of a public officer is fixed by law, "and when he has earned and received it no one but himself can direct the disposition thereof," and he may contribute money for political purposes or refuse to do so "without affecting his tenure of office." Collector Robertson, in an interview on the same subject, said that he did not think the assessment system was the best way to raise money for political purposes, nor did he think "the reform newspapers wrong in opposing it as they did." He had no orders to give with regard to the subject. He would discharge a subordinate for unfaithfulness or bad habits, but not for refusing to pay a political assessment, "his giving or not giving being a matter wholly outside of his official relations." These declarations are perfectly correct, and we have no doubt they are sincerely meant; but it will be easier to convince the public of their sincerity than to relieve the Post-Office and Custom-House clerks of all apprehension as to the consequences of a refusal on their part to pay. And this is necessary in order to take from the assessment business the flavor of official coercion. To this end everything should be avoided which looks like officially countenancing the levying of assessments.

We know very well that neither the Postmaster nor the Collector nor the head of a department in Washington can prevent a campaign committee from addressing and mailing circulars requesting contributions to the clerks in those establishments. But campaign committees usually claim the privilege of sending their own agents with subscription lists, on which every clerk is put down for a certain sum, from desk to desk in those offices, to get the signatures of the clerks and to collect at the same time the amounts for which they have been assessed. When this is permitted by the chief of a Government establishment the coercive flavor of the assessment becomes very strong, and nine out of ten of the clerks conclude at once that a refusal to pay will cost them their places. It is therefore essential that the practice of permitting assessment collectors to enter the official buildings and to go from desk to desk should be stopped. No facilities should be offered for such things in public offices any more than in private ones, during business hours, while the clerks are or should be engaged exclusively in the discharge of their public duties.

A few days ago the members of the Republican district associations in the Eleventh Congressional district nominated Mr. W. W. Astor as their candidate for the seat in Congress vacated by Mr. L. P. Morton. When young gentlemen of Mr. Astor's wealth and social connections take an active part in politics, it is generally thought that they do so from disinterested motives, and with the sole desire to achieve an honorable reputation in serving the public interest. They are certainly above the sordid impulses of the ordinary politician who seeks public employment for a living. It is supposed that, with their assured social position, they can afford to defy those sinister influences in politics which threaten with persecution and defeat those they cannot control, and to act upon independent convictions of public good with perfect fearlessness of consequences. Their active participation in politics is therefore usually hailed with general satisfaction. But when, instead of being models of fearless and honorable indepen-

dence, they become startling examples of a want of that very independence, the public disappointment is in their case greater than in others. We regret to say that Mr. Astor has so disappointed those who applauded his first appearance in public life as a sign of good promise. As a member of the State Senate he persevered in subserviency to the local Machine, against the well-known wishes of a large majority of his constituents, in maintaining the deadlock over the Senatorial election.

Mr. Astor may have considered such conduct shrewd time-serving in view of the nominations the Machine could bestow. Such a nomination he has now obtained. But he must not be surprised if when going to the polls many of the voters of his district remember that Mr. Astor by his course in the State Senate has given little hope as to what his course would be in Congress, and that such a nomination as his obedience to the Machine has procured for him — a nomination by mere close corporations representing nothing but their members— may in such a case be regarded as binding upon nobody but their members. These reflections might have touched him little, had the opposing candidate been such as to induce reluctant voters to support Mr. Astor in order to escape from some great public danger or disgrace. But they must have appeared to him more serious when he heard of the nomination by the "County Democrats" of Mr. Orlando B. Potter, whose private character is not only unobjectionable, but who by his active support of the civil-service reform movement has shown that he at least knows how to recognize the signs of the times by serving higher interests than mere party politics.

Two New Jersey editors have been sentenced to hard labor—one for ten months and the other for six months—for criminal libel. It seems that they pleaded guilty, in order to escape the expenses of a trial, never dreaming that the court would impose a severe sentence. The punishment will, however, probably prove a wholesome discipline to them, and they will be all the better editors at the close of their respective terms. Criminal libel is now really the only effective mode of redress for assaults upon private character in the press. There are no such delays in the proceeding as always arise in civil suits, and the question presented for the decision of the jury is very much simpler than in such actions. One reason why these so rarely come to anything is the wide latitude of cross-examination generally permitted by the court. The defendant's counsel is allowed, for the purpose of getting at the pecuniary value of the plaintiff's character, to go into his whole private life, drag out in court every fact in his past history which can be in the least damaging to him, and, in short, to subject him to mental torture as bad as or worse than that caused by the original libel. In criminal libel, on the other hand, the issue can hardly involve anything more than the publication and the truth of the facts; the person libelled is not a party to the proceeding, and no question of pecuniary, damages arises.

It has also the advantage of impressing the gravity of the offence upon the minds of the jury, who generally are apt to look upon civil suits for libel against editors very much as editors themselves do. There is something in the whole process of assessing the value of a man's character in court which robs a civil libel suit of its dignity, and makes the very persons who are most entitled to the protection of the courts in this matter—*i. e.*, those who are sensitive to attacks upon their character—least willing to resort to them. Almost the same sort of feeling has grown up, in this country at least, among men of refinement, with regard to civil libel suits, that has always existed among women of refinement with regard to actions for breach of promise. A criminal libel suit, with the state intervening to protect the character of the person injured, presents none of these difficulties; and the case is one in which the state ought to intervene whenever it is possible. A community in which the press is allowed to become an engine of defamation and abuse is in a bad way. It will not do to wave the matter aside as of no consequence; nothing is more certain than that where attacks on character come to be generally regarded as trifling or amusing matters, character itself must soon be regarded with indifference.

The New York banks gained $4,430,150 in their reserve during the last bank week, in consequence of the large disbursements of the Treasury and, to a small extent, of the receipts of foreign gold. At the close of the week there was no profit in importing gold; the receipts since August, however, now amount to $21,152,160, or about half of those in the corresponding time a year ago. The Treasury bought $2,000,000 of extended 5 per cents during the week, and also gave notice that any part of the remaining $12,000,000 bonds called for redemption December 24 would be paid whenever presented, with interest to the date of presentation. The money market, naturally enough, became easier for borrowers, and there was less anxiety about the future of rates. At the Stock Exchange, United States bonds and railroad investments were for the most part strong. The National Banks were large buyers of the extended 5 per cents to substitute for extended 6 per cents, the policy of the Treasury in its redemptions being apparently to extinguish all of the latter before touching the former. The differences between the trunk-line railroads are not yet healed, but on account of the large accumulation of freights at the Western cities, each of the trunk-line roads of its own accord advanced rates late in the week, so that they are considerably above the figures recently current. By some this is construed as being the first step towards a comprehensive settlement later in the season.

Mr. Walter, proprietor of the London *Times*, has been again interviewed about city pavements, the water supply, and the elevated roads, and made thereon some startling assertions. One was that the cost of an aqueduct from Lake Erie to this city could be defrayed by "one year's saving in New York city jobbery." As the annual revenue of the city is about $30,000,000, and the aqueduct would probably cost $30,000,000, Mr. Walter must know of greater leaks in the city treasury than occurred even in Tweed's day. He also denounced the new Capitol at Albany and the pavement of Philadelphia. About the effect of General Garfield's death he declined to commit himself on the point whether it would "not eventually result to the benefit of the Union"; but he went so far as to say that it (the death) had "led to an examination of the Constitution and the laws, and had pointed a warning lesson regarding the civil-service system now in vogue." Of the Irish he spoke with "compressed lips" as "a fractious and turbulent people," but made a mistake in his illustration by alleging that they got up the Maryland and Pennsylvania riots. He would evidently, if a conqueror, rule them with a rod of iron. It is right to add that the London *Truth* and *World*, in very amusing articles, ridicule the American desire to know what Mr. Walter thinks, from which it is inferrible that his "views" are not so much in demand in England as here.

A statement is made on behalf of Mr. Tyner with regard to his connection with the Star-route cases which vindicates him as having the right to "claim" to have been the first person to call the attention of the Department to the irregularities, by means of the suppressed report made in 1879, after his investigation of the subject on the Pacific coast. Judge Key, who was at the time Postmaster-General, has been interviewed with regard to the matter, and in the course of his remarks makes the singular statement that on the report being presented to him he told Mr. Tyner that if it were published then there would be a "row," and that "Mr. Brady would feel that his territory had been invaded." He therefore advised Mr. Tyner to have a conference with Mr. Brady, whom he believed to be honest and capable. It seems to be settled that Mr. Tyner is to leave the office, notwithstanding his "claim," and it is said to be untrue that General Grant interceded for him. This may show that the importance of "carrying Indiana," which was urged as a reason for Mr. Tyner's appointment, is not so great as it used to be, or else that Mr. Tyner is regarded as less likely to render efficient service in carrying it than formerly.

The *Western Christian Advocate* is very severe on us for not knowing that the Methodists have had "missions, religious societies, churches, and converts by the hundreds in Italy, and that a large number of these societies and churches are ministered, too, by ordained clergymen, converts from the Roman Catholic Church." It communicates this information, in a bitter manner, to what it calls sneeringly "the religious editor" of the *Nation*. We are very glad to find that we were mistaken in thinking there were few or no Italian Methodists; but we warn the *Advocate* that this will not prevent our keeping a sharp eye on him when he comes to "offer

inducements" for "renewals," "clubs," and new subscribers, about Christmas-time. Should these "inducements" take the form of spiritual indulgences, he may be sure that our ignorance about Methodism in Italy will not seal our lips.

Mr. A. M. Sullivan, one of the most rational of the Land Leaguers, has, in an interview in Dublin with the correspondent of the *Herald*, spoken of the great inconvenience experienced by the agitators in Ireland, or "the men in the gap," as they are poetically called, from having lines of policy imposed on them by the Irish here, who send most of the money, and who, being simple spectators of the fray, like to see things made lively. A Leaguer in New York is naturally more eager for rebellion than the Leaguer in Dublin, because he can have his fun for a quarter of a dollar without even neglecting his business; while his unfortunate confederate at home—if he takes his advice—will have to be out nearly night and day, shooting, howling, and calling names. There is no sounder rule in politics than that which forbids any honest man to advocate hazardous or violent courses in the risk and responsibility of which he does not mean to share. Not only, to quote Jeanette and Jeannot, should "those who make the quarrels be the only men to fight," but every man who makes a quarrel should be compelled to share in the fighting. If the New York Leaguers want fighting and robbery done in Ireland, they should themselves go over and take a hand in them. That is the place to make the British lion yelp. We notice, by the way, that they have issued a proclamation mentioning among other things that "the supreme moment for Ireland" has come. This is not strictly accurate. The "supreme moment for Ireland" has been arriving many times a year for many years, whereas the language of the League gives the impression that it is a new thing.

Professor Goldwin Smith has been carrying on, in the *Nineteenth Century*, a controversy with Mr. Wolff on the Jewish question, in which he makes the strongest statement of the case against the Jews which has yet appeared. He denies that the hostility to them either is now or has ever been mainly religious in its origin. He says it is hostility to a race or tribal organization, carrying on obnoxious trades, the chief being usurious lending, and he finds a solution of the "Jewish question" in the abandonment of the tribal organization by the Jews—that is, the abandonment of the prohibition against marriage with Christians—and their surrender of the Old Testament as a sacred book. Indeed, he insists upon this latter step as a very important one for the Christian Church also, which he declares cannot any longer safely promulgate what he considers the immoralities of Hebrew history. It will, however, probably be a good while before the Jews will seek escape from the discomforts of their present position by any such methods as these. It may be their tribal organization and not their religion which exposes them to Christian hatred; but to them the tribal organization and the religion are and must be inseparable. They could hardly give up the one without making profound modifications in the other. Professor Smith also complains bitterly of their refusal in every country to take to agriculture, and doubts much whether, even if their projected restoration to Palestine is carried out, they will take to it there. Indeed, he says they will be most likely to cultivate the soil through fellahs whom they will "boss." But on this point it is to be observed that no men of any race take to farming with their own hands whose wits are of a kind to promise them a good living in the towns. Even the French, whose capacity for hard labor on the soil is almost unequalled, show as strong a desire to escape from agriculture to the stock exchange and counting-room as the Jews do. The strength of this tendency among Americans is well known.

Affairs in Peru have come to another crisis, if another crisis be possible. The Calderon Government has been overthrown by Admiral Lynch of the Chilian Navy, ostensibly because it had been issuing too much paper money, or had been issuing it fraudulently, but in reality, probably, because the issue of paper money was the only function of a government it was able to perform. It was set up by the Chilians in order to provide some organization capable of making a treaty and preserving order. But as it has never been able to exercise any authority outside Lima, it is plain that no treaty it could make would be worth anything. All the power it ever possessed it derived from the presence of Chilian troops. Admiral Lynch has accordingly deposed it by simply saying that hereafter in territory occupied by the Chilian troops all authority will be exercised by officers appointed at his headquarters. As the paper money had proved a great affliction to the business community, the revolution apparently causes no great regret. Outside the Chilian lines it will make no change either for the better or the worse. There anarchy has reigned since the close of the war, and will continue to reign. It will probably diminish only as the temptations to robbery and murder diminish. The Chilians only hold two or three large cities. The rest of the country is held by, or rather exposed to, two or three chiefs, Montero, Pierola, and Solar, each of whom has a small force about him and cannot be caught by the Chilians. The whole situation is deplorable, and shows the danger of pushing a semi-civilized Government too hard. In most countries in the stage of progress which Peru has reached, the Government, whatever it be, is almost the only social bond, and if it is overthrown, there results something like Hobbes's state of nature.

The part now played in the trouble by our Minister, General Hurlbut, probably alone makes it at all interesting to most Americans, and we confess it is to us decidedly puzzling. He has written a very authoritative letter to Admiral Lynch in the character of a mediator, giving his own opinion and that of his Government as to what the Chilians should do. It is, in many places, a startling departure from the views which our Government promulgated during and at the close of our war as to the proper limits of outside meddling either between two belligerents or between victor and vanquished. But in addition to this it lays down rules of international law which are so novel that they ought to be either argumentatively and formally fathered or formally repudiated by the State Department. He strongly protests against any annexation of Peruvian territory, although he admits the Chilian right to a war indemnity, but says that, as a "principle of public right," "this should be either agreed on by the parties, or determined by disinterested arbitration." We believe this is the first time any such limitation on the rights of a conqueror has been produced by any diplomatist. It was not thought of either by us in the Mexican war, or by the Germans in the French war, or in the Austrian war. General Hurlbut declares it is "contrary to the rules which should prevail among civilized nations to proceed at once, and as a *sine quâ non* condition, to incorporate into Chilian jurisdiction territory which is undoubtedly Peruvian, without having previously proved the incapacity or unwillingness of Peru to meet the indemnity in some other form." It may be contrary to the rules which "should prevail" among civilized nations, but it is certainly not contrary to the rules which do prevail at present; and consequently it ought not to call down on the Chilians "the most decided disapprobation on the part of the United States," as General Hurlbut says it will.

The meeting of the three Emperors at Dantzic is now generally supposed—and the supposition is supported by the language of the Russian explanatory circular—to have been prompted by the Czar's fear that Bismarck's designs were not as regards him altogether pacific. In fact, the latter was suspected of being dissatisfied with the German frontier on the Russian side, and of having concocted a scheme for taking Poland away bodily from both Austria and Russia, and giving it to Saxony, and compensating Austria out of the Balkan principalities. It was, it is believed, with the view of satisfying himself that nothing so alarming as this was on foot, that the Czar sought the meeting, and he is officially reported as having come away very much satisfied, on being assured that no mischief was brewing. The desire of the three potentates to agree upon some concerted line of action against the European Socialists was probably put forward as a mere blind to cover much more serious business. But the meeting has not dissipated the belief that Bismarck means to make one more great territorial change before he quits the scene, in which the descent of Austria towards the Ægean will form a prominent feature. This determination to push her down into that region is of long standing; it is, in fact, as old as 1866. The annexation of Bosnia and Herzegovina was the first step in it, and the next will probably give her the suzerainty of Servia, of Bulgaria, and perhaps Eastern Rumelia, with Salonica as the terminus of her great southeastern trunk line of railway.

SUMMARY OF THE WEEK'S NEWS.

DOMESTIC.

THURSDAY, the 20th, being the anniversary of the surrender of Lord Cornwallis, was appropriately celebrated at Yorktown. President Arthur opened the ceremonies with a graceful address. He was followed by M. Max Outrey, the French Minister, and the Marquis de Rochambeau, who returned thanks for the courtesies the French delegation had received in this country. Baron Steuben responded for the German guests. The Centennial Ode, written by Paul Hayne, of South Carolina, was then sung by a chorus, after which Robert C. Winthrop, of Boston, delivered the oration of the day. On Friday there was a grand review of the regular and volunteer soldiery assembled at Yorktown. At the close of the day, in accordance with President Arthur's proclamation, the English flag was saluted. There was a great crowd and a large number of distinguished persons present. The accommodations for visitors are reported to have been wretched. After leaving Yorktown the French guests visited Annapolis and Richmond and various other points of interest.

On Monday President Arthur sent to the Senate the nomination of ex-Governor Edwin D. Morgan, of New York, for Secretary of the Treasury. As soon as the Senate went into executive session the nomination was at once confirmed. It is said that, without doubt, ex-Senator Howe, of Wisconsin, will succeed Mr. MacVeagh in the Attorney-Generalship.

Mr. Morgan having positively and definitely declined the Secretaryship of the Treasury, it is rumored that United States Treasurer Gilfillan is likely to be nominated for the office by President Arthur.

President Arthur has sent to the Senate, in answer to the resolution adopted on the 14th of October enquiring what steps the Government has taken to protect the rights of the United States in the Panama Canal, the report of the Secretary of State. Secretary Blaine says that, having learned since the adjournment of Congress of the rejection by Colombia of the protocol negotiated by the representatives of the United States and that Republic, and having been informed that the Government of Colombia by its public acts was avowing its desire to terminate the treaty of 1846 and appeal to the Powers of Europe for a joint guarantee of the neutrality of the Isthmus, the Department of State addressed a letter of instruction to each of the United States Ministers in Europe. The letter is of considerable length, and sets forth the political rights of the United States in the matter of the Panama Canal. It reiterates, in substance, the so-called Monroe Doctrine, and calls the attention of Lord Granville to the thirty-fifth article of the treaty of 1846, in which the United States guaranteed "positively and efficaciously" the perfect neutrality of the Isthmus. Mr. Blaine goes on to say that, "in the judgment of the President, this guarantee given by the United States of America does not require reinforcement, or accession, or assent from any other Power." The letter is dated the 24th of June, 1881.

A resolution was adopted in the Senate on the 25th inst., authorizing the Library Committee to receive and carefully preserve the papers of the Count de Rochambeau, to await the action of Congress on the proposition to sell the same to the United States Government. The papers fill a very large trunk and include many letters of George Washington. The committee had been appointed in May to examine the disbursements and contingent-expenses account of the Treasury Department, and as the result of their investigation they state that the office of Custodian of the Treasury Department is illegal, and that there have been extravagance, waste, and unlawful purchases in the department. In a letter to the Senate accompanying the report, Secretary Windom says that all the changes necessary to a complete and thorough correction of these irregularities and abuses have been adopted.

In the Senate on Friday Mr Sherman offered a resolution calling upon the Secretary of the Treasury for the report of the Meline committee, it having been intimated in the newspapers that the report had been suppressed owing to the fact that there was something in it which was injurious to Mr. Sherman. The resolution was adopted, and on Monday the report was laid before the Senate.

The sub-committee of the Senate Judiciary Committee have been investigating the subject of a bankrupt law, and in order to obtain information fifty thousand circulars of enquiry have been distributed throughout the country. It is said that nine-tenths of the opinions received are in favor of the passage of a bankruptcy law. The United States, as well as the State, judges unanimously approve the passage of some law on the subject.

From the report of the First Assistant Postmaster-General for the last fiscal year, it appears that the increase in the number of post-offices during the year was 1,500. The total number of post-offices in the United States on the 30th of June last was 44,512.

Large reductions have been made in the service on the Star and Steamboat routes, and it is thought at the Post-Office Department that further material reductions would result in harm to necessary service. The reductions already made have resulted in a saving to the Government of $525,000 per quarter.

Assistant Postmaster-General Tyner, whose resignation President Arthur has demanded on account of his having failed to expose the Star-route frauds which he is said to have discovered in 1879, has caused a very lame defence to be published. It is stated, however, that nothing that Mr. Tyner or his friends can do will save him, and that Mr. Frank Hatton will be nominated for Mr. Tyner's position at an early moment.

General Francis A. Walker, the Superintendent of the United States Census and one of the most efficient bureau officers of the Government, has resigned his position to take the presidency of the Institute of Technology in Boston.

Mrs. Garfield has written to Colonel Rockwell requesting him to announce in some public manner her purpose to cause to be published an account of the life and an appropriate collection of the literary remains of General Garfield, "after that careful consideration and preparation so manifestly necessary."

Mr. Cyrus W. Field reports that the total amount subscribed towards the fund for Mrs. Garfield and her children is $361,791 72, $361,770 75 of which has been invested in United States four per cent. registered bonds.

The Executive Committee of the National Garfield Memorial Hospital have issued an address to the pastors of churches throughout the United States, suggesting that Saturday and Sunday, November 5 and 6, "be set apart for discourses and collections in all their places of worship throughout the land" in aid of the hospital fund. Contributions should be forwarded to the Hon. James Gilfillan, Treasurer of the United States.

Justice Cox has granted the motion of Mr. Scoville, Guiteau's counsel, for an allowance to defray the expenses of bringing the defendant's witnesses to Washington.

On Friday the Grand Jury at Washington found an indictment against Captain H. W. Howgate, charging him with embezzling upwards of $90,000 from the Government.

The Navy Department has received communications from the Arctic relief ships *Rodgers* and *Alliance*. They report that no trace of the *Jeannette* has been found.

A meeting of the French and American Claims Commission was held at Washington on Monday. M. Grimaud de Caux, who has been acting as provisional agent for the French Republic, has been appointed permanent agent by the French Government.

Advance copies of the eleventh number of the *Consular Reporter* upon the commerce, manufactures, etc., of foreign countries have been furnished to the press. Considerable space is devoted to the subject of the restrictions imposed by France, Germany, Belgium, and Switzerland upon the importation into those countries of pork, lard, and canned beef, showing that the measures taken by the Governments of the countries named have created such a panic among the consumers that the sale of American meat has been greatly injured, and in some cases virtually destroyed.

Mr. Carlton, the chairman of the Port Huron Relief Committee, has published an address thanking the "charitable public of the United States and Canada" for their contributions, and requesting that no more contributions in kind, but only money, be sent to the Relief Committee.

The repudiationists in the Minnesota Legislature have adopted a policy of obstruction in the contest over the bill providing for the payment of the State bonds.

Mr. Windom was nominated by acclamation at the Republican Senatorial caucus on Thursday, and in the separate balloting by the two Houses on the 25th inst., received all but four of the Republican votes in the Legislature, and of course a large majority. His return to the U. S. Senate is therefore assured.

The Constitutional Amendment providing that all the judges of the Supreme and Superior Courts shall be nominated by the Governor and confirmed by both houses of the General Assembly has been ratified by the people of Connecticut. The judges have hitherto been nominated by party caucuses and elected by the Legislature.

Mr. John H. Lewis, the candidate for Lieutenant-Governor of Virginia on the Readjuster ticket, is reported to have said that the Readjuster party in Virginia is certain of victory and a large majority in the coming election.

On Thursday the Mississippi River broke through the Sny Levee south of Quincy, Ill., and flooded hundreds of acres, destroying many fields of fine winter wheat and much live stock, and forcing the farmers in some instances to flee for their lives.

There has been an alarming prospect of scarcity of water in New York city during the week, and on Saturday Mayor Grace issued a letter to the people of this city calling their attention to the gravity of the situation, and requesting their co-operation in stopping the "lavish or wasteful use of water." The danger has been somewhat abated by the slight rainfall on Monday and Tuesday.

The new Inman steamer *City of Rome*, which is the largest steamer afloat with the exception of the *Great Eastern*, has made her first trip from Liverpool to New York. She was rather long on the voyage, but this is said to have been principally due to the bad weather.

The Church Congress of the Protestant Episcopal Church began its seventh annual session in Providence on Tuesday. There was a large gathering of clergymen and laymen. Bishop Clark of Rhode Island delivered the inaugural address. Civil-Service Reform was the topic assigned for discussion for the first evening.

Justice Booth has bound over for trial to the January term of the Superior Court Walter and James Malley, charged with the murder of Jennie Cramer.

Action has been taken by the Pennsylvania and Baltimore & Ohio Railroad Companies to put a stop to the ruinous competition which has been going on among the trunk lines over the through-business. Trusting to Mr. Vanderbilt's assertion that the railroad war was not of his own seeking, and that he has simply

followed the action of the other managers, the two above-mentioned roads have agreed to double the present passenger rates between New England and the seaboard cities which they enter, and all points west of Pittsburg. This puts an end to the cheap Western travel of which the public have had the benefit for some time.

There is an active demand at Richmond for Confederate bonds. One banking house is reported to have bought over $1,000,000 worth of them on Wednesday last. The only hope of their redemption is thought to lie in a considerable amount of money placed to the credit of the Confederate Government in the Bank of England during the Rebellion.

FOREIGN.

The Land League has issued a manifesto advising tenants to pay no rents under any circumstances. This was followed by a proclamation issued in Dublin by the Lord Lieutenant of Ireland, declaring the Land League to be an illegal and criminal organization, and that all meetings to carry out or promote its designs or purposes were unlawful and criminal and would be dispersed by force. Archbishop Croke has dealt a severe blow to the Land League by publishing a letter protesting against the "no-rent" manifesto. He says that he has been a steadfast and uncompromising supporter of the public policy of the League, believing it constitutional and calculated to effect great national results, but that the absolute repudiation of rents meets with no sympathy from him. Arrests under the Coercion Act continue, and meetings are still being held in disobedience to the Lord Lieutenant's proclamation. It is reported that the headquarters of the League will be moved to Boulogne, France, as soon as it is no longer possible to carry it on in Dublin.

It is said that a great pressure is being exerted by English and Irish Catholics to obtain from the Pope a strong and clear condemnation of the Land League "no-rent" manifesto.

The Irish Land Court opened in Dublin on Thursday. Lord Justice O'Hagan said the court had decided on extremely simple rules of procedure, free from all technicalities. The fee for entering the court would be only a shilling, so that nobody could have the excuse of not having the advantage of the Land Act. There would be a similar fee on giving notices of appeals. Many tenants, he said, had already applied to have their rents fixed, but no decision could be given before the expiration of ten days. Mr. Edward F. Tilton and Lord Vernon sit with Justice O'Hagan in the Land Court. It is stated that a majority of the litigants thus far belong to northern counties.

The Right Hon. Sir John R. Mowbray, Conservative Member of Parliament for Oxford University, has written to the London *Times* confirming Professor Goldwin Smith's opinion concerning the kindly feelings of Americans for England. He says he believes that the unreasonableness of the Irish agitation and the character of its leaders are as thoroughly appreciated in America as in England.

The London *Times*, in an editorial discussing Secretary Blaine's letter in reference to the Panama Canal and the Monroe Doctrine, says that while the weighty nature of the interests of America in any interoceanic canal through the Isthmus of Panama will be readily admitted, still Mr. Blaine "pushes the point too far when he would have the world take it for granted that no Government except his own and that of Colombia has any claim to be consulted in regard to the neutrality of the work." The *Times* further says that this proposition is not supported in the letter by arguments which will make it acceptable to England.

The London *Daily News* has announced that the original sum of £500,000, given by the late George Peabody in 1862 as a fund for building lodging houses for the poor in London, now amounts to £720,000.

The steamer *Clan MacDuff*, bound from Liverpool to Bombay, foundered off the Welsh coast on Thursday night. She carried twenty-two passengers. Between twenty and thirty lives are reported to have been lost.

Mr. J. R. Keene's colt Foxhall scored his seventh victory on the English turf on Tuesday by winning the Cambridgeshire Stakes. Thirty-two horses started.

A meeting of the French cotton industry was held at Épinal on Sunday. Senator Claude of the Department of the Vosges presided. He deprecated a reduction of the duties, which he said would give foreigners, including the Germans, an immense advantage over the French. He urged that an appeal be made to the Chambers to maintain the duties of 1880 as the minimum.

A meeting of Radicals was held in Paris on Sunday, and various charges were made against the Government in regard to Tunis. Resolutions were adopted summoning the Chamber of Deputies to institute a searching enquiry in relation to the war there.

The condition of the French troops in Africa is reported to be worse than ever. The number of the sick is increasing and the hospitals in Algeria are overfilled.

Ali Ben Amar, the chief of the insurgents, has written to the Bey of Tunis that their religion compels the Tunisians to resist the practical cession of the country to France. The Bey demands from M. Roustan the immediate recall of Mustapha Pasha, the late Tunisian Premier.

The Bey of Tunis has received a letter from the Cadi, the Mufti, and principal inhabitants of Kairwan, declaring their willingness to surrender the town, but solemnly protesting against the bombardment on account of the resistance offered by Arabs outside the walls. The Bey immediately sent the letter to M. Roustan, the French Minister. Meanwhile the resistance of the Arabs to the advancing French columns is unabated.

The ceremony of riveting the parts of Bartholdi's colossal statue of Liberty, which is to be placed on Bedloe's Island in New York harbor, took place in Paris on Monday. There was a distinguished company of French and Americans present. Mr. Morton, the American Minister, drove the first rivet, and delivered an address testifying the "gratitude of Congress for so felicitous an expression of sympathy from a sister republic." Senator Laboulaye then responded.

King Humbert of Italy is going to Vienna to visit the Emperor of Austria. The Government "organs" in Italy say that the visit will strengthen the cordial relations between the two countries, and prevent for the future any doubt concerning Italy's loyal intentions with respect to existing treaties.

The Khedive of Egypt informed the Turkish delegates before their departure for home that he would go to Constantinople as soon as the state of public affairs should permit, which would probably be next summer. It is understood that the exact date of his visit and other details will be finally settled by the Khedive in concert with England and France.

M. Novikoff, the Russian Ambassador to Turkey, has informed the Porte that Russia has placed no obstacles to an arrangement being concluded with the bondholders. It is believed that Russia would consent to reduce her claims one-half provided Turkey offered a reasonable rate of interest with substantial guarantees.

It is reported that the true explanation of the resignation of Count Valuyeff, President of the Russian Committee of Ministers, was that the committee appointed to enquire into abuses in the sale of state lands in Orenburg was appointed without his permission.

A great political trial is expected to take place at St. Petersburg in November, when forty Nihilists will be arraigned before a special court.

The Federal Council of Switzerland intend to propose to the Federal Assembly that the Swiss Consulate at Washington be transformed into a legation.

The financial and commercial condition of Spain is reported to be more flourishing than it has been for many years.

On Monday Señor Comacho, the Spanish Minister of Finance, read his financial statement in the Cortes. He proposed a gradual reduction in the customs tariff, and said that Spain would renounce all existing commercial treaties on the promulgation of this new tariff, and would conclude new conventions on the basis of the proposed reduction. He added that at the same time Spain reserved to herself the right of imposing additional import duties upon foreign productions the introduction of which is calculated to injure home interests. It is intended to allow a free coasting trade between Spain and all her colonies.

The Spanish ministers have unanimously approved the financial projects of Señor Comacho.

Funeral services in memory of President Garfield, under the direction of the municipal authorities, will be held in Berlin on Sunday next. Herr Luerssen, the sculptor, is to produce a colossal bust of the late President.

The Transvaal Volksraad has finally ratified the convention with England. The motion recording the acceptance of the convention declares that the Volksraad relies upon the promise of the British to modify the terms of the settlement if in its workings it should be found impracticable.

The boundary treaty between Chili and the Argentine Republic, which was arranged by the American Ministers to those two countries, has been approved by both the Chilian and Argentine Congresses.

The Calderon or provisional Government has ceased to exist in Peru, the Chilians having assumed full authority. It seems that the Calderon Government has been supporting itself by the issue of unlimited quantities of paper money, to the great detriment of what little trade remained in Lima. Rear-Admiral Lynch has stated that he is in possession of proofs that frauds have been committed in connection with the issue of bank notes, and has therefore issued an order prohibiting the exercise of governmental powers by other functionaries than those established by order from the Chilian headquarters. He has received from the American minister, General Hurlbut, a letter, in which the latter expresses disapproval of the Chilian policy. Speculation is now rife as to whether General Hurlbut will not have to meet, at Ayacucho, the Pierola Government, which he denounced a short time ago in a letter to Pierola's Secretary.

The Panama Canal Company has purchased the Grand Hotel in Panama. The hotel is to be used for general offices for the company and a residence for the employees. The amount paid for the building was 990,000 francs.

It is reported from Durban that preparations are being made for an advance of British troops, and that it is evident that they are intending to make a serious demonstration in order to compel the signature of the convention by the Boers. It is also reported that the Boers are massing near the frontier.

The city of Herat has been captured by Abdul Kudas Khan, a General of the Ameer of Afghanistan. The Ameer's son has been appointed Governor of Candahar.

The Marquis of Lorne delivered a speech at the banquet given him by the Manitoba Club of Winnepeg on his return from his journey to the northwest. In the course of his speech Lord Lorne expressed the deepest sympathy with the United States in the death of the President, and stated that Canada was not desirous of annexation.

TUESDAY, October 25, 1881.

THE BRITISH FLAG AT YORKTOWN.

No incident of the celebration at Yorktown could well have been more appropriate and graceful than the President's order to the army and navy to salute the British flag at the close of the services, "in recognition of the friendly relations so long and so happily subsisting between Great Britain and the United States, in the trust and confidence of peace and goodwill between the two countries for all the centuries to come, and especially as a mark of the profound respect entertained by the American people for the illustrious sovereign and gracious lady who sits upon the British throne." There is one great drawback in the celebration of most military successes, even the greatest and most fruitful, in the fact that they commemorate overthrow and humiliation as well as victory and rejoicing. This makes thoughtful and hopeful men, who look to the disappearance of war as the next great step in the march of the race, more and more unwilling to make anniversaries of great victories days of unalloyed rejoicing. We are fast, thank Heaven, passing beyond the stage of morality in which we can exult in other people's sorrow, even if it be the sorrow of enemies.

This consideration would have more or less affected a great many in reference to the Yorktown celebration, even if the England of to-day were really the same England as that which one hundred years ago struggled so hard to subjugate the colonies. Many would have been glad, even if a king as obstinate and ignorant as George III. were still on the throne, and British merchants were still as unenlightened as to the true interests of trade and as indifferent to those of their competitors as the merchants of Bristol who applauded the royal fanaticism, to find some way of keeping the celebration of our greatest national triumph from being marred or stained by any one's chagrin, or humiliation, or resentment. Even to such an England they would not have grudged the salute which the President has just ordered.

Happily, however, there is no need in this matter of any strain on our delicacy or magnanimity. Much has been said about the changes which have come over France since Rochambeau and Lafayette and Noailles and the rest sheathed their swords and went home. But in truth the changes which have come over England, though less sudden and violent, are hardly less marked. The Government which the King and his friends were trying to set up during our Revolutionary war, and against which the Liberals of that day were contending, would have been, in its full efflorescence, not much more respectable than that of Louis XVI. The principles which Burke and Fox and a long list of other worthies defended in the House of Commons, were substantially those for which Washington was contending in the field. They triumphed completely in this country at Yorktown. They did not triumph completely in England till half a century later. But triumph they did, and although weighted in a score of ways by evil relics and traditions, it is they which to-day rule England no less than the United States. So that in point of fact there is no liberal Englishman who, if his *amour-propre* could be saved, and some way could be shown him of rejoicing in the American victory at Yorktown without seeming to rejoice in the lowering of his own flag, but would do so heartily. His pride in his flag, even if it once covered the statesmanship of George III. and Lord North, all can understand. It has not waved over many fields, after all, within the last six hundred years in which a brave man of any country would not wish to have been, or sheltered many causes of which any lover of his kind need feel ashamed. Take it for all in all, the world has much reason to be thankful that it has for so many ages been borne by such strong arms, and loved by such stout hearts. So that even if recent events had not brought the two peoples closer together than they have been for over one hundred and twenty years, a salute for the flag under which Washington, Jefferson, and Hamilton and Adams were born would not have come amiss at Yorktown. It has, however, happily been rendered easier and more graceful than even ten years ago any one could have anticipated, by the expressions of sympathy on the part of the English people called forth by President Garfield's illness, and by the exceedingly touching way in which the Queen associated herself with it. That the cause for this sympathy should have come so close on the Yorktown anniversary seemed at the time very unfortunate; but it has happily been the means of making it possible for England to participate in our rejoicing, and of furnishing the President with a conspicuous occasion for marking the national appreciation of the recent manifestations of English condolence. He has availed himself of it most felicitously, and in terms of which it would be difficult to increase the fitness.

GUITEAU'S CASE.

WHETHER Guiteau is responsible for the assassination of the President or not, it is obviously of great interest to the community that the question should be thoroughly sifted —not only for the sake of the proper administration of justice, but to determine the status in the community of the class to which Guiteau belongs. There is probably little doubt in most people's minds that Guiteau will be found guilty; but it would be a pity if he were found guilty as a sort of foregone conclusion, without a full and exhaustive presentation of his grounds of defence. The case on both sides ought to be laid before the jury by the ablest counsel in the country; neither Mr. Corkhill nor Mr. Scoville has sufficiently high professional standing to attempt the task by himself.

The "statement" which Guiteau, on his arraignment, was prevented by the court from making has now been published, but, as might have been expected, little or no light is thrown by it upon the question of his responsibility. It is designed to produce the impression that he shot the President in the belief that he was under a Divine command to do so. The fact that the statement is blasphemous, or what would be blasphemous if it came from a sane man, is entirely beside the point. It must be remembered that the absence of motive will probably be the main reliance of Guiteau. He had nothing to gain, his counsel will argue, by the President's death. He was a disappointed office-seeker, no doubt, but then it was not the President any more than a dozen other men who had prevented his getting office. If, as he says in his "autobiography," he was at the time of the shooting actually pressing his claims for a foreign consulship, the crime was still more irrational in the ordinary sense of the word. As a sane man he cannot have imagined that bringing in the Stalwarts by such means would have bettered his position in any way. On the other hand, the absence of motive is not in any sense conclusive. If a man walking up Broadway fires a shot into an omnibus and kills one of the passengers, it may raise a presumption that he is out of his head, but unless something more than mere absence of motive can be shown, he has to be hanged for it.

The case is one in which "expert" testimony will be probably of the least possible value. The testimony of medical experts on the subject of insanity has fallen of late years into great disrepute in courts of justice, partly because it is highly paid, and can therefore generally be produced in any quantity on either side which has money at command, and partly from the fact which no one who is at all familiar with medical enquiries into insanity can have failed to notice—though, curiously enough, it has attracted little attention from the courts—that the medical and the legal view of insanity are not only different, but are radically opposed to each other. In any criminal case the only thing the law cares to find out is whether the accused is responsible for the act charged against him. If he is not, punishment would be unjust to him, and could have no deterrent effect upon others similarly situated. In order to determine the question of responsibility there are three common tests applied, which are very simple, and usually easy of application: First, did he know the nature and quality of his act; second, has he the capacity to distinguish right from wrong; and third, did he act under a delusion as to some matter of fact which, supposing it to be no delusion, would have justified the act?

Now these are not the tests necessarily applied by physicians at all. Their enquiries are directed to the investigation of the condition of a man's mind, not in reference to responsibility for a particular act, but with reference to his mental state as compared with what they regard as a healthy normal condition. Any departure from this is a symptom of mental disease. This difference would be of less consequence if it were in some way brought clearly into view in court. If medical experts were asked, for instance, to testify under oath whether on a given state of facts they were of opinion that the accused was responsible for the act he is charged with, they could answer intelligently. But, for the technical reason that to do so would be to let witnesses invade the province of the jury, this, under our system of law, is not permitted, and expert witnesses are generally asked whether, on a given state of facts, the man was "sane" or "insane." Now it admits of very simple demonstration that the answer to this

question may be wholly irrelevant. It not infrequently happens that persons actually confined in asylums are brought into court to testify to matters within their knowledge. They are of course "insane," and yet at the same time they may be good witnesses, and would be responsible for perjury if they should commit it. In the same way a perfectly valid will may be made in an asylum, for the capacity of the testator, like the responsibility of the criminal, is dependent solely upon the amount of intelligence he possesses with regard to the particular transaction involved—in one case the disposition of his property, in the other the crime.

But in Guiteau's case there will probably be little necessity for medical expert testimony on either side, nor would the jury be likely to be affected by it one way or the other. If several members of his family have been, as is stated, insane, this fact, once proved, would do more to establish a doubt in the minds of an ordinary jury than all the testimony of all the experts in the country with regard to hereditary insanity. The question as to his responsibility must in all probability be determined by the application of the ordinary legal tests to which we have referred—by a consideration of the man's appearance, demeanor, conversation, past history, and his own explanation of his conduct. What is to be chiefly feared with regard to it is that the case will not be tried thoroughly well on both sides, and that confusion may be introduced into it by the weakness of court and counsel. The refusal of the court to allow Guiteau to produce his "statement" when called upon to plead does not seem a very auspicious opening of the case, and we may say the same thing of the singular decision of the judge that the question of jurisdiction must be argued in advance of the trial. The court itself cannot be strengthened, but the trial of the case can be secured against degenerating into confusion, and the verdict from leaving a feeling of uncertainty behind it, by the presence of efficient counsel on both sides.

THE SUPPRESSION OF THE LAND LEAGUE.

The very desperate step taken by the Irish Land League in advising the tenants not to pay rent has been met by the Government with a proclamation suppressing the organization as illegal. We believe it is the anti-rent move which has furnished the Government with legal as well as moral justification for the proclamation. As long as the League confined itself to agitation, even though violent agitation, for a change in the land laws, and supported its arguments by denunciations of the Government and the landlords, it stood on ground which, though it might not be in point of law absolutely impregnable, was so strong that any Liberal Ministry would probably have shrunk from meddling with it. But the advice to the farmers to refuse all payment of rent, accompanied with a promise of pecuniary assistance in case of eviction in consequence of such refusal, was advice to violate lawful contracts, backed up by a promise of impunity in case it was taken. Any association which undertakes work of this kind is doubtless illegal, and suppressible by proclamation. Rent is in the eye of the English law a debt like any other, fully as binding as a bill at a grocer's. If a society were started to induce persons to enter into a combination to pay no grocer's bills already due, because some grocers sanded their sugar, it would, if not ridiculous, be a sufficiently near approach to a society for the promotion of swindling to make it distinctly criminal. The League has in fact been hoist by its own petard, or, as O'Donovan Rossa would say, been slain by an arrow feathered from its own breast.

But illegal though it be, it is very doubtful whether the Government would have ventured to suppress it, even for the combination against rent, if no redress had been provided for the acknowledged grievances of the Irish tenant. If, for instance, a strike against rent had been organized close on the defeat by the Lords of Mr. Forster's Disturbance Bill in the winter of 1879-80, it is very unlikely that the Ministry would have undertaken to arrest it. In fact, its occurrence would have furnished a sort of justification of the very extraordinary interference with the obligation of contracts for which that bill asked Parliament. Public opinion, too, the world over would have been with the tenants. Or, if the present Land Act had been loyally tried, and had been found after such trial to give no relief, the strike against it might have been excused, as the strike against tithes was fifty years ago, as a quasi-revolutionary remedy for grievances no longer tolerable, and for which legal remedy seemed hopeless. The Land League, however, has now put itself hopelessly in the wrong by refusing to try a legal remedy produced with enormous pains, and which has enjoyed the very high commendation of being denounced in unmeasured terms by the leading landlords of the kingdom.

It may be said that the League was making preparations to test the value of the Land Act when Parnell was arrested. Unfortunately he made known in advance what his tests were to be, and as candor, fairness, and truthfulness have not disappeared from the world, these tests were regarded as a piece of transparent trickery. In the first place, he denounced the Land Courts as sure to be dishonest before they were organized. Then, knowing that the phrase "a fair rent" as used all through this agitation was understood to mean such a rent as the average price of produce would permit a farmer to pay, after leaving him a reasonable profit, he concocted a new meaning for it—viz., the rent which a farmer ought to pay after providing himself with the kind of subsistence which the Land League should pronounce "comfortable." Finally, he capped the climax by repudiating the "Griffiths valuation," which for the last two years he has been preaching as the true basis for rent, and substituting a new one of his own invention, which confined the landlords' interest in the soil of Ireland to the soil in a state of nature, and made the rents amount to about half a crown an acre or $15,000,000 per annum for the whole island instead of $85,000,000, which is about the sum the landlords are now supposed to receive. It was these fantastic theories which he and the League were going to submit to the Land Courts as tests of its willingness and ability to do the tenants justice under the new law. Their object was plain enough. The Court, being composed of rational and civilized men, would be sure to reject them, and then the League would denounce it as an imposture. Even those who, like ourselves, sympathize warmly with the tenants in this crisis are, however, bound to assume, in discussing Irish questions, that for Irishmen, as for the rest of the world, straightforwardness, rationality, good faith, and fair dealing, even towards enemies, are of constant obligation.

That the suppression of the League involves the failure of the strike against rent, we think there is little doubt. The mutual confidence, and the certainty of pecuniary and other support, which would be necessary to make such a combination on so great a scale successful, cannot be kept alive by any secret organization, however well conducted. It would need the aid of all kinds of publicity—meetings, newspapers, the telegraph, and the post-office. With the "halls" shut up, the leaders in jail or in flight, and the money undistributable or not subscribed, the enterprise is hopeless, even if morality be as dead among the Irish farmers as the managers of the League would fain have the world believe. That their last and greatest stroke should have been a solemn and pathetic appeal to the rascality of their countrymen, is surely as pitiful a termination to a great effort to right human wrongs as the world has ever seen.

THE AMERICAN HEIR AND THE LORD CHANCELLOR.

The Hedges family, which, like so many other families, is said to be "scattered all over the United States," has recently learned that there is a nice little property of $250,000,000 in England ready to be divided among all Hedges who can prove a descent from a "common ancestor" who died some century or two ago in England. He did not leave behind him $250,000,000, but his unclaimed property has been accumulating ever since his death, and has now reached the very respectable figure we have given. It is, of course, in the Bank of England, where all unclaimed sums of this sort accumulate, but how it is invested does not appear. Invested funds, it is well known, double every few years or so, and if the Hedges meet, as they probably will, some obstacles in the way of effecting a distribution, the delay will after all only make the family richer. In 1890 the fund ought to be about $500,000,000, and by the beginning of the next century $1,000,000,000; and however large the family may be, the division of sums of this magnitude will make a perceptible difference not only in their private fortunes, but in the national resources themselves. The sudden transfer of $1,000,000,000 or even $250,000,000 from the vaults of the Bank of England to a foreign country would, a hundred years ago, have been regarded with alarm by all statesmen; and though modern political economy has taught us nowadays to regard such transfers without national terror on the one side or exultation on the other, even the economist will probably concede that the sudden enrichment of a large

number of citizens by such a transfer increases the resources of the citizens themselves, and spreads a general feeling of contentment and prosperity among them and their creditors which must reinforce the general national vitality and energy, and indirectly increase the ratio of progress made by the nation itself.

The Hedges estate is by no means the only English estate which is awaiting distribution among American heirs. There are numerous other properties of the same description which have been discovered from time to time, and fully described in the newspapers. Formerly they used to consist almost invariably of land, which had been left a century or so ago by a wealthy Englishman who died without leaving a will, but having some relative in this country. The discovery of an estate of this description generally led to a family gathering and a resolution to retain counsel and prosecute the claim. The trouble always was in these cases that when the opinion of counsel was taken it was found, to the surprise of everybody, that the provision of English law which makes land, in cases of intestacy, descend to the eldest son, had been overlooked—a very singular fact, considering that every American child learns in his cradle that primogeniture is the great blot upon England's boasted civilization—or else that the claim was barred by lapse of time. As a nation we could hardly feel much interest in an American claim to English landed estate, because there was always a risk that the successful claimants would, after all, go over to England and settle down on the property, and denationalize themselves. As a people we should gain nothing by this. Nevertheless, this consideration would have little weight with the claimants, and at one time the number and extent of these claims grew with amazing rapidity.

They have now entirely disappeared, and the fortunes at present awaiting American heirs in England, like the Hedges estate, invariably consist of personal property. This is obviously a much better form for them to have than land. There is no trouble about primogeniture nor adverse possession ; but curiously enough a new obstacle in the way of an immediate distribution seems to have arisen from the unaccountable behavior of the Lord Chancellor. What the origin of his jurisdiction over property in England claimed by American heirs is, we have never seen explained ; it may perhaps be one of those assumptions of authority in new cases which used in former times to be so characteristic of the Lord Chancellor's jurisdiction, but which we must say we supposed had in modern times no chance of obtaining a foothold. But whatever the true explanation may be, the movements of the American claimants seem to be always governed in a remarkable way by the proceedings of the Lord Chancellor. Sometimes he helps them, and sometimes he puts them off. They are generally waiting for a decision from him which will enable the fund to be distributed. Occasionally he makes a decision which seems to satisfy them. When this is the case it almost always turns out that there was some mistake about it which compels the postponement of the really final adjudication till a later date.

This sort of thing has now been going on for years, and not a foot of English land has been secured, nor a dollar of English money got out of the Bank vaults. With such a claim as that of the Hedges family there can hardly be any difficulty in getting the best legal advice, and it may therefore be expected that they will have the proceedings of the Lord Chancellor with regard to their fund looked into. A discussion of the origin and present extent of his jurisdiction over the vaults of the Bank of England might lead to some curious revelations. If he won't distribute the money, what does he mean to do with it ? If he thinks he can use it to pay the national debt, and intends to "cover it into the Treasury" for that purpose, it is time the fact should be known in this country. If his proceedings are fair and above-board, why is it that all this wealth continually accumulates, and no distribution is ever effected ? Why is it, too, that all his decisions about American claims are secret, and never get into the reports ? The Bank must now have thousands of millions of unclaimed property, which his indecision and vacillation and secrecy tie up. The Bank does not want it, and the heirs are all waiting for it; the old jurist is always at work on the cases, and still we seem to be as far off from the end as ever.

THE KING'S MISSIVE.

THE historical accuracy of "The King's Missive," a poetical contribution by Mr. Whittier to the 'Memorial History of Boston,' is discussed in the new volume of Proceedings of the Massachusetts Historical Society. When, at the meeting of the Society in September, a year ago, the poem was read from the proof-sheets, it "led to some discussion," not, however, preserved in the Proceedings ; but at the following March meeting the Rev. Dr. George E. Ellis read a paper which, being given to the newspapers, drew out letters from Mr. Whittier and replications from Dr. Ellis. The paper read by Dr. Ellis to the Society and one of his newspaper letters, one letter from Mr. Whittier, together with some notes by the poet and his critic, are now preserved in the published volume of the Society's Proceedings.

The information upon which "The King's Missive" was composed was gathered from the pages of authentic books ; as poetized by Mr. Whittier it furnishes a pleasing episode in the history of the persecution of the New England Quakers. It is to the lasting dishonor of the Puritans that in their treatment of the Quakers they violated all the laws of humanity and of Christianity. Cotton Mather, writing in 1695, says : "I will not, I cannot make myself a vindicator of all the severities with which the zeal of some eminent men hath sometimes enraged and increased, rather than reclaimed, those miserable heretics." What those "severities" were is shown in part in a declaration drawn up by some of the sufferers and presented to King Charles II. shortly after his restoration. Thirty had been whipped, the stripes amounting to six hundred and twenty ; twenty-two had been banished on pain of death if they returned ; twenty-five had been banished upon the penalty of being whipped, or having their ears cut, or being branded in the hand, if they returned ; three had their right ears cut off by the hangman ; one had been branded in the hand with the letter H ; many had been imprisoned ; many had been fined ; and, worse than all, three had been put to death. This declaration of sufferings, signed by John Rouse and John Copeland, who had been deprived of their right ears in Boston jail, and by Samuel Shattuck and five others, who had been "banished upon pain of death," was followed up by the earnest solicitations of Edward Burroughs and other zealous Quakers of London. They did not seek for revenge, they said, "but to restrain the violence of the rulers of New England." It was not, however, until the news of the execution of William Leddra reached London that the King took action. As soon as the circumstances of that tragedy were made known to him he ordered a mandamus to be forthwith issued, the wording of which was as follows :

"CHARLES R.

"Trusty and Wellbeloved, we greet you well. Having been informed that several of our Subjects among you, called Quakers, have been and are imprisoned by you, whereof some have been executed, and others (as hath been represented unto us) are in Danger to undergo the Like : We have thought fit to signify our Pleasure in that Behalf for the future, and do require, that if there be any of those people called Quakers amongst you, now already condemned to suffer Death, or other Corporal Punishment, or that are imprisoned, or obnoxious to the like Condemnation, you are to forbear to proceed any farther, but that you forthwith send the said Persons (whether condemned or imprisoned) over to this our Kingdom of England, together with their respective Crimes or Offences laid to their Charge, to the End such Course may be taken with them here, as shall be agreeable to our Laws, and their Demerits. And for so doing, these our Letters shall be your sufficient Warrant and Discharge. Given at our Court at Whitehall, the 9th day of September 1661, in the thirteenth Year of our Reign.

"Subscribed, To our Trusty and Wellbeloved John Endicot Esq ; and to all and every other the Governour or Governours of our Plantation of New-England, and of the Colonies thereunto belonging, that now are, or hereafter shall be : And to all and every the Ministers and Officers of our said Plantation and Colonies whatever, within the Continent of New-England.

"By His Majesty's Command.

"WIL. MORRIS."

The King having deputized Samuel Shattuck to bear the mandamus to New England, the Friends in London bestirred themselves, and made an agreement with Ralph Goldsmith (himself a Quaker and the master of a ship) to sail with all despatch for Boston, and convey thither the King's deputy. For this service Goldsmith was paid £350. The ship entered Boston Harbor on a Sunday in the latter part of November, 1661, after a passage of about six weeks. Joseph Besse ('Sufferings of the People called Quakers,' vol. ii., p. 220) gives the following circumstantial account of the delivery of the mandamus to Governor Endicott :

"Next morning [Monday] Ralph Goldsmith, the commander, with Samuel Shattuck, the King's deputy, went on shore, and sending the boat back to the ship, they two went directly through the town to the Governor's house and knocked at the door. He sending a man to know their business, they sent him word that their message was from the King of England, and that they would deliver it to none but himself. Then they were admitted to go in, and the Governor came to them, and commanded Samuel Shattuck's hat to be taken off, and having received the deputation and the mandamus, he laid off his own hat, and, ordering Shattuck's hat to be given him again, perused the papers, and then went out to the Deputy Governor's, bidding the King's deputy and the master of the ship to follow him. Being come to the Deputy Governor, and having consulted him, he returned to the aforesaid two persons, and said : '*We shall obey His Majesty's command.*' After this the master of the ship gave liberty to his passengers to come on shore, which they did, and had a religious meeting with their Friends of the town, where they returned praises to God for his mercy manifested in this wonderful deliverance."

The colonial authorities were greatly disturbed by the King's interference in their proceedings. Gov. Endicott called a special session of the Gene-

ral Court. The execution of the laws against Quakers was suspended, and the keeper of the jail in Boston was ordered "forthwith to release and discharge the Quakers" then in his custody. For various causes set forth, but "in special God's suffering many enemies and underminers to multiply complaints against us to our sovereign lord the King," a day was set apart for fasting and "solemn humiliation." Agents were despatched to England with an address from the General Court to the King, representing that the execution of the laws against Quakers had been suspended in accordance with the letter missive. It is true that some of the inhuman laws were subsequently revived, but it is also true that for a considerable time following the arrival of King Charles's mandamus the Quakers found peace in the Massachusetts colony.

We must regard Mr. Whittier's poem, in its main incidents especially—the return of the banished Quaker with the King's letter, his interview with Endicott, the "jail delivery," the Friends' meeting—as an exquisite representation of interesting historical events. Dr. Ellis, in discussing the "historical accuracy" of the poem, bases his argument largely on mistaken facts. He says: "The proceedings of the court and magistrates towards the Quakers were in no whit changed by such intimations of the King's wishes as were conveyed to them. His instructions in his letter were not complied with." Against this we offer Hutchinson (vol. ii., p. 205, 'History of Massachusetts Bay'), who says, referring to the King's order of Sept. 9, 1661: "Whatever opinion they might have of the force of orders from the crown controlling the laws of the colony, they prudently complied with this instruction." And also Neal (vol. i., p. 235, 2d ed. 'History of New England'), who says: "This [mandamus] put an effectual stop to the sufferings of the Quakers on account of their principles, the hands of the Government being tied up by this letter from putting their laws in execution for the future."

But it is where Dr. Ellis charges the Quakers with "indecency" that he makes his gravest mistake. Having set forth the law of May 22, 1661, he goes on to say:

"The effrontery and indecency of the Quakers waxed to a perfect riot under these circumstances. Women without any clothing, and smeared with black dye, marched through highways and public places 'by way of prophesying,' screeching, denouncing awful judgments, causing dread, pain, and fright to many of the delicate of their own sex. Such was the position of things here in May, 1661."

Mr. Lodge, too, in his 'Short History of the English Colonies in America,' sees the events of that period with Dr. Ellis's eyes, and so can say: "The Quakers were drunk with religious zeal, and came a few at a time, but did little in the way of conversion. They appeared naked in the streets and churches, hideous with grease and lamp-black, breaking bottles, and raising a riot and disturbance everywhere." This is all improbable. The tenor of it is untrue. The Quakers, as a class, are innocent of the grave charges brought against them by Messrs. Ellis and Lodge. The offenders within the category made out by these historians were not only few in number, but the offences were not committed until long after May, 1661—not until long after the arrival of the mandamus, and not until after the cruel laws, suspended by that mandamus, had been revived. It is well to be particular. The facts stand upon record. On the 25th of November, 1662, Deborah Wilson, "for going through Salem, without any clothes on, as a sign of spiritual nakedness in town and country," was sentenced to be whipped not exceeding thirty stripes. And on May 5, 1663, Lydia Wardwell, "for coming naked into Newbury meeting-house," was sentenced to be severely whipped. Mr. Felt (in his 'Annals of Salem'), referring to Mrs. Wilson's case, says that "from instances of discipline, found on the first records of the Friends in Salem, they, no doubt, as a body disapproved of her conduct." In 1663 Thomas Newhouse (having previously been whipped through three towns for attending a Quaker meeting in Salem) went into a Boston meeting-house with two glass bottles, which he broke before the congregation, saying: "Thus will the Lord break you in pieces." In 1677 Margaret Brewster, clothed in sackcloth, and "with her face smeared as black as a coal," presented herself at the Old South in meeting-time, and for her misbehavior was imprisoned and whipped. The substance, then, of the sweeping charges, after a fair sifting, leaves four cases—one found in Salem, one in Newbury, and two in Boston, but not one connected with the "position of things here in May, 1661."

Through all the controversy upon "The King's Missive" Dr. Ellis exhibits something of his prejudices against the Quakers. He tried his utmost, he tells us, to deal impartially with the "harrowing subject" in an article printed in the 'Memorial History of Boston.' A single quotation from that article must here suffice to illustrate his idea of impartiality: "They [the Quakers] were all of them of low rank, of mean breeding, and illiterate." The evidence that they were not "all" illiterate is contained in the writings of Robinson, Stephenson, Leddra, Mrs. Dyer, and many others of the persecuted sect: Savage, in his 'Genealogical Dictionary,' applies the term "excellent" to one of Leddra's letters. It is known that some were sons and daughters of gentlemen, and that they were of good education and circumstances. And "all of them," probably, were of as high rank and breeding as can be claimed for their oppressors. The more the subject is studied, the greater becomes the wonder that a harmless, peaceable, and non-resisting people, such as the Quakers are known to have been, escaping from the oppression of Old England, could have met with the reception they did in New England. But history tells many strange and cruel tales, and this is one of its strangest and cruellest.

Notes.

Mrs. Garfield makes public her intention to secure "an account of the life, and an appropriate collection of the literary remains" of the late President, "at the earliest practicable time." Colonel Rockwell intimates that the latter part of the task will not be difficult, owing to General Garfield's remarkable order in his literary affairs.——Henry Holt & Co. have now ready a 'Young Folks' History of the War for the Union,' by John D. Champlin, jr.; and an illustrated translation of Dr. Jacob von Falcke's 'Greece and Rome,' forming a "massive quarto" for the holidays.——E. & J. B. Young announce Part 2 of the Rev. J. H. Blunt's 'The Reformation of the Church of England, 1547-1662'; 'Sermons to the People,' by the Rev. H. P. Liddon; and 'The Village Pulpit,' sermon outlines, by the Rev. S. Baring-Gould.——An enlarged and even renewed edition of Prof. J. M. Hoppin's treatise on Homiletics is soon to be published by Dodd, Mead & Co.——Presley Blakiston, Philadelphia, has nearly ready 'Malaria: How Caused and How Prevented,' by Dr. Joseph F. Edwards.——Geo. W. Harlan issues this month three juvenile holiday books, with many illustrations—viz., Mrs. Brine's 'Road to Slumberland,' and 'Madge, the Violet Girl'; and 'Tutti Frutti,' child songs by Laura Ledyard and W. T. Peters.——The prospectus of the new (64th) volume of *Harper's Monthly* indicates an increase in English contributions, and, among American names, a series of papers by Mr. John Fiske on Early American History, and a paper by Prof. B. L. Gildersleeve on the recently-discovered statue of Athena Parthenos. The publishers state that the average cost of the illustrations of each number of the magazine exceeds $5,000.——Mr. Christern has received catalogues and photographs of the principal paintings, of the Dutch school, forming the collection of the Bierens family, which are to be sold at auction by Frederick Muller & Co., Amsterdam, Nov. 15. A large number of these have never had any other owners.——Mr. Christern also sends us the first (October) number of *Vom Fels zum Meer*, the latest magazine for family reading which has appeared in Germany. The publisher is Spemann, of Stuttgart, which is a guarantee of typographical elegance and literary excellence. The number is in fact beautifully printed and charmingly illustrated. Gottfried Kinkel, G. Nachtigal, and E. Werner are among the contributors; and in addition to the customary quota of fiction there are papers on travel, on the right of asylum, on color, on the military strength of France after ten years of reorganization, on the wonders of the stage; poetry; songs, with music; and various colored plates, including one of the heavens.——Alphonse Daudet's new romance, 'Numa Roumestan,' the appearance of which was noticed in our Summary last week, has had the unprecedented distinction of being published in a German translation a fortnight before the book was brought out in Paris. This will seem perhaps less surprising when it is known that Gambetta's career is the basis of the novel.——David Bogue, London, has in the press 'Alps and Sanctuaries of Piedmont and the Canton Ticino,' by Samuel Butler, a book to keep for its text and its pretty etchings from nature, and also a guide to little-known and little-frequented places in a delightful region.

—Houghton, Mifflin & Co. are the American publishers of the second edition of Mr. Taswell-Langmead's excellent text-book on 'English Constitutional History,' reviewed in No. 565 of the *Nation*. The author has revised it to advantage, and expanded one chapter particularly—that on the "Progress of the Constitution since the Revolution"; and to the full texts of the Magna Charta, the Petition of Right, and the Bill of Rights, he has added that of the Act of Settlement, "which completes the written Code of our Constitution."——The judicious have always regarded the index to Mr. John Bartlett's 'Familiar Quotations' as being one of the greatest excellences of that admirably thorough work, and the maker of it has quite naturally undertaken the species of concordance called 'The Shakespeare Phrase Book' now published by Little, Brown & Co. This is not a verbal concordance, and on the other hand the cit tions give more than a cue—they are, if not always complete, carried beyond the point of abruptness. Mr. Bartlett's principle of selection has been ideas and quotable sentences rather than words; hence, while *tuition*, for example, occurs only once in the 'Phrase Book' as in Shakspere, *note-book* occurs but once for a different reason—the compiler's choice. So *tune* the verb has been wholly neglected in favor of *tune* the substantive. The plural of nouns is commonly found under the singular; but we note an exception in the case of *follies*, and of course in *men* and *man*. Proper names are entered whenever they have any familiar significance; and here the comparison is curious as between *Hamlet* (once) and *Cassio* or *Cæsar* or *Brutus*. At the end Mr. Bartlett has placed a select *variorum* in

the shape of comparative readings from the texts of Clark and Wright (followed in the body of the work), Dyce, Knight, Singer, Staunton, and Grant White. The value and convenience of this arrangement are self-evident. It only remains to praise the punctiliousness of the typography and the general tastefulness of the book, which is of a very handy size and will soon be found on every shelf.——Even of a 'French and English Dictionary' in its 116th thousand (by Prof. E. Roubaud—New York, Cassell) there is something to be said, for this popular work has been entirely reset, and brought up with the latest edition of the French Academy's Dictionary, to whose innovation it conforms, as in the accenting of the heretofore exceptional words in *ége*. It is of course less inclusive than Littré, and while admitting *income-tax* omits *photogravure*. The merits of this work are clearness of print, conciseness of definition, and distinction of obsolete from current meanings—a very useful feature. Some grammatical tables supplement the customary lists of proper names. The pronunciation is given only in the English-French vocabulary. ——Col. Henry B. Carrington's 'Battle-Maps and Charts of the American Revolution' (New York: A. S. Barnes & Co.) is intended for school use, and has impartial references to a great variety of text-books. It consists, in brief, of a map for each considerable battle or campaign, with a statistical statement, on the opposite page, of commanders, forces engaged, results, etc., with occasional comment on the strategy. Our chief criticism would be that the letter-press and maps are both unattractive to the eye, and we fear that the author's "Elementary Maxims" will sound obscure to the young student—*e. g.*, "Wise statesmanship is fundamental in declaring military policy."——Prof. Ebers's 'Egypt' (Cassell) has now reached Part 20, giving in neighboring chapters views of ancient life from the monuments and of modern life among the people at Cairo. Finally, the route for Upper Egypt is taken. The social and ethnographical illustrations are of singular beauty and in the usual abundance. ——'The Photographic Amateur,' by J. Traill Taylor, issued by the Scovill Manufacturing Company, will answer very well the purpose of stimulating would-be photographers, and of fairly starting them in their experiments.—— A portrait, which has suddenly become memorial, of the late J. G. Holland has been photographed by the Century Co., from a life-size crayon by Wyatt Eaton. Those of Dr. Holland's admirers who have room on their walls will doubtless prefer this to the admirable woodcut in a late number of *Harper's*.——The chief features of the current Proceedings of the American Antiquarian Society are extracts from Revolutionary orderly-books, with a long list of such as the Society possesses; and a noteworthy paper by ex-Governor Bullock on "The Centennial of the Massachusetts Convention," which we commend to all our legal readers, especially if they be members of legislatures.——M. Alfred Sardou's 'French Language Self-Taught' (Appletons) is on the whole a misnomer, as must be said of every work professing to enable one to *converse* in a foreign language. It is really Ollendorff in disguise, yet is not without some praiseworthy qualities of its own. We may instance the very well-conceived and useful twenty pages on prepositions; and the section on idioms, very complete and well done. Errors like "À quoi *bon* cela vous servirait-il?" (p. 379) are rare. The rules are too brief for grammatical purposes.——Mr. O. B. Potter has generously and wisely given $2,000 to the Civil-Service Reform Association, for the purpose of spreading widely the utterances of President Garfield on the reform, and the Association has already put forth a broadside of extracts from General Garfield's speeches and writings.

—The *Atlantic* for November contains instalments as usual of "Dr. Breen's Practice," and of "The Portrait of a Lady," both of which promise to be among their authors' best stories. Mr. James's atmosphere grows more and more thoroughly European as Mr. Howells's gets more completely American. The conversation between Dr. Mulbridge and his mother may be said to be horribly American, just as the character of the Countess Gemini is disagreeably European. It would be absurd to attempt to institute any comparison between the merits of Mr. Howells and Mr. James, for each is in his own way absolutely individual. Mr. Howells's humor, Mr. James's wit; the easy narrative style of the one, the sharp, dramatic changes of the other; the former's delicate delineation of character, the latter's wonderful fertility of plot, in which he seems to us to be excelled by no writer, American or foreign—there are no common tests to be applied to such widely different literary qualities and resources. In one thing, and in one thing only, they are alike—in a certain lowness of tone, which exhibits itself sometimes in an almost nervous shyness of all display of passion, and sometimes in quiet little scenes and dialogues, which in Mr. James's case remind us now and then of the cleverness of the French stage, and in Mr. Howells's of the representations of American life to be met with in Mr. Winslow Homer's pictures. As a haphazard illustration of this the following scene (from "Dr. Breen's Practice") is characteristic:

"She went away, feeling suddenly alone in this exclusion from the cares that had absorbed her. There was no one on the piazza, which the moonlight printed with the shadows of the posts and the fanciful jig-saw work of the arches between them. She heard a step on the sandy walk round the corner, and waited wistfully.

"It was Barlow who came in sight, as she knew at once, but she asked, 'Mr. Barlow?'

"'Yes, 'm,' said Barlow. 'What can I do for *you*?'

"'Nothing. I thought it might be Mr. Libby at first. Do you know where he is?'

"'Well, I know where he *ain't*,' said Barlow; and having ineffectually waited to be questioned farther, he added, 'He ain't *here* for *one* place. He's gone back to Leyden. He had to take that horse back.'

"'Oh!' she said.

"'n' I guess he's goin' to stay.'

"'To stay? Where?'

"'Well, there you've got me again. All I know is, I've got to drive that mare of his'n over to-morrow, if I can git off, and next day if I can't. Didn't you know he was goin'?' asked Barlow, willing to recompense himself for the information he had given. 'Well!' he added, sympathetically, at a little hesitation of hers." This is flat with a genuine American flatness.

—Mr. John Fiske contributes an article on "The Theory of a Common Origin for all Languages," in which he comes to the conclusion, which may be taken to represent the orthodox view of the matter, that in speech, as in other branches of human activity and development, the progress of mankind is "from fragmentariness to solidarity." At the beginning, among savage tribes, hundreds of half-formed dialects, each intelligible to a few score of people, all constantly changing; "at the end, an organized system of mighty nations, pacific in disposition, with unlimited reciprocity of intercourse, with very few languages, rich and precise in structure and vocabulary, and understood by all men." He gives an extraordinary instance of the instability of primitive languages in the following changes which have taken place among the Tahitians in the name of five of the ten simple numerals since Captain Cook's time:

"Two was *rua*; it is now *piti*.
Four was *ha*; it is now *maha*.
Five was *rima*; it is now *pae*.
Six was *ono*; it is now *fene*.
Eight was *varu*; it is now *vau*."

The metaphysical demand for a common origin for languages was derived of course from the ancient world, just as was the theory of descent from a common pair. There has been perhaps no more remarkable mental change brought about by the revelations of modern science than the complete dislodgement from the human mind of the idea that the order of development is from unity to variety, and the substitution for it of the conception of a development from heterogeneity to unity. An anonymous writer contributes an article on the "Romance of Modern Life," in which an attempt is made to show that there is in the nature of things no reason why, a few generations hence, the last half of the nineteenth century should not seem to our descendants to have been a period as full of poetry and romance as bygone centuries seem to us. The writer insists that the events and personages of what we now consider romantic periods did not appear so to contemporaries; and, on the other hand, that the events and personages of to-day possess all the materials of interest just as fully as they would have done had they lived and happened two or three hundred years ago. We trust it may prove so. We should be glad indeed to think of our descendants getting as much romantic pleasure from Bull Run, Gettysburg, and Appomattox; Stanton, Grant, Jefferson Davis, and Lee; the reconstruction struggle, the "carpet-baggers," and the "brigadiers"; the Tweed Ring, the panic of 1873, and the Star-route cases; the adventures of William Mahone and Jubal Early, and the duels of Riddleberger, as Scott managed to extract for us from the 'History of the Crusades,' the life of Richard Cœur de Lion, the tournament of Ashby de la Zouche, or the adventures of the Pretender. But we very much fear the case is hopeless. There is one great difficulty in the way of a new birth of Romance hereafter which writers on the subject would do well to consider—that Romance never had before to struggle with newspapers. The newspaper leaves behind it not only a very realistic picture of the history of the world from day to day, but it also preserves a record, which the world has never before possessed, of what the age thinks of itself. A very brief examination of any old newspaper file of the present period a hundred, or two hundred, or a thousand years hence, will convince any one that the present age, though it had on the whole a very good opinion of itself, did not regard itself as romantic. Progressive, intelligent, moral, civilized, witty, humorous, we may think we are, but not romantic. There are people of an observing turn who think that we are vulgar, frivolous, sensational, and shallow, but this is not the atmosphere of Romance. All this criticism, it must be remembered, will be preserved, and will seriously embarrass any future romantic school that may spring up.

—Mr. Hatton's second paper on "Journalistic London," in the November *Harper's*, begins with the *Times* and ends with some of the society papers—the *World*, *Truth*, etc.—the personal account of Mr. Henry Labouchere being particularly full and entertaining. The manufacturing aspect of the *Times* establishment will most surprise American readers. The portrait illustrations include Mr. Walter, Mr. Delane, Sir W. Vernon Harcourt, Mr. Yates, Mr. Labouchere, Dr. W. H. Russell, and others. The paper on "Ohio's First Capital"—Chillicothe, namely—not only tells the familiar story of Western towns missing their great expectations, but, in the case of the late Gov. William Allen, shows again what remarkable revivals there may be in the career of an American politician.

Gov. Allen entered the United States Senate in 1837, served two terms, and then retired to private life. In 1873 he appeared to the majority of Ohio voters the fittest man to be their chief magistrate. Mr. John A. Dillon advocates and explains the proposed Eads railway across the Isthmus of Tehuantepec, but without furnishing probable evidence of its feasibility. His argument for a national subsidy is that the Mexican Government having in their concession to Captain Eads allowed him to discriminate in his charges in favor of any nation which might aid him, he will have it in his power, by "a rebate of thirty-five or fifty per cent. on transit dues," to "enable us to compete with England—our chief competitor—while at the same time permitting the company to make enough money to earn interest on its cost." Here an estimate of the ratio between the rebate and the interest on the Government subsidy would have been in order, after which some questions of national dignity and the national policy of protection would have remained to be considered. Mr. Thomas Hughes contributes "A Reminiscence of Arthur Stanley," which adds something to our comprehension of the late Dean of Westminster, and briefly mentions "one slight but characteristic trait of his Canterbury life—his pride that the ordinary services were continued as usual while the roof [of the cathedral] was on fire." This does not appear to have been a case of deliberate self-control in order to avert a panic, like the band's playing when the theatre is burning, and suggests some reflections on the grounds of pride in inaction under such circumstances.

—The *Century Magazine* enters upon its twenty-third volume with an enlarged page, of which the advantage for illustrations is seen in the striking portrait of George Eliot (after an etching by Rajon), which serves as a frontispiece. The accompanying text, by Mr. F. W. H. Myers, tells little that is new about the author of 'Adam Bede,' unless it be that she was an admirable player on the pianoforte, and that Schubert was her favorite. The most noteworthy illustrated articles are Mrs. Lizzie W. Champney's "In the Footsteps of Fortuny and Regnault," Mr. Frank D. Millet's "Costumes in the Greek Play at Harvard," and Mr. W. J. Stillman's "The So-Called Venus of Melos." Mrs. Champney's impressions of Tangier contrast singularly with Mr. Aldrich's recent humorous report of the same city, and for the rest we can only refer to the way in which the connection between the lives and artistic careers of Fortuny and Regnault is brought out in her paper. She says of Fortuny's drawing-book at nine years of age that it contains not a trace of talent, whereas at thirteen Regnault could have earned his living as a designer for the pictorial journals. Mr. Millet speaks with the highest authority as to the costuming for the "Œdipus Tyrannus," which he directed with so much devotion, and the drawings by Mr. Alfred Brennan are worthy of all praise for their fidelity to the spirit of the scenes and even to the personality of the actors. Mr. Stillman rehearses arguments familiar to readers of the *Nation* to prove the Venus of Melos the Wingless Victory for which the little temple on the western brow of the Acropolis was reared, and furnishes a great number of Venus types, and the few incomparable Victory types which survived the demolition of the shrine, together with some tracings after photographs of a model posed like the so-called Venus, and with a shield or tablet resting on her left knee. The action of the body seems to answer that of the statue, and the chief difficulty to the acceptance of Millingen's theory (advanced by him in 1826) lies in the fact that the eyes are directed above and beyond the natural margin of the tablet. We can only allude to Salvini's "Impressions of some Shaksperian Characters," and Frederick Douglass's account of his escape from slavery, the exact mode of which was never before revealed. The poetry of the number is much above the average, as well it may be, with two such characteristic productions as Mr. Lowell's "Phœbe" and Mr. Stedman's "Christophe."

—Two of the finest engravings in the magazines just mentioned—Closson's General Prim, after Regnault, and Kruell's Dean Stanley—are now on exhibition at the Boston Museum of Fine Arts, along with other American and some foreign specimens of the art of wood-cutting, embracing more than 700 entries. The catalogue of this exhibition lies before us. As the management expresses its acknowledgment to Mr. A. V. S. Anthony for his assistance, there is some excuse for printing the slipshod preface which he has furnished. The most noticeable portion is that which criticises the now fashionable mode of photographing on the block, as to which Mr. Anthony says, with some weight:

"I am not certain that this too common method of furnishing subjects to the engraver is not going to work destruction to the art in this country. These designs are often fine, decoratively, in the originals, but owing to the great reduction on the wood the forms are lost, or only vaguely defined, necessitating constant consultation with the originals. The eye is one moment looking through a powerful magnifying glass, and the next is searching over the large drawing for indistinct detail. The effect upon the ordinary eye may be imagined."

In his hurried historical summary we do not know what authority Mr. Anthony has for saying that Bewick and his pupils worked "on *blackened* blocks," drawing "as they progressed with the graver." The truth is to be found in the statement made on page 21 of a little 'Handbook of Wood Engraving,' just published in a new edition by Lee & Shepard: "Modern draughtsmen regard the block upon which they draw as a white surface; Bewick regarded it as black." This, by the way, is nearly all that can be said in favor of the Handbook, which gives an atrocious cut of the pathetic vignette of the ruined house and starving ewe, and begins its instruction in a way directly opposed to Bewick's teaching and example.

—The latest number of the *American Art Review*, that for September, is chiefly occupied with three biographical and critical articles concerning three painters whose lives and works curiously illustrate the widely diverse modes and interests of the art they practised in common. The first and best of these papers is on Trumbull, a painter who has had less than justice hitherto done to his excellent qualities, and who, in the short list of American painters of distinction, is well deserving of the high place to which Mr. Durand here assigns him. The illustrations of the article, especially Miller's engraving from the original sketch in India-ink for Trumbull's well-known picture of the Battle of Bunker Hill, are of value as exhibiting the characteristic qualities of Trumbull's artistic conceptions and methods of design. They show his straightforward and intelligent representation of action, his skill in composition, and the simple, prosaic temper of his imagination. Mrs. Van Rensselaer's essay on Correggio is a little vague in thought and extravagant in phrase. Clear discrimination of an artist's merit is not indicated by speaking of his "balanced, rounded, uneccentric, and unstunted perfection." Perfection needs no epithets. And to be told that "his life just spans the time when the great wave we know as the Renaissance was at its fullest height, pausing, crested with a marvellous foam of beauty, between its slow upheaval and its more rapid dissolution," is enough to satisfy a common reader as to the advantage of reading more. The article on Hamon, by Miss Adams, gives numerous characteristic illustrations from the works of this poetically gifted artist, whose fancy occasionally, as in his "Théâtre Guignol," reached over into the domain of the imagination, but was too often content with pretty and trivial conceits. The number, as usual, contains some specimens of the work of American etchers, and, as usual, they are specimens of work which indicates that as yet we have, among a multitude of etchers of more or less technical ability, few who have anything of special interest to communicate to the world by means of their art. The editorial gatherings in the Art Chronicle are, as always, full, accurate, and useful.

—We regret to learn that with the next number, which closes its second year, the publication of the *American Art Review* is to cease. But the announcement is not surprising. The venture was a bold one—to publish, in competition with the foreign art journals, a magazine of such high character and of such cost that its circulation must of necessity be confined to persons rich enough to indulge in an expensive luxury. The failure of the attempt to establish the journal on a permanent footing is not due to any lack on the part of the publishers to do their best to make it worthy of support, or of any want of energy or capacity on the part of the editor. Indeed, both publishers and editor deserve much credit for the manner in which the journal has been conducted. Mr. Koehler's wide acquaintance with the field of art, his liberal sympathies, and his unwearied industry, have been conspicuous from the first number to the last. The defect in the conception and conduct of the *Review* has been the attempt to appeal to too many classes of readers, and hence a division of interest, and a failure to enlist any class heartily in its support. The project of combining attractions for the great mass of uninstructed people who like pretty pictures, with what should be of interest to the select and small class of cultivated readers and serious students of art who have a great objection to merely pretty pictures, was perhaps a natural design, but was not likely to be successful. And when to this double-headed project was added the intention to make the journal representative, in the best sense, of American art, the critic standing by could not but ask how long a supply of tolerable material would be afforded. In one branch of the technique of art America, indeed, is well at the front, and the *Art Review* is likely to be chiefly remembered for the admirable specimens it has afforded of the work of such men as Mr. Linton, Mr. Kruell, and Mr. Closson. Still in this field it could hardly compete with *Harper's* and *Scribner's* monthlies. On the critical side, the *Art Review* has been generally content to express the average sentiment and opinion concerning matters of art prevalent among the semi-educated artists and cultivators of art whom it mainly addressed. It has wanted a distinct and vigorous voice of its own. It has lacked consistent and intelligent principle. It has not done much to educate the public, and it might have died with its first year had it attempted to do so. There is a chance in America for a critical journal of art, and it is much needed. But if properly conducted it could have but a small circulation, for it would pay little attention to "American" art, as such, and that little would not be flattering to the conceit of artists or public. Mr. Stillman's *Crayon* and Mr. Sturgis's *New Path* were, each in its way, better than anything we have had since. We need now a journal as independent and as

thoughtful as these were, and more learned and larger in outlook than either of them.

—Lovers of art will welcome 'Select Works of Adoph Tidemand,' the greatest of Norway's *genre* painters, who died in 1876. The work is published by Christian Tönsberg, Christiania, and contains twenty-four etchings of Tidemand's most celebrated works, namely: 1. Sunday Night in a Cabin in Hardanger. 2. Christmas Custom. 3. A Catechising. 4. The Letter from America. 5. Going to the Chalet. 6. The Sectarians (Tidemand's most famous painting). 7. The Woman Winding Worsted. 8. The Solitary Old Couple. 9. Fishing by Torch-light. 10. A Wedding Procession Arriving at the Church. 11. A Wedding Procession in Hardanger. 12. A Funeral on the Fjord. 13. A Funeral Repast. 14. The Farewell. 15. Return of the Bear-Hunters. 16. At the Death-Bed. 17. Decorating the Bride. 18. Fight at a Country Wedding. 19. The Grandfather's Souvenirs. 20. The Fanatics. 21. The Grandparent's Visit. 22. The Resurrection of Christ. 23. A Wedding Procession through the Forest. 24. The Landing of Sinclair in Romsdalen in 1612. The series furnishes a delightful opportunity of studying the manners and customs of the peasantry of Norway. Their every-day occupations, their merry and solemn festivities, their rural interiors, their dress and faces are here depicted to the life, as in no book that we have seen; for if we compare these compositions with Björnson's fiction, faithful as it is, their scope is wider, including well nigh every phase of Norse life. The price of the collection is only 30 crowns (about $8). From the same publisher we have received 'Norway: an Illustrated Handbook for Travellers,' edited by Mr. Tönsberg himself. It is a handsome volume of more than six hundred pages of close print, with 134 fine engravings on wood and 17 maps. So far as Norway is concerned there is no other similar work that can compete with it. Every route is given with the utmost detail, and besides this there is an introductory section of upwards of sixty pages on the climate, geology, orography, water-courses, lakes, glaciers, snow-fields, animal and vegetable kingdom, literature and art, national character, habits, constitution, courts, statistics, etc., of Norway, all prepared for the work by the most eminent specialists of the country. The handbook is in English, and therefore perfectly available for the increasing number of English and American tourists in Scandinavia. The price is only eight crowns (say $2 50).

—Harper & Brothers have published a book of vocal music under the title of 'The Franklin Square Song Collection.' It contains two hundred pieces and costs forty cents, or five songs for a cent. This is certainly cheap enough, and would be considered so even in Germany, the land of cheap music. Some of the songs included in the collection are also cheap in an æsthetic sense; but this could hardly be avoided in a book which was intended to be popular. Popular most of these songs certainly are, and many of them deserve their popularity. There are ballads and songs of sentiment, such as "Auld Lang Syne," "Annie Laurie," etc.; patriotic airs of various countries; Christmas carols, hymns and school songs, although, as the editor says, nearly everything in the book is appropriate for use in the schoolroom. The editor does not lay claim to the adjective "best" or "rivalling the best" for his book, but only "worth having"; and that epithet it certainly deserves. It does not require any great genius to make such a collection where there are so many thousand songs to choose from; but the editor deserves credit for avoiding the vulgar and puerile songs that are too often allowed to creep into such compilations from the street and the variety show, under the impression that by altering the words the song too has been refined in character. The print is clear and legible, and each song is finished on the page on which it begins, thus obviating the necessity of stopping to turn a leaf. The vacant space left over by this process is filled out with notes and paragraphs on all sorts of subjects of interest to musical folks. In households where young folks frequently meet in the evening, and, after other entertainments have lost their charm, indulge in some vocal music, half a dozen copies of the 'Franklin Square Collection' would be very much appreciated; and for such a purpose we can honestly recommend the book.

—Henry Holt & Co.'s 'Our Familiar Songs' is a similar collection of over three hundred songs of the English-speaking race only, arranged with pianoforte accompaniments and preceded by sketches of the writers and histories of the songs. The heads under which these songs have been arranged are as follows: Songs of Reminiscence, Songs of Home, Songs of Exile, Songs of the Sea, Songs of Nature, Songs of Sentiment, Songs of Hopeless and of Happy Love, Songs of Pleasantry, Convivial Songs; Political, Moral and Religious Songs. In writing the biographies more attention has been paid to the minor poets and composers than to those whose fame has made the incidents of their lives more or less familiar to everybody. In looking over some of the songs we have come across an occasional error in the accompaniment which, however, may be the printer's fault. The typographical execution is otherwise attractive. What we object to is the size of the book. It contains more than six hundred and fifty pages, and as the paper is rather thick it is so bulky that it cannot be conveniently placed on every piano. It would have been better to leave out some of the songs or else to bind the book in two volumes. Musical books should never be bulky and never bound in stiff covers. Barring this defect in the get-up of the volume, 'Our Familiar Songs' will commend itself to lovers of English music.

—A little work on 'Word-building' was left by the late Professor Haldeman nearly completed, and is issued (Lippincott) by Mr. J. Hunter. It illustrates the processes of derivation by parallel sets of English words coming from different forms (as Teutonic, Latin, Greek) of the same ultimate root, with definitions and remarks appended. Teachers will get valuable hints from it, but its method does not seem well adapted to school use. By an undesirable deviation from ordinary usage, the editor calls a borrowed word (as *canoe*) a "derivative," a derivative (as *manly*) a "compound," and a compound (as *manservant*) a "composite."

—It seems to be natural for any one who has made himself familiar with the oration of Demosthenes 'On the Crown' to feel an impulse to translate it. It is so clear, so powerful, so absorbing in the intellectual interest it excites, so stirring in its appeal to universal and readily-responding feelings, that one feels as if he could not keep it to himself. And so there is a long list of published translations, from that of Cicero, one of the earliest foreign students of Greek literature, to the present time. To this list another has recently been added by Mr. Geo. W. Biddle, a well-known member of the Philadelphia bar, in a handsome volume published by Lippincott & Co. He has followed Cicero, as most of his predecessors have not, in translating together the two great orations belonging to the same trial, so that one may read Æschines first and thus understand better the special arguments of Demosthenes and the need for so great an effort on his part. In the most important respects Mr. Biddle has done his self-imposed task well. There are not a few inaccuracies of translation, as might be expected in such a work from a lawyer in active practice, and inconsistency in the troublesome matter of transliterating the Greek proper names; but the orations read well and reproduce in good measure the life and vigor of the originals. The value of such a book must be mainly in its bringing these masterpieces within the reach of those who are not acquainted with Greek, and for such readers its value would be greatly increased by a few judicious notes explaining things that must be unintelligible to them, by cross-references from one oration to the other, and perhaps by a brief analysis of each.

—One of Mr. Ruskin's most deep-rooted objections to modern society is that it has invented and developed the railroad. He refused some years ago to come to the United States because he could not live in a country in which there were "no castles," but if he had been forced to emigrate he probably would have found the great and increasing mileage of railroads in this country a more pestilent evil even than the absence of castles. His objections to railroads are of course entirely æsthetic, and it must be confessed that a line of iron track is seldom an attractive object in the landscape, and if the picturesque were the only thing to be considered in locomotion, there can be little question that many ways of getting from place to place could be found which would be far preferable to that at present in use. But something can be done to make even railroads attractive to the eye, or at least to mitigate their unattractiveness; and everybody but the hopeless pessimist will be glad to learn that on one of the roads leading out of Boston the station agents are now allowed an annual sum for the purchase of flower seeds, plants, and shrubs, and that the company offers prizes to the station agents who make their stations most attractive. This will have its effect not merely upon the station "grounds," but probably upon the walk and conversation of the station agent himself. The influence of flowers in softening manners is well known, and there is perhaps no place in the world where manners could be softened with more advantage than at railroad stations.

—The Vienna Burg Theatre, which has no rival in Germany and only one in France, lost its director last winter by the death of the famous dramaturgist Dingelstedt. The position thus left vacant has not yet been filled and there was no urgent need of filling it at once, as Dingelstedt had left behind him a partial sketch of the *répertoire* for a whole year. Various names have been mentioned in connection with the place, but of late it has become tolerably certain that Adolf Wilbrandt, the novelist and playwright, would be elected. It was, however, by many regarded as a suspicious omen that Wilbrandt's latest drama "Johannes Erdmann," which was brought out a few weeks ago at the Burg Theatre, had a bare *succès d'estime*. L. Speidel, in the *Neue Freie Presse*, reassures these timid folks, and points out that the success or failure of a single play has nothing to do with the decision of the question whether its author is a proper person for the post of director. Wilbrandt has all the qualities to be desired of such an official: a famous name, a connection with literature and artists, and a most intimate acquaintance with the life, requirements, and mechanism of the stage. The appointment of Wilbrandt would not only be an advantage to the Burg Theatre, but also to the poet himself. Speidel thinks that the failure of his last work is due to his temporary poetic exhaustion, and that if his mind were distracted and rested for a year

by attention to the practical details of stage management, his poetic gifts would recover their former freshness.

A FRENCH VIEW OF OUR SIGNAL SERVICE.

L'Astronomie pratique et les observatoires en Europe et en Amérique, depuis le milieu du XVII. siècle jusqu'à nos jours. Par C. André et A. Angot. Quatrième partie. Observatoires de l'Amérique du Sud et les établissements météorologiques des États-Unis. Paris: Gauthier-Villars. 1881. 16mo.

ALTHOUGH this is nominally Part iv. of the interesting series prepared by MM. André, Rayet, and Angot, it is really the fifth volume which has appeared, the others being: Part i., Observatories of England (1874); Part ii., Observatories of Scotland, Ireland, and the English Colonies (1874); Part iii., Observatories of the United States (1877); Part v., Observatories of Italy (1878). It is, moreover, that one which is most generally interesting to Americans, since seventy-eight of its one hundred and twenty-six pages are taken up with a description of the meteorological services established in the United States, and especially with the best account of the Government Signal Service, or Weather Bureau, which has yet appeared. This account is particularly valuable, as it has been written by M. Angot, the Secretary of the French Meteorological Society, who has familiarized himself with the whole routine of our Weather Bureau from personal inspection during two visits to the United States. He has given just such a sketch of its origin and its activity as was needed to connect together the isolated facts of the annual reports of the Chief Signal Officer; and although his is usually the most flattering of verdicts, it is important that the points which he finds not entirely admirable should be attentively considered.

The history of the progress of meteorology in the United States begins with the establishment of the Smithsonian Institution. Prof. Henry, from the outset of his career as director of that establishment, turned his attention to the formation of a corps of volunteer observers of meteorological data; and so successful was he that some three hundred to four hundred persons were engaged in this service without cost to the Institution. This continued until the Government Weather Bureau was well under way, when Prof. Henry caused these reports to be made to the Signal Office, in accordance with his often-expressed and wise policy not to attempt any scientific work which could be equally well done elsewhere. Besides collecting immense quantities of data, Prof. Henry provided for the discussion of the results from time to time by men of ability in this direction. Some twenty or thirty special memoirs have thus appeared, among which may be cited Prof. Coffin's 'Winds of the Northern Hemisphere'; 'Magnetic and Meteorological Observations in the Arctic Seas,' by Dr. Kane; 'Smithsonian Rain-Tables,' by Dr. Schott; and 'Meteorological Tables' (several editions), by Prof. Guyot. Thus the Smithsonian Institution has not only been an assiduous collector of meteorological data, but it has done a more important work in providing for their exhaustive discussion by competent hands. It is in this latter way that the greatest services have been rendered.

The early history of American meteorology is not fully treated in the volume before us, and it appears that more should have been said of the early work of Espy, Loomis, and others. The work of Lieut. Maury, however, at the Naval Observatory is mentioned with the high praise it deserves, although no details are given in regard to it. The organization of the Weather Bureau is described at great length, and in a most interesting manner. The *arrière pensée* of the author is certainly apparent, as he clearly desires to force his own Government to understand what practical steps have been taken here, in order that they may be imitated at home. At the end of our civil war it was decided not to disband our Signal Corps, which had rendered such useful service in the field. It was organized with a chief (the late General Myer), and consisted of enlisted men, of its chief, and of officers temporarily detailed from the line of the army, young lieutenants of artillery, etc. The services of Prof. Cleveland Abbe, the director of the Cincinnati Observatory, were also secured as scientific adviser. Prof. Abbe, following out suggestions made by Prof. Henry and others, had organized a bureau of predictions at his observatory, and had been for some time publishing in the Cincinnati daily papers the *probabilities* for the ensuing day. It is to him that whatever is scientific in the present system is in great part due. The military and administrative portion is due to General Myer and to the corps of able young officers by whom he was surrounded. These facts deserve mention in even the briefest review of the work of the Office, for there has never been a department of the Government in which an able chief was more indebted to the efforts of those about him.

The observers of the Signal Service are enlisted men in the United States Army, and are regularly instructed in their duties at Fort Whipple, Virginia. They are of two classes—*sergeants*, receiving about $830 per annum (including all allowances), and *soldiers*, receiving about $657. The passage from one class to the higher is by examination. Each year two are appointed lieutenants in the army (at $1,500) on examination. At each signal station, so called, one or more of these observers is placed. In 1870 (the first year of the Service) there were 24 stations; in 1871, 55; in 1872, 65; in 1873, 79; in 1877, 109, etc. The growth has been rapid, and more rapid than is necessary, the stations being often established in a Congressional district to secure the support of "the member." We should recollect, in looking at the familiar daily weather-map, that not more than two-thirds of the stations are there given.

At each signal station the sergeant in charge sends *by telegraph*, three times each day, ten words to the central office in Washington. This message is a simple cipher-code, and gives the name of the station, the hour of the day, the state of the barometer, thermometer, hygrometer; the aspect of the sky, the direction and velocity of the wind, the nature of the upper and the lower clouds, and the rainfall. River stations add two words, which give the rise or fall since the last report. The instruments at each station have all been compared with one set of standards. Obvious precautions like these have not been neglected. Dr. Angot's remarks on the disposition of the instruments at the various stations should be noted. They are based, let it be remembered, on his personal examination of stations of the Service in all parts of the United States, from San Francisco to Boston and Washington. He says:

"The position of the rain-gauge and the thermometer is usually very bad; it is often so with respect to the wind-gauge. . . . It follows from this that the observations of the Signal Service, while sufficient for the requirements of weather warnings, where great precision is not necessary—at least, not up to this time—are not accurate enough to serve as a base for the serious study of climatological conditions."

A more rigid system of establishing the instruments of each station is thus desirable.

The next section of Dr. Angot's work is devoted to a description of the central office at Washington. Here the tri-daily reports are received, translated, mapped, printed, and despatched to various points. The maps so made are studied by the officer in charge of the "probability-room," and the *indications* are made out and given to the press. The reports sent by the various stations at 11 P.M. must be mapped and studied, and the indications for the next day sent out, before 1 A.M. The tri-daily indications are sent to the "fact-room," and there compared with the veritable occurrences. The ratio of fulfilled predictions is then computed by fixed rules, and each officer's work is thus subjected to the most rigid of tests. Other bureaus prepare the international bulletin—a record of *facts* from all over the world for each day of the year. The bureau in charge of publications issues no less than eight periodicals, and employs a large force of printers and lithographers.

There is no space here to speak of these in detail, nor of the repute in which they are held all over the country. It must suffice to direct attention to the lucid account given by Dr. Angot, who is full of admiration for the Service and the manner in which it is carried on. At the same time he points out in various places that, however great this Service may be, it still requires serious improvements, whose general nature is the addition of permanent scientific value to the present rough observations, and the careful discussion of the vast quantity of data daily received. It is more than probable (though this is not stated by Dr. Angot) that the Bureau could be carried on at far less expense than at present.

The volume contains a very flattering account of the Meteorological Observatory in Central Park, where Dr. Daniel Draper has a truly scientific establishment filled with ingenious and simple instruments of his own devising. The printing meteorological instruments invented by Prof. Hough, Director of the Dearborn Observatory of Chicago, are also fully explained. In short, the work, while destined especially for men of science, contains a quantity of most useful and interesting information, such as is not to be met with elsewhere.

We have no space to speak of the excellent accounts given of the observatories of South America, two of which the American astronomers, Gilliss and Gould, have made so famous. This part of the work is also well done. If we have a criticism to make, it is on the extreme good-nature with which the extravagant and useless instrumental outfits of some of the South American observatories are spoken of. On the whole, this volume is even better than its predecessors, principally because its subject was sufficiently limited to allow of an adequate treatment.

BOULGER'S HISTORY OF CHINA.

History of China. By Demetrius Charles Boulger, Member of the Royal Asiatic Society, Author of 'England and Russia in Central Asia,' 'Yakoob Bey of Kashgar,' etc. Vol. I. London: W. H. Allen & Co. 1881. Pp. 604.

MR. BOULGER'S labor on the two previous works quoted in the title-page of this one has probably suggested the preparation of a compend of Chinese history which should furnish English readers with a digest of its leading events, and aid them in following the growth and fortunes of the Black-haired Race. We have now become comparatively well acquainted with the Chinese of the present day, and an attempt to narrate the changes and describe the great actors in their long past is likely, if well done, to meet the wishes of many readers. In a short preface the

author says that Gibbon's remark, "that China has been illustrated by the labors of the French," is almost as true now as it was in 1781.

"It is they also," he adds, "who have at all periods been more willing than we have been to recognize the innate strength and greatness of the Chinese nation. The task of supplying what has appeared to be a want in our literature, and of popularizing the subject of Chinese history, has been very congenial to me; and if I have only succeeded in making the subject in any degree as much a cause of pleasure and instruction to others as its study has proved to myself, I may indulge a hope that something of the reproach of being behind our neighbors in the interest we take in China may be removed."

Bringing this spirit of candor to the execution of his task, Mr. Boulger, unlike most English writers, is willing to judge the Chinese by their own opportunities; and to estimate their advances in good government and morality by their own standards and circumstances. His non-residence among them, therefore, has had one advantage—he is not always disparaging their actual condition. His principal authority in this epitome is the 'Histoire de la Chine,' translated by the Jesuit Père Mailla from the native compend called 'Tung Kien Kang-muh,' and published after his death by Abbé Grosier, in 1777–1783, in twelve quarto volumes. But this work is by no means a double translation; it is rather a digest of the information in the original, and we must not look for minute accuracy. The author has also consulted 'La Chine,' the excellent résumé of the late French sinologue G. Pauthier, whose knowledge of his subject gives weight to his opinion. The work has, we think, been fairly well done. The reader will obtain from it a just idea of the dynastic changes through which the Chinese have passed since the destruction of the feudal system, B.C. 220, and their gradual welding into a homogeneous people. It sketches their history from the earliest times, about B.C. 2637, down to A.D. 1350, and gives a synopsis of the successive ruling families. The Chinese reckon twenty-six dynasties *in toto*, and all but two are here noticed; while among these the four great names of Han, Tang, Sung, and Yuen occupy two-thirds of the volume. Their varying fortunes during their struggles for power, and the diverse characters of the successive sovereigns, are on the whole narrated in a lively and clear style. Mr. Boulger has also looked at later books, but with no material advantage to his narrative. One extract, summarizing the deeds and character of the first Mongol Emperor, Kublai, whose life fills fifty pages, will show his style:

"After Kublai's last journey to the northern frontier his bodily infirmities increased so much that it was generally perceived that the end could not be far distant. In A.D. 1294, after the appearance of a comet in the preceding year, which the Chinese took advantage of to reform his administration, Kublai fell ill and died. He was then in the eighticth year of his age, and had occupied the throne for thirty-five years. Twenty-three years had elapsed since he gave his dynasty the Chinese name of Yuen, and during the last sixteen years he had been the acknowledged ruler of the whole of China.

"With regard to the private character and domestic life of this prince, we owe most of the details to that vivacious gossip and remarkable traveller, Marco Polo. That Kublai was destitute of natural affection could not be sustained in view of his evidently unaffected grief at the loss of his wife Honkilachi and his eldest son Chinkin; but there is much corroborative evidence of the charges brought against him by the Chinese historians of having been too much addicted to such weaknesses as the love of money and a morbid inclination for superstitious practices, and he was also undoubtedly of a sensual nature. But, admitting these faults and shortcomings, there remains a long list of virtues and high qualities in his favor. If he was not the greatest of Chinese emperors—and that he certainly was not—his character is sufficiently vindicated by the events of his reign. They show him to have been well able to maintain a great empire at its height, and to lead his people into the paths of peace and prosperity.

"Kublai's long reign is not less remarkable if regarded from the standpoint of its being the climax of the triumph of a more vigorous race over a weaker. The greatest of the Mongol achievements, greater in its way than the march across Asia to the confines of Austria and the Persian Gulf, was undoubtedly the conquest of China. It had foiled the efforts of Genghis and his immediate successors, and all the credit of success was reserved for Kublai. The praise for having accomplished the most arduous of all the undertakings that formed part of the original Mongol programme belongs, therefore, to this prince. The Chinese were subdued and reduced by him to the condition of subjects of the Great Khan; but there can also be no question that they were throughout the most unwilling of subjects. Kublai showed that he knew how to conquer them, but it was above his capacity to reconcile them to his rule. Perhaps the task was impossible; but his later public acts were conspicuously deficient in the tact and judgment required for popularizing his authority" (pp. 583, 584).

If we have commended the candor of our author in his estimate of the Chinese, we cannot say as much for his accuracy. He is evidently totally ignorant of the Chinese language, and has, in consequence, fallen into many mistakes, and been misled by similarity of sounds. For instance, in a note on page 6, he says: "Before his reign the sovereigns of China were called *wangs* or kings. The name of the King of Heaven, or God, was *Changti*, Supreme Emperor or sovereign. *Hoangti* means the Yellow Emperor; but it henceforth became a usual title for the first ruler of a new dynasty to take." On this queer *mélange*, it is enough to say that *Hoang* stands for two different characters, one meaning "yellow," and the other meaning "autocratic"; that there has been only one Yellow Emperor among the two hundred and forty-six names on the list; that every monarch in a dynasty has been popularly called *Hwangti*, or Autocrat, since Tsin Chi Hwangti, B.C. 240, as Pauthier mentions on page 478; that *Changti* is the name of the highest god in the Chinese state religion; and, lastly, that all the sovereigns were styled *wang* down to B.C. 249. Mr. Boulger follows the French spelling of Mailla and Pauthier, as *Hoangho* for *Hwang-ho*, the Yellow River; *Chunti* for *Shun-ti*, etc., when he quotes from them; but in quoting an English author he uses his spelling. Thus, on page 405, he says: "Hoeitsong was the eleventh son of Chintsong II."; but Chin-tsung is written quite differently in Chinese from Shin-tsung, the name of the father of Hwui-tsung, and both sound and sense are unlike in the two titles. The province of Shantung is also written Chantung, owing to this confusion.

The different uses of the *nien-hao*, or reign-name, and the *miao-hao*, or temple-name, seem also to be unknown to our author. On page 339 he says: "Chuwen founded a dynasty and took the great names of Taitsou Hoangti," etc. This single title means Greatest or High Ancestor Emperor, and was conferred on Chu, the general who established the After Liang dynasty on the ruins of the Tang dynasty, after his death in A.D. 915. He was worshipped in the Imperial Ancestral Hall under the full title of "The High Ancestor, the Divine Warrior, the Original Holy and Filial Emperor." The years of his reign of eight years were styled Kai-ping and Kien-hwa, which were two *nien-hao* or reign-names.

Upon the uses of these and other titles among the Chinese monarchs we have no room to enlarge, and refer to them chiefly to show the desirableness of a knowledge of the language in one who writes a history of China. A Chinese always writes his family name first, and his style or given name after it—the reverse of our own custom. These terms ought, consequently, to be separated, making two words, as indeed Mr. Boulger has done in some cases, as *Chow Kwang Yu*, *Kwo Wei*, etc. His usage is, however, too often a disorderly mixture, thus: *Chupasien*, *Fanyuki*, and *Lichimin*, and so generally elsewhere; Chu Pa-sien, Li Chi-min, and Fan Yu-ki are more correct.

One celebrated officer, Li Sz' (not *Lisseh*), the minister of Tsin Chi Hwangti, is charged by native historians with having influenced his master to destroy the literati (pp. 73, 74), for which both of them have been denounced. Of that great conqueror's career we have a full account (pp. 59–79), though here much confusion arises from the misapplication of the title *Hoangti* as a proper name; as, "Hoangti cut short the admonition"; "In Hoangti they encountered an opponent." In Chinese history he is only known as *Chi Hwangti—i.e.*, the Emperor First; but in the work before us he is called Tsin Hoangti, which is somewhat as though a modern historian should employ the title "Brandenburg Kaiser" for the Emperor William of Germany, were that combination conceivable. We are told (page 76) that this hero lived "long enough to see the fortified wall constructed from the sea-coast to the extremity of Kansuh." But the Great Wall was not completed till seven years after his death; and in its construction he joined several short walls which had existed for many years. We have some doubts, too, as to the propriety of using the modern name Kansuh for a region called by other names hundreds of years before. Mr. Boulger does so throughout his book, thus causing the same confusion in the minds of his readers as if one should say Lincolnshire and Devonshire, when describing the boundaries or wars of the Saxon Heptarchy.

Still, with these defects and some others, the 'History of China' will repay perusal. We recommend its readers to begin with chapter iii., inasmuch as the two previous chapters are far too meagre and imperfect to reward them. The next volume will come down to modern days, when the annals of Mailla can be rectified by more reliable historians. This attempt may incite some accomplished sinologue to become the historian of the Chinese Empire, and emulate Gibbon in all his best qualities. The native histories among the Chinese have never been carefully studied by any foreigner, and a survey of the rise and fall of the successive dynasties will enable a modern scholar to weigh the merits and demerits of Chinese civilization while comparing it with that of the Romans, Greeks, and Hindus.

RECENT NOVELS.

Damen's Ghost. [Round-Robin Series.] Boston: James R. Osgood & Co.

With Costs. By Mrs. Newman. [Franklin Square Library.] New York: Harper & Bros.

Kalani of Oahu. An Historical Romance of Hawaii. By C. M. Newell. Boston: Published by the Author. 1881. 8vo, pp. 415.

Warlock o' Glen Warlock. By George Macdonald. Boston: D. Lothrop & Co.

Sceptre and Ring. By B. H. Buxton. [Franklin Square Library.] New York: Harper & Bros.

Boscobel. New York: W. B. Smith & Co.

The Lutaniste of St. Jacobi's. By Catharine Drew. [Leisure-Hour Series.] New York: Henry Holt & Co.

A Prince of Breffny. By Thomas P. May. Philadelphia: T. B. Peterson & Bros.

The Letter of Credit. By the author of 'The Wide, Wide World.' New York: Robert Carter & Bros.

Michael Strogoff: the Courier of the Czar. By Jules Verne. Translated by W. H. G. Kingston. New York: Chas. Scribner's Sons.

'DAMEN'S GHOST' and 'With Costs' fall together in virtue of plots based upon the disputed inheritance of large fortunes, but in merit the two are widely apart. The title of the first is, by the by, *a lucus a non*, for there is not the ghost of a ghost; or if there were, there is no part for him to play. With much good intention as to the reward of the good and the punishment of the wicked, the writer has gathered such a host of improbabilities as to turn the whole story into a farce. The different groups of people will be recognized as "reproductions," at the longest interval, of well-known characters and scenes. There may be a doubt whether the law in the case would be admitted by the profession to be even "good enough for a novel."

'With Costs' is so well contrived, and there are so many wheels within wheels, that we shall not spoil the story by giving the conclusion:

"There was Miss Gray, ready to take all the blame and the shame, as she called it, to shield her father, letting the friends she thought so much about believe her guilty! Had he not heard her with his own ears? There was Mr. Norman, refusing to let her have her way, insisting upon being punished himself! Mrs. Lydesley and her son holding fast to Miss Gray when facts seemed to tell against her, and for no other reason than because they liked her! Sir Edward ready to condone everything and marry the daughter of the man that had wronged him! And, more puzzling than all, the clever woman—Marks gave Mrs. Verral credit for ability—had come to grief! 'A curious world—a curious world!' was his mental ejaculation."

Over the main drift of the story there come such cross-currents, such eddies and whirls, that it vividly shows, though there is no pretence of going beneath the surface, how the plans and the wiles of men are sometimes furthered and sometimes thwarted equally by the malice of things and the careful good luck which seem to track every footstep. The story does not descend to the trickery of law-suits, but it finds a field for humor, far from barren, in the rivalry of attorneys for no meaner motives than the pleasure of beating each other. "Honor bound to outwit Goodge" is all the droller that Goodge was not in it at all, only one scheming little busybody of a woman working out of her own head for her own purposes. The book well repays reading.

Polynesian history and mythology, however interesting in themselves, have not as yet proved fertile themes for imaginative writers. Since Byron's 'Island'—in which, however, there is little that is Polynesian but the scene—we know of but one English poem that can be called important which has found its subject in the Pacific Islands: Alfred Domett's 'Ranolf and Amohia.' In prose romance we have Herman Melville's 'Typee,' a work of imaginative genius, and yet truer to the facts than many a book of Island travels. Hawaiian history has been the "only begetter" of Mr. James Jackson Jarves's 'Kiana,' a story published in Honolulu many years ago; and Dr. Newell has gone for his theme to the same interesting period—that of the conquest of the "Eight Islands" by Kamehameha I. After the rival kings, the leading human characters of his romance are Boki, Kaiana, Kupuli, the "love-queen" of Kalani, and Keone Ana, the English sailor. Besides these actors, Dr. Newell introduces a full line of supernatural personages, chief among whom is the goddess Pele, "the divine," "the dread," "the beautiful ignipotent." She is the most striking figure in the Polynesian pantheon. We may add that her position, according to the Hawaiian scheme of divinity, was highly anomalous. Pele dwelt in the great volcanoes of Mauna Loa, pouring forth their lava-streams at will; her Paradise was in Hale-mau-mau, the pit of everlasting fire. It will be seen that this view greatly embarrassed the first missionaries' expositions of the true doctrine of the future state.

Pele was, however, an entirely anthropomorphic goddess, and as a tropical woman she became the lover of Kalani, the young King of Oahu, Kamehameha's enemy. Being slighted by him, she withdrew her protection from him and his cause, retired to her burning lake on Mauna Loa, and, after dreadful portents, left him to his fate at the battle of Nuuanu, when his island fell under the power of Kamehameha I. Dr. Newell has hung upon this plot a great deal of mythology, description, and really imaginative, if florid, writing. The mythology is very courageous, elves and mermaids being added to the local supply of supernatural creatures, while the descriptions are fervid to the last degree: that they convert the semi-tropical climate and scenery of the Islands into full-tropical is only the beginning of Dr. Newell's transformations. But local truth of color is not the first thing we look for in a romance, least of all in one which seeks to give popular interest to an order of ideas and customs a hundred times remoter from our own than the ideas and customs of the ancient Greeks. The same fault pervades Mr. Domett's poem, just mentioned, in spite of the fine imagination and the literary gift displayed in it. What sort of literary gift Dr. Newell's is, will appear in the following fairly representative passage, describing the apparition of Pele by night to Kalani and his queen:

"Afar off the red lava streamed up from Loa's top, and lit the reeling world with fire, like some monstrous beacon-light put forth by the hand of God. The pool, that had already grown tranquil since the departure of the nocturne spirits, had again become ruffled by some unseen wind. . . . The hill whereon they stood shook with agony. . . . A dark something now came suddenly over the moon, leaving the royal pair clinging to each other in the midst of blackest darkness. . . . By the tender blue of her large, soft eyes, and the golden magnificence of her shining hair, both the King and Queen knew the blinding vision before them to be Pele, the creator of the world."

Dr. Newell's English speaks for itself. As to his Hawaiian, the phrases frequently employed show that his knowledge of the native idiom has been impaired by long absence from the Islands, where, as he tells us, the first draft of his story was composed thirty years ago. Solecisms in Polynesian syntax are not, however, the sharpest of trials for the critic of novels, and we dare say that the reader of 'Kalani' will not be disturbed by Dr. Newell's slips in this matter. Of these, the most flagrant that we have noted are such readings as *nui mokus* for *moku nui*, and *maikai Moi* for *Moi maikai*.

'Kalani' is a curiosity, both in subject and in treatment. In the second edition, which we hear is forthcoming, we advise Dr. Newell to drop the superfluous name Kamehameha in his dedication of the book to "Kalakaua, the VII. King of the Eight Isles." King Kalakaua is descended from an old line of chiefs, but is not more nearly related to Kamehameha than President Grévy is to Napoleon I.

There can be nothing new said of George MacDonald's work. 'Warlock o' Glen Warlock' is only another of the strange medleys that so forcibly emphasize the possible difference between what a man has heard and what he has invented. One might look far for truer wisdom than the sturdy Scotch lassie's: "It's no kennin' things—it's kennin' things upo' the so'd ye gang, 'at 's o' consequence to ye." But turn the page and read: "Such a man I do not think even diamonds could hurt, although where breathes no wind of life those very crystals of light are among the worst in Beelzebub's army to fly-blow a soul into a thing of hate and horror." Could mixed metaphor further go? The laird of Warlock, again, puts a whole chapter of critical dissertation into one line: "There's naething like faith for makin' o' poets." But no faith except a supreme one in a man's own genius could have inspired the verses which close the story. "My spiritual colophon," the author calls them. Two stanzas will show how like they are to Henry Vaughan's—as like as tinsel is to gold:

"Diamonds are shadows of the sun:
They drink his rays and show a spark;
My soul some gleams of thy great shine hath won,
And round me slays the dark."

"All knowledge is but broken shades—
In gulfs of dark a wandering horde;
Together rush the parted glory-grades—
And lo! thy garment, Lord!"

'Sceptre and Ring' is neither better nor worse in its workmanship than the average novel of the circulating library, but the extraordinary manner in which the meanest conduct is overlooked by those who have cruelly suffered from it demands a word of comment. A gentleman just setting out for hazardous duty with the army entrusts, in the most solemn manner, a letter to a lady, for delivery at a given hour the next day. Piqued by his manifest indifference to herself, she carelessly drops the letter, and finds upon her recovery from a fit of weeping only its charred remains under the grate. She remembers part of the address, but in jealousy allows herself the basest suspicions, makes one faint effort to find the street and number, and conceals the loss of the letter from her friend, with whom she is in correspondence during his four years' absence. The letter, of course, was for the young and beautiful lady whom he had secretly married. It would have explained his sudden departure and supplied her with means of support. Failing these, she is even compelled to sing in the streets to save herself and her baby from starvation. What follows is the old story—a great musician's hearing the wonderful voice, training for the stage, a brilliant *début*, the "sceptre" already in her hand. The husband returns, and recognizes her at a private concert in a house which she has just discovered to be his father's. Father, son, and wife learn within a few hours the heartless treachery which has cost them so dear; but at this point the tale becomes utterly false, or men and women have so deteriorated that noble resentment for wrong is no longer a virtue. That Miss Hartley had, meanwhile, most unwittingly been the benefactress of the deserted wife is no redeeming trait, for it was only for self-pleasing and vanity. The ready indifference with which her excuses are accepted is as repulsive to a high-minded sense of honor as many things more commonly characterized as bad in novels. She becomes at once the affianced of the father, and all the admiration which the beauty and patience of Olga in her lonely suffering may have excited turns to a feeling of almost contempt for the four as they disappear driving gayly together to the Ascot races.

'Boscobel' shows not very much skill in contrivance of plot or portraiture of character; but it is worth an hour's reading for the sake of some pretty sketching of Florida scenery and of the life of the winter sojourners there.

'The Lutaniste of St. Jacobi's' was a German maiden, the daughter of the last of a long line of famous musical-instrument makers in the old Hamburg of the seventeenth century. All the week she worked swiftly and deftly over her lace pillow and bobbins, and on Sunday she played the lute in one of the orchestras which made part of the great church choirs before or-

gans came into use. Close by her, George Neumarck played the viol da gamba. To him she was the good genius, first, for strength in grievous temptation, and then, when through her own success she had won for him fortune and position as court musician, to be his happy wife. The book is in the main a biography of Neumarck, in something the fashion of the once-famous 'Charles Auchester.' If there is not the fervent imagination which made that so vivid, the slender story has, nevertheless, a delicate sweetness which proves it to be a labor of love—a token of gratitude, perhaps, for some helpful experience of the beauty and pathos of the hymn and tune to which George Neumarck owes his fame. The old words are dear to many hearts:

> "Leave God to order all thy ways,
> And hope in Him, whate'er betide;
> Thou'lt find Him in the evil days
> Thy all-sufficient Strength and Guide."

Frederic William I. of Prussia ordered it to be sung at his funeral. In the form in which Mendelssohn adapted it for a chorale in "St. Paul" ("To Thee, O Lord, I yield my spirit"), it was used in the funeral service for the Prince Consort. By a coincidence, which must seem more than fortunate to both author and publisher, the book appeared but a few days before the same chorale was again sung, this time, one might say, to a listening world, on the 26th of September last. "The ages come and go, but down through them all ring the notes of a plaintive song that has a subtile power over all hearts, that soothes and consoles, and for sweet melody and rich harmony has no rival in all the great compositions that have come, or may yet come after it, through all future time."

It is seldom in our day that a book appears so much after the model of Scott as 'A Prince of Breffny.' The old baronial hall, the fair maiden in her bower, the hero eager for adventure, the faithful retainers, even the priestly earl, are old friends. But if the story is after Scott, it is a long way after, for the episode in history which the author has chosen to illustrate, if not obscure, is at least too remote to awaken any keen interest in the mind of the reader, and the incidents are few and scantily told. There is much *said* about the O'Reilly, the Prince of Breffny, in whose courage and valor unbounded faith is asked, but with one exception, in the attack upon Charles III. at Madrid, he is never seen to do anything. As for the heroine, an author may well be arraigned for wanton waste of sympathy who at the four hundredth page drowns the lady for whom he has sought our admiration and affection, and within twenty more marries her lover to another. Mr. May has much to learn of Scott in quite another direction: Scott could draw low life with dignity. The hearty, the very homely, is not of necessity the coarse.

It is more than thirty years since Miss Warner first presented to the public her hero and heroine, the latter an impossible child, the former a young man of superlative accomplishments and conscious good manners. We will not renew here the question of good taste, or of the wisdom of putting into a child's head the idea that any kindly-disposed man may some day prove a lover. There is something to be said of another side of the stories. In the first the man converts (to use what would be Miss Warner's own phrase) the young girl; in the second the girl converts the young man. Under the given conditions, these are the only two situations possible, for that either side should resist would be an inconceivable category to that way of thinking. Still, Miss Warner has found modes of repeating the story through a long series of books of which 'The Letter of Credit' is the last. There is something painful in the steady deterioration of them. The first did contain not a little that was beautiful in pictures of village and country life, but each time the color has grown fainter and the outline balder, till there is nothing left of the charm which attracted many to the first books who could by no means approve the leading *motif* of them. Another result of this reiteration has been, that she long ago exhausted her resources for quotation from the Scriptures, and is obliged to seek strange verses and far-away interpretations to answer her purpose. It were well that the guardians of Sunday-school literature should mark this, for it is doing no reverence to the Bible to strain and twist it thus. The passages which have guided the human soul from darkness to light are not so very many. Miss Warner knew she could not use them over and over again for purposes of fiction. She did not see that therefore, instead of following these by-paths, so to speak, she should drop the story. Only genius could portray in succession the manifold experiences by which from the same source the most diverse need is met.

In the pause to take breath which must follow the perusal of 'Michael Strogoff,' the reader's first thought will be of wonder at the skill with which the writer keeps within the line that divides even the wildly improbable from the impossible. Jules Verne is a born story-teller, and he is fortunate to have fallen upon a time when, to the great mass of readers, a novel is nothing if it is not full of incident. This "voyage extraordinaire" has barely enough of a love story to pass it for a novel, but it has in it every other moving adventure of flood or fell. Moreover, there is something canny in the way in which the author, while entering a field which is at this moment among novelists a kind of preserve of mysteries and horrors, keeps himself clear of what he knows have been snares and pitfalls for the unwary, and employs only the incidents which are the common stock of the tales of adventure. The two newspaper correspondents who achieve the same perilous journey as "the Courier of the Czar" are, however, unique, and, on the whole, the haps and mishaps of these "two of the most distinguished products of modern civilization" are the most entertaining in the book. There is only local color enough to make the picture real, and it would not be amiss to add to it by looking up Gautier's sketches of the Volga, etc., which were not included in the admirable "Winter in Russia." It is very unusual to find so good a translation as this: it reads like an original. Not much can be said of the illustrations, numerous as they are. For some reason they are greatly inferior to the same pictures in the Hetzel edition.

A Sketch of Ancient Philosophy. By Joseph B. Mayor, M.A. Cambridge (Eng.) University Press. New York: Macmillan & Co. Pp. 254.

ABOUT half of all the instruction given last semester in philosophy in the German universities was strictly historical. The great change thus indicated in the method and spirit of philosophic study is caused mainly by the distrust of every individual system as such, and the growing conviction that, as Hegel said, though not in his sense, philosophy is now the history of philosophy. Instead of indoctrinating the student with the system of the instructor or his master—the only method yet known in far too many of our colleges—he is first of all taught the chief stages by which human consciousness became broadened, deepened, and elevated in the past, and is thus saved from provincialism in time. Not only are lessons of reverence and curiosity thus impressed which make the *nil admirari* spirit impossible, but the danger which springs from the limited range of present interests, and of wasting time over problems already clearly wrought out by thinkers of antiquity, is averted. The story of happiness, first naïvely conceived as sensuous pleasure, and gradually widening to high intellectual enjoyments, and culminating in the sacrifice of personal to public or social interests—or in pure altruism; or of virtue deepening from mere obedience to a few authoritative commands to spontaneous goodness; or of the first apperception of ideas by Socrates, their materialization and independent existence urged by Plato, the logical forms given them by Aristotle, and the quaint structures reared on them by Alexandrian mystics: the romance of substance, the only reality of Spinoza, fading into the unknowable in Locke, denied of matter by Berkeley, and of mind by Hume, till at last phenomenalism culminated in the *éclaircissement* and the French Revolution; —these are things that must for ever appeal to all that is most essential and formative in young men of an age liable to Wertherian crises, but capable of both the deepest insights and the strongest enthusiasms. In our age of transition, too, the choice for men of culture between nativism and empiricism, between phenomenalism and spiritual realism, which is so inevitable, either explicitly or implicitly, is perhaps the most important in its moral bearings of any made during college years. It is essential that it should be made early and in a wide horizon of facts, and *not* under the dominant influence of individual teachers, however revered. Within the last forty years the history of philosophy has been written not less than a score of times, and the consensus as to what is and what is not essential is mainly established. Why, then, is it excluded from our colleges?

This question is becoming more and more urgent. While most colleges are mediæval in the methods and field covered by this department, science is coming daily into closer quarters with purely psychological questions. Political studies centre more and more about what might be termed ethical philosophy. Education is realizing far and wide the need of a basis securely laid in the nature of human faculties and the order of their unfolding; and most of all, if it were but seen, religion itself, in its most cherished interests, needs the offices of a reverent but profoundly discriminating philosophy more than ever before since the Reformation. Yet it is hardly too much to say that, by the consent of almost all who are competent to judge, the very poorest teaching in our colleges is in this field, because here they still follow instead of lead public sentiment. Young men's minds are still sealed up against all future interest in the most vital questions. What passes for the *best* teaching is that which inoculates young minds with the "love of wisdom" in such a way that they may never feel it seriously later in life. They are brought safely to anchor instead of being led out into the open main, for which every seaworthy keel was made. To lead young men through college without "unsettling" the religious opinions of childhood is to leave them puerile in religious character and opinion; but it is an art which many professorlings of philosophy assiduously cultivate, because they dare not trust their pupils in the wide field of historical philosophy with accessible apparatus to follow up their interests fearlessly and freely.

The complaint has been that text-books were wanting. Ueberweg is too large, Schwegler too abstract, Zeller too detailed, etc. We have, however, in the work now before us a little sketch of ancient philosophy, from Thales to

Cicero, inclusive, which, though not perfect, is yet in many ways admirably adapted to introduce college classes to the study of historical philosophy. The author is Professor of Ethics at King's College, and has considered mainly—indeed, almost exclusively—the *ethical* teachings of Plato, Aristotle, the Stoics, and the rest. This is perhaps commendable, as matters now stand, although it is not the historical method. The author is Evangelical, and believes that Greek philosophy as well as Jewish law should be regarded as a schoolmaster to bring men to Christ. We hope this little book may find wide favor among those teachers of philosophy who still hesitate to adopt more fully the historical method. It is well written, and with abundant references.

Memorials of the Right Reverend Charles Pettit McIlvaine, D.D., D.C.L., late Bishop of Ohio, in the Protestant Episcopal Church of the United States. Edited by the Rev. William Carus, M. A., Canon of Winchester Cathedral. New York: Thomas Whittaker, 1881.

It is not a little remarkable that the biography of a man who was so conspicuous in the Episcopal church of the United States, and so much venerated and beloved, should have waited so long for a biographer (Bishop McIlvaine died in 1873); but it is even more remarkable that when at length his biography appears it is not from the hand of a fellow-countryman, but is written by an English churchman, whose friendship for him was indeed of long standing and of the tenderest character, but whose acquaintance with him was confined almost entirely to a correspondence, generally of the most abstract nature, eked out with a few brief periods of immediate personal intercourse. It is true that Canon Carus has been entrusted with a few letters and journals of the late Bishop; but even with the help of these, in addition to his own letters from him, his 'Memorials' have throughout an air of great remoteness, and can in nowise be accepted as an adequate biography. Canon Carus is himself aware of this, and in his preface modestly indicates the relation of his book to some completer biography of Bishop McIlvaine, which he hopes will some day appear.

Bishop McIlvaine was, if we are not mistaken, a man of considerable organizing and administrative ability, but there is in these 'Memorials' no indication of the extent or nature of his work. The letters and journals are of a highly emotional and exclamatory character, without any literary charm. Current events are treated always sentimentally and never thoughtfully. It is to be presumed that the good Bishop was a man of some reading, but there is no reflection of it in these pages. 'Essays and Reviews,' and the remarkable letters of "Janus" on the Œcumenical Council, are well nigh the only contemporary works mentioned. Against the former, Bishop McIlvaine wrote a *pronunciamiento*, as he called it, for the Episcopal Convention. He belonged decidedly to the Evangelical party. Ritualism was his particular abomination: it was "Popery" thinly disguised. The old-fashioned character of his polemics is indicated by the fact that his word for Roman Catholicism is always "Popery." A good churchman, his sympathies were affected more profoundly by his dogmatic than by his ecclesiastical ideas. He wished to be on good terms with all believers in the atoning sacrifice of Christ. This doctrine was the heart of his heology, which was extremely simple and sincere. Luther's belief in a personal devil was not more concrete, and certain "buffetings of Satan" are set down with implicit faith in their reality, as also are certain providential escapes from physical danger. In all his personal and domestic relations Bishop McIlvaine figures in these pages as a man of singularly sweet and joyous disposition, much loving, much beloved. He died anticipating many serious changes in the religious world, and many of his prophecies have already been made good. The tendency of his church to substitute tradition for the Scriptures as the stronghold of its faith would have given him great anxiety if he had lived to see its latest phases, but the shrewdness which these manifest is evident to the ordinary observer.

Butterflies: Their Structure, Changes, and Life-Histories, with Special Reference to American Forms. Being an Application of the "Doctrine of Descent" to the Study of Butterflies. With an Appendix of Practical Instructions. By Samuel H. Scudder. Illustrated. New York: Henry Holt & Co. 1881. 8vo, pp. 322.

It may be that the scientific standing of our author leads us to expect too much from his book. It certainly contains a great deal of important matter, much that is the outcome of his own observation, and more perhaps drawn from observers like Harris, Edwards, Burgess, and others. Yet the general effect is disappointing. Scientists will find the manual unsatisfactory in that it contains very little that is new, that the applications of the doctrines of descent are not made sufficiently clear, and that many of the author's peculiar ideas as to nomenclature, classification, etc., generally thought unworthy of adoption, are here repeated. The unscientific or popular reader, for whom no doubt the book was written, will find the style difficult, and many of the common names such as were never before heard of, some of them indeed being misnomers, as in case of the brown or black Limenites, which are grouped as "Purples." The meaning is often obscured by sentences of extraordinary length, that drag through the text like literary tapeworms. Grammatical puzzles occasionally obstruct the reader's way. The definition of a caterpillar (p. 33), though not one of the longest sentences, will serve as a fair illustration:

"A caterpillar, then, is a cylindrical jointed creature, having several of the front segments consolidated to form a horny head, with numerous mouth-parts, eyes, and antennæ all crowded together at the bottom; three other segments succeeding it bearing horny legs; and most of the remainder supported by fleshy legs furnished with microscopic hooks; all the body segments are furnished with special appendages, which, during some stage of its development, are arranged in definite series."

The following, from p. 235, will show at once a peculiarity of logic, running through sentences and chapters, and the uncertain condition of the author's belief as to origin and development:

"That each of these forces [physical agencies and natural selection] has borne its part in the work there can, I think, be little doubt; but in a case like this, where we find beauty of the most exquisite and refined character in creatures of an inherently low organization, I can only express a deep-seated conviction that a preordaining purpose and plan governs these proximate causes, and that beneath both structure and beauty we may discern far-reaching and controlling thought."

Only in cases like this? Reasoning similarly, one might say: A result of the author's education is that he recognizes certain phenomena as beautiful; these phenomena appear in creatures of inherently low organization; therefore they are evidence of a preordaining purpose and plan—which is hardly conclusive. Huxley's 'Crayfish' seems to have served Mr. Scudder as a model, without being approached in clearness, vigor, or exhaustiveness. Considerable space is given to suppositious ancestry, with the result of leaving the condition of our knowledge on the subject of descent about as it was. In many respects the work is, for its pretensions, behind the times. Thus, it ought to have contained some mention of the work of Weissmann (1875) on season dimorphism, ornamentation, etc. Such statements as (p. 10) that "very little is known of the changes undergone by the yolk and surrounding parts, and of the formation of the embryonic caterpillar," were good enough ten years ago. They are now best met by reference to the works of Hatschek, Ludwig, and others, which surely cannot have escaped the author's notice. We have only a very superannuated account of the venation. "At the base of the anterior margin of the fore-wing is a horny scale such as occurs in many other insects" (p. 73). This should have been substantiated by references. These patagiæ are generally supposed by entomologists to be without known relation or representation in other insects, and the mere assertion is not convincing. Speaking of the Heliconii (p. 70), we are told: "This is the one group of butterflies in whose wings we find large patches of membrane devoid of scales." Our author had forgotten that in the Satyridæ, and occasionally in the Papilionidæ, we find the same. We wish he had given the localities for the crowds of *P. philenor* which (p. 121) appear in spring upon the New England landscape. The records show that the species was first seen long ago by Harris, in the Botanical Garden; in the fall of 1880 it was seen again. Except on the most southern borders of New England, a few isolated specimens only have been recorded in the intervening time. "As we go north, the colors become less sharply defined, then gradually fade away or become blended with surrounding tints; the red first disappears," etc. (p. 161). It is best for the theory to say nothing of the splendid red spots of the Parnassius, ranging northward to the Yukon and to 13,000 feet of altitude. Notwithstanding the fact that the foundation for his remarkable story of Brenthis and its overlapping generations (*Amer. Nat.*, Sept., 1872) was completely demolished by the results of the researches of Mr. W. H. Edwards (*Can. Ent.*, 1875–77), it is revived here as if the author thought it a pity to allow so good a story to be spoiled. The information said (p. 149) to be lacking in Mr. Edwards's publication will be found there on a more careful reading. The European species, *P. podalirius*, is not confined to the Mediterranean region, as alleged on page 154, but ranges as far north as 55°; it is not to be compared with *P. Ajax*, which is a strictly southern species. Mr. Edwards discovered that the brown race of *C. pseudargiolus* is the male, and not the female, as was commonly believed—a fact which should have been credited to him. Serious impediments in the way of the student are to be found in vernacular names of the author's coinage, and in scientific designations from a still-born nomenclature, almost unknown to scientists, that has already been sufficiently characterized by Peabody, Edwards, and others.

Fifty of the illustrations are from Harris. As may be seen by comparison, they have suffered much in electrotyping. Thirteen have fore-legs which do not belong to them (84, 89, 118, 120, 121, 129, 130, 131, 140, 141, 143, 144, 192). In the preface to Harris's work this was said to be due to the exposure of the second pair of legs, the first being rudimentary. This excuse did not apply in case of the side view (130), in which "the fore-foot should have been omitted." Our author repeats the mistakes, but does not correct them. One-third of the work treats of anatomy, external and internal; it contains nothing new. Another third is devoted to color, ornamentation, etc., and was intended to be the most important; but the exuberant phraseology

and verbose diffuseness make it difficult to follow the thought or to determine the nucleus of the ideas. The remarks in this portion relate principally to the author's own careful observations of New England lepidoptera, which are good as far as they go. In the absence of a basis—a knowledge of the force or power which originates color and ornamentation—they amount to a careful tabulation of external characters, which might or might not be intimately connected with the animal itself. The question of descent is left about where it was taken up. The portion with which the least fault is to be found is the first Appendix, which is full of excellent advice to beginners.

Buddha and Early Buddhism. By Arthur Lillie. London: Trübner & Co.; New York: G. P. Putnam's Sons. 1881.

THIS is an ingenious though a dangerous book. There are some good points made in it, but on the other hand the errors are many and misleading. Why does the author begin with such certainty—"Five hundred and sixty years before Christ a religious reformer appeared in Bengal, Buddha"? In the first place, every one ought to know nowadays that the date of Buddha's "appearance" is not so proved as the author asserts. The probability is leaning towards a much later date than 560 B.C.; probably the year 360 B.C. would meet the case on evidence now forthcoming. Then, again, the appearance of Buddha in "Bengal" is rather misleading. Bengal, indeed, is a large Presidency, and may possibly include the almost unknown region of Kapilavastu; but the statement is a loose one.

On the other hand, there are some happy allusions in this book. We are glad, for instance, to find so clear an account of the symbolism of Buddhism, especially the Catacomb symbolism. The descending dove (plate ii., fig. 1) is a real gain for Buddhist archæology. Very probably this is a Christian adaptation of the trisul, and it is perfectly in accordance with the evangelist's narrative (Luke ii., 23) that the dove "*rested* upon Him." Supposing that the origin of the trisul is to be found in the three rays of the rising sun (the dawn), then it will be easy to understand why these doves are sometimes drawn on the *shoulders* of saints, as, *e.g.*, in the case of Elisha (Lincoln College, Oxford)—(Mrs. Twining's 'Symbols,' p. 64, pl. xxxi.); and so Gregory Nyssen relates that when Basil the Great was preaching, Ephraim saw on his *right shoulder* a white dove. So, also, Augustine and Aquinas are drawn with white doves *on their shoulders*. Now this will be understood at once if we compare with it the account of Zohák with a snake on each shoulder, and the old coins of the Kadphises group which represent a flame on each *shoulder* of the reigning monarch. This flame is sometimes drawn as a nosegay of flowers (borrowed, probably, from the story of Dipañkara), but in all cases the symbolism may be traced back to the three rays, two on each side of the orb of the sun, representing his shoulders; the other (the one on the top of his head) preserved to us under the form of the ekas'ringa or unicorn, and also in the horn of the Burmese Buddha.

Mr. Lillie has gathered his information from so many sources that his pages are confusing. It is not easy to draw the line distinctly when such authorities as the "Asoka inscriptions," the 'Lalita Vistara,' and the 'Mahawanso' are brought into immediate connection. But surely Mr. Lillie is wrong in taking the 'Lalita Vistara' as the "oldest life of Buddha." What would the late Mr. Childers have said to this? Indeed, it is plain that such cannot be the case. The 'Lalita Vistara' is one of the last of the expanded Sûtras, and must take its place very late in the Buddhist development. Then, again, the puzzling question of Buddhist early intercourse with America is discussed, as though it were yet an open one. Surely Mr. Lillie would not contend that Buddhist missionaries ever found their way to Mexico *via* Behring's Straits and Alaska. If so, we give it up.

But to be serious. The examination of Buddhist literature must be undertaken with some knowledge, at least, of the widely diverging schools of that religion; and the enquiry must be patiently pursued on one line to a fixed end. It is impossible to settle everything in books of this sort. We must be content to find out bit by bit; and every one who adds one item of truth to the stock of knowledge (little enough) that we possess will deserve thanks. Mr. Lillie has done some service in his enquiries on the symbolism of the Buddhist Church compared with that of the Catacombs. Beyond this his book is a jumble of disconnected essays.

Report on the Geology and Resources of the Black Hills of Dakota. By Henry Newton, E. M., and Walter P. Jenney, E. M. With atlas. Washington: Government Printing Office. 1880.

THE fieldwork upon which this report is based was executed in the summer and autumn of 1875, under the authority of the Bureau of Indian Affairs. Several causes have conspired to delay its publication until the present time. In the first place, it was discovered, when too late, that there was no law authorizing such a survey, and no funds from which its expenses could be met. This was subsequently remedied by legislation, but not until it had caused considerable delay. The death of Mr. Newton, which occurred in 1877, before the completion of his report, caused a second and serious delay. The work was finally taken up by Mr. G. K. Gilbert, of the Geological Survey, and pushed as rapidly as possible to completion. The publication has been made under the auspices of Major Powell's Survey of the Rocky Mountain Region, and Mr. Gilbert's name appears as *editor* only, although his share of the work consisted of much more than merely editorial duties. The first half of the volume is devoted to the structural geology of the Hills. Following this is a reprint of Mr. Jenney's preliminary report on the economic geology and other industrial resources of the region, first published in 1876. The last part of the book consists of a report on the palæontology of the region, by R. P. Whitfield, and a brief report on the astronomical and hypsometric work.

As is well known, the Black Hills are of a roughly elliptical shape, the longer axis trending somewhat west of north and east of south. They have a length of somewhat more than 100 miles, with a maximum breadth of about 50 miles. The area covered by them is about 5,000 square miles, or a little more than the area of Connecticut. The opening sheet of the atlas, a bird's-eye view of the Hills, tells the whole story of their physical conformation in a peculiarly graphic manner. Just to the east of the middle of this mountain mass is a large area of rugged mountains and hills without any apparent system, further than that all the streams appear to flow off radially. Around it is a continuous cliff, facing towards it, so that it is in a manner shut in. This interior region is made up of Archean rocks, the core of the uplift, while the cliff is of carboniferous limestone. On the east these beds have considerable inclination, which carries them at once below the surface. On the west, on the other hand, they have a very gentle dip, and form a plateau instead of a ridge. At the further edge of this plateau, west, north, and south, the dip of the beds suddenly increases, carrying them down below the surface. The level of this plateau is, with the exception of a few igneous peaks, the highest land in the Hills. It is evident that these carboniferous beds originally extended over the whole region, and that they have been removed from the eastern area by denudation, which has also carved the Archean rocks into their present orographic forms.

Outside of the carboniferous, and completely encircling it, is the "Red Valley," marking the outcrop of the soft clays of the Red Bed and Jurassic formations. This valley, which extends completely around the Hills, forming an annular ellipse, is a very marked and peculiar topographical feature. Outside of it is an equally continuous encircling ridge or hogback, broken only by the gorges of the streams which drain the interior of the hills. This ridge, popularly known as the "foothills," is formed of the hard Dakota sandstones. This, and the soft beds beneath it, are conformable to each other and to the carboniferous beds, and dip in the same direction, so that the foothills consist everywhere of a monoclinal ridge, dipping away from the Hills and towards the Plains. Outside the "foothills" are a number of small monoclinal ridges, less persistent, but agreeing with them in dipping away from the mountain mass, though at a lower angle. These ridges are of the Upper Cretaceous series. Originally, all these beds of the Cretaceous, Red Bed, and Jurassic formations overlaid the whole area of the Black Hills, and formed the upper layers of the great dome which was the result of the uplifting process, though they were eroded more or less during the process of upheaval.

The original shape of the uplift, supposing that no erosion took place during the process of upheaval (which was, of course, very slow), was that of a nearly flat-topped ovoid. The descent from the tabular summit was steeper on the east and west than on the north and south. On the north, or, more definitely, the northwest, the axis of elevation is prolonged in a low, flat-topped table for fully forty miles beyond the range proper. The maximum height of the uplift, before erosion, was 6,600 feet above its base. The solid contents of the restored mass of uplift are no less than 4,200 cubic miles. Besides the main uplift of the range, there are numerous local volcanic disturbances, catastrophic in character. These, although producing mountains of considerable elevation, are of small comparative importance. As to the geological age of the Hills, Mr. Newton shows from the stratigraphy that the uplift took place between the Cretaceous and the Miocene Tertiary periods. A study of the drainage systems enables him to go still further, and show that the Hills began to rise before the desiccation which succeeded the Cretaceous; that the form of the uplift was changed during its progress, the line of greatest elevation shifting from the western to the eastern portion; and that the flanks were so far buried by Miocene sediments that a new river system (that now in existence) was superimposed when the lake was finally drained.

The volume is well illustrated by lithographs, diagrams, and geological sections. The atlas contains, besides the graphic bird's-eye view referred to, a topographical and a geological map of the Hills, on a scale of four miles to an inch.

BOOKS OF THE WEEK.

Adams, W. T. Our Little Ones. Boston: Lee & Shepard. $1 50.
Allen, Prof. W. F. Tacitus's Life of Agricola and Germany. Boston: Ginn & Heath. $1 15.
Arnold, M. Poetry of Byron. New York: Harper & Bros. 20 cents.
Balch, W. R. Garfield's Words. Boston: Houghton, Mifflin & Co. $1.

Bartlett, J. The Shakespeare Phrase-Book. Boston: Little, Brown & Co. $3.
Beljame, Prof. A. Le Public et les Hommes de Lettres en Angleterre, 1660-1744. Paris: Hachette; New York: F. W. Christern.
Bergen, T. G. Register of the Early Settlers of Kings Co., Long Island, N. Y. Bay Ridge, N. Y.: Van Brunt Bergen. $3.
Blunders of a Bashful Man. New York: J. S. Ogilvie & Co. 25 cents.
Boyesen, Prof. H. H. Queen Titania: a Tale. New York: Chas. Scribner's Sons. $1.
Brennor, O. Speculum Regale: Ein altnorwegischer Dialog. München: Christian Kaiser; New York: B. Westermann & Co.
Brine, Mary D. Grandma's Attic Treasures. New York: E. P. Dutton & Co.
Butterfield, C. W. History of the Discovery of the Northwest. Cincinnati: Robert Clarke & Co. $1.
Carrington, Col. H. B. Battle Maps and Charts of the American Revolution. New York: A. S. Barnes & Co. $1 25.
Carus, Rev. W. Memorials of the Late Bishop Charles Pettit McIlvaine. New York: T. Whittaker. $3.
Cassell's Book of Sports and Pastimes. New York: Cassell & Co. $3.
Chadwick, Rev. J. W. The Man Jesus. Boston: Roberts Bros. $1.
Chadwick, E., and Boardman, J. Reports on the Estate of Sir Andrew Chadwick. New York: Chas. L. Woodward.
Coolidge, Susan. Cross Patch, etc., adapted from Mother Goose. Boston: Roberts Bros. $1 50.
Cooke, C. W. Life, Writings, and Philosophy of Emerson. Boston: J. R. Osgood & Co. $2.
Cox, Sir G. W. Introduction to the Science of Comparative Mythology and Folklore. New York: Henry Holt & Co. $1 75.
De Rupert, A. E. D. Californians and Mormons. New York: J. W. Lovell.
Douglass, Edith. We, Von Arldens. Chicago: Henry A. Sumner & Co.
Draper, L. C. King's Mountain and its Heroes. Cincinnati: Peter G. Thomson. $4.
Dros, G. Bertha's Baby. Philadelphia: T. B. Peterson & Bros. $1.
Dulles, Rev. J. W. The Ride through Palestine. Philadelphia: Presbyterian Board of Publication.
Ebers, Prof. G. Egypt. Parts 16-20. New York: Cassell & Co. 75 cents each.
Edwards, M. F. Illustrated Red Riding Hood. New York: Nelson & Sons. 75 cents.
Emerson, W. A. Hand-Book of Wood Engraving. 2d ed. Boston: Lee & Shepard. $1.
Ewing, Mrs. J. H. Mrs. Overtheway's Remembrances. Boston: Roberts Bros. $1 25.
Finley, Martha. Mildred and Elsie: a Tale. New York: Dodd, Mead & Co. $1 25.
Force, M. F. From Fort Henry to Corinth. New York: Chas. Scribner's Sons. $1.
Forestier, A., and Anderson, R. B. The Norway Musical Album. Boston: O. Ditson & Co.
Gottschalk, L. M. Notes of a Pianist. Philadelphia: J. B. Lippincott & Co. $2 50.

A SUMPTUOUS GIFT-BOOK.

Greece and Rome.

THEIR LIFE AND ART.

By Jacob von Falcke, Director of the Imperial Museums, Berlin. Translated by William Hand Browne. 4to, $15.

The numerous portraits of interesting objects, and pictorial "restorations" of places and occurrences in Athens, Rome, and Olympia, are believed to surpass in interest and artistic merit anything of the kind ever before published here.

Young Folks' History

OF THE

War for the Union.

By John D. Champlin, Jr., Editor of the "Young Folks' Cyclopædias." 8vo, copiously illustrated, $2 75.

Time has at length placed among curious and intelligent readers a generation which has no personal knowledge of the great American Civil War. As most of these new readers are "Young Folks," the publishers have peculiar satisfaction in announcing a history of that conflict suited to their needs, combining impartiality and all needed completeness, and written by an author whose reputation is established for thoroughness, accuracy, and facility in writing for the young.

Mythology and Folklore.

An Introduction to the Science of Comparative Mythology and Folklore. By the Rev. Sir George W. Cox, Bart. 12mo, $1 75.

Our Familiar Songs,

AND THOSE WHO MADE THEM.

Edited by Helen Kendrick Johnson. 8vo, $6.

HENRY HOLT & CO., New York.

E. & J. B. YOUNG & CO.'S

NEW PUBLICATIONS.

THE CREED and MODERN THOUGHT. By the Rev. Benjamin Franklin. 12mo, cloth, $1 75.

"It is full of vigorous thought, of clear and terse reasoning, and of sound theological wisdom. . . . We commend the volume to all thoughtful students in each and every branch of knowledge."—*Churchman.*

"It is an able contribution to a full discussion of a great subject."—*Guardian.*

CONSTANTINE THE GREAT. The Union of the State and the Church. By the Rev. E. L. Cutts. 12mo, cloth, $1 05, net; by mail, $1 15.

"A very readable and admirable history of the Empire and of its Emperors and Cæsars."—*Church Standard.*

"For graphic details, Mr. Cutts is a sort of St. Mark in history."—*Church Eclectic.*

ENGLISH EDITIONS OF

Ancient History from the Monuments.

With illustrations, maps, etc.

16mo, cloth, 60 cents, net; by mail, 66 cents per vol.

E. & J. B. YOUNG & CO., Cooper Union, New York.

NOW READY.

King's Mountain and its Heroes.

A History of the Battle, Oct. 7, 1780, and the events which led to it, after two years spent in preparation, is now published and ready for delivery. The author, Lyman C. Draper, LL.D., has spent forty years in gathering materials for this work, which abounds in stirring recitals of adventures and hairbreadth escapes, alike interesting to old and young. The descendants of such men as Campbell, Shelby, Sevier, Cleveland, Lacey, Williams, Hambright, McDowell, Winston, Hammond, and their officers, now living by the thousands throughout the country, will welcome this permanent record of that glorious event which turned the tide of the Revolution. The work contains 612 pages, on fine paper, beautifully bound, with seven steel portraits of the Heroes and numerous woodcuts, with index of 5,000 references. Price $4. Sent, post-paid, on receipt of price.

NATURE SERIES: New Volume.

Fashion in Deformity, as Illustrated in the Customs of Barbarians and Civilized Races. By William Henry Flower, LL.D., F.R.S., F.R.C.S. With illustrations. 12mo, 75 cts.

"This lecture well deserves its present permanent form. Like any history of primitive superstition, it shows the living connection between the lowest savage and the proudest heir of all the ages. . . . This little work merits the widest possible circulation."—*Nation.*

THE BIBLE AND SCIENCE.

By J. Lander Brunton, M.D., D.Sc., F.R.S. With numerous illustrations. 12mo, $2 50.

"We do not know any writings of this nature better calculated to accomplish their object of making science easy to the general reader; and as the spirit is throughout tender, not to say sympathetic, towards traditional beliefs, the book deserves a wide circulation among the increasing class of persons who desire to learn, with a small amount of trouble and without fear of stumbling upon any cloven hoof, what biological science has done, is doing, and is likely to do. . . . In the interests of scientific education, therefore, we should like to see 'The Bible and Science' pass through any number of editions."—*Nature.*

THE MYTHE OF LIFE. Five Sermons, with an Introduction on the Social Mission of the Church. By Charles William Stubbs, M.A. Square 12mo, $1.

"The author reads and understands the signs of the times, looks them squarely in the face, and sets himself to work at a task he perfectly comprehends; and although the vast issues of life and death be thick about the conflict, there is neither noise nor flurry, but the silence and repose of the spiritual athlete, who has counted the cost and entered the arena for conquest; for men, institutions, and civilizations are at stake, and the road to victory, he feels, may lie athwart long reaches of devastation of riches and lives and souls. It is English, truer, purer, and stronger than Mallock's, but warm with central fires of the Christ-life."—*Christian Union.*

THE RESURRECTION OF OUR Lord. By William Milligan, D.D., Professor of Divinity and Biblical Criticism in the University of Aberdeen. 8vo, $2 75.

"It would not be possible to obtain from the Divine Word a richer theme than this, and it is enough to say that it is presented here clearly, reverently, hopefully, to the edification and comfort of every intelligent reader."—*N. Y. Observer.*

"We wish to say here at the outset that this volume is, on the whole, the best and the most satisfactory treatise on the nature and meaning of Christ's resurrection that we have ever seen."—*Churchman.*

TEMPLE SERMONS. By C. J. Vaughan, D.D., Master of the Temple and Dean of Llandaff. 12mo, $2 75.

MACMILLAN & CO.,
22 Bond Street, New York.

Silver Opening.

THE GORHAM MANUFACTURING COMPANY, SILVERSMITHS, encouraged by the gratifying results of their last season's exhibit, have prepared a more extensive display of what may be termed "Art Productions in Silver" than was possible at that time. This collection consists of the finest specimens selected from their Spring productions, together with some few pieces of a higher order of workmanship made for the purpose of this exhibition. A large portion of the exhibit will consist of exclusively hand-wrought articles, and the more prominent of these are not to be duplicated. This exhibition will extend over two weeks' time, commencing Monday, the 17th inst., and during that time pi[illegible] may be selected for delivery [illegible]its close.

The col[illegible]ion will be found in their A[illegible]Room,

[illegible]7 UNION SQUARE.

UNMOUNTED PHOTOGRAPHS
Of ANCIENT and MODERN WORKS of ART, embracing reproductions of famous original paintings, sculpture, architectural subjects, etc. Price, cabinet size, $1 50 per doz. Send stamp for catalogue of 1,000 subjects. JOHN P. SOULE, Publisher, 338 Washington St., Boston, Mass.

Antiques.

A new, large, and rapidly-changing collection of Antique Furniture, etc., restored, when required, with intelligence and skill.

New York is the best and the worst market for such. It buys liberally, but sells dearly.

Our prices are not more than two-thirds.

JOHN WANAMAKER.
1313 Chestnut Street, Philadelphia.

The Nation.

NEW YORK, THURSDAY, NOVEMBER 3, 1881.

The Week.

THE Senate adjourned on Saturday without confirming Mr. Statham as Postmaster at Lynchburg. Senator Ferry, as chairman of the Committee on Post-offices and Post-roads, was instructed by the Republican caucus on Saturday morning to consult Senator Mahone and invite him to join in a request to the President to recall the nomination. The President, on being asked, refused to do so. This being reported to the Senate, the Republicans succeeded in getting the consideration of the matter passed over, after which an adjournment was carried. It was understood that the President would thereupon immediately appoint Statham. The struggle will therefore have to be renewed in December. The Democrats claim the postponement as a victory, on the ground that though the Administration promise the Readjusters all the patronage in Virginia, they cannot "deliver the goods." Moreover, Senator Hill seized the opportunity of denouncing by resolution the practice of making appointments in the Federal civil service for the purpose of influencing State elections as "dangerous to the perpetuity of our institutions."

The New York *Times* denounces the opposition of the Democrats to Statham's nomination on civil-service reform grounds, and particularly rebukes Senator Hill's protest as hypocritical, inasmuch as the Democrats have been, are, and would be again guilty of using Federal appointments to influence State elections. This may be true—it probably is true; but even if it be true, it does not make the practice any the less objectionable. It was right for President Arthur to dismiss Wilson because he was a defaulter, but it was not right to choose his successor for any other reason than the good of the service. It was an abuse of the appointing power to select him with a view of helping Mahone or any other man to win the State election. The knowledge that he owed his appointment to such a consideration would surely have demoralized Statham and all his subordinates, and set a bad example to every other postmaster in the country. So that whatever the motives of the Democrats in resisting the confirmation—and we do not rate them highly—it is not to be regretted that the Virginians of both parties should see that such arrangements cannot be carried out, and should hear, from some source, that they are injurious to the public service. Let Statham be appointed, if he be the best man for that office, but let him be appointed with the clear understanding that the sole duty of his office is to sort, deliver, and forward letters, cash and issue money orders, and render just and true accounts.

As to the hypocrisy of the Democrats, we are willing that any use should be made of it except one: it ought not to serve as an excuse for Republican reluctance to reform. The more wicked and corrupt the Democrats are, the more needful it is that the Republicans should be good and pure. They say themselves that the Democrats will never set them a good example, and if this be true and they wait for it, the plea so often heard that the Democrats are just as bad has about as much force as the plea that Satan keeps tempting people. No church would listen for one moment to a backslider who said he was going to mend his ways as soon as Satan left off seducing him, but not sooner. One party or other must begin the work of administering the Government on business principles, and the duty undoubtedly falls to the party in power. It may be hard to do it, and may cost salt tears to many a politician, but in our time power brings disagreeable tasks as well as pleasant opportunities.

Judge Folger's appointment as Secretary of the Treasury has been received with general favor as the best thing to be done in view of the failure to secure Mr. Morgan, and as that of a man of integrity and general capacity for affairs. These are the qualifications chiefly needed in the office now, and there is no reason to doubt that he will discharge its duties with credit. As a judge of the Court of Appeals he has enjoyed a good though not a brilliant reputation. In the Legislature he was considered an excellent parliamentarian. There is no obvious connection between all this and his present position, but his appointment is a safe one, and an honest and conservative view of all legal questions which may arise in the Department may be expected of him. There are no great financial problems for him to solve, and if he administers the Treasury with a single eye to the honest collection and disbursement of the revenue, he will satisfy everybody. His views about patronage are, we presume, those of a Stalwart; but the actual administration of the affairs of a Government bureau may convert him, as they were said to have converted Mr. Windom.

Ex-Secretary Windom has during his brief administration of the Treasury Department not only achieved some remarkable financial successes, but he has also turned his experience in the management of a large branch of the civil service to good account. The conclusions he has reached as to methods of appointment are in the main eminently sound, and it is greatly to Mr. Windom's credit that he frankly expresses his changed opinions upon that subject. The plan advocated by him is this: To allot to the States respectively, as the existing law governing appointments in the Treasury Department requires, the number of appointments to which they would be severally entitled in that department; then to appoint a carefully selected committee of three in each State, whose duty it should be to meet once a year at some convenient place in the State, and before whom any one desiring to enter the Government service should have the right to present himself or herself for examination—such examination to be practical, and to relate to the character, experience, and capacity of the applicant, and to the duties of the position to which appointment is desired. The committee should prepare a list, graduated according to merit, of those who pass the examination, and send the papers to the head of the Department at Washington. From this examination, Mr. Windom believes, persons should be selected from those highest on the list, and only be sent for when the State of which they are residents is entitled to appointments. This is the application of the system of competitive examinations, as it has been for some time in force in the Custom-House, to the Treasury Department. It is equally applicable to all the executive departments of the Government. The feature of the pro-rata allotment of appointments to the several States is not an essential, and might under certain circumstances become an embarrassing one. The Government should always be enabled to avail itself for its service of the best capacity the country affords, wherever it may be found. The examination of candidates at convenient places in the different States by commissions appointed for that purpose, or by sub-committees of a general civil-service commission, would be sufficient to give the people of all the States and of every part of the country an even chance. The most essential feature of the plan is that the examinations be open to general competition, and that appointments be made from those highest in the order of merit as shown by the examinations. It is pleasant to learn that Mr. Windom discussed this plan with President Garfield shortly before the fatal second of July, and that the President regarded it with much favor.

About $1,500,000 foreign specie arrived during the week, but the rate for foreign exchange advanced at the close, so that there was no profit in importing gold. In our foreign trade, exports continue to fall off while imports increase. During the last month reported (September) the imports of the whole country were $2,400,000 above those of a year ago, while the exports were $8,800,000 less. The New York banks have strengthened their position by a further contraction of credits and by a gain of $2,700,000 in specie, so that on the average for the week they held about $4,700,000 more reserve than the law requires. The general trade of the country continues large and profitable. Early in the week the trunk lines advanced east-bound freight rates, the first move having been made by the Pennsylvania and the Baltimore and Ohio roads. Towards the close of the week another advance took place, each company acting for itself, and without reference to the points of contention which caused the war last summer. At the Stock Exchange the speculation resulted in higher prices until Monday, when it was announced that the Mechanics' National Bank of Newark had stopped payment, having been robbed by its cashier of about $2,600,000.

This news unsettled confidence and caused lower prices.

The Newark bank failure has really only one lesson, and that is the small impression produced by lessons on the financial mind. We believe it would be impossible to point to a case of bank failure through the fraud of an officer, during the last twenty years, in which the conditions of the fraud differed in any but the slightest degree from those of this last catastrophe. In the first place the bank has to be long established, very prosperous, with large deposits, and has to pay high dividends. These things of course avert suspicion and inquiry, and keep the balances large. Then there has to be a board of wealthy directors, who feel honored by directing the bank, and whose names confirm the public confidence in it. In this country such men are almost always very busy with their own affairs, or have retired from business owing to age and infirmity. In either case they are prevented from giving any attention to the affairs of the bank. In fact, the very qualities which make them the proper persons to superintend its operations give them something else to do, as long as their vigor lasts. Somebody, however, must have the active management of the concern, and this brings on the scene a personage who is now almost as familiar a figure in the field of American finance as the heavy father, or walking gentleman, or double-dyed villain in the theatre. He is a cashier, or sometimes a president, who entered the bank as a poor boy and gradually, by diligence, industry, and faithful attention to business, worked his way up, until the directors got into the way of leaving everything in his hands, and the older ones of regarding him as a son. He is always, too, a man of correct deportment, generally an active church member, and lives quietly. He seldom or never indulges in any display, and furnishes the local fathers with a model for their lazy children. In nine cases out of ten he really is a good fellow, and under ordinary circumstances would end his life blamelessly. But he has not got along very far before he finds himself released from the checks and restraints which the experience of all ages and nations has shown to be necessary for those who have the handling of other people's money. In other words, he finds himself exposed to temptations to which no one ought to expose another man's character and to which no wise man will expose his own. He finds vast sums practically within his exclusive control. He finds that his figures are not examined to discover whether they tally with the facts, and that in many important matters his mere word is taken in lieu of figures, and this in a country where fortunes are made every day by lucky strokes on the Stock Exchange. He finds, too, as in the case before us, that the Government Bank Examiner takes a great deal for granted in the case of a prosperous institution, or, in other words, assumes that the managers of such an institution will not attempt any great fraud.

In the present instance Baldwin, the cashier, has apparently been able to deceive the Examiner for a long series of years as to the amount the bank had lying to its credit at its correspondent's in New York, and only last year he was able to deceive him again by delivering to him with his own hands a forged letter from the person to whom the Examiner had written for a verification of his accounts. So that there is really nothing to be said about the affair except that prosperous as well as shaky institutions have to be managed with the usual business precautions. Any depositor or stockholder who is satisfied if the directors are men of high standing, and does not enquire or know whether they give any personal attention to the affairs of the bank, or whether they leave them to some one person who has grown up under their eye, and in whom "they place the utmost confidence," must when these crashes come bear up like a man, and pocket his losses. He must not seem "quite broken down," or thunderstruck, or run about wildly enquiring how it happened. He knows well enough how it happened, or if curious in such matters, may find most of the details in any old newspaper file.

Mr. Samuel Morley, member of Parliament for Bristol, whom a telegraphic despatch somewhat effusively describes as "one of the greatest philanthropists in the world," has been talking sound economic sense in a place where such talk is conspicuously needed—in the city of Philadelphia. "The marvel to me is," he says, "how your population consents to be so taxed in their daily expenditures as must be the result of your tariff system." "I should hope," he adds, "that some modification of your tariff might be secured"; and further: "I have seen enough to satisfy me that many of your manufactures do not need protection in competition with England." If Mr. Morley can convince the Pennsylvanians that the coddling period of our national life has passed, or ought to have passed, and that the period of large and liberal competition of this country with others should begin, he will accomplish a benevolent work surpassing in importance all the generous deeds which have promoted his wide reputation as a philanthropist.

The news that the identity of the brigand Randazzo has been established is very satisfactory, but it has no bearing whatever on the objections raised by his counsel to the manner in which he was extradited. It is absolutely necessary, unless we are willing that our administration of justice in such cases should fall into general contempt, to have the matter thoroughly sifted at Washington. The arrest made in New Orleans by Mooney, the detective, is perhaps the most peculiar feature of the proceeding. There has recently been published an "opinion" by the District Attorney at New Orleans, informing him that the warrant gave him full authority to make the arrest. Now, what we want to know is whether this is the law or not. Can a United States Commissioner sitting in New York authorize anybody he pleases, without deputizing him as an officer, to arrest any one in any part of the United States who may be accused of an extradition crime? If he can, it is a great outrage, and the law ought to be changed at once, for the simple reason that it violates the elementary principle that arrests must not be made by persons who are not able to compensate the person arrested for any wrong they may commit. Mooney may, for aught we know, be a responsible man; but if he may go about the United States making arrests in this way, any tramp may be sent off on a kidnapping expedition of the same kind. And in cases of doubtful identity it will generally be much easier and more convenient for the extraditing Government to have the man kidnapped by a tramp than arrested by a responsible officer.

The First Comptroller of the Treasury has decided that Guiteau's witnesses cannot be paid by the Government if they reside more than a hundred miles from the District. The effect of this might be practically to cut Guiteau off from his chief ground of defence, and the difficulty can hardly be got over by a change of venue, for the witnesses probably do not reside in any one judicial district or circuit, but are scattered all over the country. On Wednesday his counsel applied for more time to prepare for trial, and were given until November 14; the judge taking occasion to modify his extraordinary decision that the question of jurisdiction must be argued in advance of the trial, by saying that he only meant that he should like this course to be taken. Mr. Corkhill will be assisted on the trial by Judge Porter of this city, which is an assurance that the case will be thoroughly tried. The views of the District Attorney as to the nature of the issue presented to the court seem, to judge by his argument against the postponement, to be somewhat confused. He declared that "what the people were waiting for was not that this man should be found insane," but that "a sane man who assassinated the President should promptly expiate that crime." On the contrary, what the people are waiting for is a fair trial; and if they were not, it would make no difference so far as Mr. Corkhill is concerned. If he will confine himself to doing his utmost to secure a conviction and not trouble himself about "the people" or what they are waiting for, he will be doing his whole duty.

Sitting Bull's last account of himself and his plans, if true, shows that he gets more satisfaction from introspection than most white men. He says, for instance, what very few Caucasians can say, that "he has always had a reason for everything he has done," and that "every act of his life has had an object in view," and that "no man can say he has neglected to think"—a charge which is brought with great success against white men nearly every day. He makes one other assertion which very few of us would venture on, viz., that "if he had no place in the world he would not be here," and that "the fact of his existence entitles him to the exercise of whatever influence he possesses." With us the fact of existence gives of itself so little influence that we never hear of any disputes over attempts to exercise it. Nor is every one satisfied, as Sitting Bull is, "that he was created for a purpose." In fact, great numbers of men are puzzled to know what they were made for, and so are their friends. The precise object of the creation of Democrats, for instance,

is a question which vexes the mind of a great many old-fashioned Republicans. Passing from the discussion of his *raison d'être*, however, to more practical themes, Bull announces his intention to get his Sioux to settle down to farming, and that he is in great haste to see the new President so as to make the necessary arrangements.

Mr. Randall, the late Speaker, was the principal orator at a meeting of the County Democrats on Thursday night to ratify their nominations and the platform of the County Convention, and as he confined himself to Federal questions, we turned to his speech for the latest statement of Democratic doctrine on the more pressing topics of the day. The thing for which he claimed most credit for the Democrats was their gallant struggle in the Forty-sixth Congress for refunding at three per cent. During the whole of this struggle the Republicans, he said, were fighting bitterly for three and a half per cent., and, in order to support themselves, decried the public credit, and said we could not borrow at three and a half. The Democrats, on the other hand, were upholding the honor of the flag by maintaining that our credit was as good as that of England, because our debt was likely soon to be paid, while that of England would never be paid. But then Mr. Randall overlooks the fact that the money market does not see the matter in exactly the same light as the gallant Democracy. The certainty that the interest on a public loan will be punctually paid being equally strong, the credit, measured in the rate of interest, of a country which is not likely to pay off the principal, or not likely to pay it off soon, always stands higher than that of a country which is sure to pay it before long. This may seem funny to the Congressional Democrats, but it is true. The interest charges of the United States are actually made higher by the strong prospect that it will soon be out of debt, and for precisely the same reason that a long Government bond is easier to float than a short one. The people who lend to great states do not feel the sort of desire for short reckonings which is felt by the landlords of Democratic halls and taverns.

We looked in Mr. Randall's speech with some eagerness, also, for an account of the Democratic attitude towards the tariff, and especially "the tariff for revenue only," which the party demanded in the last Presidential canvass. We were rather surprised, therefore, to find him proposing the abolition of all internal-revenue taxes. Foreseeing that the audience would say that this would make it necessary to keep up "a high protective tariff," the only answer he had to make was that "this was a tender subject for a Pennsylvanian to touch," and that "they ought not to be so much against Pennsylvania because she manufactured," because New York "manufactured more than Pennsylvania"; that "there ought not to be any clashing," and "that we have one great motive power behind us, the agricultural interest." "For these reasons," said he, "I believe we should have a three per cent. rate of interest, should revise the tariff, abolish internal-revenue taxes, and the whole machine go along as smoothly as can be." We have failed for our part to extract from this Mr. Randall's opinions or those of the party about protection. He seems to us to be about as clear in his ideas about the tariff as General Hancock was, but not more so, when *Harper's Weekly* made him ask, "Who is Tariff, and why is he for revenue only?" Who is Tariff? we ask Mr. Randall. Why is he "a tender subject for a Pennsylvanian?" Why, if New York manufactures more than Pennsylvania, should we "not be so much against Pennsylvania?" Why should we not "clash?" And whither is "the great motive power behind us" pushing us?

Our prediction that the "no-rent" programme of the Irish Land League would prove a failure has been fully realized. The farmers in all directions are paying their rent, some even paying who have held out for two years. Moreover, the flood of applications to the Land Courts for readjustment—amounting, it is said, already to 30,000 — shows beyond question that all who can pay mean to pay hereafter. The Land League, too, has not only had to abandon the plan of submitting test cases, but is as a power capable of securing widespread obedience, practically extinct. When Parnell and the chiefs get out of jail, they will find their occupation gone and a new régime established. Archbishop McCabe of Dublin has delivered a terrible philippic against the anti-rent manifesto, as a direct attack on property by men most of whom have none. He has not nearly as much influence with the people as Archbishop Croke, but on this point both are agreed. In fact, a more shameless proposal has not in our time been submitted to a civilized people, and it will be a relief to every one who cares for the good name of the Irish race to find that it has fallen flat. Professor Goldwin Smith, in an article in the *Pall Mall Gazette* on the condition of Ireland, which he thoroughly understands—something which unhappily can only be said of few Englishmen—calls once more for some large measure of local self-government as the only way of putting an end to Irish political discontent. As Irish affairs are now administered, much of this discontent is reasonable. The large body of writers, both English and foreign, who free their minds about Ireland every now and then, and say it is not reasonable, are almost all grossly ignorant of the Irish legislative needs, and of the way in which they are and have to be met in the House of Commons. These philosophers are consequently about as well worth listening to as Parnell or Egan. It ought to be understood that the fact of a man's having had his dinner spoiled by an Irish cook does not qualify him to lecture on Irish history.

The order of the League to pay no rent naturally suggested the enquiry whether they intended this to operate as a permanent abolition of rent, and, in fact, of all letting of land, because, if so, it would of course greatly diminish the value of the land bought or stolen by the present tenants. Egan, the secretary, we believe, of the organization, was therefore questioned on this point, and he admitted that such was the true construction of the proclamation. No more land was to be held hereafter in any one person's hands than he could cultivate. Anything over or above this he was to be compelled to sell. That a small collection of needy young men should have seriously supposed themselves capable, by mere proclamation, of effecting a change of this magnitude in the distribution of property in a community of five millions, shows how much of the worst folly of the Paris Communists there is latent everywhere and ready to show itself, whenever any loosening of the social bond gives the shiftless and reckless, and irrational a chance to come to the front and be heard. It suggests, too, a doubt whether many of Mr. Forster's prisoners would not be more appropriately lodged in the lunatic asylum than in Kilmainham jail.

The firmness of Mr. Gladstone's language about the Boers in his Leeds speeches, coupled with the forward movement of the troops, seems to have brought the Volksraad to reason, and it has ratified the Convention, while preparing to avail itself of Mr. Gladstone's promise that some modifications might still be made in it, to adapt it to Boer prejudices. On the one point, however, in which the Boers are most sensitive—their relations to the natives—no concession is likely to be made. The British Government will not relinquish its right to protect the natives both against Boer laws and lawlessness. The Boer farmers live by the Old Testament, and still hold firmly to the old view of the "curse on Ham," which used to do such good service in the slavery days at the South. They also consider themselves as the chosen people, and the Zulus and Caffres as Canaanites, Hittites, Hivites, and the like, so that the colored man has really no chance with them. If he objects to be smitten as a descendant of Ham, they smite him as a person holding the soil unlawfully against a divinely-appointed conqueror and annexationist.

In the Leeds speeches, which appear to have shown as much power as any he ever made, Mr. Gladstone appeared in a new character—that of a magistrate who did not mean to bear the sword in vain. His oratory has usually hitherto been of the expository and argumentative sort, but he has now shown that he can menace and wave the flag even more successfully than Beaconsfield or Salisbury. His threats against Parnell and the Leaguers, and against the Boers, had a volume and weight, and even a mystery, which it is in our day seldom possible to give a threat, and have been in the highest degree successful. His promise to use "the resources of civilization" against them have set the Leaguers nearly wild, because they apparently believe that he was alluding to some kind of shell, or torpedo, or electrical machine. What he did mean was, undoubtedly, simply the organized force of a civilized community which has found that the courts and police are not sufficient to stop murder and robbery. Mr. Chamberlain has made the somewhat indiscreet confession, however, that without the Land League the Government could not have procured the passage of the Land Act last winter—a striking illustration, if true, of "the moral uses of dark things."

SUMMARY OF THE WEEK'S NEWS

DOMESTIC.

In his letter to President Arthur declining the Secretaryship of the Treasury, Mr. Morgan said that his physicians had advised him, on account of his age and poor health, not to accept. On Thursday the President nominated Judge Charles J. Folger of New York to be Secretary of the Treasury and Mr. James to succeed himself as Postmaster-General. Both nominations were promptly confirmed by the Senate. The business men throughout the country seem generally to approve of the appointment of Judge Folger. Great "pressure" has been brought to bear upon Mr. MacVeagh by the President and his friends to persuade him to remain in the Cabinet until the completion of the Star-route prosecutions. Mr. MacVeagh has, however, absolutely refused. He says that the prosecution is in the hands of lawyers of eminent ability, and that his supervision will be entirely unnecessary to secure its successful termination.

It is stated that Mr. Blaine will probably not remain in the Cabinet after the 1st of December. If he does remain beyond that time, it will be in compliance with the President's wish that he should continue in office until his successor is selected.

The special session of the Senate ended on Saturday. The last few days of the session were occupied with a struggle between the Republicans and Democrats over the appointment of Mr. Statham to the post-office at Lynchburg, Va., in the place of the present incumbent, Wilson, who is a defaulter. The Democrats wished, out of antagonism to Senator Mahone, whose protégé Statham was, to have Wilson retained. The whole matter was dropped on Saturday, it being understood that the President would suspend Postmaster Wilson and appoint Statham after the final adjournment of the Senate.

Assistant Postmaster-General Tyner sent his resignation to President Arthur on Wednesday. Mr. Tyner requested that if there were any charges against him implicating him in the Star-route frauds, his resignation should be returned to him and an immediate investigation ordered. He was informed by Postmaster-General James that there were no charges on the files of the Department affecting his official or personal integrity. The resignation was at once accepted by the President.

Colonel Barker, chief of the post-office inspectors, has submitted to the Postmaster-General a report of the operations of his division for the fiscal year. The report states among other things, that 461 persons were arrested during the year for depredations upon the United States mails.

The Second Comptroller of the Treasury has submitted to the Secretary his annual report. It shows that there were 17,935 claims and cases of every kind settled during the last fiscal year, and that the amount allowed thereon aggregated $144,476,554.

The annual report of the Lighthouse Board for the fiscal year ending June 30 has been submitted to the Secretary of the Treasury. It is estimated that the total amount which will be needed for the general service of the lighthouse establishment during the coming year will be as follows: For the establishment itself, $2,248,000; for lighthouses and fog signals, $530,000.

Mr. Windom made some remarks upon civil-service reform on Saturday which have been generally copied by the press. He proposes to allot to the States the number of appointments to which they would be entitled in the Treasury Department, and then to appoint a committee of three in each State whose duty it should be to meet once a year and examine applicants, this committee to prepare a list, graduated according to merit, of those who pass the examination. The persons to fill the vacant places should be selected from those highest on the list, and be sent for only when the State of which they are residents should be entitled to appointments. Mr. Windom says that he proposed this system to President Garfield, who regarded it with much favor.

Secretary Hunt has issued an order calling the attention of officers of the Navy to the regulation forbidding applications for duty through persons of influence. "All such applications must be made directly to the Secretary of the Navy, who is supposed to be the best judge of what duty an officer is entitled to, and if made in any other manner will not be attended to."

There was a disastrous explosion in the navy-yard at Washington on Friday, caused by a rocket taking fire while one of the workmen was charging it. The inner walls of the fulminating-room of the Ordnance Department were demolished, and one workman was killed and two others severely wounded.

Lieutenant Hoxie of the Engineer Corps has submitted a report to the Commissioners of the District of Columbia, in the course of which he considers the subject of the reclamation of the Potomac flats. He says that plans for the new river front were long ago prepared, and should be urged upon the attention of Congress at the coming session; that the sandy flat in front of the city of Washington should be filled sufficiently to change it from marsh to dry land, and that if filled a little above high tide, it could readily be kept dry by surface drains and flood valves.

The trial of Guiteau has again been put off. The trial is now set peremptorily for November 14. The postponement was made at the request of Mr. Robinson, Mr. Scoville's assistant counsel, who represented that the time was too short to enable him properly and adequately to prepare for the trial.

In the Criminal Court at Washington on Thursday an order was passed allowing twenty witnesses to be subpœnaed in behalf of Guiteau, the fees and cost of service to be paid by the Government.

The Western Union Telegraph Company will send all messages on business concerning the Garfield monument at Cleveland to and from the committee free of charge, and the United States and American Express Companies will forward all packages or money collected for the monument-fund free.

Captain Howgate was arraigned in the Criminal Court on Friday to plead to the indictments for forgery found against him by the Grand Jury. He pleaded not guilty, and was formally surrendered by his bondsmen.

President Arthur is reported to be desirous that the Star-route prosecutions be urged with all judicious speed, and is quoted as saying that he dislikes the repeated postponements, and thinks it desirable that the cases be pressed for trial at once, and the ground on which they rest be made evident in one way or another.

The speculative movement in Confederate bonds has continued during the week. It is now stated that the United States Government will take cognizance of the matter, and will notify Great Britain that any moneys on deposit belonging to the late Confederacy are forfeit to the United States, and that these funds, if any exist, must not be paid to redeem Confederate obligations.

Colonel Kelton, the Adjutant-General of the Division of the Pacific, who has just returned from a tour of Arizona, says that all the trouble with the Indians is over, unless the Mexicans drive the fugitive Chiricahuas back over the line, in which event the troops will attend to them. He says that the Indian agents and the military have been working together harmoniously, and he expects that the American and Mexican authorities will also unite in putting down the hostile Indians.

The United States Arctic search steamer *Alliance*, commanded by G. H. Wadleigh, has concluded her search expedition. Captain Wadleigh has made a brief official statement in which he says that he was unable to obtain any tidings of the *Jeannette*.

The wife of the alleged Italian brigand Esposito has admitted his identity by making a declaration before the Board of Health in New Orleans that her husband's name is Giuseppe Esposito Randazzo, *alias* Costanzo.

The Mississippi River had risen at Quincy, Ill., on Sunday to nineteen feet above low-water mark. Traffic on all the railroads running south and west from Quincy, with the exception of the Hannibal and St. Joseph, has been suspended. The water is steadily spreading over the thousands of fertile acres hitherto protected by the embankments, and the loss to the farmers will be very heavy.

The Mississippi River Improvement Convention met in St. Louis on Wednesday, its object being to urge upon Congress the duty and obligation of enacting measures for the improvement of the Mississippi and its navigable tributaries by deepening the channels and removing obstructions. There were five thousand delegates present, representing all the States in the Mississippi Valley. Governor Crittenden was appointed temporary chairman.

A serious accident occurred on the Mississippi River on Thursday night. The steamer *Jennie Gilchrist*, commanded by Captain Gilchrist, left Rock Island, Illinois, to go up the river. A mile above the Chicago, Rock Island, and Pacific Railroad bridge the engineer discovered that the wheel-rod was broken, and, the river being greatly swollen, the steamer drifted rapidly down stream and collided with the bridge. The boiler heads were broken by the collision and the steam scalded and suffocated the passengers. Nine of the passengers and one of the crew were killed. The captain and crew are reported to have been drunk, and to have acted in a very cowardly manner.

The business part of the town of Edgefield, South Carolina, was almost entirely destroyed by fire on Sunday. The fire is supposed to have been of incendiary origin. The total loss is estimated at over $100,000, and the stocks of goods destroyed in the stores were in most instances not insured.

The Mechanics' National Bank of Newark, New Jersey, the foremost banking establishment in the State, was closed on Monday on account of the embezzlement of two million dollars by O. L. Baldwin, the Cashier. Baldwin has made a confession, in which he says that for many years he has been lending the money of the bank without security to the firm of C. Nugent & Co., of Newark, morocco manufacturers. He escaped detection by drawing upon the bank's deposit in a bank of the same name in this city, and then falsifying the account of this deposit on his own books.

The French visitors have been in Newport and Providence, being entertained as guests of the State of Rhode Island. From there they went to Boston.

The Episcopal Church Congress held its final session at Providence on Friday. Bishop Clarke of Rhode Island delivered the closing address. He said he did not think that any previous Congress had added more material and substantial thought to the Church literature, or more to the fund of information on the topics discussed.

FOREIGN.

The German elections of members of the Reichstag took place during the week, and resulted in a complete victory for the opponents of Prince Bismarck. In 368 out of the 397 districts, were chosen 44 Conservatives, 22 Free Conservatives, 100 members of the Centre party, 31 National Liberals, 24 Secessionists, 35 Progressists, 15 Poles, and 17 Protesters and Particularists. The most striking and significant fact brought out by the elections is the great increase in the strength of the Social-Democratic party. Count von

Moltke was defeated at Essen, but he may be returned for Memel. Prince Bismarck's son William has been defeated in Mulhouse, by five thousand votes, by a Liberal. It is stated that the Opposition may prove strong enough to necessitate a dissolution of the Reichstag.

Some Jews in Berlin have instituted proceedings against Dr. Stoecker for the part he has been taking of late in stirring up the people against the Jews. The Public Prosecutor has begun an action against the editor and publisher of the *Reichsherold*, on account of a poem in it approving the persecution of the Jews.

A funeral service in memory of President Garfield was held in Berlin on Sunday. There were many distinguished persons present. Professor Gneist delivered the oration, standing before a colossal bust of the late President.

The elections of members of the National Council of Switzerland show but little change in the position of parties there. Fifty Conservatives and Ultramontanes and ninety-eight Liberals and Radicals have been elected, against forty-five and ninety-three respectively in the former Council. The increase in the population gives the Council ten additional members.

In the Spanish Chamber of Deputies on Saturday Señor Portuondo urged the passage of laws for the government of the press and public meetings in Cuba, which should give the Cubans the same rights as those enjoyed in the mother country. To this the Minister of the Colonies replied that the Government intended to send out on the 10th of November a new press law for Cuba and Porto Rico, and that it would devote its attention to the various promised reforms, but would do nothing to promote autonomy.

The Governor-General of Cuba has issued a circular to the Governors of the various provinces of the island, recommending the protection of the public-school system. From this circular it appears that there are nine hundred and twelve schools in Cuba supported by the state, with an attendance of thirty-four thousand eight hundred and ninety-five children of both sexes. Two hundred of these schools were established by the present Administration.

The *Voz de Cuba* professes to have unquestionable evidence that a large contraband trade in American goods is carried on between New York and Cuba. To this cause it attributes the diminished receipts from customs duties, while there is no decline in trade.

The King and Queen of Italy arrived in Vienna on Thursday. They were met at the station by the Emperor and Crown Prince of Austria. The meeting was described as "most affectionate." The reception of King Humbert in the streets of Vienna is said to have been very enthusiastic.

The French Chambers were reopened on Friday. M. Gambetta was elected provisional President of the Chamber of Deputies by a vote of 317 to 29 in favor of M. Brisson. It is said that Gambetta ran for the Presidency of the Chambers in order to test his strength with the Deputies as a prelude to taking office.

President Grévy has asked M. Gambetta to take office, and the latter has consented. It was agreed that he might assume the Presidency of the Council either with or without a portfolio.

It is expected that M. Gambetta will soon make an important statement regarding his policy, either during debate on an interpellation regarding the Government's course in Tunis or at a meeting of the majority.

In a speech at a banquet at Havre recently, M. Gambetta said that he had been to Germany to study the means by which Bremen, Hamburg, Stettin, and Lübeck had attained their present greatness.

The French column from Susa entered Kairwan on Wednesday without opposition, the insurgents having retreated southward after pillaging the city.

It is stated that there has been an exchange of views between Lord Granville and M. Barthélemy-St.-Hilaire, the French Minister of Foreign Affairs, in regard to Mr. Blaine's Panama circular, but that no joint reply is likely to be made.

The London press have severely criticised the circular. The *Times* says that Mr. Blaine's arguments are "certain of a patient and friendly hearing, but that as a piece of logic the circular can hardly be considered by his best friends to be very powerful."

Mr. Chamberlain, President of the Board of Trade, speaking at Liverpool on Wednesday, said: "I cannot reflect without gratification upon the fact that the deep sympathy for America on the death of President Garfield felt throughout the country has been reciprocated by the graceful act and courtesy in saluting the British flag at the centennial celebration of the battle of Yorktown." In another speech at Liverpool Mr. Chamberlain suggested the creation of a council, on the model of the railway commission, representing the whole shipping interest and the great insurance companies. He suggested that the functions of this council should be to advise and assist the Board of Trade.

The International Arbitration and Peace Association in London passed a resolution on Tuesday recording its satisfaction with the saluting of the English flag at Yorktown. Such an incident, the resolution says, is unparalleled in history, and must ever remain of deep international interest. The Association regards the act as a weighty and significant testimony to the eternal oblivion of all animosities resulting from the War of Independence, and as an emphatic expression of the brotherly love existing between England and America.

Municipal elections were held throughout England and Wales on Tuesday. In a great many instances they show important Conservative gains. This is especially noticeable in towns where there are many Irish.

The first decision under the Land Act was given at Monaghan on Tuesday. The Commission, after viewing the holding in the case, reduced the rent by 50 shillings for the next fifteen years.

The power of the Land League seems to be waning. There are now about four hundred Leaguers in prison, and arrests continue. Archbishop McCabe has issued a pastoral denouncing the recent rioting in Dublin and the no-rent manifesto. In regard to the latter, he begins: "A few days ago people were startled from their dream of security by the publication of a manifesto assailing the eternal law of God, and striking at the foundation whereon society rests, namely, the right of property." There are already 7,500 cases before the Land Court, of which 3,600 came in on Saturday.

In replying to an address presented to him at Knowsley Mr. Gladstone denied the report that the Land Act had been the outcome of the Land League. He contrasted the opinions and policy of Daniel O'Connell with those of Parnell. He pointed to the fact that the people who have been urged to pay no rent were coming forward with their money, and that the Land Court was working well.

There have been rumors flying about of late to the effect that Mr. Gladstone was meditating the resignation of the Chancellorship of the Exchequer, and total withdrawal from public life. In answer to a question in regard to his intention in this matter, Mr. Gladstone replied that he had nothing of any kind to add to his public declarations on the subject. By this he is supposed to refer to his speech at Leeds on the 7th of October, in the course of which he said that it was not for him, whose life was drawing to a close, to anticipate the long future they desired for him, but that he would leave the affairs of the country in the hands of men in whom it had confidence.

A troop-ship left Portsmouth on Tuesday with five hundred and twenty men to reinforce various regiments in Ireland. Orders have been received at Athlone to have a flying column in readiness to proceed immediately to any part of Westmeath or Roscommon.

Immediately after the publication in the *Freeman's Journal* of Mr. Parnell's letter deprecating the formation of Tenants' Defense Associations, the Governor of Kilmainham jail was superseded by two new Governors. It is stated as probable that Mr. Parnell will be sentenced to fourteen days' privation of visits for having written the letter in question while in jail.

Mr. Sexton has been released from Kilmainham jail on a medical certificate stating that further confinement would endanger his life.

Heavy snowstorms and severe gales are reported throughout England. In several of the midland counties there are two feet of snow on the ground.

The British steamer *Calliope*, from Odessa to Bremen, has been lost on the Spanish coast. Only one person was saved.

The Rev. George Granville Bradly was formally installed as Dean of Westminster on Tuesday in the presence of a large congregation.

A despatch to the London *Times* from Pietermaritzburg says that the ratification of the convention between England and the Transvaal has caused general satisfaction, but that it is understood that the convention has been signed more with a view to give it a trial than in reliance upon it as a final arrangement. The Volksraad has imposed heavy direct taxes and a duty of 33 per cent. on foreign invoices. Much discontent has been caused at Pretoria by these measures.

M. Novikoff, the Russian Ambassador to Turkey, has consented to a reduction of the interest on the war indemnity, but demands that a settlement of the indemnity shall be effected simultaneously with the arrangement with the Turkish bondholders.

The police at St. Petersburg arrested three Frenchmen on Monday, and seized some compromising documents in their possession. They made a desperate resistance, and fired several shots, wounding one of the policemen. The French Ambassador has reported the affair to his Government.

It is stated that the question of Hebrew emigration to America is a subject of concern to the Russian Government, and that another attempt is to be made to turn the Hebrews into peasant farmers and settle them in the provinces of Kherson and Yekaterinoslav.

A despatch from Constantinople announces that two of the Circassians who robbed and maltreated Mr. Pierce, the American missionary, have been tried and sentenced to five years' penal servitude. Five others who were arrested for connection with this offence have been discharged.

The Egyptian Government has issued circulars to the local European press informing them that they must cease to publish articles calculated to wound national feeling. A similar circular has been issued to the Arab press in regard to articles against foreigners.

The dispute in regard to the silk guilds in Japan still continues. The foreign merchants have addressed a circular to the native producers in the interior, calling upon them to ignore the guild and deal directly with them. The Japanese silk-dealers in Yokohama and Tokio have also issued circulars to the producers, and the replies show that the feeling of the producers is with the guild. The silk market at present is wholly blocked to foreigners. In connection with the new code of laws to be introduced into the Japanese judicature it is proposed to allow foreign as well as Japanese judges to sit as assessors. It is stated that Mr. John O. Bingham, United States Minister at Tokio, has been offered the first appointment.

TUESDAY, November 1, 1881

PRESIDENT ARTHUR ON "PUNISHMENT."

GOVERNOR FOSTER of Ohio reports a conversation with the President which contains some interesting passages. The assurance that he (the President) "has no enemies to punish, and does not intend to be used to punish the enemies of anybody else," is particularly gratifying, though a foreigner who knew nothing of the spoils system would find it incomprehensible. He would imagine on reading it that the President of the United States was armed with some sort of arbitrary power over the lives and fortunes of American citizens which enabled him to "punish," or harass, or mulct any person who offended or annoyed him, although no mention is made of it in the Constitution. It would have to be explained to him that when the President talked of "punishing an enemy" he meant simply an enemy within a certain small class called the civil service. He would, then, imagine that the only enemy a President could have in the civil service was a person who neglected the duty which he was paid to perform, and that "punishment" meant dismissal for incompetency. Here it would have to be explained to him again that, in political parlance, an officer or employee of the Government, however humble his position, became an "enemy" of the Chief Magistrate by exercising his abstract right to vote against the party in power, or by failing to "work" for it in caucuses or primaries, or by having been nominated or recommended for office by a Senator or Representative or politician with whom the President had had a quarrel. So that a civil-servant might become an "enemy" of the President and receive "punishment" without any fault of his own whatever. It would, with the aid of this glossary, be finally made clear to the foreigner, if an intelligent man, that when President Arthur said he had no enemies to punish he meant that he did not intend to dismiss any civil servants of the Government without cause; and that when he said he would not allow himself to be used to punish any one else's enemies, he meant that he would not dismiss a competent officer at the request of some influential politician who bore him a grudge. We are all so used to this lingo that we do not at first sight perceive how strange and mysterious it must seem to an outsider.

To Americans who understand party language the declaration will be very welcome. It is pleasant to know that President Arthur does not intend to deprive a number of poor men of their livelihood because they or their friends have exercised that freedom of political action which he claimed in his letter of acceptance as the birthright of every American citizen, Government officers included; and that he does not mean to be made the instrument of gratifying, through the same means, any grudges which any one else may cherish. The avowed abandonment of this use of the civil service, though it may not seem a very great step in the path of reform, is really, in view of what we have been used to, a very considerable advance.

Nevertheless, when, as Governor Foster further reports, President Arthur "advanced, in the most positive manner, the theory that Senators and members of the House are the best judges of the sentiments of their constituents and of the standing of applicants for office within their boundaries," he virtually surrendered, though he may not have seen it, the very wise and humane ground about "punishment" which he took in the same interview. Senators and Representatives might be good judges of candidates for office if they were disinterested. But they are not disinterested. They have for fifty years been using their recommendations to office as means of "punishing their enemies" and rewarding their personal and political friends. Moreover, by a long-established tradition, the best man for an office, in their nomenclature, does not mean the man who will perform its duties most efficiently, but the man who, while holding it, will render them personally most service. The same reasons, too, which lead them to recommend a man for office whether he is competent or not, lead them to resist his dismissal if he is found incompetent, and also to seek the dismissal of competent men in order to make room for their favorites. We are not here saying things which are controverted. Not only does nobody deny them, but a politician thinks a person who does not know them a simpleton. When, therefore, President Arthur says he means to let Senators and Representatives supply him with the fittest candidates for Government employment, he virtually, though we will not say consciously, cedes to them that power of "punishment" which he repudiates for himself. If there is to be "punishment," however, we confess, for our own part, we should sooner see him, the Sultan of the spoils system, inflict it himself than distribute it among a body of pashas.

Moreover, we do not understand how President Arthur can reconcile his theory of the relation of Senators and Representatives to appointments with the United States Constitution, as interpreted by several Republican platforms, and notably by that of the Cincinnati Convention in 1876. It may be true, as he says, that the Senators and Representatives are the best judges of the fitness of applicants for office, and that it would have been well if the Constitution had given them the selection of candidates. As a matter of fact the Constitution, for reasons which to the framers seemed good, has not done so. It lodges the duty and power and responsibility of selection with the President, leaving to the Senators the duty, power, and responsibility of judging whether the selection is a good one. This arrangement may be unfortunate, but it stands as part of the organic law. Like many other provisions of that law, many of us may disapprove of it and may think we could substitute something better; but is it not the duty of the officers of the law to obey it loyally in the spirit as in the letter, even if they do not see, as others see, or think they see, the enormous evils which have resulted during the last forty years from disregarding it?

AMERICAN POLICY TOWARDS THE ISTHMUS CANAL.

THE sum and substance of Mr. Blaine's letter on the Panama Canal is a protest against any joint guarantee by the European Powers of the neutrality of the Isthmus, coupled with a declaration that the United States means to establish a protectorate there. This, he says, moreover, is not "the development of a new policy or the inauguration of any advanced aggressive steps to be taken by this Government; it is nothing more than the pronounced adherence of the United States to principles long since enunciated by the highest authority of the Government, and now, in the judgment of the President, firmly inwoven as an integral and important part of our national policy." He declares that any such European guarantee "would partake of the nature of an alliance against the United States, and would be regarded by this Government as an indication of unfriendly feeling." He does not say what we should do in case of such an "alliance," and he expressly disclaims all idea of intending a menace or threat to other nations, pointedly referring to the fact that "our armaments, by land and sea, are kept within such limits as to afford no ground for distrust or suspicion." But it is obvious that if the despatch is to have any effect in the way of deterring the European powers from entering into a joint guarantee, the United States must do something more than warn them that its intentions are peaceful; and accordingly we find in that part of the letter which refers to the treaty with Colombia a definite statement that the traditional policy of the country, which Mr. Blaine says he merely states in an explicit form, involves the assumption by the United States of the position of sole guarantor of the neutrality of the canal:

"It is as regards the political control of such a canal, as distinguished from its merely administrative or commercial regulation, that the President feels called upon to speak with directness and with emphasis. During any war in which the United States of America or the United States of Colombia might be a party, the passage of armed vessels of hostile nations through the canal at Panama would be no more admissible than would be the passage of the armed forces of a hostile nation over the railway lines joining the Atlantic and Pacific shores of the United States or of Colombia. And the United States of America will insist upon her right to take all needful precautions against the possibility of the Isthmus transit being in any event used offensively against her interests upon the land or upon the sea."

The first question that suggests itself with regard to this statement of the traditional position of the Government with regard to the Panama Canal is, whether it is true. To ascertain this, it will not do to take the word of the Secretary of State for it. We must examine the only authentic declarations of policy which the United States has made on the subject, and these are to be found in the treaty of 1846 with New Grenada, to which Mr. Blaine refers, and the Clayton-Bulwer treaty of 1850, about which he is entirely silent. Now as to the first of these, there is not in the treaty one word from beginning to end which gives the idea that the United States entered into it with the idea of becoming the sole guarantor of the neutrality of the Isthmus. The treaty with New Grenada (which became the United States of Colombia in 1862) was a general treaty of peace, amity, naviga-

tion, and commerce. It provided (Article XXXV.) that the United States should have on the Isthmus of Panama all the commercial advantages enjoyed by the citizens of New Grenada, this equality to extend to the passengers, merchandise, and correspondence of the United States. The Government of New Grenada guaranteed to the United States a free right of way across the Isthmus, with an absolute equality of tolls, free from all import duties. Other articles provided for a general equality of commercial advantages between the two countries, and against any discrimination with regard to the ships of either or customs duties. Finally, "as a special compensation for the said advantages," and "for the favors they have acquired by the 4th, 5th, and 6th articles of this treaty," the United States guaranteed the neutrality of the Isthmus and the rights of sovereignty and property of New Grenada in the territory.

There is no language to be found in the treaty which gives color to the idea that this guarantee was intended to exclude New Grenada from getting any other guarantees that she could, or to prevent other powers from also promising that the territory should be neutral. The guarantee was simply, as a lawyer would put it, the consideration for which the United States got the right of way and other commercial advantages. But if there were the slightest doubt on this head, the Clayton-Bulwer treaty would remove it, because the Clayton-Bulwer treaty was made four years later. This instrument is not only inconsistent with, but radically opposed to, the idea of a sole guarantee or protectorate. Its first article solemnly states that "the Governments of the United States and Great Britain hereby declare that neither the one nor the other will ever obtain or maintain for itself any exclusive control over the said ship canal"; that neither power "will ever erect or maintain any fortifications commanding the same, or in the vicinity thereof," or "occupy, or fortify, or colonize, or assume or exercise any dominion over . . . any part of Central America." By Art. II. vessels of both countries going through the canal, in case of war between the two countries, are to be exempted from detention or capture. By Article V. the contracting parties engage that they will protect the canal when completed, and guarantee its neutrality. By Article VI. "the contracting parties in this convention engage to invite any state with which both or either have friendly intercourse to enter into stipulations with them similar to those which they have entered into with each other, to the end that all other states may share in the honor and advantage of having contributed to a work of such general interest and importance." By Article VIII. the two Governments solemnly state that "having not only desired, in entering into this convention, to accomplish a particular object, *but also to establish a general principle*," they will extend their protection by treaty to any practicable route across the Isthmus, whether by canal or railway.

Now these are the only authentic declarations of policy ever made by the United States on the subject, and an examination of them makes it perfectly clear that, notwithstanding Mr. Blaine's statements, it is not true that the policy which he announces is "firmly inwoven as an integral and important part of our national policy." He says that it is the intention of the Government to assume the sole protection of the Isthmus, to the exclusion of European powers, when we are under a solemn treaty stipulation not to erect any fortifications or assume any military control over any part of Central America, and when we have an existing treaty for a joint guarantee with England. As a further indication of the permanence which it was intended to give this joint guarantee, it is worth while to observe here that though the treaty (by Article V.) provided for its termination on six months' notice from either party, this was only in case of the failure of the persons undertaking the management of the canal, *when completed*, to regulate the traffic in the spirit of the treaty. The canal has never been dug, and consequently at present the treaty cannot be terminated in any way.

There is no doubt that the policy announced by Mr. Blaine as that of the late Administration is a better policy for the United States to adopt than that declared in the Clayton-Bulwer treaty. Our interest in the canal is going to prove so great that it will be important for us to undertake a protectorate, and, it may be, an exclusive protectorate. This means, of course, war with any power that interferes in any way with the canal. Our position with regard to the Panama Isthmus is very much like that of England with regard to the Isthmus of Suez; and at one time the necessity of securing the political control of that for Great Britain seemed so strong to Lord Palmerston that he obstructed the completion of the canal in order to make sure of it in advance. It was not a joint guarantee of neutrality, however, to which he objected. The value of this protectorate as to our interests would, of course, be neutralized if the European powers were to undertake a joint police duty with us. But we owe it to ourselves, and to our position as a civilized nation, to come out frankly and say that we mean to tear up the Clayton-Bulwer treaty and adopt this new policy. We are bound, also, to explain to England our reasons for considering a change of policy desirable. Even when such a power as Russia withdrew from the engagements of the Treaty of Paris, which were certainly much more onerous upon her commercially than anything contained in the Clayton-Bulwer treaty can ever be upon us, she announced to the world the reasons for her withdrawal, and did not attempt to persuade anybody that there was nothing new in it.

Mr. Blaine's mistake becomes more apparent when we reflect that the sources of information on the subject of the traditional policy of the United States are just as open to foreign Governments as they are to him. If the United States were an autocracy and its foreign policy were evolved from the brain of the President or the Secretary, Mr. Blaine's way of developing a new policy might be very good. But the foreign policy of this country is a matter of written law and treaty, assented to and proclaimed by certain departments of the Government, and this fact is known in Europe just as well as it is here. Consequently Mr. Blaine, in order to write his despatch at all, was obliged to treat the Clayton-Bulwer treaty as non-existent, and if, in reply to his despatch, England or any other foreign Government enquire how his statement of the position of the United States can be reconciled with the provisions of that instrument, he will have no answer to make; and this will not improve the position of this country—it will make it awkward and embarrassing.

THE ELECTIONS IN GERMANY.

The results of the elections to the German Reichstag are not yet sufficiently known to permit an accurate estimate of the relative strength of parties and "factions" in that body. The circumstance that in the constitutional system of Germany the composition of the Administration is usually not affected by parliamentary majorities, has prevented the division of political forces into two great parties contending for the possession of power, as is the case in England. The stake in an election being less than it is in a country where parliamentary government, or government with an elective executive, prevails, people will be apt to attach less importance to the building of large and powerful party organizations, and will therefore be more apt to split upon minor questions of principle and policy. Hence it is that in Germany there are half a dozen or more parties, none of which is strong enough to command a majority of the Reichstag, or to carry a vote except by combination with other parties or factions.

It has therefore been the business of the Government represented by, or we might almost say embodied in, the Imperial Chancellor, Prince Bismarck, to effect such combinations as were necessary to carry its measures through the Reichstag. In his endeavors to construct a reliable majority the Chancellor has resorted to the most startling changes of tactics. At the time when the building up of the empire required that popular spirit which, where the army is drawn from all classes of the people, is so great an aid to military action, Bismarck leaned principally upon the National Liberal party, which, representing the intelligence and aspirations of the middle classes, at that period was the most popular and the strongest. That party demanding ministerial responsibility and constitutional government in the English sense, his dependence upon its support became irksome to Prince Bismarck, who, as a natural-born autocrat, wanted to make the Emperor's Government as free as possible from parliamentary restraints, and to have his own way generally. He therefore gave up his alliance with the National Liberal party—which in the meantime had greatly discredited and weakened itself in popular estimation by its pliability in making concessions of principle to accommodate the Chancellor—and turned his face towards the conservative elements whose views of government were more congenial to his own, and out of which he expected to form a more compact and available majority in the Reichstag.

To effect this he had to change not only his political associations, but also his policy in the larger sense of the term. When he leaned upon the National Liberals he was a free trader; he asserted with emphasis the su-

periority of the State over the Church; he favored reforms in the way of municipal self-government, and so on. With the Conservative alliance came the necessity of winning the favor of the small landed nobility, of the manufacturing interests aspiring to become "monopolies," and of the Catholic Church. The free-trade policy was therefore thrown overboard, and one of protective duties substituted; the system of taxation was kept as much as possible in harmony with the interests of the landholders, and concessions were made to the Catholic Church in order to end the "Kulturkampf" and propitiate the Catholic vote. An effort was even made to bring about a combination which seems to involve a paradox, but has shown itself practicable to a certain extent more than once in the history of the world—viz., a combination between the "prolétariat" and the autocrat. Bismarck's startling measures of "state-socialism," with his project for the support of disabled workingmen at the public expense, pointed that way.

This time the Government seems to have made an unusual effort to carry the elections in the Conservative interest. The absurd and disgraceful agitation against the Jews was permitted to continue for a considerable time without encountering any energetic measures of repression. The official and "inspired" press proclaimed loudly that every vote cast for a Liberal or against a Conservative candidate was a vote against the Emperor. The tone of newspaper articles and speeches on the Conservative side was violent in the extreme. The official influences of the Government were exerted to the utmost limit of legal possibility. One of Bismarck's sons went "on the stump" and was one of the most vehement of campaign speakers. But all this seems to have been in vain. Although it is doubtful what the exact strength of the opponents of the Government in the Reichstag will be, it appears certain that the efforts to elect a reliable Government majority, or the elements out of which such a majority might be formed, have failed completely. One of the most gratifying results is the utter rout of the Jew-baiters. All the prominent leaders of the Opposition have been re-elected in the city of Berlin; and generally at those points where the exertions of the Conservatives backed by the Government were greatest, the defeat is most crushing.

As to the consequences of this event, it may be said that, according to the constitutional system of the German Empire, they will not consist of any change in the *personnel* of the Government. It is a hard blow to Prince Bismarck, and, as he has grown more nervous with advancing years, it may possibly lead to some violent resolutions. But this is by no means as certain as that he will stick to the measures he has mainly at heart, such as the tobacco monopoly, his workingmen's insurance, the limitations of parliamentary power with regard to the appropriations of money, etc., and devise some plan of advancing them again. To this end he may think a speedy dissolution of the new Reichstag necessary, or perhaps for a while try again the effectiveness of that personal charm which so often has aided him in forming political combinations, and may again have to do service in a new change of tactics.

THE VINDICATION OF CEDARSWAMP.

A WELL-KNOWN Boston publishing firm has, it seems, got into trouble by publishing a novel in which the characters not only are drawn from real life, but are given their real names. The novel is not a novel of society, the characters being natives of a small hamlet on Cape Cod called "Cedarswamp." The author is Miss Sally Pratt McLean, and is described by a local authority as an "attractive, handsome blonde, about medium height, as graceful in her way as she is bright and charming in her intellect." Whether it was the brightness and charm of her intellect, or her extreme youth and inexperience, which caused her to introduce into 'Cape Cod Folks' all the most eminent and prominent inhabitants of Cedarswamp, we do not know. But there they all are; and as the book has met with a great success, they have all earned through Miss McLean's novel a fame which their eminence and prominence in Cedarswamp would never have given them elsewhere. They have, as a Boston critic puts it, become "historic persons." This same critic, in a tone which in some parts of our common country would be called decidedly undemocratic, declares that the Cedarswampians take "what may be called the peasant's view" of the matter; the "peasant's view" of the matter being, as every one who is familiar with the American peasantry—or for that matter, the peasantry of any country—knows, to work a little village incident of this sort "for all it is worth."

This view, however, they did not take spontaneously, probably because no such opportunity had ever presented itself in Cedarswamp before. Fortunately there were friends at hand to suggest it to them—benevolent members of the bar, lawyers such as still are to be found in every community, who, when they hear of a crying case of injustice and wrong, do not wait for the formality of a retainer, but call the attention of the injured person to the wrong of which he is the unconscious victim, and stimulate in his sluggish mind that desire for litigation by which alone it can be redressed. Such seems to have been the history of the Cedarswamp case. The "peasantry" were at first inert; but at length they were brought to see that they were neglecting an opportunity such as they might never have again, and letters were written to the publishers protesting against the use thus made of their names, and demanding pecuniary compensation for the injury to their feelings. These were followed by a letter to the publishers signed by the Attorney-General of the State ("in his capacity, however, of a member of the legal fraternity"), which we are sorry to be obliged to state was "couched in such terms as to be considered by the firm unworthy of answer." What the next steps taken were is not stated, but when we hear that the matter has been "recently revived," after what is called "the quiet action of some new parties not directly interested in the affair," by the institution of four suits against the publishers for $30,000 damages, accompanied by the hint that these suits will be followed by similar proceedings on behalf of every character represented in the book, we unquestionably see in the result not merely the effect of the "peasant's view" of the subject, but also of that enlightened legal benevolence which the study and the practice of the law sometimes promote.

It is startling to learn that all this trouble arising from the use of the names of the eminent Cedarswampians at once stimulated the sale of the book, that the entire edition published was eagerly taken up, and that soon not a copy was procurable at any price. Miss McLean became suddenly famous, and the publishers went to work to correct their mistake by changing radically every name in the book, "substituting others of equal length in the plates." By and by this new edition too will be published and no doubt will have a great sale.

As when some energetic prima donna or actress arrives with all her trunks at a great musical or theatrical metropolis, and her quiet apartments are invaded by the burglar, and her truly immense collection of diamonds or dresses is carried off, cynical and suspicious men of the world are always apt to suggest that, like Mr. Dickens's celebrated victim, she "did it herself" with a view to the increase of her notoriety and income, so too of course the cynical and suspicious will imagine that the impending litigation over 'Cape Cod Folks' was foreseen by Miss McLean, or the publishers, or both; that having witnessed the immediate success of novels of London life, such for instance as Lord Beaconsfield's 'Endymion' (which we venture to say, without having an opportunity of comparing the books, is distinctly inferior to 'Cape Cod Folks'), in which real characters, slightly disguised, are supposed to be introduced, it occurred to them that the sale of a book would be still further promoted by having characters with their real names; that the "peasants" and the benevolent lawyers who advise them also foresaw that, though there might be no chance of recovering damages in such a case, the litigation could not but be of great benefit to Cedarswamp and indirectly to the "peasants" who live there; that crowds would be attracted there during the summer, who would come with money in their pockets and spend it freely among the peasantry, desiring to see Cedarswamp and the peasants for themselves; that the publishers foresaw that the sale of the book might be greatly increased by the probable litigation that the use of the names would cause, and that the substitution of fictitious names would not injure it as long as the real names were already known.

We are sorry that civil libel suits for the vindication of character, particularly literary libel suits, should have fallen into such bad repute as to suggest such suspicions as these. But the truth must be spoken. While no hopeful or progressive man will like to think any of them well founded, what we desire here to point out is, that should the cases ever come to trial these suspicions will all be suggested to the jury by the learned and benevolent counsel on both sides, and that the trial, admirably as it no doubt will be conducted, will be much more likely to lead to the pecuniary benefit of everybody connected with it than to the cessation of the practice of putting real characters into books. People who do not take the "peasant view" of the matter will probably see that locking the blonde author and her publishers in jail for a short period, together with a perpetual injunction against the sale of the book, would probably be a far more effectual way of making them feel the sacredness of private character, and the case will probably still further tend to make civil proceedings for its vindication by an award of damages seem ridiculous.

TUESDAYS AT THE FRENCH THEATRE.

PARIS, October 14, 1881.

I REMEMBER the time when the Théâtre-Français was always half empty; when the heroes and heroines of classic tragedy seemed to move on the banks of the Styx; when even the comedies of Molière seemed unreal and wanted life. How different is our French Theatre now! I am one of its most faithful customers, and for years I have always found it full, even in the warmest days of summer. The railways have something to do with this new state of things; wave after wave of provincials and foreigners

rolls perpetually over Paris. Still, there was a time when provincials and foreigners avoided the French Theatre as carefully as the Parisian himself. Paris sets the fashion, which is afterwards followed by the provinces and by all Europe. And why has Paris returned to the Théâtre-Français? Why is it more eager to see a new piece performed there than in any other theatre?

The answer to this involves almost a social question. I must of course do justice first to the admirable management of M. Perrin, the present director of the French Theatre—a gentleman possessing not only a very high culture, in every sense of the word, but very rare administrative faculties. It is not easy to rule over a world of comedians. The comedian is the most sensitive sort of creature, made up of vanity and jealousy; he would not be a comedian if he were not a highly nervous, touchy, emotional, irrational sort of a man. He has no will of his own, except when he deals with his director, and then he becomes very wilful; he plays so many characters that he becomes very fanciful; he feels the world's contempt under its admiration, and he becomes revolutionary, impatient of rule. The greater are his parts, the meaner become his instincts. Talma was *Cæsar* in the evening, and a beggar the next morning (see the 'Memoirs' and 'Letters' of Madame de Rémusat). A quiet, sensible man, fond of repose, would rather go into the lion's den than be thrown among the passions of a troop of comedians.

I must also do justice to the wonderful talent of the troop which has sustained the French Theatre for ten years. I leave out, on purpose, Sarah Bernhardt. She cannot be measured by common rules. She can say: "Moi seule, et c'est assez." She could and would draw multitudes in a desert. She is incomparable, as Rachel was. But since, in a moment of folly, she abandoned the French Theatre, the destinies of the theatre have not changed; the house is every evening as full as if we could hear her silvery voice, watch her harmonious attitudes, and lose ourselves in the admiration of this extraordinary human flower—so ideal, so unreal, so different from vulgar and coarse humanity. The troop of the Français, even after her departure, is self-sufficient; it forms a solid phalanx of talents of the most varied sorts. Behind the greater stars are smaller stars, and behind them there is a sort of nebulosity of perfection carried into the most minute details. The old actors of the Français who play the servants, who open the doors, who bring letters, are absolutely perfect; they are like pictures—they can walk as people did walk in past ages; they move and bear themselves according to the time, to the place. The sensation—it is a sensation more than an impression—which I always experience at the Français is a sort of material comfort, arising from a perfect harmony of all the details, a certain ease, a quiet and perfect conformity between the action and the passion, between the central figures and all their surroundings.

There are, however, deeper reasons for the marvellous prosperity of our histrionic high school. The most serious of these reasons must, in my opinion, be found in our home politics and in the eclipse of French society. France presents at this moment a curious phenomenon: the political primacy is absolutely divorced from the social primacy. It is quite evident that an aristocracy, after having for centuries founded itself on birth, on war, on power, on influence, can be deprived of all its privileges without losing the power of imagination which remains attached for a long time to great names and to great memories. If the English aristocracy were deprived, in the course of time, of all its privileges; if the House of Lords were suppressed; if primogeniture and the law of entail were abolished; if the patronage of the higher classes were suppressed; if the monarchy were changed into a republic; if no names could be found in the House of Commons except names actually unknown—the social primacy would nevertheless remain for a long time in the descendants of the aristocratic classes. There would be found places and houses in London, in the provinces, where conversation would be carried on as it is now, where the objects of interest would remain the same—schools of worldly wisdom, and elegance, and self-restraint; schools for all the qualities, all the real or conventional virtues which now constitute the gentleman. In fact, the gentleman would survive the aristocrat; virtue and intellect would survive power.

I have made an almost absurd supposition for England, but it will better illustrate what I said of the divorce which exists in France between social and political supremacy. There is still here a large and brilliant class which considers itself the first, socially speaking; but it has for a long time been deprived of political power. This class is homogeneous in one sense only, as many revolutions have made distinctions in it. The Legitimists, the Orleanists, the Bonapartists form so many different worlds. You cannot find in Paris what you find in England—a compact society, where, under the frail denominations and distinctions of Conservatives and Liberals, the same ideas and interests prevail. It is very far from the "noble faubourg" to the *salon* of Princess Mathilde; very far even from some purely Legitimist houses to the houses of the rich Orleanists. Society is divided into coteries, and there are in reality very few *salons* of the old type, like that of Madame Récamier or of Madame de Staël. Young people will dance and be married, and there must be dancing-parties; but the social tie is getting more and more loose, and this disposition is extremely favorable to the theatres.

M. Perrin has instituted weekly representations, at which the places are let for the winter season. In the absence of all worldly gayeties, the French Theatre becomes in this way momentarily a kind of *salon;* people agree to meet there; they see each other every Tuesday evening; every box becomes a little centre. This fashionable Tuesday audience is much dreaded by the artists, as it is not demonstrative. Our best theatrical critic, M. Sarcey, who writes the dramatic *feuilleton* of the *Temps*, has attacked it very bitterly. He finds it dull and almost stupid; he complains of its absurdities and its manias. But the absurdities and even manias of society are accompanied by peculiar qualities. Society—that is to say, French society—cannot bear exaggeration, ranting, screaming; it abhors vulgarity in words, and even more in manners; it likes simplicity, what we call *naturel;* it forces the actresses to behave like ladies, and the actors like gentlemen. If there were no other public, there would be some danger that the Théâtre-Français might become a little insipid; but there are seven days in the week, and each day brings its tide of foreigners, provincials or meridionals, who laugh loudly and cheer with enthusiasm. Season tickets have only been tried twice at the French Theatre—in Talma's time and at the present moment. Experience has been favorable to them. The system which makes a public of permanent judges, coincides with the remarkable financial prosperity of the Theatre. The most curious characteristic of the present public is its eclecticism. No literary system now dominates: we are neither Classic nor Romantic; we can enjoy equally Racine and Victor Hugo, "Andromaque" and "Hernani"; we can even enjoy "Œdipus Tyrannus," which is now having an extraordinary success. We go from Molière to Alfred de Musset, from Musset to Alexandre Dumas, from him to Pailleron. We enjoy the "Monde où l'on s'ennuie" as keenly as we do the "Mariage de Figaro." It would not be very easy to explain the reason of this curious indifference, or rather optimism; I cannot remember a time in our literary history when it was so complete. It seems as if every spectator had become a mere mirror; we want perceptions, sensations, be they what they may. The French Theatre has found in this disposition the means of giving great variety to its *répertoire*.

Correspondence.

THE IDEA OF GARFIELD.

To the Editor of The Nation:

Sir: Permit me to say a few words by way of reply to the communication in the *Nation* for Oct. 13, entitled "The Idea of Garfield." One of the most difficult things that the mind has to contend with, in arriving at a correct conclusion, is the strong bias given to it by what we might term the egotism of conception. By this I simply mean that delirious joy by which a certain class of minds, with a marked tendency to introspective and self-centred thought, find themselves overtaken when they have suddenly and accidentally come upon what they suppose to be the solution of a much-mooted question. I fancy that I perceive a touch of this in "W. W. T." His article is stamped with all that excessive zeal and ardor to prove, that marks the special advocate of an idea. I would not for a moment question the integrity or sincerity of his motive; but it is quite evident that he comes to his task with a theory to demonstrate, and that this theory has taken possession of his mind to the exclusion of all things else. Not content with maintaining that President Garfield had the general interests of his party and the country at heart, he endeavors, by a very elaborate and chess-board process of reasoning, to establish that the President constituted himself the special guardian of civil-service reform, and that he set out, with cold calculation and all the wiliness of his nature (!), to undermine Conkling and drive him from the political arena. Of course Conkling *supposed* that he was resigning from his own free will, but that was all a hideous mistake; he was the victim of a most artfully-contrived conspiracy. All this your correspondent asks us to believe without qualification or allowance. But it is too mathematically correct, too abstractly logical, to adapt itself to an ordinary chain of circumstances. As a specimen of intellectual dexterity in the arrangement of facts, so as to force a desired conclusion, it is admirable. It reminds one of those marvellous feats of ratiocination that Poe used to indulge in—unravelling the mysteries and deciphering the cryptograms of his own making.

Deception, scheming, and calculation, however, are not traits of character that the public have been accustomed to associate with the name of Garfield; and that he should accept the services of Roscoe Conkling in a political campaign; that twice during that campaign he should recognize him by no less an act than an invitation to the hospitality of his own roof; and then that, having attained the Presidency, partly through the efforts of Conkling, he should set about with craftiness, "deliberateness of purpose," and an Iago-like callidity, to crush

him—is more than Garfield's most implacable enemy would assert. The simple truth is, that the writer, in his zeal to prove his point, has proved too much. But, since he has raised the question, let us calmly and dispassionately review the most prominent nominations made by the President, and see if we can ascertain from them what his exact relations to civil-service reform were; for this is the only method by which we can judge men, and certainly no one can object to facts and the truths which they establish, if the facts are not distorted nor presented in a captious or churlish spirit. And first comes Stanley Matthews. When his name was sent in by Hayes the better portion of the press opposed the nomination, and it was afterwards conceded that the Senate had practically rejected him by allowing his name to lie over without taking action upon it. But one of the first acts of the new President was to return the name of Matthews to the Senate. He was finally confirmed by a bare majority of one, and then only by the aid of Democratic votes, receiving but an insignificant number from his own party. According to the general method of judging of appointments, the nomination of Wm. E. Chandler would be attributed to the influence of James G. Blaine, of whom he is a warm friend and admirer. We will not plead this, however, but look merely at his political character. It is no secret that Attorney-General MacVeagh, one of the most conspicuous civil-service reformers in the country, threatened to resign his position in the Cabinet if Chandler should be confirmed; and George F. Edmunds, the leading Republican in the U. S. Senate, rose from his seat in that body, and in a speech in which he denounced Chandler as the prince of wire-pullers, lobbyists, and of political legerdemain, stated positively that he would resign the chairmanship of his committee if the name of Chandler should even be *reported* to the Senate for confirmation. It is needless to say he was rejected.

But the name which was indirectly the means of stirring the political cauldron to its depths as it had never been stirred before, by a nomination at least, is that of Robertson, Collector of the Port of New York. Here, again, if we were to apply the principles generally used in judging of appointments, we should have to say that Robertson's appointment was a reward for political services. And why? Because he was one of Blaine's most prominent advocates in the Chicago Convention, and it was largely due to the defection in New York, of which he was the leader, that the nomination of an anti-Grant man was made possible. But would Robertson's nomination have been in accordance with the principles of civil-service reform, aside from any political consideration that may have been contained in it? I think not, and for this very simple reason, that there was not a particle of cause for the removal of Merritt. His term of office was but half out, he had given excellent satisfaction, and the great body of New York merchants protested against his removal, as did also Postmaster-General James, another noted civil-service reformer. But the defenders of this nomination say: "Merritt was not injured, for he received another appointment; Robertson was honest, and Garfield was pure." Granted. But the objection of civil-service reformers has been, not that each individual who was appointed in accordance with the principles of the spoils system was a thief and a knave, but that the method of appointment itself is corrupting and pernicious. Admit that men like Garfield need not be bound by any rules or regulations in their appointments, because they are pure, and you will be compelled to grant the same privilege to others who may be less careful in exercising it.

What I have said concerning these appointments is not intended in any way as a defence or an apology for Conkling, nor in derogation of the character of Garfield, but simply what I conceive to be the true state of the facts. I agree with "W. W. T." that "a nation needs models." But what it needs as much, if not more, is a correct conception of the lives and acts of its public men; for their lives and acts go largely to make up the nation's moral history. As a nation we cannot look facts too plainly in the face; we cannot afford to allow our sympathies and our sense of gratitude to mislead us in the estimate of our public men; we cannot afford to establish false standards, to quibble with truth, or to juggle with virtue. James A. Garfield had his faults, as all men before him have had theirs, but they were chiefly of a negative and not of a positive character. While many of his appointments were not in accordance with the principles of civil-service reform, yet it is more reasonable to suppose that these were made because he found it difficult to break with the party leaders, and to escape from the importunity of friends, than that they were made for the purposes of self-aggrandizement and to obtain power. Garfield, being of a very generous disposition, would find it peculiarly difficult to deny his friends. He intended and desired to do all things for the best, but he was "too full o' the milk of human kindness to catch the nearest way." L. C. H.

Iowa City, Iowa, Oct. 24, 1881.

A HIGH SCHOOL AND ITS MORAL.

To the Editor of The Nation:

Sir: I have taught in a high school two months. In that time I have made several discoveries—I mean they were discoveries to *me*. I came out of college last June, knowing that I was to fill this position. I had no "experience" nor "methods" when I entered "the work"; I had done some thinking, and had a few notions about teaching. The chief one was that if I made the studies interesting, other matters would right themselves. I worked hard, and succeeded in getting thoroughly enthusiastic myself. I found, however, that my classes were by no means unanimous in *their* enthusiasm. I was puzzled; I did not consider myself wholly to blame; for there were a number who had been listless at first who were most animated now. I went to old teachers who had had "wide experience." I stated as clearly as I could my trouble, and asked for an explanation. With a smile that made me feel as if they had patted me upon the head and addressed me as "Sissy," I was told that I should soon "get used to that—all teachers did"; "there were some children that could never be interested in anything"; after I had had more "experience" I should learn to accept this as an unavoidable evil. I was sceptical; I tried a little harder to be entertaining. My History class were studying about Egypt. It was dry for me, very stupid to them. Lessons dragged. We began to read aloud from Ebers's 'Egyptian Princess.' We had only half an hour a day for this, but it produced a marked change in the majority of the class. They were not suffered to take the book outside, and I found that the text-book lessons were recited with an astonishing velocity, so that a few minutes might be secured for the 'Princess.' However, there were several of the class who sat dreamy-eyed and passive, smiling in polite amazement when the rest of us became excited over our reading.

I have also a Natural Philosophy class. One day we learned that "nature abhors a vacuum." I thought of the minds of some of my nonchalant scholars; I concluded that nature must abhor a mental as well as a physical vacuum. Still believing that these young people were interested in something, I set myself to find out what that something might be. One of my notions was that the way I used to write compositions was all wrong. Like most children, my subjects, if not abstract nouns, were reversed and revised quotations from cyclopædias and histories, cradled in a few moralizing ideas abstracted from my mother or big sister. I spent much time talking with my scholars out of school-hours, and, as I like things that boys and girls like—such as jig-saws, base-ball, china-painting, and the *St. Nicholas*—I soon found what was nearest the hearts of many of my boys and girls, and I made them write of these things.

I was still baffled by the same *dolce-far-niente* scholars. Light was poured in upon my dim understanding one day in the shape of a pink-tinted, gilt-edged, perfumed note breathing words of love from a girl of fifteen to a boy of seventeen. I was no longer mystified. How could a girl of fifteen have any room for the pyramids of Egypt when her mind was overflowing with an absorbing passion? Had we not advanced a step further in physics, and learned that no two bodies can occupy the same space at the same time? I took observations, and convinced myself that here was one source of my trouble. I thought: "If this matter begins in the high school, I must find some way to nip it in the bud." I began to investigate. The Grammar grades seemed familiar with the "old, old story"; it did not appear to be a new thing in the Intermediate departments. I had occasion to leave the building one noon earlier than usual. The Primary school had just been dismissed. A group of small boys, averaging seven or eight years of age, were leaving several small girls. One youth of six, holding up a scrap of paper covered with a child's scrawling attempts at printing, called out, "Say, what 'd you give for your *love-letter?*" A blushing maiden of *five* turned around and in somewhat indistinct accents expressed her displeasure. At the same moment another young gallant rushed up, tore the letter from the hand of the first boy, administering a vigorous kick, and valiantly enquired if "he'd bother 'his girl' any more?" Two other small girls were walking lovingly side by side. One was overheard to remark: "Whose *your* beau? Mine is," etc.

Now I do not believe that this "childish nonsense" is harmless, and that girls and boys get "over it." I know that it will do no good for me to enter the lists against my high-school Cupid; but won't somebody with a wiser head than mine try to convince the fathers and mothers that our public schools—of which we are justly proud—are nourishing an evil that it does seem to me is one great cause for a great part of the useless lives and loose morals in the country? I mean the primary grades as at present managed in many schools. I have taken some pains to get statistics, and in the majority of the public schools I find that the most crowded departments are the primaries, frequently averaging sixty children from five to nine years of age. It is plain no teacher has time to find out each child's character. It is no new idea that one "knowing" child can instruct a dozen innocent children in matters concerning which they should remain in perfect ignorance until instructed by their mothers. I could give dozens of conversations that I have heard among the children themselves that shocked me, and, I cannot but think, would surprise these babies' parents were they to become aware of what their little children were talking about.

If our lowest grades were turned into kindergartens, with a carefully-chosen teacher for every fifteen or twenty children, who were with

these children constantly until they were safe in their respective homes; who played with them, studied with them, watched their talk, and, more important still, found out what the little ones thought about, would not that do something towards making the matter right? Of course it would make the school-tax larger, for larger salaries would be required for such fine work. But if there must be retrenchment anywhere, abolish or lower the grade of the high school, I think, rather than spoil the children. Let the "old" teachers of "wide experience" go into the lower grades, and let us girls fresh from college teach where any mistakes we may make will not cause irreparable harm.—Respectfully, L. M. F.

Owosso, Mich., Oct. 26, 1881.

MUNICIPAL ECONOMY IN PRUSSIA.

To the Editor of The Nation:

Sir: I should like to call the attention of some of the writers for the *Nation*, or of any students of finance among your readers, to a publication of the Royal Statistical Bureau at Berlin. It is entitled 'Beiträge zur Finanzstatistik der Gemeinden in Preussen.' It was prepared by L. Herrfurth, a privy councillor, and contains a great mass of interesting information in regard to the municipal economy of Prussian cities and towns. Among other matters, it presents in tabular form, for the year 1876, the income and expenditure of all Prussian towns of 10,000 inhabitants or more, carefully itemizing the various accounts. One table shows clearly the enormous increase in expenditure of the various municipal governments from 1869 to 1876. It reveals a truly American rate of progress, and proves that the increasing extravagance of American cities during the years 1865–1873 was fully paralleled a few years later by European cities. The sums raised by taxation in thirty-two cities of the above class were as follows:

In the year 1849	9,088,335	marks.
" 1860	26,787,870	"
" 1876	49,064,851	"

The expenditure of Berlin grew from 2,774,928 marks in 1843 to 11,935,644 marks in 1869, and to 20,117,586 marks in 1876. An immense increase in the amount devoted to education is noticeable in nearly all cases. Only forty-one municipalities, however, support free schools for all classes. In many places the income from school fees forms a large part of the sum expended for education. The following table shows the amount expended by the cities and towns in the above class (during the year 1876) for the various purposes mentioned:

1. For police	12,371,000	marks.
2. " water, gas, streets, etc.	18,217,000	"
3. " care of poor, public health, etc.	5,775,000	"
4. " education	32,027,000	"
5. " municipal debts (sinking fund, etc.)	19,350,000	"

The sources of income are quite as interesting. The whole Prussian system of municipal finance can be studied to advantage by those who are aiming to improve our own. Although their actual system is far from satisfying either their theorists or practical men, yet it possesses many features which we might adopt. A general and vigorous discussion is now going on in Germany in reference to municipal taxation, and it is well worth our while to heed it. I hope some contributor to the *Nation* will undertake to give us a summary of the main points and authorities in the discussion.—Respectfully yours,

E. J. James.

Normal, Ill., Oct. 23, 1881.

Notes.

A. D. F. Randolph & Co. have in press an autobiographical sketch by the Rev. Titus Coan, entitled 'Life in Hawaii.' Mr. Coan has been stationed at Hilo since the year 1835, and his recollections cover a varied experience as well as a long one, including that of two visits to the Marquesas Islands, with some new facts relating to the *tabu* system. His account of the Hawaiian volcanoes, which are a sort of pastoral charge of his, inasmuch as Kilauea lies within his district, is brought down to the eruption of the present year.——G. P. Putnam's Sons add to former announcements the following works: 'Opium Smoking in America and China,' by Dr. W. H. Kane; 'The American Citizen's Manual'; the "popular poem," 'Your Mission,' in an edition illustrated by Ellen H. Gates; 'A Text-book of Kant,' by J. H. Sterling; 'The New Infidelity,' by A. R. Grote; 'The Art of Voice-Production,' by A. A. Pattou; 'The Science and Practice of Medicine,' by Prof. Alonzo B. Palmer; and a series entitled "Science Ladders."——Fords, Howard & Hulbert will publish in a single volume the Rev. Henry Ward Beecher's 'Yale Lectures on Preaching' for the years 1873–4–5. Mr. Beecher, who, as his successor says, has done "so much to turn religion in Protestant America from a fear into a hope and a love," has just relinquished his editorial relation to the *Christian Union* in favor of the Rev. Lyman Abbott, who has long "had the whole practical management of the paper."——Thomas Whittaker is about to publish a third edition of Bishop Littlejohn's 'Conciones ad Clerum,' with a very full table of contents epitomizing each *concio*; and a new edition of Dr. Shelton's 'Rector of St. Bardolph's,' now out of print.——A new edition of Walt Whitman's 'Leaves of Grass,' with additions and a portrait, will shortly be issued by J. R. Osgood & Co.——Estes & Lauriat, Boston, indicate by a first catalogue of old books their intention to open a new department in their business.——Chatto & Windus, London, announce 'Prince Saroni's Wife' and other stories (3 vols.) by Mr. Julian Hawthorne, and English editions of Mr. Wheeler's 'Familiar Allusions' and Mark Twain's 'Prince and Pauper,' neither of which has yet appeared here.——The current issue of *Le Livre*, noticing Rudolph & Klemm's (Zurich) "English Library," to consist of the best works in English and American literature, says the following beginning has been made: Mark Twain's 'Sketches,' Scott's 'Lay of the Last Minstrel,' Goldsmith's 'She Stoops to Conquer,' and Marlowe's 'Faust,' which can at least be called a chronological collocation and gradation. *Le Livre* also states that Turgeneff has written tales for children against the coming New Year's.——Catalogue No. 77 of Otto Harrassowitz, of Leipzig, is wholly devoted to Shakspere and his times. Its 270 numbers are all, or nearly all, from the library of the late R. Gericke, of Leipzig. From a third to one-half of the volumes are in English. A glance down the pages of this catalogue reminds us that Freiligrath translated the Sonnets of Shakspere into German, and Herr Bodenstedt paraphrased "Venus and Adonis." A line in Greek text catches the eye, and informs us that a translation of "Hamlet" was published at Athens in 1858.——*Art and Letters*, a new monthly illustrated magazine of fine art and light literature, has been started by Remington & Co., the London publishers of *L'Art*, from which publication the illustrations of *Art and Letters* are to be taken. The October number contains brief essays on "J. F. Millet," "Modern Caricature," "Venetian Lace-Making," and "Frederick Walker," and half a dozen full-page engravings and a dozen smaller cuts, with here and there an initial or a tail-piece. *Art and Letters* is about the same size as *L'Art*, and the monthly part contains thirty-two pages, with an inserted engraving printed on heavier paper. The appearance of the new periodical is promising, and its material aspects—type, paper, press-work, etc.—are delightful.——Koolman's 'Wörterbuch der Ostfriesischen Sprache' (Norden: Braams) reaches the word *Lomig* with its thirteenth part. In regard to the deliberate appearance of this thorough work, we may use the East-Frisian proverb, "Bäter lât as hêl ten," or in plainer English, "Better late than never." The present instalment, by the way, is rather less suggestive of kinship with our mother-tongue, and its proverbial store smaller, than customary. "Live and let live" has the Teutonic guise of "Man mut läfen un läfen laten." A quaint saying is "Laten is gôd tegen 't hangen," *i. e.*, Hands off is good against hanging (for theft).

—The Century Co. have brought out a volume of 'Selected Proofs' from the first and second portfolios of illustrations reproduced from *Scribner's Monthly* and *St. Nicholas*. They therefore stand in no need of praise, but as the present collection is designed for more general purchase, it will be well to say that there are, counting a tail-piece, 58 engravings in all; that about 23 of these are portraits, and that 20 are from the graver of Mr. T. Cole—a sufficient evidence that the popularity of subject which has determined the editor's choice does not imply a low degree of the art. Indeed, the portraits of Poe, Modjeska, the Countess Potocka, and Savonarola, and the kindred subject of a Russian nun, are likely to remain classic specimens of the art of wood-cutting. Mr. Kruell's Walt Whitman is not behind these. It is pleasant to meet again Vedder's "Young Marsyas," Dubois's "Charity," Whistler's Mother, Homer Martin's "Walden Pond," and Thayer's sunny "Autumn Afternoon in the Berkshire Hills" (all by Cole); Martin's "Whittier's Birthplace" (F. S. King); and the "Swedish Queen Mother" (W. Closson), to mention no others.——John P. Soule, Boston, sends us a new game of "Artists and their Masterpieces," certainly a great improvement on the rather dull exchange of authors and their works. There are two sets of photographs mounted and neatly boxed, cabinet size, after five of the principal works of each of the following artists: Fra Angelico, Da Vinci, Bellini, Michael Angelo, Titian, Raphael, Correggio, Andrea Del Sarto, Paolo Veronese, and Guido Reni. Each card bears a list of the five to be "called," and one gives also the artist's name, city, and life-span. The photographs vary in merit according to their being taken more or less directly from the original canvas. To choose from Michael Angelo was particularly difficult, and every admirer would have something to criticise in anybody's selection of five specimens. The game will accomplish its end of enlarging art knowledge and forming taste.——Mr. Pach, 841 Broadway, has published two photographic souvenirs of the late national tragedy—a portrait from life of President Garfield, whose only fault is an excess of smoothness, and a view of the Francklyn cottage at Elberon.——When Messrs. Ginn & Heath, Boston, published the 'Elements of the Differential Calculus,' by Prof. W. E. Byerly, of Harvard, the *Nation* expressed the opinion that the work treated the elements of the integral calculus to a sufficient extent to have justified the author in making some mention of the fact upon his title-page. The appearance, from the press of the same publishers, of a separate treatise by the same author on the 'Elements of the Integral Calculus,' sufficiently accounts for

the omission. The two volumes form a very complete treatise on the calculus. Those who have studied the differential calculus in Prof. Byerly's first volume will of course find it greatly to their advantage to study the integral calculus in his second.——John R. Anderson & Co., New York and Chicago, publish a new edition of Roget's 'Thesaurus,' wholly reset, and edited with much intelligence by the late author's son. The system of cross references has been greatly enlarged, and the index so improved as to save one who consults it from turning to the text in, it may be, the majority of cases.

—The Dante Society, of Cambridge, Mass., are now ready to begin printing the hitherto inedited Latin comment on the "Divine Comedy," composed by Benvenuto da Imola a little more than fifty years after the poet's death, and therefore possessing exceptional value in the long list of commentaries. An exact copy has been made from the MS. now in the Laurenzian Library at Florence, and the work is expected to make three handsome octavo volumes of five hundred pages each, at a price of five dollars per volume, payable on delivery. If the requisite number of subscribers be obtained, the Society's hope is to issue the first volume before the end of 1882. Names may be sent in to Mr. John Woodbury, secretary, or to Mr. Justin Winsor, librarian of Harvard University; from Europe, to Trübner & Co., London.

—The very extensive Oriental and linguistic library of the late eminent Professor Benfey, of Göttingen, is for sale; and, in conformity with wishes expressed by himself, his family would especially rejoice to see it purchased as a whole by some institution in America. The opportunity is one to be taken advantage of, the collection having been pronounced by a competent authority to be "of rare completeness." Particulars may be learned of the family.

— Hardly any form of literary productiveness would seem more thankless than a genealogical dictionary. It has no allurements for continuous reading; it baffles the reviewer; it brings no profit to the pocket of the compiler—certainly none that will bear a moment's comparison with the toil, and generally money, bestowed upon it; in the nature of the case public gratitude for it is a posthumous reward. Most of these considerations hold good in the case of Savage's Dictionary, the Bible of the New England genealogist; all of them are pertinent to the late Mr. Teunis G. Bergen's 'Register, in alphabetical order, of the Early Settlers of Kings County, Long Island, N. Y., from its First Settlement by Europeans to 1700' (Bay Ridge, L. I.: Van Brunt Bergen. 8vo, pp. 452). The indefatigable compiler unhappily passed away in the midst of his labors before the volume was quite through the press. His 'Register' is an uncompromising roll of pioneers, of course mainly Dutch, sparsely lighted up with facts serving either to distinguish the individual or to illustrate the primitive times. There are, for example, few as picturesque figures as Nicholas Albertsen, suspected to be the one of Flatbush who "made his mark to documents in 1689," and who at all events was well marked himself, being "sentenced in 1658, for deserting his ship and betrothed bride after publication of banns, to have his head shaved, [his body] flogged, ears bored, and to work two years with the negroes." Thomas Gridy (or Greedy), from Devonshire, England, although one of the first settlers of Gravesend in 1646, and allotted a plantation-lot, was "publicly whipped and banished in the same year for theft." Per contra, Lady Deborah, widow of Sir Henry Mody (or Moody), "to avoid persecution in Massachusetts or New England, left said locality and came to New Netherlands, settling in 1643 in Gravesend among the more tolerant Hollanders," but was at once visited by a Puritan Providence in the shape of Indians, who in October drove her and her settlers off. One Abraham, of the great tribe of Jansen, but a mulatto, of Brooklyn, was summoned in March, 1658, "to appear before the council for abusing Sheriff Tonneman while collecting Dr. Polhemus's salary, and fined 12 gl. ($4.80), his excuse of not understanding the Dutch language being viewed as frivolous." In 1644 Huybert Jansen, with others, "was found guilty of cutting Peter Wolpherson (Van Couenhoven's) wainscot with their cutlases, for which he was sentenced to ride the wooden horse for three hours." Female apprenticeships were not uncommon, like that of John Grissell's daughter-in-law, Hanna Banan, whose two and a half years of service were to be requited "with two suits of 'comely and decent clothes,' and a heifer with calf, or one with a calf by her side." John Scudder's mill-pond in Bushwick was in 1668 "supposed to be the cause of the fever and ague prevailing in the vicinity, and as a preventive its dam was ordered by the court to be cut to let out the water." Under Op Dyck is an account of the early state of Coney Island, then consisting of three separate sand strips, known respectively from west to east as Coney I., Fire I., and Gisbert's I. (*i. e.*, Gisbert Op Dyck) or, later, Johnson's I. The Vans in this 'Register' fill sixty-one pages, and their descendants alone ought to ensure the success of the publication. The Vanderbilt family is of course conspicuous. It only remains to say that this work must forever be the prime general authority for the multitude of relationships involved in the author's researches, which no successor is at all likely to have the opportunity to repeat or to rival.

—Charm of style is perhaps the feature that one is least frequently called upon to praise in American medical literature. It is not that the difficulty inheres in the subject. A hundred writers, from Hippocrates and Vesalius to Sir Thomas Watson, might be adduced to show that nearly every branch of medical literature has been treated at once scientifically and with rhetorical grace. Professor Henry M. Lyman's book 'Artificial Anæsthesia and Anæsthetics' (New York: William Wood & Co.) does not profess to be more than a concise résumé, historical, physiological, and practical, of what is known upon the subject; but it is a lucid and complete survey, and has its classic trait in a felicitous manner which recalls Watson's clear arrangement and winning style, and West's or Anstie's vividness. Helmholtz has recently made his protest against the disfavor shown by his younger colleagues in scientific pursuits towards the art of form and presentation in their writings. That disfavor is a fashion which will have its day; but it would be curious to enquire how it originated, whether in race jealousies, which tinge even the dry light of science, or through an inescapable natural selection, pressing more sharply than ever the disjunction of the literary and the scientific habit of thought. But if, on the other hand, clearness, order, and vividness of style afford a presumption of the same qualities in the writer's intellectual processes, we shall be inclined to take sides with Professor Helmholtz, and to commend the method which Professor Lyman has followed in his useful manual. His publishers have given it a not undeserved compliment by adding it to their series of "Standard Medical Authors."

—Mr. Grove recently published in London papers a letter, of which a synopsis was given in these columns, expressing his belief in the probable existence of a tenth symphony by Schubert, and appealing to the proper authorities in Vienna to investigate the matter. Herr C. F. Pohl, librarian of the "Gesellschaft der Musikfreunde," has now sent to the *Neue Freie Presse* an answer to Mr. Grove's epistle, in which he expresses his firm conviction that a tenth symphony by Schubert does not exist, and that the dates and facts alluded to by Mr. Grove refer to the great symphony in C major. In the first place, if a tenth symphony had been written and presented to the Musik-Verein, the scrupulous punctuality of Baron von Knorr, the director of the society, would have ensured its being registered in 1826 in the catalogue of the archives. Then, again, Schubert could not have failed to mention this symphony to some one of his friends; but nothing was ever heard of it by either Sonnleithner, the sisters Fröhlich, Baron Schönstein, Bauernfeld, Spann, or his own brother Ferdinand. That the dates on MSS. are sometimes deceptive is proved among other things by the fact that Mozart, who died in 1791, wrote the date of 1792 on his Requiem. The great symphony in C major was entered in the catalogue of the archives in 1828, and if in 1838 Schumann found the score of this work at Ferdinand Schubert's, it must have been either a copy or else Schubert had sent it to be copied. When the association to which Herr Pohl belongs moved into their present new building the whole archives were examined and rearranged, and as they were consulted by Mr. Grove in their new arrangement, Dr. Pohl expresses surprise that he should have indulged in such hasty surmises, in disparagement of the directors of the musical society in question. Dr. Pohl begs those papers which noticed Mr. Grove's letter also to give a place to his reply.

—Those who went to Booth's Theatre on Monday evening expecting a tame performance from Signor Rossi must have been most agreeably disappointed. The interest excited by his *Othello*, while not very marked during the first act, grew steadily as the play went on, and by the time he had reached the great scene with *Iago* the audience had become fairly enthusiastic. He has to contend with the memory of a great rival in Salvini, and at every turn in the play, every intonation of voice, every gesture, every reading of the text, every piece of "business," a comparison was unavoidable. It must be said that he stood the test remarkably well. As an illustration of what may be done with an entirely unpoetical conception of the part his acting was perhaps even greater than Salvini's. The inherent difficulty in any representation of *Othello* is that an actor of refinement is apt to make us forget that he was a Moor, while an actor of strong tragic force makes us think of a negro. Signor Rossi's acting is open to the latter criticism. His *Othello* is a bluff, hearty, good-humored African, driven to rage and murder by suspicion and jealousy. Taking this view of the character, his acting must be pronounced very fine. The love passages were disfigured, to any devotee of Shakspere, by the sensual character of the passion displayed, yet all this is in thorough harmony with the other characteristics of *Othello*. We insist nowadays on a refined *Othello*, because we are refined ourselves and dislike displays of the "primary" feelings; and in the pursuit of refinement we have made *Othello* into a character somewhat different from what Shakspere had in mind. Of all Shakspere's tragedies, *Othello* has always seemed to us most emphatically a pure story told in a dramatic form. It is hard to see what any character in it "illustrates." *Iago* is a type of the revengeful, plotting Italian of the period, and *Othello* can hardly be said to bring home to us any important truth with regard to life, because he is by his temperament doomed from the

outset as the victim of his pretended friend. It is a pathetic and simple plot, which Shakspere made use of because he saw its dramatic possibilities We doubt very much if he ever thought of the Moor as a particularly refined lover, and we can imagine him liking Signor Rossi in the part very well. There is no question that the Italian actor knows very much more about Moors than the author of the play ever did, and would probably give Shakspere "points" with regard to Mauresque dressing, character, and general make-up. To justify the slight feeling of dissatisfaction with, his conception of the part which we confess to having felt, we must fall back on what is probably the settled conviction of all English and American critics—that no one can really understand Shakspere who has not English blood in his veins; and this because the *sentiment* of all the plays is at bottom English, no matter where the scene is laid or of what nationality the characters are.

—If the compendious 'Deutsche Geschichte'—now publishing by Velhagen & Klasing, Leipzig (New York: L. W. Schmidt), under the editorial direction of L. Stacke—had no other merit, that of a genius for illustrations on somebody's part must be accorded it. Fairly we might conclude, the publishers', remembering the analogous 'Deutsche Literaturgeschichte' of Robert Koenig, which has reached ten editions of nearly 40,000 copies. Parts III. and IV. of the former work have just appeared, covering the period from 1207 to the thick of the Thirty Years' War in 1631, when Magdeburg fell before Tilly. It is difficult to give an idea of the pictorial wealth of these chapters and the light they shed on manners, costumes, the arts of war and peace, superstitions, judicial processes, &c., &c. Innumerable camps and battle-fields, executions, torture, the judgment of God (Queen Kunigunde walking on hot ploughshares), Huss going to and at the stake, a game of the fifteenth century like blind-man's buff, a barbecue; the first Imperial seal, showing a distinct Gothic form (in the throne of the effigy); the first representation of Turkish warriors; the earliest printed church-political manifesto (from Faust and Schöffer's press); a fac-simile of a letter of indulgence (Gutenberg's imprint); the oldest preserved private dwelling in Germany—such are some of the subjects of the abundant engravings, mostly after contemporaneous prints and documents, of this interesting history. We must add, however, sundry initial letters in color, copies of illuminated MSS., and above all the long artistic array of portraits and character pieces after Dürer, H. Burgmaier, H. S. Beham, H. Holbein, L. Cranach, and Jost Ammann, which make this almost a history of German design. Publishers the world over should take notice of the fact that not a single illustration thus far has been trivial or imaginative, and that the announcement of five more instalments is consequently anything but formidable to the subscribers to the 'Deutsche Geschichte.'

—Kristofer Janson, the Norwegian poet, dramatist, novelist, and orator, landed in New York on the 7th of October, having come to this country for the purpose of visiting the Scandinavian settlements in the Northwest, and of extending his acquaintance, begun on his former visit in the winter of 1879-80, with the practical results of American institutions. Like Björnson, who was here a year ago, he is a republican in politics, and in religion he may be styled a Unitarian of the Channing school. To American readers he is chiefly known as an occasional contributor to *Scribner's Magazine*, and as the author of the 'Spell-bound Fiddler,' published by S. C. Griggs & Co. in Chicago. Mr. Janson was born May 5, 1841, in Bergen, Norway. His father being United States Consul in his native town, from childhood he took an interest in America. After completing a course in the Bergen Latin School, he entered the University of Norway and graduated in the theological department in 1865. While a student he became interested in the movement instituted by the eminent linguist, Ivan Aasen, to revive the Norse tongue, and create out of the dialects a national language in place of the Danish, which had been introduced during the four hundred years of Danish rule; and since his first novel was published, in 1866, he has maintained a position as the foremost advocate of this movement. Mr. Janson is one of the four poets in Norway (the other three are Björnson, Ibsen, and Lie) who receive an annual salary from the Storthing or Parliament as a recognition of their talents. This salary he has drawn since the publication of his historical romance 'Fraa Dansketidi' (Danish Days) in 1875. For many years he has been a teacher in the so-called people's high schools in Norway, a kind of educational institution similar to those established by Grundtvig in Denmark for the purpose of awakening among the grown-up sons and daughters of the peasants an interest in their country's history and literature. He has travelled extensively in northern, western, and southern Europe and in Iceland, and has published several books of observations on foreign countries. His stories are partly in the same vein as Björnson's, and partly historical. As an orator, also, Janson is very popular.

—'Die Semiten und ihre Bedeutung für die Kulturgeschichte' is the title of a pamphlet containing the first lecture of a course on the Semitic races and languages, delivered in 1878 at the University of Munich by Fritz Hommel, and now just published (Leipzig: O. Schulze; New York: Westermann). The author believes that the subject he has chosen has been unduly neglected, and that the comparative method applied to its study will produce as valuable results as in the case of the Indo-Germanic philology. Renan's work on the Semitic tongues deservedly aroused great interest at the time of its publication in 1855; but much of it has been superannuated by the Assyrian cuneiform discoveries of recent years, which have raised doubts on many questions that were considered definitively settled. The very term Semitic is now admitted to be a misnomer. After enumerating the nations and languages which are designated as Semitic, and fixing the geographical limits of the Semitic birthplace, the author surrenders considerable space to a warm vindication of the Semitic race—so warm, indeed, that he finds it necessary to mention that he is not of Jewish blood, nor actuated by any feeling of friendliness for the Jews of to-day, although, on the other hand, he disavows all sympathy with the anti-Semitic crusade. For the past four thousand years, he says, the stream of history has been formed by the confluence of two streams, the Semitic and the Indo-Germanic, compared with which all other tributaries are but as rivulets. If we ask what elements the Semitic race have contributed to our existing civilization, the answer will be that in the sphere of government, in art, science, and philosophy they have been far outstripped by their Indo-Germanic rivals; that they have done a great deal for industrial and material culture; but that their crowning merit rests in the service which they have rendered to religion. If they had done nothing else than present the world with monotheism, which was the indispensable forerunner of Christianity, and which has everywhere driven out the Indo-Germanic gods and mythologies, they would possess a lasting claim to the gratitude of mankind. And even in those qualities in which they are relatively inferior they have displayed a degree of excellence that is remarkable when we consider the early period at which it was developed. It must not be forgotten that we possess monuments of Semitic literature and art dating back to times which, as far as the Indo-Germanic race is concerned, are prehistoric; and that the latter is, in many respects, but the heir of the earlier civilization. The author gives a glowing account of the achievements of the various Semitic peoples; of the high degree of culture of the Babylonians; of the conquests of the Assyrians; of the widespread commerce of the Phœnicians, to whom the world owes the alphabet and the art of writing; of the services to civilization rendered in the Middle Ages by the Arabs, to whom we owe our system of numerals. The lecture is not, however, by any means a mere rhapsody; it gives signs of solid learning throughout, and is accompanied, in an appendix, by a philologic excursus on the peculiarities of structure of the Semitic languages.

THE EARLY LIFE OF LAMARTINE.

Mémoires inédits de Lamartine, 1790–1815. Paris: Hachette; New York: F. W. Christern. 1881.

THIS autobiography comprises the first twenty-five years of Lamartine's life, and therefore presents a picture of the growth of his mind and character at a very interesting period. We have his childhood, his school-days, his love affairs, his first entrance into manhood. Whether the picture is pleasing or not to the reader will depend almost entirely on whether he is of a sentimental turn. M. de Ronchaud, who writes the preface, has apparently found it rather difficult to reproduce the impression made upon his mind by the memoirs. He says that those who never knew Lamartine intimately will make the acquaintance through them of "un Lamartine familier": "a country gentleman, cultivating his fields and vineyards, as he has described his father doing before him; preserving, through the vicissitudes and glories and struggles of his life, his attachment to his native soil, his love of home, the sentiments and affections of his youth. It is the very substance of his nature which appears living in these memoirs." We must say that, while the last statement is undoubtedly correct, the substance of Lamartine's nature as we see it in these pages is a somewhat different sort of substance from that which M. de Ronchaud finds it. The substance of Lamartine's nature, if it is possible to express it in a single phrase, is sentimental, and we may almost say theatrical; and it is only by admitting this at the start that this curious volume of reminiscences can be appreciated.

It is impossible to suppress a pang of regret at knowing that any man who has made a great mark in literature is going to have his private life raked through by a biographer. In what he has said, and the impression he has made upon us, we have the most valuable memorial of him that can exist, and the chances are greatly against the knowledge of his private life adding anything to the dignity of his memory or the value of his permanent contribution to the literary possessions of the world. Of course it is idle to protest against publicity of this sort; the public curiosity on the subject is too keen to permit long the suppression of any important information that may be accessible on such subjects. It may be suspected, too, that there lurks in every human heart a jealousy as well as an admiration of all forms of greatness, which leads to a strong desire to know the private lives of great men, in order that our vanity may be soothed by dis-

covering that, notwithstanding their apparent grandeur, they were after all full of human weakness and sinfulness. The publicity given to the private details of their lives must in many cases be unfair to literary men, because the public never sufficiently cares to discriminate accurately the line which separates criticism of character from purely literary criticism. We have seen within the past year a great literary reputation almost destroyed by such a publication. Yet no one can say that Carlyle's 'French Revolution' and 'Sartor Resartus' are not just as valuable now as they were before we knew that Carlyle was meanly envious of the rich and great. The excesses of Byron's life do not deprive the magnificent poetry of parts of 'Childe Harold' of its value, any more than the virtues of Wordsworth will ever make many of his ballads seem anything but dull and uninteresting. The shade of Shakspere is all the mightier for our knowing so little of the man himself. If the debate over the authorship of Homer could be suddenly settled by the discovery of his life and correspondence, is it probable that the 'Iliad' or the 'Odyssey' would be quite the same poems to us that they have hitherto been?

Next to the absolute destruction of the records of a literary man's life, the best course for him to pursue is undoubtedly to give the public his own account of his private life. He knows the facts better than any one else, and he can put the best face upon them. He can explain what needs explanation and suppress what needs suppression; he can, if he has skill, make the book so attractive in itself that, whether the picture be accurate or not, it will be accepted. Whether Lamartine was led into the compilation of his reminiscences by such considerations as these, we do not know; but the picture he draws of his early life is composed with so much skill and delicacy of touch that the task of analysis seems almost cruel. Are we bound to analyze it at all? Lamartine was a poet, and his prose is the prose of a poet. Why should we trouble ourselves to enquire further as to its sincerity or accuracy?

"We live," he begins, "in our thoughts; in memory we live a second time; it is for this reason that I have at last decided to write my memoirs. I do it, not for the sake of vanity, like that inspired lunatic J. J. Rousseau, nor for humility's sake, like that heavenly madman St. Augustine. I believe myself neither the best nor the worst of men, but simply what God made me—a man of common and changeable character, cast into the world by Providence a little above ordinary human kind, perfected by my family—a family virtuous, pure, and noble with that nobility which does not glorify itself, but whose influence ever increases; led astray afterwards, though never bad at heart, but plunged into a frivolous and corrupt society, the unhealthy touch of which makes the soul shudder; then brought back and ripened by age to do as well as might be my work here below—for honor, remembering my father; for piety, my mother; growing old with resignation; submitting myself to the judgment of men, while awaiting with confidence that of my Creator. This is all. May He pardon me! I only ask of Him justice, for His justice is itself forgiveness."

Our translation is inadequate to convey the verbal niceties of this prelude in the original, but sufficiently gives its spirit. And what is it—humility or egotism, vanity or modesty, pious self-abnegation or self-glorification? The key to this problem is contained in the rest of the book.

In one of the opening chapters of the volume Lamartine gives a résumé of his entire life, in the course of which he makes the rather amusing statement that he single-handed "improvised the Republic" of 1848. Whether this is strictly true or not, his life was in great part that of a public man. As early as 1820 he was attaché at Naples. In 1824 he was secretary of the French Embassy at Florence, where from 1826 to 1829 he was *chargé d'affaires*. In 1833 he was elected a member of the Chamber of Deputies. In the Revolution of 1848 he certainly took a leading part; he was Minister of Foreign Affairs under the Provisional Government, and in the elections for the National Assembly received a majority of votes in ten departments, and towards the close of that year (1848) he was a candidate for the Presidency. Thus the better part of his mature life was spent in a political atmosphere. The reader, therefore, naturally turns to this volume to discover the intellectual sources of his interest in public affairs, the ideas or theories which lay behind his political career. The search, however, is hopeless, for the thing made most plain by his memoirs is that Lamartine never was at any period of his life a man of thought. The political ideas of his childhood and youth, which were strictly conservative, were inherited. Those which he took up when he "improvised" the Republic of 1848 were entirely akin to his mental and moral constitution; and that they should have failed to make any lasting impression upon his country is not remarkable. These memoirs, of course, belong to what seems now an almost antique time, and the present period of the world is more reflective and more critical than that of Lamartine's youth. Still, even in Lamartine's youth there were French boys who thought, and there were other French boys who merely felt. Our author clearly belonged to the latter class. There is no sign in this book of his ever having possessed any critical intellectual force, but there is plenty of evidence that at a very early date he was, like a true poet, keenly sensitive to impressions, to surroundings, to the beautiful in life and art.

His description of his childhood is on this account very pleasant reading. It carries us back to the old country life of France in the last century. His grandfather, a soldier during his youth, but now a retired country gentleman, with large estates in various parts of France, owning a forest in one department, vineyards in another, a ruined castle in a third, had his principal seat at Monceau, where life during the summer must have been carried on upon an almost magnificent scale; for we hear of terraces, of gardens, of clusters of vine-dressers' houses, plantations of silk-worms, a little private theatre for comedy, large *salons* always full of guests, and a stable full of horses for both masters and visitors. In his old age, however, the retired captain preferred the quiet of Macon, where, with his wife and children, he weathered the storm of the Revolution. Wealthy people had reasons for not making much display in those days. In the evening a few old friends, relatives, and quiet abbés used to make their appearance and silently sit down at the card-tables for a game of Boston or a rubber of whist; but the play, as became a time of revolution and disaster, was very low; and when it was over, each one, lighting his paper lantern, crept noiselessly home to bed, in mortal dread of rousing the suspicions or jealousy of the neighbors. The Hôtel Lamartine and all the other possessions of the family, in due course of time, would have gone to the eldest son; and we find the heart of the head of the family saddened at the thought that his other children must under the new laws share equally with him. His wife, too, felt that the division would be no better than robbery. All three generations live together as one family till the death of the grandparents, when the division of the estate takes place among their children. "The abstraction of equality," Lamartine says, "prevails with difficulty over nature," and in the Lamartine family the old traditions were much too strong for the law. His father refused absolutely to profit by it, and "thus he remained poor and much beloved by the rest of the family." Among them a division was made, but we find the family estate at Macon preserved for common use during the winters. Next we have an interesting description of the emigration of the poorer branch of the family to Milly—a long procession of ox-carts, Lamartine's mother being in the first, with two little children between her knees, and a third at the breast; his father walking in huntsman's costume, a gun in one hand, occasionally helping the cart out of a rut with the other. After this there is a charming description of the new life of the family at Milly, which was evidently a very different affair from that of the Hôtel Lamartine. But whatever the faults of Lamartine, a mean love of money and position was not among them. He looks back upon the simple life of his childhood with a pure affection. His attachment to his family is, perhaps, of all the various emotions expressed in this volume, the most sincere, and it is expressed with that delicacy of sentiment which gives so much of his prose an essentially poetical character.

Childhood over, a description of his life at a French boarding-school follows, of which the most interesting episode is a free-fight between the head master and one of the boys, who has refused to go down on his knees in the presence of the school and beg pardon of one of the professors for some trifling fault. A terrible scene ensues, in which the instructor is tumbled over on to the floor; the boy tears out a good part of the master's hair; the servants appear, armed with various deadly kitchen utensils, to rescue the master; and they finally succeed, after a fearful struggle, in ejecting the rebellious scholar, half dead, into the street, where he is left without any further attention being paid to him. This scene filled little Lamartine with horror, and he resolved to run away. An opportunity soon presented itself when the school was permitted to indulge in a curious holiday sport. This consisted in hanging a live goose in the air with its head down, and in trying, blindfolded, to cut the head off with a sabre. The youthful Lamartine, disgusted with the cruelty of the game, enabled a friend of his, by a preconcerted signal, to strike the head master instead of the goose, and then, seizing the occasion, he delivered an address to this companion and his brother, which, considering his age to have been eleven years, is as finished an oration on the education of youth as we remember to have met with. The orator and his audience now took their departure, but were almost immediately recaptured.

His miseries at this school were finally ended by his being taken away and placed with some Jesuits, where he seems to have been very happy. His education over, his love affairs begin; and this part of the book is a curious revelation of character. We have already referred to the elevation of sentiment so noticeable in Lamartine with regard to money. It is the same, in theory at least, with regard to love. Love with him is a romantic and absorbing passion, the only perfectly pure and unselfish emotion the heart can know, and such at the outset we should think the attachment between Mademoiselle Henriette P. and a gentleman to whom he modestly refers as "the charming young man from Milly" must have been. They were both very young, very innocent, and one of them at least was very sentimental. The curious part of the affair is the way in which it dies out. His family was opposed to a marriage, and persuaded him to set off on his travels. "I left Mademoiselle P.," he says quietly, "for a few months only, with the certainty of finding her always faithful, while I never doubted that I

should bring back to her a heart for ever devoted." This is pretty much the last we hear with reference to Henriette, with the exception of a brief and business-like correspondence between a member of her family and himself, which terminates in his surrender of all claims, and her almost immediate marriage to another and more wealthy suitor. Then we have some very prettily-expressed regret at the sudden ending of this youthful dream of happiness. It is apparent, however, that what really ended it was the fact that the author liked travelling in Italy better than Mademoiselle Henriette's society, and that he had completely forgotten about her the moment he had got out of France. He had, indeed, had one or two love-affairs before receiving the letter of enquiry from her relative, and, instead of going home when he might, he insisted on continuing his travels. This is all very natural, perhaps; but it is told with a naïveté that only a thorough-paced sentimentalist could carry off. We see through the shallowness of the whole thing, but we forgive it, because it is done with such delicacy, such simplicity. It is really a story of desertion; but then it is a story charmingly told. A prettier story still is that of Graziella, the poor fisherman's daughter, the beginning of which is given in these pages, with her touching love-letter: "Già che sei partito non posso più restar. Non ti rivedrò mai: la Damizella." He calls Graziella his "first love," but this is clearly a mistake.

Sainte-Beuve is reported to have said, on being asked which he preferred—Lamartine, Chateaubriand, or Victor Hugo—"Charlatan pour charlatan, j'aime mieux Lamartine," and there is a good deal to justify the classification in the volume before us. All three writers belong to the romantic school, and it was a school which never hesitated to juggle with words or with sentiments. One reason why they are all so untranslatable is that any translation reads like a travesty. These memoirs in English would probably go far to damn Lamartine irrevocably with English readers, while in French they have a certain naturalness. But it is hardly fair to call it the book of a charlatan. A charlatan must perform his tricks consciously; Lamartine is never consciously an impostor. He has a profound appreciation of everything that is noble and elevated and refined. He likes to hear himself talk about it. He revels in the facility of expression which this keen appreciation gives him. Consequently, he lives in an atmosphere as different from that of ordinary every-day life as a painter or a musician does. He must not be judged by intellectual or moral tests, but by those of style, of expression, of imagination.

THE GOSPEL OF ÆSTHETICISM.

Lares and Penates; or, The Background of Life. By Mrs. Caddy, author of 'Household Organization' and 'Artist and Amateur.' London: Chatto & Windus.

It is well known that there exists in England a small sect of persons who propose—Christianity having thus far failed in the purpose of its existence—to regenerate mankind by means of the new gospel of Æstheticism. Where the example and the exhortations of prophets and apostles have been fruitless, they trust to the soft, persuasive influences of blue china to lead the erring soul to the practice of virtue. What the Sermon on the Mount can no longer accomplish upon the hard hearts of the present generation, a house furnished with a scrupulous regard for artistic sensibilities may be trusted to do. The fundamental principle of the new gospel appears to be similar to that of the old adage about a hair of the dog that bit one. Hitherto preachers and moralists have counselled those who desired to ascend into the regions of the higher life against the pomps and vanities of this wicked world—the desire of the eyes and the pride of life. The preachers of the gospel of Æstheticism reverse this process. It is by means of and through the desire of the eyes and the pride of life that they hope to elevate fallen mankind to those serene heights whereon they themselves walk as gods. Artistic culture, according to these teachers, is the final end and purpose of man's existence, and the careful education of "the taste" the means by which he may hope to achieve it. The great high-priests and interpreters of the new faith are the men and women who have succeeded most perfectly in the building and furnishing of houses according to the principles of a delicate and luxurious æstheticism. A color that wounds the artistic eye, a piece of furniture that does not harmonize with its surroundings—these replace, among the votaries of this new creed, the worm which dieth not and the fire that is not quenched. They walk sorrowfully in a world that is filled with ugliness, and among men and women who have no adequate sense, and too often no sense at all, of the depraving influences of "the Ugly." But there is here and there an oasis in the desert. Amid "the waste of column and of coping," there are, here and there in London, houses which realize the æsthetic ideal, and where the wearied spirit of the forlorn and outraged æsthete may find rest and refreshment.

The book before us describes some of these exceptional residences. Mrs. Caddy is indeed an æsthete of the æsthetes—the most devout believer in the saving influences of upholstery that we remember to have ever encountered in the walks of literature. Her feelings are, in truth, not unfrequently too much for her; so that when the furniture is specially good she is apt, in attempting to describe it, to become incoherent and unintelligible. Her book opens with a sort of invocation to or description of "Taste," from which we learn that "taste" is "the surface of science"; also that it is "a thing of growth," and "a plant that must be pruned and root-pruned, or it will suck the life-juices." Fine taste, however, "is best taught by examples," and especially, it would appear, by means of houses. According to Mrs. Caddy,

"One house will display its own beauty; another will retire as a background to a well-chosen collection; one is devoted to easy leisure; another is Venice or Rome in miniature. One owner will have laid out his wealth in the happiest investment—fine art, the poetry of work; a second will have nothing, yet possess all things, through his perception of the harmony underlying all objects of God's creation, and the melody that floats on its surface."

The reader of this extraordinary paragraph feels himself a good deal "mixed" before he gets to the end. He started with houses—that was clear—and, apparently, it is about houses that the lady is talking all along; but what have houses to do with "the harmony underlying all objects of God's creation, and the melody that floats upon its surface"? These things are, we presume, parables the meaning of which is hidden from the grosser sense of an unæsthetic world, which, seeing, does not see, and, hearing, does not understand.

Among the houses described by Mrs. Caddy as realizing, in different ways, the ideal of æstheticism, are those belonging respectively to Lady Marian Alford, Sir Frederick Leighton, the President of the Royal Academy of Arts, and Mr. Alma Tadema, the well-known artist. These mansions are all described with much enthusiasm and considerable unintelligibility. "Gell's descriptions of Pompeiian houses," Mrs. Caddy tells us, "are at once my example and my despair; for he is aided by exquisite illustrations, and our curiosity about gems of antique art is aroused, with many fine passions and latent powers." One cannot but regret that Mrs. Caddy gives no further account of "the many fine passions and latent powers" which Gell's descriptions are so effective to enkindle, because it would be worth while to invest even a considerable sum of money in the purchase of Gell, if he could be securely relied on for even one "fine passion." "*Many* fine passions and latent feelings" is so very large an order that it awakens distrust of the capacity of Gell. Mrs. Caddy, too, is obviously not as other people are; and it is only too possible that Gell can arouse "fine passions" in her artistic breast which he could not awaken in the normally-constituted human being.

But let us proceed to Mrs. Caddy's descriptions. It must be acknowledged that, though deprived of the assistance of "Gell's exquisite illustrations," she has acquitted herself very well. She has struck out a line of her own—at least, we never remember to have seen a house described after the manner which we suppose is natural to Mrs. Caddy. Of Lady Marian Alford's house we are told:

"The chairs are chairs, and not lounges; the pleasure spread before one here demands too much activity from the mind to be compatible with sloth, and yet it does not importune by a persistent claim on the attention; it is a cordial, rather than the medicinal draught too many of our dogmatic houses resemble. This is no burden; it is rather a bunch of roses that we carry."

This passage would have delighted Dr. Blimber, who, as we learn from the pages of 'Dombey and Son,' "liked a metaphor." "A dogmatic house resembling a medicinal draught" would be worth crossing the Atlantic to see. Mrs. Caddy, it would seem, has to take a good deal of medicine in the shape of these "dogmatic houses." Of Sir Frederick Leighton's house we are told that it appeals

"mainly to a certain class of intellectual faculties—namely, the perceptive; and even here it speaks only to already cultivated admirers. Here are neither children, animals, nor musical instruments. Perhaps it is enough that one should drink in melody through the eyes. This house is an admirable grouping in still life; . . . a background to the life of persons of full-grown mind, with whom the mouth is used for conversation, not for song, and only necessarily for food. Such people value wine for its glow as they would a ruby. Persons of this order of intellect (unless highly self-disciplined) welcome their peers; they would also welcome the angels; but others are less valued for themselves than for certain picturesque qualities which may lift them above the gross of mankind in general."

Here, again, we must complain of becoming very much "mixed." We start with a house which has the peculiar property of "appealing to the perceptive faculty." Houses of this kind, we are told, are chiefly built by "full-grown persons," who use their mouths for conversation, "and only necessarily for food." People who apply their mouths to the discharge of these unnatural functions "welcome their peers, and also angels," but are remarkable for giving only the cold shoulder to "the general gross of mankind." These mysteries are too deep for us. We give them up, and pass on to Mr. Alma Tadema's house. This house reminded Mrs. Caddy

"of Rome, where the pervading feeling is classical, and yet one meets with many styles; as a symphony has several movements—from the grand and pompous march, the plaintive *adagio* or sweet *andante*, to the buoyant *scherzo* or whirl of the *presto*. . . . . I felt at once in this house the spirit of Rome, the soul of the an-

tique ; a classicism fit for human needs, for soul and body ; a classicism free from the paltry narrowness which will divide a honeysuckle pattern rigorously in half, and invert it to make it fit on a corner, and hug itself with joy that now no less classical weed can grow there the right way up."

There is only one passage in polite literature which we can compare to this concluding burst about "the honeysuckle." It is the close of Sam Weller's valentine, and informs "Mary" that her likeness "was took on my hart in much quicker time and brighter colors than ever a likeness was took by the profeel macheen, altho it *doe* finish a portrait, and put the frame and glass on completely with a hook at the end to hang it up by, and all in two minutes and a quarter." There is a great deal more to the same unintelligible purport in Mrs. Caddy's book as the passages we have extracted, but this is not to be wondered at. The inevitable result of attempting to establish a nonsensical thesis is that a great deal of nonsense has to be talked in the endeavor.

GIPSIES AND THEIR WAYS.

In Gipsy Tents. By Francis Hindes Groome. Second edition. Edinburgh : Wm. P. Nimmo & Co. 1881.

It is natural that curiosity should invest a class of people which, though found in the midst of almost all civilized nations, chooses to isolate itself to a great extent, and, as if from uncontrollable heredity, persists in adherence to a mode of life essentially nomadic. For it is thus that the Gipsies, on the slightest observation, lend themselves to be characterized ; and, until a comparatively recent period, if we add to this characterization the half-proved surmise of their Hindu extraction, and the general persuasion of their propensity to light-fingeredness, there was little else to say of this strange and interesting tribe.

Now, however, the ignorance of past times regarding them is, in good measure, dispelled. Research has discovered that the designations which have been given to them in various parts of Europe can pretend to no historic foundation. As little are the Gipsies by descent Egyptians, or Tartars, or Bohemians—to mention a few of the many names which have been imposed on them—as "Romans" ; the term *Rómano*, by which they call themselves, having apparent reference to New Rome, or Constantinople, in the neighborhood of which they may have made a prolonged halt in the course of their migration westward. Inasmuch as the radical element of their purer dialect is obviously allied to some mediæval Hindu language, it is placed beyond a doubt that they originated from India. Yet the time at which they bade farewell to their old home is not likely ever to be ascertained better than very vaguely. As to their first presence in Europe, Dr. Miklosich, at least to his own satisfaction, finds traces of it as far back as A.D. 810. It is determined, at all events, as a fact that more or fewer of them were domiciled as slaves in Wallachia in 1372. They emerge into sight in other European countries not long after, or in 1417.

The fashion of arrogating regal and nobiliary titles, which everywhere obtains among the Gipsies, is a peculiarity of long establishment with them. Every one has heard of Gipsy kings and queens ; but the Gipsies of old did not stop at the simple division of themselves into royalets and subjects. In 1445 an emblazoned monument was erected at Steinbach in honor, according to the inscription on it, of "the high-born lord, Lord Panuel, Duke in Little Egypt, and Lord of Hirschhorn in the same land." Another similar monument at Pforzheim, dated in 1498, commemorated "the high-born Lord Johann, Earl of Little Egypt." Intermediately, in 1453, still another, at Bautma, marked the resting-place of a second Gipsy of the same assumed rank, "the noble Earl Peter of Kleinschild." Nor were the titles of Gipsies attested by epitaphs alone. In 1505 James IV. of Scotland formally commended to a brother sovereign, him of Denmark, one "Anthony Gawin, Earl of Little Egypt" ; and in 1540 his successor granted letters, under the great seal, to "oure lovit Johnne Faw, Lord and Erle of Litill Egipt." In connection with the inscriptions spoken of above, it is pertinent to note the scrupulous solicitude manifested by Gipsies, in spite of the latitudinarian complexion of their practical Christianity, to be buried in consecrated ground, and also to have their children baptized at church with due formalities.

Considering that, as has been remarked, the high titular pretensions of Gipsies were in former ages allowed in divers quarters, we have the less cause for wonder in learning that these wanderers were, here and there, the recipients, at the hands of our forerunners, of notice which would now be reckoned somewhat eccentric, to say the least. Some time between 1513 and 1524, as we are told on good authority, Thomas, Earl of Surrey, bestowed sumptuous hospitality on a party of "Gypsions," at Tendring Hall, in Suffolk. A few years later it was not beneath the dignity of a Scotch king, James V., to attend a Gipsy dance at Holyrood House. But, perhaps not without justification, the reputableness of Gipsies, in Great Britain as elsewhere, early declined, and is still far from being wholly rehabilitated. The mere fact of being "Egyptians," or even of consorting with them, was long accounted felony, and was rigorously treated as such, especially in Scotland. In 1577 eight Gipsies suffered death at Aylesbury ; in 1592 five were hanged at Durham ; shortly before the Restoration thirteen were executed at Bury St. Edmunds ; and this melancholy list might be greatly extended. The delinquencies of these poor creatures, so far as can be made out, were, if anything at all, by no means of the gravest.

If full credit be due to the claims which have been advanced for the Gipsies by one and another of their more enthusiastic and exacting advocates, the world is indebted to them "for having introduced metallurgy, playing-cards, saddlery, Protestantism, folk-tales, Magyar music, glass-making, and fast-and-loose ; for having produced Solario, John Bunyan, and the 'Tinclarian Doctor,'" etc., etc. As regards their influence in the sphere of speech, besides that they have left a distinct imprint on the slang of our mother-tongue, it is contended that they imported the parent of the Italian, Spanish, and Portuguese *basto*, "pack-saddle" ; and that of the modern Greek τζαγγάρης, "shoemaker."

For reasons which are not far to seek, the Gipsies are a race remarkable for robust health and for length of life. There are, indeed, many instances satisfactorily certified—some of which are particularized in the volume before us—of their having attained to great longevity. By one of these instances (and it is not the most extraordinary that might be adduced) were suggested, besides an epitaph of befitting seriousness, the vigorous lines of the Rev. Legh Richmond, rector of Turvey, in Bedfordshire :

> "Here lies Jim, the wandering Gipsy,
> Who was sometimes sober, yet oftener tipsy ;
> But with the world he seemed to thrive,
> For he lived to the age of a hundred and five."

Details like the bulk of the foregoing chequer, in abundance, the work with which we are occupied, but yet do not constitute its chief staple. Of Mr. Groome's most complete competence to discourse on the literature to which, as a subject of investigation, the Gipsies have given birth, there is indisputable evidence in his learned contribution to the new edition of the 'Encyclopædia Britannica.' That literature, now grown to the dimensions of a small library, and requiring for its adequate appraisal a knowledge of all the leading languages of Europe, he there affords proof that he has mastered in its entirety. But his acquaintance with his clients, under whatever aspect, is in no wise simply that of a scholarly and critical compiler. With the Gipsies of actual life he is, in all likelihood, more familiar, from personal intercourse with them, than any other person, whether of bygone or of modern times, not himself of their fraternity. Hence it is that, what with kindly warmth of interest, a gift of keen observation, and striking executive ability as a reporter, he has succeeded in portraying his humble friends with a freshness and a vividness which distinguish no other book of which they have as yet formed the topic. If Gipsies are reserved and suspicious, they are so, as it is made out pretty clearly, mainly because they are accustomed to be suspected. To Mr. Groome they are open enough ; and, as human beings, they could hardly be otherwise to one who has acquired such an intimacy with their dialect as to have enriched its store of verse with renderings of Burns's "Jolly Beggars" and Goethe's "King of Thule." If only as a well-timed and effective antidote to Mr. George Smith's too disparaging 'Gipsy Life,' 'In Gipsy Tents' may be recommended with all confidence. On other grounds, however, it is a production of sterling worth, and from beginning to end is unflaggingly instructive and engaging.

Gipsies, vouched for as genuine by their brethren and kinsmen abroad, are scattered over the United States in hundreds, if not in thousands. We have them among us from Great Britain, Germany, Hungary, and Spain, and probably from other countries as well ; yet our information concerning them is barely better than a blank. Who shall say that Mr. Groome would not be rewarded for his trouble if he were to come over here, look them up, explore their antecedents, and depict them ? No one, assuredly, could approach them in a more conciliatory spirit, or do them more intelligent, discriminating, and sympathetic justice.

A POPULAR HISTORY OF SWITZERLAND.

Switzerland. By Harriet D. S. Mackensie. Boston : D. Lothrop & Co.

To narrate the important events of modern history in such a way as really to interest the public is a task of which no writer need feel ashamed, yet nearly all "popular" histories are worthless, because history is a branch of knowledge upon which every one feels at liberty to write, whatever may be his disqualifications of knowledge or of temper. The history of Switzerland is especially instructive to all interested in the political, social, and religious questions of our own day, for that country has been a free field for experiments of all kinds. But writers of popular histories have been so blinded by the garish light of certain apocryphal but melodramatic events, or else, like the present writer, so indifferent to the unvarnished truth, that such knowledge as can be obtained from their works is little better than none at all.

The volume before us is very prettily printed and bound, and is rendered still more attractive by one hundred agreeable views of Swiss scenes. The style, moreover, is very good ; but the author's qualifications for writing history may be inferred from the following extract, in which the italics are ours :

"In these days of change all the old historical landmarks known to other generations are liable

to be taken up and put down in other places, or even to be removed altogether. We are not allowed *to love the Stuarts* and hate Henry VIII. with the simplicity of fifty years ago, while the wave of progress has threatened to sweep William Tell away entirely. But many people are still found who will be disposed to share the feelings of the Waldstätten on this point. When *Haller* published his doubts as to the story of the apple, in 1760, they immediately burned *the whole* edition of his book, so that a copy can *scarcely* now be found. As to Tell's existence, one would suppose it sufficiently vouched for by the presence of a hundred people who had known him in life, at the dedication of the memorial chapel, only thirty years after his death. *The details of the story do not signify so much.*"

The real "William Tell" is so familiar as to obviate the necessity of re-examining the question of his origin and growth, but it is worth while to point out the dishonesty of this way of writing. *If* one hundred people, who had known him, met to do him honor only thirty years after his death, there can of course be no doubts as to his existence. Then, if the details are immaterial, the cross-examination of any witness who tells a plausible story is equally so. Tell's adventure is alleged to have happened in 1307, and though we have several chronicles, written in the intervening period, which contain comprehensive descriptions of the battle of Morgarten, the first allusion to Tell's act or person occurs one hundred and sixty years later; while the story, in its present symmetrical form, we owe to the inventive genius of Johannes von Müller. How, therefore, can we know of a meeting of Tell's admirers thirty years after his death? To point out all the misstatements we have found would far exceed our space, but we may say here that not Von Haller, but the pastor Freudenberger, wrote the book the edition of which was burned in Uri in 1760.

The entire mediæval period is treated in the same manner. The mythical Arnold of Winckelried figures as large as life, and general mistakes like the following are frequent: "The bishop had the right of supremacy in the city [Geneva], which had been granted long before by the *French kings*." Servetus, to whom, however heretical his opinions were in Calvin's eyes, no one can deny the name of being a fervent Christian, is termed an atheist. Of Leventina, it is said that "it passed from the rule of the Italian *Visconti* to that of Uri"; for Visconti read Sforza. Of Neuchâtel, it is said that having, before 1707, been subject to the *Habsburgs* (really the House of Orange, to the last representative of which the then King of Prussia was the heir-at-law), it then became a Prussian province; which is as if we were to say that Hanover was an English province previous to 1837, or that Norway is a Swedish province, or Luxemburg a Dutch. Apparently, whenever the author makes a special effort to be accurate, she makes a gratuitous blunder. Thus she calls the Geneva politician James Fazy, *Jacques*. Fazy was christened Jean Jacob, but called himself, and was universally known, by the name, not of Jacques, but of James. The purely Swiss names of "Toggenburgs and Bonstettens" are enumerated (p. 125) as "Austrian nobility." But perhaps the most amusing blunder is where the author speaks (p. 440) of German revolutionists raising the "black and yellow" (Austrian) colors—the first step in such enterprises having been the display of the old imperial standard, whose colors, black, red, and gold, were deemed as typical of liberty and unity as the Austrian were of separation and oppression. Another instance of perverse inaccuracy is too important to be passed over: "In 1862, the restoration of the valley of Dappes to the canton of Vaud, which had been robbed of it by the first Napoleon in 1804, went far to pacify the republic. Soon afterwards there was again a risk of misunderstanding at the time of Mazzini's attempt on the Emperor's life." Now, instead of Dappes having been held by France, 1805 (not 4) to 1862, it was so held only till 1814, and, in 1862, instead of being restored to Switzerland, the latter was forced to hand over a portion of what it already possessed to France. As to Mazzini, what was at the time merely a suspicion (and probably an insincere suspicion) on the part of the French Government, to support which there has never been a particle of evidence, is here given as an unquestioned fact.

How careless is Miss Mackensie's treatment not of details, but of general events, may be illustrated by her account of the troubles in Zug, 1729-36, "the question in dispute being whether a *monopoly* in Burgundian salt should still be allowed, or whether salt should be imported also from the *Tyrol*. After many years of trouble the Burgundian salt won the day, and from that time reigned exclusively in the cookery of Zug." The non-popular account of this affair is that in 1691, Zug troops being then in French pay, Austria forbade Zug's importing salt from Swabia; whereupon the French allowed the exportation of Burgundian salt below the market price. As to the constitution, nothing is said of the revision of 1874, or of the unique and highly-instructive peculiarities of Swiss public law. Occasionally, too, we think some of the details given must be due to the author's imagination. Thus, in describing Swiss affairs during the war of 1870, we are told that the Swiss soldiers, as they marched, sang the German national song, the "Wacht am Rhein"; and that when Bourbaki's soldiers "crossed the line every man laid down his arms, until the swords, bayonets, and *yataghans* were heaped up like a hill." We are familiar with soldiers stacking their arms upon surrender, and with throwing them away in flight, but we never before heard of a demoralized army preserving discipline exactly to the point of raising a monument of yataghans. In conclusion, we may say that the author not only has not thought out for herself any rational explanation of the events described, but shows no signs of having grasped those of the writers with whose works she may be supposed to be acquainted.

The proof-reading and index are more than worthy of the text. In the latter we find Doubts of William Tell entered under D; College of Geneva, under C; half the names of persons under their given names; two saints under S; and Linden, a party-name, entered as a place. Of apparent misprints, we notice Haslithal *Valley*, Berne minister, Hohenzollerens, Nuremburg, Chenaur (throughout) for Chenaux, Urs (throughout) for Orso, Furno for Forni, Eidsgenossen, Inspruch, Caronge, Chal[b]lais, Fancigny. Siegwart-Müller, whenever mentioned, is given only the first half of his name, and so on. We may seem to have given to a work of small pretensions altogether more attention than it deserves; but it is time a protest should be made against the "popular" histories with which we are overrun. In the present case, too, the appearance of such a work is doubly to be regretted, because there is (in English, if we except the translation of Zschokke) no respectable Swiss history to which the public may be referred.

In the Brush; or, Old-Time Social, Political, and Religious Life in the Southwest. By Rev. Hamilton W. Pierson, D. D., with illustrations by W. L. Sheppard. New York: D. Appleton & Co. 1881. 12mo, pp. 321.

Not long ago we noticed a little work on 'Pioneer Life in the West,' by the Rev. J. B. Walker, and now we have scarcely less interesting reminiscences by a brother minister, relating to a section which, though vaguely denominated "the Southwest," we gather to be chiefly the hill country of Kentucky and Tennessee. The two volumes are almost identical in shape and size, and so externally as well as internally have a fit companionship on the same shelf. The "old-time," however, of 'In the Brush,' does not antedate 1843, when Dr. Pierson went South as a Tract Society inspector; and most of the scenes and adventures he describes probably occurred in the period 1853-58, when he was an itinerant agent of the American Bible Society. The reasons for his nearly absolute reticence as to names, localities, and dates can be readily imagined and appreciated, but the value of his narrative is not a little impaired by this precaution. Take it altogether, however, the work commends itself as that of a writer of more than ordinary literary dexterity, graphic power, and sense of humor. It preserves and exemplifies a large number of Southern Americanisms, and shows in a great variety of lights the life of the rude people whose minds he was to prepare for the colporteur, bringing Bibles to sell or at all events to give away. We have never seen a clearer or more picturesque account of a barbecue than that given on pp. 92-94. Weddings and "basket-meetings" and "candidatings," the torchlight funerals of slaves, the every-day and the extraordinary hospitality of the lords of hog and hominy and the single-room log-cabin, tell of a civilization only partly shattered by the civil war, and doubtless still lingering in its larger traits.

The truthfulness of the following passage will receive instant recognition (p. 78):

"Perhaps some statement in explanation of this 'rough' but abounding hospitality of the people in the Brush is demanded in justice to those persons and places whose hospitality would seem to suffer in the contrast. I might enumerate many circumstances connected with life in a wild, unsettled country that will occur to most readers as the cause of this abounding hospitality; but it seems to me that the chief reason is the fact that meat, bread, and all their provisions, excepting groceries, cost them so very little. They estimate what they can use scarcely more than the water taken from their springs. Beef, pork, and bread cost them almost nothing. Their cattle run at large, and their free range includes thousands of acres of unoccupied lands. They grow and increase in this manner with but little attention or care. The hogs find their food in the woods the greater part of the year, and in the fall they fatten upon the nuts or 'mast.' . . . With this unusually abundant supply of food, which, on account of the bad roads and the distance from market, has but little pecuniary value; with houses and accommodations such as I have described; with but few books, newspapers, and other kinds of reading; with a dearth of the excitements and amusements of the outside world, it is not so strange or wonderful that they are eager for pleasures and enjoyments that involve these dis plays of hospitality."

The glimpses of Southern political customs are among the most amusing in the book, and we should be glad to dwell on them. "There is a fine crowd here, and I am going to make a speech," said a candidate, with a keen eye to business opportunities, at the close of one of Dr. Pierson's meetings, which he had already interrupted. The intruder was hustled from the room and clapt in jail, but was chivalrously bailed out by his opponent and was elected the next day. Still gayer is the account of the youthful rival of the Hon. Lynn Boyd, Speaker of the House of Representatives from 1851 to 1855, who retained his place by "the 'still hunt' method of electioneering," until aspirants for his place got not only weary but gray. The etiquette of the canvass required that any candidate who called a meeting in the district should notify all the others, that they might have a chance to attend and present their own

claims. Our young scapegrace, in a district without railroads, purchased a fleet horse and duly published his list of appointments, "but made these appointments so far apart—some eighty miles or more—that it was impossible for his venerable opponent to ride the distance. He had complied with the 'letter of the law,' but it was one of those cases where 'the letter killeth.' . . . In this manner he canvassed the district alone. He made his speeches, and had no one to answer them," and of course "'made the political race.'"

The irrepressible negro cuts but a small figure in these pages. Dr. Pierson's task of providing every white family with a Bible was possible on the sole condition that the book was not placed in the hands of slaves. He knew it as his employers knew it; but that the blacks should get their knowledge of the Scriptures only at second and third hand does not seem to have troubled him, and it would not be strange if in his eyes the fact that the most illiterate white in his circuit had no Bible in his house, was of vastly greater concern than the brute condition of the whole black population. It is inferrible from an incidental remark on page 311 that in the effort to force the Tract Society to publish tracts on slavery he would have taken sides with those who resisted. He does relate at some length, and without his usual secretiveness, the remarkable career of a Kentucky slaveholder who, in his will, gave freedom to his children by his colored mistress (his only wife), and provided for their prosperity by ruthlessly ordering his other slaves to be sold in New Orleans, and with "exceeding cruelty" (we quote Dr. Pierson), "not in families, but each one alone." This is said to have "horrified even his pro-slavery neighbors." Dr. Pierson was a very acceptable visitor at this man's house, and learned from him his terrible feelings at the thought of the fate of his daughters in slavery. We might have expected the minister to recommend emancipating them at once, but he does not seem to have done so. He did, however, furnish the greatest consolation by "the sweet message, 'The blood of Jesus Christ cleanseth from *all* sin.'"

A large part of Dr. Pierson's reminiscences of course connect themselves with the religious condition or rather destitution of the people among whom he rode and slept and labored so many years. He has some very forcible remarks (p. 238) on the native illiterate preaching, of which he thinks verbatim reports would greatly favor an educated ministry, and some such he gives, of the drollest sort. What strikes the candid reader, however, is that while the "preaching" (*i. e.*, the expounding) of Scripture texts by those unable to read them intelligibly to themselves or to others wounds our author's susceptibilities, the religious "experiences" of their still more illiterate parishioners, converted by these means, seem to him to have a peculiar value—higher, one would think, than the religious convictions of the cultivated. Compare pp. 250, 251, for example, with pages 110-112.

We had marked but did not cite from Mr. Walker's 'Pioneer Life,' the curious printer's error—"homo soit que mal y pense"; but this is easily surpassed by the following verses in Dr. Pierson's generally well-printed volume (p. 289):

> "Bemi soit bien [Dieu] qui chaque jour
> Nous comble de ses biens,
> Et dont s'inconvenable [l'inconcevable] amour
> A rompu nos liens."

Or do the Haytian negroes enjoy the privilege of an illiterate hymnology?

Japanese Episodes. By Edward H. House. Boston: J. R. Osgood & Co. 1 vol. sq. 12mo, pp. 247.

THE author of this dainty little book is a veteran journalist, some of whose best work has been done among that one Asiatic people which is the pet of all good Americans. The friend and companion of Hildreth, who, at the time of Perry's expedition, wrote the still invaluable compend of 'Japan as it Was and Is,' Mr. House became early interested in the Japanese. After our civil war, in which he was one of the first and best of the correspondents in the field, he served on the staff of the *Tribune* for several years; but, unable to resist the charms of the newly-opened island empire, he went to Japan in 1870. There, while a brilliant and successful teacher in the Government schools, he was also a diligent student of the fascinating antiquities of old Nippon. He was the first to propound the theory of the identity of the great conqueror Genghis Khan with the Japanese hero Yoshitsuné—a theory since wrought out so plausibly by Suyematz, one of his pupils, in a work printed in London. As a correspondent his pen was not idle, and his letters, which pricked the bubble of American snobbishness at the unsophisticated court of the Mikado, which exposed the true nature of the Macao coolie traffic as exemplified by the Peruvian vessel *Maria Luz*, which, more than any other cause, secured the recall of Mr. De Long, and which laid bare the true character and quality of the employees sent from Washington to Tokio at myriad-dollar salaries, and which, finally, illustrated the Japanese occupation of Formosa, are worthy of remembrance as among the achievements of American journalism. From 1877 to 1880, Mr. House edited the Tokio *Times*, which, with all its shortcomings, was the freshest and most vigorous newspaper printed in English in Japan. In his recent ventures in amateur diplomacy, notably in his personal abuse of the British Minister, his free lance seems as often to lunge at a windmill as at the real enemy.

From among his many contributions to periodical literature Mr. House has selected these four episodes, which, though reprinted from *Harper*, *Atlantic*, and the Tokio *Times*, are carefully re-edited and paragraphed. In them, even those who have been offended with his violence as a looker-on in trans-Pacific politics will be charmed with his lively fancy, playful humor, and kaleidoscopic vocabulary. He seems carefully to have studied the play of that emotion which the Japanese call *ero* and the Greeks *eros*, and so writes fluently and with sympathetic imagination of the love in humble life of Little Fountain and Mountain Bird, in the episode of "Little Fountain of Sakanoshita." To be sure, our American abroad seems to see everything as under the spell of moonlight; and others, whether missionary or worldling, who look at the same objects in the light of common day, are apt to think that Mr. House loves to gild plain gold with an Etruscan film and to dye simple violets to a deeper purple. We have seen in native houses a silk scroll-painting, which represented a Japanese goddess who, dissatisfied with the hues of earth-born flowers, came down from heaven and painted them anew from her own palette. "To Fuziyama and Back" tells in fresh style of a trip now old and ordinary, not to say commonplace. "A Japanese Statesman at Home" takes one inside a native household during festal times, and we see both the bright lights and deep shadows of the social life of a people who are still cursed with polygamy, and a religion that looks upon all women as soulless kittens or passive drudges. The decently veiled description of perfectly nude females on page 194—"a brief suggestion of halls of antique statuary"—tells its own tale of a nation that has suffered for centuries from debauchery, the result of which is seen in the pigmy physique of the men, and in the fact that most of the earnest Japanese students abroad return home to die of consumption. Hirosawa, the statesman-host, was one of those earnest spirits who led the revolution of 1868 to successful issue, and then, like Okubo, sank under the assassin's dirk. "A Day in a Japanese Theatre" is told as the former dramatic critic of the *Tribune* might be supposed to tell it, and is the most readable, informing, and amusing description of the Japanese theatre which we have yet read. On the whole, this little book will serve to direct attention anew to the kindly nature of the Japanese people, and to suggest an insight into their humble private life. It is certainly a good offset to the bird's-eye view given in 'Unbeaten Tracks in Japan.'

Loci e libro veritatum. Passages Selected from Gascoigne's Theological Dictionary, Illustrating the Condition of Church and State, 1403-1458. With an Introduction by James E. Thorold Rogers, M.P. Oxford: At the Clarendon Press. 1881. 4to, pp. xc. and 254.

WHAT abundant aids the scientific student of history finds at his disposition to-day which a generation ago did not exist! At that time the only period for which it was possible for him to go to original authorities was ancient history; and in those days of exclusively classical culture it was not the least of the benefits of that culture that the boy, in reading Cicero, Cæsar, and Thucydides, was learning history at first hand. It was the only school for training in historical methods, and it cannot be doubted that, while the precision of expression and delicacy of appreciation cultivated by linguistic study formed the best preparation for the examination of historical documents, the historical sense was quickened and cultivated by close contact with writings which rank as historical authorities of the highest order.

The student of the present day is not confined to the authors of classical antiquity for his acquaintance with original authorities in history, although the Latin language still forms the best medium for the use of authorities. The student who cannot use Latin has but meagre materials at his command for any but the most recent periods. But he is now rather embarrassed by the abundance than the paucity of the works of original authority placed before him. It is true the chronicles and letters of the Middle Ages do not rank with Cæsar and Cicero as works of literature; but we venture to say that few will pronounce them less interesting, their interest largely consisting in their nearness and direct connection with us.

The extracts from what we may call the Common-Place Book of Thomas Gascoigne, edited by Mr. Rogers, do not belong to the most entertaining documents of this class. Even although the editor has sifted out the especially theological portions, and the pages given here contain a number of characteristic anecdotes and incidents, yet it will be consulted, not so much for interesting narration as for the light it throws upon "the darkest period in the social and political history of England." All of us have felt, no doubt, that the Wars of the Roses were a puzzle—a relentless civil war, laying England waste during the life of a generation, with very distinct and calamitous results, while the causes of it were obscure and seemed inadequate. It is just this dark period that the book before us serves to enlighten. Its author died in 1458, three years after the first battle of St. Albans. He tells us, therefore, very little about the events of the war, but, what is of far more importance, a great deal about the troublesome times that led to it—the social discontent, culminating in Jack Cade's rebellion, the corruption and misgovernment of Suffolk and Somerset, the important parliamentary proceedings of 1455, and the mis-

management of the war in France, with the surrender of Anjou to the Queen's father, and the loss of all the rest of the English possessions except Calais. Surely, here was enough, in the presence of an imbecile King and an able statesman who had a better title to the throne, to account for a civil war which made a disputed succession its pretext, but found its support in the deep-seated discontent of the people.

Mr. Rogers is admittedly the best-informed authority upon the social history of the later Middle Ages, which is, we suppose, his favorite field of investigation; nor is his knowledge of the political history of this period by any means inadequate. His introduction, of ninety pages, is a valuable commentary upon the book, and an excellent guide to the study of the reigns of Henry V. and Henry VI. The picture of the times presented as well by him as by Gascoigne leaves no room to wonder at either of the convulsions that followed—the War of the Roses and the Protestant Reformation.

Mr. Rogers's description of the character of Henry V. is well worth reading (p. xxi.):

"Henry seems to have entered on the French war partly with the view of recovering at least that which had been lost by the rupture of the peace of Bretigny, but quite as much with the object of chastising the frightful scandals of the French court and of French society. The language in which he announces and justifies his purposes is like that of a Puritan commander in the early days of the Civil War, as if he were one who was sent by God to chastise the guilty. Severely orthodox, scrupulously just, a model of private virtue, of dauntless heroism, of consummate military skill, and favored by unexampled good fortune, he united all the qualities which the English admire but have hardly ever witnessed together in their most popular kings. . . . His army, well drilled and invincible, was, so far as the King could make it, as secure in its own discipline, as confident in the genius of its general, and as pious, as Cromwell's Ironsides, but as severe in the hour of battle and of victory."

The Exploration of the World. By Jules Verne. The Great Explorers of the Nineteenth Century. Translated from the French. With fifty one original drawings by Léon Benett, and fifty-seven fac-similes from early MSS., and maps by Matthis and Morieu. New York: Charles Scribner's Sons. 1881. 8vo, pp. xv, 378.

THIS is the third and concluding volume of Jules Verne's account of the great travellers, "from the time of Hanno and Herodotus down to that of Livingstone and Stanley." The date he fixes upon as the time when "the shape of the earth is now known, the task of the explorers is done," is 1840, when "the whole coast-line of North America was now accurately laid down." But the arbitrariness of this limit will be appreciated when we recall the fact that precisely in 1840 Livingstone first sailed for Africa, so that this work stops just short of those who now are, and without doubt in the future will be, regarded as "the great explorers of the nineteenth century." And it is surprising, to say the least, to find that the task of the explorers is at an end while the physical geography of the greater part of Africa and Australia is still unknown, and Central Asia, China, Japan, Borneo, and New Guinea are to a great extent unexplored. The opening chapter is devoted to a general summary of the travels in the first decade of the century, and though the second is headed "The Exploration and Colonization of Africa," it is mostly confined to the journeys of Denham and Clapperton, Caillié, and the Landers upon the west coast. Following this are a few pages on India and America, concluding the first part. The second part narrates the voyages round the world and the polar expeditions, in which, as is natural, by far the largest space is given to the French navigators, Freycinet, Bougainville, and D'Urville.

The work is not without value, though it adds nothing to the reputation acquired by the author as a geographical romancer. In great part it is hardly more than a dry compilation of names, dates, and figures, while the account of the voyages, which are narrated at great length, has, with few exceptions, singularly little life and vivacity. We have noted many inaccuracies of statement and occasionally a blunder, which may, however, have been the fault of the translator. For instance, the height of Chumulari is given at 30,000 feet, and, immediately after, it is said, that "Webb climbed the Niti-Ghaut, the loftiest peak in the world, the height of which he fixed at 16,814 feet." "Peak" should, of course, be *pass*, but even then the statement is incorrect, as there are a number of passes more than 18,000 feet above the sea level. On the same page is this statement in reference to Fraser's travels in the same region: "He visited the source of the Jumna, and, at a height of more than 25,000 feet, he found numerous villages picturesquely perched on slopes carpeted with snow." As a matter of fact, human habitations are rarely to be found, even on the northern or Tibetan slope, above a level of 12,000 feet. The names both of persons and places are frequently spelled incorrectly and in different ways in the course of a few pages. Now and then a well-known name is almost lost under some strange form, as Azcongater for Eziongeber. Of the maps, too, we are sorry to be unable to speak with praise. Not only are they coarse in execution, but they are also of little worth to the reader. The map of Egypt does not give Alexandria, while that of English India gives only the northern half of the peninsula. There is also on most of them a mixture of French and English names, which must sadly confuse those who consult them. On the map of Victoria at the South Pole the ocean is called the "Arctic." The want of an index aggravates all the other deficiencies, in view of which we can hardly help suspecting a commercial use of the author's name in connection with this compendium.

Household Hints. By Emma W. Babcock. [Appletons' Home Books.] New York.

EACH of the "Household Hints," which have appeared from time to time in the columns of the *Evening Post*, is good of its kind. "Miscellaneous" the table of contents calls them, but the trouble is they are so miscellaneous that it would be difficult to arrange any coherent housekeeping from them. What is wisdom to her who has no servant, or but one, is folly for her who has three or five. The mother to whom it is useful to know how "to restore faded blue stockings" is not likely to bring up "her daughter as a hot-house plant," imminent as that danger appears to be to the author's mind. The Germans advertise frankly books "zur höheren und bürgerlichen Kochkunst," and our own cook-books sometimes discriminate as to the expense of different dishes. It would be well to carry the same distinction into all departments of housekeeping, and to group hints according to the housekeeper's point of view. One further and wider difference underlies the whole subject: housekeeping and doing housework are two separate things. That some women have to do both at once is no reason for confounding them. That any woman, wife, mother, daughter, sister, to whom is given the privilege of making a home, should keep house, may be held as a duty; but how much housework she should do, or whether she should do any at all, is a question which immediate circumstances alone can decide. There are women, who are admirable housekeepers, whom it would be a great waste of precious material to set to doing housework. Such a woman could find better ways to eke out a slender income, and not neglect home either.

One-half of the book is devoted to cooking recipes. A new cook-book is always welcome. There are households in which it is thought good economy to cook the last book through for the sake of perhaps finding a new muffin for breakfast. These recipes seem in the main sensible and appetizing; but what will the orthodox, the old believers in open fires for roasting, say to a remark like this: "An easy and, so far as I can see, unobjectionable way is first to steam the turkey until it is tender; then brown it slowly in the oven, basting it often"?

BOOKS OF THE WEEK.

A SUMPTUOUS GIFT-BOOK.

Greece and Rome

THEIR LIFE AND ART.

By Jacob von Falcke, Director of the Imperial Museums, Berlin. Translated by William Hand Browne. 4to, $15.

Young Folks' History

OF THE

War for the Union.

By John D. Champlin, Jr., Editor of the "Young Folks' Cyclopædias." 8vo, copiously illustrated, $2 75.

Mythology & Folklore.

An Introduction to the Science of Comparative Mythology and Folklore. By the Rev. Sir George W. Cox, Bart. 12mo, $1 75.

Our Familiar Songs,

AND THOSE WHO MADE THEM.

Edited by Helen Kendrick Johnson. 8vo, $6.

HENRY HOLT & CO., New York.

NEW BOOKS.

WHITTIER BIRTHDAY-BOOK. With steel portrait and twelve illustrations. Square 18mo, beautifully stamped, cloth, $1; flexible calf, morocco, or seal, $3 50.

This book is prepared on the same plan which has proved so popular in the Longfellow and Emerson Birthday Books.

A HOME IDYL AND OTHER Poems. By J. T. Trowbridge, author of 'The Vagabonds,' etc. 1 vol. 16mo, gilt top, $1 25.

This book contains many of the poems Mr. Trowbridge has written since the publication of 'The Emigrant's Story,' in 1874. Mr. Trowbridge's ballads and poems of every-day life are so true to nature and reveal so warm a sympathy with the experiences of every-day people that they are deservedly very popular.

NEW EDITIONS of Mr. TROW- bridge's previous Volumes.

THE VAGABONDS AND OTHER POEMS. $1 25.
THE EMIGRANT'S STORY AND OTHER POEMS. $1 25.

These have for some time been out of the market, and are now reissued in attractive style and at a reduced price.

THE HUDSON. A Poem by Wallace Bruce, author of 'The Land of Burns,' 'Yosemite,' etc. Illustrated by Alfred Fredericks. 1 vol. small 4to, cloth, $1 50.

A poem describing, in flowing, picturesque verse, the features of the Hudson which by beauty, or legend, or historic incidents appeal most strongly to those who visit or read of this beautiful river. The illustrations supplement its descriptions, and the whole forms an attractive gift-book.

LOUISE, QUEEN OF PRUSSIA. A Memorial. By August Kluckhohn. Translated from the German by Elizabeth H. Denio, Teacher of German in Wellesley College. With two portraits. 8vo, paper, 75 cents.

A fine translation of a book which tells the story of this admirable, right queenly woman with excellent simplicity and with just appreciation of her noble qualities.

*** *For sale by all booksellers. Sent, post-paid, on receipt of price, by the publishers,*

HOUGHTON, MIFFLIN & CO., Boston;
11 East Seventeenth Street, New York (between Broadway and Fifth Avenue).

PUBLISHED THIS DAY.

A SELECTION OF CASES on the Law of Bills and Notes and other Negotiable Paper. With full references and citations, and also an Index and Summary of Cases. By James Barr Ames, Bussey Professor of Law in Harvard University. 2 vols. royal 8vo, half calf, $12.

ODDITIES OF THE LAW. By F. F. Heard, author of 'Curiosities of the Law Reporters.' 12mo, cloth, $1 50.

This collection of quaint and curious excerpts from the law books will be found exceedingly interesting, not only by lawyers, but by the general reader. It has the same attraction, and shows as scholarly a touch, as Disraeli's 'Curiosities of Literature.'

* Also, a New Edition of

HEARD'S CURIOSITIES of the Law Reporters. Revised and enlarged. Sixth thousand. 12mo, cloth, $1 50.

No lawyer can read the 'Curiosities of the Law Reporters' and 'Oddities of the Law' without learning something that will be of use to him in the practice of his profession.

A New Edition of

A DICTIONARY OF SYNO- nymes and Synonymous Expressions. By Richard Soule. 8vo, cloth, $2; half calf, $3 50.

This book is so simple in arrangement, and so full and accurate in its grouping of synonymes, that it has grown rapidly in favor wherever it has become known.

"I think it is the best book of the kind extant; and I know not how it is to be made better."—*A. P. Peabody, LL.D.*

All the above books will be sent free by mail or express on receipt of price.

SOULE & BUGBEE,
12 Court Street, Sears Building, Boston.

Subscribers to the

Weekly Evening Post

are notified that hereafter the NATION will be issued as the Weekly edition of the EVENING POST, and subscriptions not yet expired will be filled by the NATION without extra charge, unless otherwise directed. (The Semi-Weekly or Daily editions of the EVENING POST will be substituted pro rata if preferred.) Terms per annum, post-paid: Daily, $9; Semi-Weekly, $3; The NATION (Weekly), $3.

BENJ. F. STEVENS, President.
JOS. M. GIBBENS, Secretary.

IN any family, whether large or small, but especially where the number of children is large, a record of the constitutional peculiarities of each one, and the whole course of its physical development in sickness and in health, is certain to be instructive and may prove invaluable. Such a record is Professor J. F. Fonssagrives's 'Mother's Register,' consisting of a series of tables scientifically arranged for brief and convenient entries. A separate volume for boys and for girls. Price, post-paid, 75 cents per volume, or $1 25 for two volumes. Address PUBLISHER OF THE NATION.

J. W. BOUTON,

706 BROADWAY,

PUBLISHES THIS DAY:

I.

A Treatise on Wood-Engraving:

Historical and Practical. By William Andrew Chatto and John Jackson. With an additional chapter by Henry G. Bohn, and 450 fine illustrations. A Reprint of the last Revised Edition. 1 vol. royal 8vo, cloth, uncut, $9; half morocco, gilt top, $10.

II.

Evenings with the Skeptics;

Or, Free Discussions on Free Thinkers. By John Owen, D.D. I. Pre-Christian Skepticism. II. Christian Skepticism. 2 vols. 8vo, cloth, $9.

NEARLY READY:

Monumental Christianity;

Or, The Art and Symbolism of the Christian Church. By John P. Lundy, D.D. With 200 illustrations. Second edition. 1 vol. small 4to, cloth, gilt top, $8.

HYGEIA HOTEL,

OLD POINT COMFORT, VA.

Situated one hundred yards from Fort Monroe, at the confluence of the Chesapeake Bay and Hampton Roads, being the first point of land lying westward between the Capes of Virginia, about fifteen miles north of Norfolk and Portsmouth; all passenger steamers running to and from those cities touch at the pier, going and returning, with the U. S. mails, landing only twenty rods from the hotel, which is substantially built and comfortably furnished; has two Otis hydraulic passenger elevators, gas, Creighton's oral annunciator or electric bells in all rooms; water: rooms for bath, public or private, including *Hot Sea*, and closets on every floor, with the most perfect system of drainage of any hotel or public building in the country. And as a resort for the pleasure-seeker, invalid, or resting-place for tourists on their way to Florida or the North, this house, with accommodations for about 1,000 guests, presents inducements which certainly are not equalled elsewhere as a summer resort or cold weather sanitarium. Has during the cold weather over 15,000 square feet of the spacious verandas (of which there are over 25,000 square feet encircling the houses on all sides), enclosed in glass, enabling the most delicate invalid to enjoy the sunshine and fine water view without risking the slightest exposure. The climate of Old Point Comfort is unequalled for salubrity, MALARIAL FEVERS BEING ABSOLUTELY UNKNOWN. The record of the Meteorological Observatory for the past ten years shows an average temperature of 60°, 74°, 70° in summer; 70°, 59°, 40° in autumn; 45°, 44°, 42° deg. in winter; and 48°, 52°, 63° in spring; the invigorating atmosphere and mild temperature being especially adapted to that class who seek the genial winters of the South and cool summers of the North. For sleeplessness and nervousness, the delicious tonic of the pure ocean air and the lullaby of the ocean waves rolling upon the sandy beach, but a few feet from the bedroom windows, are most healthful soporifics at the Hygeia.

For further information address, by mail or telegraph.

The Nation.

NEW YORK, THURSDAY, NOVEMBER 10, 1881.

The Week.

THE result of the elections is, on the whole, what most people expected. Not only is it "an off-year," but the proverbial apathy of an off-year has been aggravated by the absorption of the public mind during the past summer in the late President's illness and by the prevailing suspense about the course of the new Administration. The vote has been very light everywhere, every party excepting John Kelly's bringing but a small proportion of its forces to the polls. Kelly's "cohorts," however, seem to hold their own in all weathers and in all years, which is the more surprising as he has now no offices to reward them with, and there was really more coal and flour to be got by joining one of the rival "halls." The controversy between him and the *Herald* continues to be carried on with furious bitterness, but that paper does not inflict on him the extreme editorial penalty of "ordering his name out of the paper." This retribution has, however, apparently overtaken Mr. W. W. Astor, along with other misfortunes, for he is only spoken of as "the Republican candidate," while his opponent's name is given in full. Scenes like these are well calculated to shake the stoutest nerves. Next to the permanence of Kelly's strength, the most remarkable feature of the election in this city was the defeat of two of the young men of wealth who made their début in political life by becoming slaves of the Machine. They and all like them have now been made aware that though the Machine can give nominations, it cannot always make the nomination valuable, and that to succeed "inside politics" it is also necessary to stand well with the voters outside politics.

The report of the Commissioner of Pensions, only an abstract of which is before us, will remind the people very forcibly of the foolish demagogy which inflicted upon the country the Arrears-of-Pensions Act. Before the passage of that act the pension roll and the sum necessary for the payment of pensions were slowly going down. When the Arrears Bill was under discussion, its advocates, in their speeches in Congress assured the public that the total amount required to satisfy all claims for arrears would certainly not exceed thirty millions and might fall below twenty-five. At the Treasury Department it was estimated that the required amount would be all of one hundred and fifty millions. The Commissioner of Pensions thought that it would run up to three hundred millions; but after the first half-year's practical experience of the operation of the act he amended his estimate to the effect that the public expenditure directly and indirectly caused by it in the shape of arrears proper, of a rapid increase in the number of new pension claims, honest and fraudulent, stimulated by the larger prizes to be obtained, and of the consequent increase of the pension roll involving arrears and annual payments, would in the course of years reach a total of about six hundred millions. We fear this estimate is not very far from the truth. At present the annual expenditures of the Pension Office, as the Commissioner shows, have run up from twenty-nine millions, the sum required before the passage of the Arrears Act, to $49,723,967. The amount paid out during the year as "first payments" to new pensioners is reported as $23,628,177—a large sum, considering the fact that the civil war closed sixteen years ago.

Treasurer Gilfillan's report is probably the most extraordinary document ever presented to a political community. There is a surplus revenue this year of over $100,000,000, and the revenue increased $27,000,000 over that of last year. Over $90,000,000 was spent in reducing the public debt. The stock of gold and silver in the Treasury has risen to $269,000,000, the amount of gold having increased over $39,000,000 since last year, and that of silver over $16,000,000. Putting aside the greenbacks, the demand liabilities of the Treasury fall below its assets by over $146,000,000. The fund for the redemption of the greenbacks is kept at about 40 per cent. of their total amount, which is $362,539 65. No public financier has ever had such a story to tell. No other nation ever got its finances into such a comfortable condition except by robbery. To the friends of the tariff, however, there is something awful in it. The Protectionists have a philosophy of society, just as the slaveholders had one, which makes a high tariff one of the normal wants of each political community, just as clothes are one of the normal wants of the civilized man. This philosophy has never, since it triumphed in 1861, had to face the public on its own merits. It has always had behind it, as the pro-slavery philosophy had, a good backing in the shape of seeming political necessity, as well as undoubted pecuniary profits for a large class. But the enormous rise of the revenue and the near approach of the disappearance of the debt will speedily compel the tariff men to make good their claims without the aid of seeming necessity. They will have to show the country that it ought to submit to be taxed for their benefit simply and solely without any mixture in it of political need. This will be a terrible job. They will have to bring to the task all the similes and allegories they have in store, and will have, moreover, to abandon that old story about helping infant manufactures. The fondest parents are apt to get tired of spending money on stretching apparatus for an infant who cannot show that in ten years he has added one genuine inch to his stature.

The public debt was diminished during the month of October $13,321,458, which makes the decrease since June 30—the beginning of the current fiscal year—$55,064,345, or at the rate of $165,000,000 per year. The statement of the assets and liabilities of the Treasury shows that the Treasury at the end of October owned $167,785,609 gold coin and bullion, against $169,122,024 at the beginning of the month; that the amount of silver owned at the end of the month was $37,146,870, against $42,447,784 at the beginning. It is notable that at the end of October there were outstanding $66,327,670 silver certificates, against a total of standard silver dollars in the Treasury of $66,576,378, so that the limit of the issue of silver certificates on the present stock of silver dollars has about been reached.

Notwithstanding the arrival of $1,490,000 foreign gold and the disbursement by the Treasury of about $3,000,000 of November interest, the surplus reserve of the New York banks was reduced during the week $1,600,000, or to $3,104,675. The foreign-specie arrivals since August 1 have been $22,832,941, against $45,325,652 a year ago. The rates for foreign exchange do not warrant fresh gold imports, but if the declining tendency of the prices of breadstuffs continues, it will not be long before this class of exports will furnish exchange enough to lower rates once more to the gold-importing point. There has been no advance in the London rate for money. The Paris settlements from which trouble was apprehended have passed without causing any serious disturbance, and there are rather more securities going to Europe than are coming back from there. The general trade of the country continues very large, and the indications are that it is profitable. The tonnage of the railroads was never larger than at present. No further steps have been openly taken towards a settlement of the differences between the trunk lines, but whether these are formally settled or not, rates during the winter months promise to be considerably higher than now, although without a formal agreement between the trunk lines there is no guarantee of a long continuance of profitable rates. Prices advanced during the week at the Stock Exchange, where business ran almost entirely on specialties, each of which is controlled by a clique.

The *Public* of last week had an important article on "Prices since Resumption." Tables of comparative prices of forty-three articles of commerce, being those of most common use, and constituting three-fourths of all the traffic of the country, are given for the years 1878, 1879, 1880, and 1881. Assuming that the prices of the year 1860 represented the normal standard or true par of exchange between commodities and gold, and representing this condition by the figure 100, the *Public* finds that average prices on the first of November, 1878, were at 81.40, or about nineteen per cent. below the nominal standard; that in 1879 they were at 98.93, in 1880, at 103.08, and at the present time (November, 1881) at 111.02. Going back to the years before and after the panic of 1873, the *Public* finds the following range of average prices as compared with the standard of 100, gold values being used in all cases:

1866	131.00	1872	122.00
1867	138.00	1873	113.00
1868	140.00	1874	115.00
1869	116.00	1875	107.00
1870	118.00	1876	100.00
1871	120.00		

Making some allowance for imperfect data, these figures are believed by the *Public* to be approximately correct, and they seem to tally with the observed fluctuations of trade. The tables would be improved by adding to the list of prices examined those of labor, real estate, and transportation. Their value consists in the fact that a marked and continued rise of general prices above the normal standard is always the forerunner of a commercial crisis. It appears that prices anterior to the crisis of 1873 reached the maximum of 140.00 in the year 1868, and that they were considerably above 100 for a period of ten years before 1873, although in the last-mentioned year they were only two per cent. above the present average.

The only question presented to Judge Cox for decision by the argument now going on in the Star-route cases is, whether a conspiracy to defraud is an "infamous crime," in the technical sense of the word. The Constitution requires that the prosecution of "a capital or otherwise infamous crime" shall be by "presentment or indictment of a grand jury," except in certain specified cases. Of course, in the ordinary sense of the word the crime is infamous; but it by no means follows that it is so as a matter of law. The reason why the cases were begun by information was that the statute of limitations barred an indictment. There is great force in Mr. Bliss's suggestion to the court that if the question involved appears to it to be doubtful, the information ought to be sustained and the question carried up. It should be observed, too, that all the talk about proceedings by information being despotic and anti-American is absurd. If the framers of the Constitution had meant to prevent all crimes from being tried by information, they would have said so in so many words. "Liberty" is in just as much danger from the trial of a non-infamous crime without the intervention of a grand jury as of an infamous one. In fact, it would probably not hurt Liberty a bit if all prosecutions were begun in this way.

We have not hitherto advanced any private theory of our own in regard to the speculation in Confederate bonds, simply for the reason that we have been so much interested in watching the development of theories on the subject by our contemporaries. These have, as our readers are aware, been very numerous. The first theory advanced was that the speculation was based upon the effect which the Mahone movement in Virginia was likely to have upon the financial policy of the Republicans. The process by which a fondness for repudiation in Virginia was going to lead to a desire to pay a debt the assumption of which is prohibited by the Constitution, was never very clear to us. It was advanced by the *World* with that apparent seriousness which it so often makes use of for the purpose of disguising its overflowing humor; but the chance of recovery by the means suggested in the *World* seems now to be at least as likely to be good as any which has made its appearance since, and it deserves to be taken into consideration among the other theories. The second was the deposit theory, which in its original form bore a curiously close resemblance to the deposit theory of the American heir to vast estates in England. As we pointed out the other day, the deposit which awaits the arrival of the American heir is always lying in the Bank of England, and its payment is in some way dependent upon an opinion of the Lord Chancellor which can never be found in the regular series of reports. In exactly the same way these Confederate deposits were found to be in the Bank of England, and Lord Hatherley, who was Lord Chancellor a few years ago, was stated to have delivered an opinion. These statements were fortified by a reference to a correspondence between the State Department and the British Government, in which the United States laid claim to these deposits, but was driven off because, in order to prove its title, it would have to admit the legal existence of the Confederate Government and apply for these funds as its "executor," which of course Mr. Fish would not do for any money. There was in this theory a certain vagueness as to the amount of money in the Bank of England to the credit of the holders of Confederate bonds, but it was generally conceded that it was either $800,000 or else $17,000,000, and whichever it was, it clearly did not belong to the Bank.

General Marcus Wright, however, who has long been charged with the custody of the Confederate archives, pronounces wholly baseless the belief that there is a Confederate deposit somewhere in England which has produced the recent speculation in Confederate bonds. Indeed, there seems to be little or no question that the whole affair is a sort of experiment on public credulity made either by one stock operator or by a syndicate. If by eagerly offering a dollar for a $1,000 bond the speculator can persuade outsiders to give two dollars a piece for his stock of them, he has of course made one of the little strokes which are tried successfully or unsuccessfully in Wall street every day. It is the old mock auction in a new form. The belief that the Confederacy left treasure hidden somewhere in Europe will probably survive, however, for fifty years, and reappear every now and then in some sort of "flurry." It is like the belief in Captain Kidd's treasures and in the unclaimed English estates belonging to American men. Such beliefs, indeed, are survivals of the olden time, when there were no banks, and people buried their savings, and are among the most ancient and poetic weaknesses of the race.

The Minnesota House of Representatives has passed a bill to adjust the State's railroad-bond debt at fifty cents on a dollar, and if the Senate concurs in an amendment which authorizes the issue of bonds for the purpose at less than five per cent., provided there is a market for them at the reduced rate, the bill will become a law. We should suppose that buyers would be rather shy of the bonds at any rate. Who can say that when they become due the State will not "readjust" them also at fifty cents on a dollar? The holders of the partly repudiated bonds may take the new ones upon the ground that "half a loaf is better than no bread"; but the credit of a great State cannot be maintained by taking a niggardly advantage of the proverb.

There is nothing more interesting in connection with the present struggle between Chili and Peru than the great contributions which have been made through it to public law. This is really not surprising, because there are now at least four existing governments in the country, and, as all jurists know, the amount of public law in any part of the world is directly proportioned to the number of governments in it. First, there is the Government of Don Patricio Lynch, the Chilian admiral, who has declared martial law throughout all the territory of Peru occupied by Chilian troops. Second, there is the Government of Don F. Garcia Calderon, a description of whose authority is best given in his own words in a letter to Admiral Lynch—that he is "occupying without troops" a "zone." The headquarters of the Government of Don Nicholas de Pierola are believed to have been "in the saddle" hitherto, but it is now said that Arequipa, the "earthquake city," has abandoned his fortunes and gone over to Calderon, who will no doubt proceed to occupy it without troops. The fourth Government is that carried on by Mr. Hurlbut, our Minister, by postal communication with the various other governments. Lynch's Government, being based on the Chilian guns, is a military government; Calderon's is a republic, Pierola's a dictatorship, and the Hurlbut Government does not come under any known political head, but is, according to his own account, based on certain principles of international law which would, if applied in good faith by the other governments, furnish a means of settling all their disputes amicably.

With this excellent end in view he has announced it as a principle of the code of international law administered by him that war indemnities must "be either agreed upon by the parties, or determined by disinterested arbitration." This has now been supplemented by a letter from Don F. Garcia Calderon, in which he gives the views of his Government on the subject of martial law. He admits that Admiral Lynch may by martial law prevent his "practising acts of hostility," but insists that all other operations he has still a perfect right to carry on. It follows from this that the Admiral has no right "to take possession of the Treasury," or "to sequestrate the funds which the Government possesses in the Bank of London," or "to demand the surrender of the offices under my administration." Admiral Lynch, it will be remembered, declared martial law for the purpose among others of stopping the operations of the Treasury, which consisted in the manufacture of paper money. It is obvious that if the Calderon Government's view of the limitations of martial law were correct, he could, by merely keeping the Treasury running, pay any war indemnity the Admiral might ask, while, as the money is worthless, the resulting advantages to Chili would not be

great. Admiral Lynch therefore objects to this theory of martial law, and insists on the old view that martial law means the will of the officer who declares and maintains it. Pierola has not recently manifested any interest in these questions, but is believed to be devoting considerable attention to the view taken by international law of the subject of highway robbery and murder. The latest story from the scene of negotiations is that some publicist is forging documents purporting to come from the Hurlbut Government, for the purpose of giving the impression that the United States is going to intervene. This does not seem at all necessary at present.

The Land Court in Ireland has made its first decision, making a reduction of nearly thirty-three per cent. in the rent of the farm. This will probably still further increase the number of applications from tenants. In fact, they are now coming in so rapidly as to threaten to overwhelm the court with business, and make so much postponement necessary as greatly to diminish the immediate value of the act. It is said to be the policy of the Land League to encourage applications for the very purpose of producing a block and disgusting the tenants with the delay. The Ministry is in the meantime suffering somewhat from the Irish vote in the large English towns, in four or five of which the Conservatives have made heavy gains at the municipal elections. This, however, will not account for all their gains; but there are usually so many local issues in municipal elections that they are not sure indications of the drift of popular sentiment on imperial questions

---

The Irish Land League has issued another manifesto, which is more rational and coherent than any which have gone before. It confines itself, *apropos* of the approaching hundredth anniversary of the establishment of Irish legislative independence by Flood and Grattan and the Volunteers, to dwelling, though with the usual heat and extravagance, upon the wrong and damage involved in the administration of Irish affairs mainly by Englishmen and Scotchmen, and in the legislation on Irish affairs by a Parliament made up in the main of Englishmen and Scotchmen. It comes very near hitting the bull's-eye by declaring that if the government of Ireland were what it ought to be, Parnell would be Prime Minister (for Ireland) instead of being in jail. This is not the exact truth, but it comes very near it. If the government were what it ought to be, the highest place in Irish politics would not be reached by persons as reckless, incoherent, and unscrupulous as Parnell, but the person obtaining the position Parnell occupies in popular confidence would be, not Prime Minister, but Irish Secretary. If the League would come down to the region in which rational men live and work, and push this argument in the language of sober business, they would soon bring about a change which would satisfy not only the material but sentimental wants of the Irish people. As long as they rave and rant, and call names like escaped lunatics, they not only close the ears of Englishmen, but justify their deafness in the eyes of the civilized world. The reductions which the Land Courts are making in the rent are in the meantime filling the landlords and mortgagees of Irish estates with consternation. There are very few encumbered properties which will bear them and leave anything at all for the life-tenant.

Wendell Phillips has, in a letter declining an invitation to go to Ireland to lecture, made a very important contribution to the long-standing controversy about the nature of rent. But we need hardly say that he agrees neither with Ricardo, Mill, Carey, nor any of the other prominent writers on this subject. They all assume that the owner of the land has something to say in fixing the amount of the rent, and that his demand will be influenced in some degree by the producing power of the soil, and the price of produce in the nearest market by the competition of farmers. According to Mr. Phillips, however, the owner has no more to do with the matter than the man in the moon, nor is it affected by competition for the land, or by the price of produce. The tenant fixes the rent himself. "Honest rent is the surplus left after the tenant has lived in comfort—material, intellectual, personal, and social comfort." Under this rule Ireland, Mr. Phillips says, "owes no rent," which is perfectly true. But he might have added that no rent is due under this rule in any country in the world. The tenant must of course decide when he feels comfortable, materially, intellectually, personally, and socially, and no tenant has any surplus left after providing himself with what he thinks necessary for his comfort. The richest land supplies no such surplus, and never will, because, as the ages roll by, people's ideas of comfort expand. Comfort in its large sense abhors a surplus (just as nature abhors a vacuum) if the comfortable man has to pay it to somebody else. No one is ever comfortable enough to have something over for such a very uninteresting person as a landlord. Consequently Mr. Phillips's definition, which is one of his very best, if generally accepted, will render tenants the very important service of reducing the species of property known as the fee-simple of land to a mere claim on the occupier for as much of his money as he does not care to keep for himself. He leaves untouched the very serious question, whether if the land does not supply the tenant with comfort the landlord is not bound to do so out of his own pocket.

In Germany there is evidently much excitement among the "Conservatives" and in Government circles about the elections. The greatness of their disappointment appears more strikingly from the way in which they express it than from the number of seats gained by their opponents. When the *Kreuz-Zeitung*, the organ of the feudal Conservatives and of the stiff old bureaucracy, exclaims that the continued success of the Progressists and Secessionists—that is, of those who seceded from the National Liberal party — means something very much like the end of the world, it is evident that they confess themselves very seriously defeated. But the alarm seems almost comical considering the fact that the same Progressists and Secessionists are very loyal subjects and dutiful citizens, who only want constitutional government with some real responsibility in it, and that most of them would be glad to co-operate with Prince Bismarck if he were less autocratic in his ways and would reasonably co-operate with them. The "covert satisfaction" expressed by the French papers at the result of the elections in Alsace-Lorraine, which is looked upon as an evidence of French sympathies, is a little premature. Germany assimilates new accessions of population slowly but surely. The Prussian province on the left bank of the Rhine was added to the Kingdom of Prussia in 1815. French sympathies lingered there for thirty years after the incorporation of that territory with the Prussian monarchy. For a long time, even within the memory of middle-aged men, the very name of Prussian was hated there and used as a particularly offensive epithet. It continued to be so more or less until the revolutionary movements of 1848 turned the thoughts of men into different channels. Now the German population on the left bank of the Rhine is perhaps more intensely national in feeling than any other in Germany. Alsace and Lorraine will probably pass through the same process. Any great event which takes in the minds of the population the place of the memories of the last war will greatly facilitate that transition.

Prince Bismarck is still evidently a good deal puzzled as to the course he is to take in view of the result of the elections. It is, to be sure, still possible to pursue the course he pursued before 1866, and totally disregard the majority in the Reichstag, but it would be by no means easy. Times have changed since 1866. The Emperor is older, Bismarck himself is older, and the German people are more experienced in politics. Parliamentary government, too, has gained in strength all over Europe, and Germany has less to fear. An article in the Berlin *Post*, a strongly Conservative paper though not an organ of the Chancellor, sketches the difficulties of the situation in an article which is exciting a good deal of attention. It assumes that an attempt will have to be made to govern through a working majority; that no such majority can be formed by the Progressists, and that the materials for it can only be found among the Centre party and the Clericals; that at the head of such a majority Prince Bismarck could not possibly put himself, and that, therefore, somebody else will have to take his place. It is much easier to talk of some such person, however, than to find him. Bismarck has a position which cannot be resigned or laid aside, at least as long as the present Emperor lives. It is not likely that the old gentleman would ever place any reliance on any other adviser, or in fact consult any other adviser; and in Germany the monarch still not only reigns, but governs. He has large undefined powers, which it would be highly embarrassing to the Minister to have exercised, not under his guidance, but under that of a non-official counsellor behind the throne.

SUMMARY OF THE WEEK'S NEWS.

DOMESTIC.

ELECTIONS were held in twelve States on Tuesday. The campaigns preceding the elections have been unusually quiet in all the States with the exception of Virginia. It is impossible as we go to press to obtain any accurate account of the results.

President Arthur has fixed upon Thursday, November 24, as a day of national thanksgiving and prayer.

United States Treasurer Gilfillan has issued his annual report for the fiscal year which ended June 30. It states that the receipts of the Government show an increase over those for 1880 from every source. In comparing the condition of the Treasury on September 30, 1881, with its condition on the same day of last year, the most striking changes are the increase in the gold coin and bullion and standard silver dollars on hand, and in the silver certificates outstanding. The amount of United States currency outstanding at the close of the year was $362,539,437 65. During the year fifty-four national banks were organized and twenty went into voluntary liquidation, leaving 2,136 doing business at the close of the year.

General Sherman has submitted his annual report on the army. He complains that the army is not strong enough in point of numbers, and that this results in overtaxing its strength. He says that it would be more economical to have a larger force, since this would avoid the drain upon the men's powers and the waste in the matter of supplies and transportation.

General William B. Hazen, Chief Signal Officer, has presented to the Secretary of War his annual report of the operations of the Signal Corps for the year. It states that the year "has been distinguished by additional progress and decided improvements." These points are treated in detail in the report. Some of the most important are the establishment of a permanent school of instruction at Fort Myer, Virginia, the preparation for the press of special bulletins containing weather information of public interest; the forecast of weather and of hot or cold waves for periods exceeding twenty-four hours; the forecast of northers for the interior plateau; the extension of the special warnings to the different agricultural interests of the country; the publication in quarto form of special professional papers; the offering of prizes for essays of great merit on meteorological subjects, and the general extension of the signal-service system in all parts of the country.

The Naval Advisory Board which has been engaged for some time in discussing the subject of the reorganization of the navy, has submitted a report to the Secretary of the Navy, from which it seems that we have now only twenty-one ships of war which are either efficient or worth repairing, and that in order to put the navy upon a proper footing it will be necessary to build at once forty-one ships of various classes. The report states it to be the opinion of the Board that it is best to have a navy of swift iron cruisers and to delay for the present the building of ironclads. The fact that the construction of this latter class of vessels has been rapidly changing of late renders it advisable to delay making any decision upon them until the navy is provided with ships of a class more fitted for ordinary service.

The total reductions in the Star-route service since Postmaster-General James began operations amount to about $1,575,000 per annum.

The hearing in relation to the information filed by the Government in the Prescott and Santa Fé Star-route case was begun on Thursday morning before Judge Cox in the Criminal Court at Washington. The defendants undertook to show that the method of proceeding by information, which was adopted by the Government on account of the action of the Statute of Limitations, instead of by Grand Jury indictment, was illegal and ought not to be allowed. Mr. Wilson opened for the defendants. He was followed on Friday by Mr. Bliss, who addressed the Court for the Government. Mr. Bliss made an able argument, showing that the method of proceeding on the part of the Government in this instance was well sustained by authorities. Mr. Ingersoll and Mr. Chandler continued the argument for the defence on Saturday and Monday.

General John W. Foster, of Indiana, has resigned the Russian Mission. He has been engaged in the diplomatic service of the United States for the past nine years.

The Hon. Lionel Sackville-West, the new British Minister to the United States, arrived in Philadelphia on Friday. He was received by the reception committee and the Mayor of Philadelphia, and was offered the hospitality of the city.

It is probable that something will soon be done about an international-copyright treaty between this country and England. Sir Leonard Tilly has gone to Washington from Canada on business in connection with this question, and has the sanction of the Canadian Government to protect its interests. The British Colonial Office has informed the Canadian Government that Mr. West, the new Minister from England to this country, would enter into negotiations with the United States in regard to the matter.

Several of the leading London newspapers have declared that there is no money in the Bank of England or elsewhere available for the payment of the Confederate bonds. It is also stated in Washington that the State Department has had no correspondence, and does not contemplate having any, with the English Government in reference to the reported balance remaining in the English banks to the credit of the Confederate States.

Bank Examiner Shelley has completed his examination of the affairs of the Mechanics Bank of Newark, and has forwarded his report to the Comptroller of the Currency. By this report the deficiency in the bank accounts is shown to be $2,411,000 45. It is now alleged that Nugent, the Newark morocco dealer, has been the dupe of Baldwin, the cashier of the bank, the latter having obtained control of Nugent's business after the panic of 1873, and having since used the funds of the Mechanics' Bank in carrying it on.

It is the opinion at the Bureau of the Comptroller of the Currency that the Newark bank will certainly pay its depositors sixty per cent., and that it is quite probable that it may pay in full.

An article which appeared originally in the Washington *Star*, and which was afterwards reproduced in the press throughout the country, purporting to be a description of what took place at the first Cabinet meeting after the Yorktown celebration, is authoritatively stated to be absolutely without foundation. The article in question described President Arthur as accusing Attorney-General MacVeagh of neglect of his duties in his conduct in regard to the Star-route frauds and the prosecution of Guiteau.

William Brown, a cabinet-maker in Washington, has testified before the committee appointed by Secretary Windom to investigate the methods of disbursing the contingent funds of the Treasury Department, that he did certain work upon the house and stables of Secretary Sherman in 1878 and 1879, for which he was paid out of Treasury funds. Mr. Sherman's friends say that the charges will "not only be met but refuted," but as yet no adequate explanation has been given. This affidavit of Brown's is part of the suppressed testimony in regard to the Treasury frauds. Mr. Pitney, the so-called "custodian" of the Treasury building, who was discharged on account of the revelations made before the investigating committee, says that he has been "sacrificed to screen his superior officers," and that he "possesses documentary and other evidence which will clear him, and place the responsibility for irregularities where it properly belongs."

The Medical Society of the District of Columbia appointed a committee some time ago to investigate the statements which have been made in regard to the unhealthfulness of Washington. The committee have had a meeting at which all the members testified to the general healthfulness of the District as shown by their own practice. A circular letter is to be sent to every practising physician in the District, and a report is to be drawn up based upon the information contained in the replies to the circular.

The official report of the Connecticut State Board of Health has been published and shows, among other things, a considerable increase of malarial diseases in that State. An interesting chapter on this subject is also to be found in the Massachusetts State Board of Health's newly issued report.

The lower house of the Legislature of Washington Territory has passed a bill giving the right of suffrage to women. Although a similar bill was defeated in the upper house some time ago, it is thought that it will come up in another shape and pass.

The trial of Lieutenant Flipper has begun. He is arraigned on two charges—namely, embezzlement and false statements. The defence spent Monday in a cross-examination of Colonel Shafter, who testified that before Flipper was relieved from the Commissary Department he thought him perfectly honest and of good habits, and if money had been stolen, he thought it had been stolen by some one else.

Last week was the most successful thus far of the Atlanta Exposition, the number of visitors having been forty per cent. greater than during any previous week. There is no doubt that the Exposition is a success, and that it will do a great deal of good to the South.

The long-pending controversy in regard to the priority of invention of the telephone has reached the stage of argument before the Examiner of Interferences in the Patent Office. There are five parties to the contest, including Messrs. Edison and Bell.

There was another steamboat disaster on the Mississippi on Friday night. The passenger packet *War Eagle* was carried by the force of the current against the Keokuk and Hamilton bridge, at Keokuk, Iowa. The officers of the steamboat behaved gallantly, and only two lives were lost. The steamer, however, was badly injured, and the bridge was damaged to the amount of $150,000.

On Saturday night the New York Chamber of Commerce gave a dinner to the French and German delegates to the Yorktown Centennial. There were about two hundred and fifty guests present. On Monday night a grand ball was given in honor of the delegates. They subsequently "disbanded." Some of them left for Europe on Wednesday, while others are to prolong their stay in order to see a little more of the country.

The members of the Ninth Regiment of Massachusetts are said to have behaved in a very disorderly manner in Richmond on their way to and from the Yorktown celebration, and a committee has been sent from Massachusetts to investigate the charges against them.

FOREIGN.

M. Brisson has been elected President of the French Chamber of Deputies by a large majority over the Legitimist and Bonapartist candidates.

Questions in regard to the Government's policy in Tunis were brought forward in the French Chamber of Deputies on Saturday. Premier Ferry, defending the policy of the Government, indignantly repelled the "calumnies" against M. Roustan, the French Minister to Tunis, and said that the Tunisian expedition had originated from the necessity of

protecting the Algerian frontier. He declared a French protectorate over the country to be inevitable, and denied the charge that the expedition had caused France to lose alliances or had disorganized the army. In conclusion, he urged the Chamber to do nothing that might compromise the interests of the army or of France. The debate has been feeble and uninteresting. No new facts of any importance were brought out. One of the members of the Opposition accused the Minister of War of having disorganized the army and falsified the official sanitary statistics.

The insurgents are said to have retreated from the vicinity of Kairwan in two bodies, one towards the coast, and the other into the province of Djerid. Their rapid movements make an attempt to surround them extremely difficult.

General Étienne has been appointed Provisional Governor of Susa and Kairwan.

A London despatch states that an army of 25,000 French volunteers will be formed for the purpose of occupying Tunis. Each volunteer will receive 1,500 francs, half of which is to be paid on his engagement and half at the close of his term of service, which is to be five years. Twenty-five hectares of land in Algeria will be allotted to him.

It is reported from Turin that negotiations are actively proceeding for the absolute cession to France of all the territory north of the river Medjerda.

It is stated that communications have been exchanged between France and England relative to the steps which are to be taken in case of a fresh military outbreak in Egypt. It is said that the leaders of the recent demonstration in Egypt are aware that any further action will lead to Anglo-French intervention, and that they are anxious to provide for their own safety.

The *Bulletin du Canal* has published an article, which is supposed to be an expression of the views of M. de Lesseps, upon Secretary Blaine's circular in regard to the Panama Canal. The article says that the just interests of the United States are already provided for in the terms of the concession by Colombia to the Panama Canal Company, and that, therefore, it is entirely unnecessary for America to trouble herself in the matter.

The conferences between the English and French Commissioners on the commercial treaty between the two countries have terminated. It is stated that the points upon which no arrangement has yet been reached will be settled through the ordinary diplomatic channels. It is not known as yet what conclusion was come to in the conferences, but it is thought that a definitive agreement will soon be concluded.

In Germany all political parties are actively pushing the claims of their respective candidates in those districts where a second ballot is necessary. Up to this time a majority of these second elections have fallen to the Liberals. The ministerial newspapers have expressed themselves very bitterly in regard to the result of the elections. One of them, the *Kreuz-Zeitung*, says that the continued success of the Progressists and Secessionists means "Finis Germaniæ."

Prince Bismarck is reported to have declared his opposition to the anti-Semitic movement which has played such a large part in the recent German elections, and to have said that he would never entertain any proposal to curtail the constitutional rights of the Jews.

There has been a split in the Democratic party in Spain. A number of prominent men, including Señor Martos, have withdrawn from the party and will probably unite with Castelar. This defection has greatly weakened the Democratic or Revolutionary party, as it is sometimes called, and will have the effect of strengthening the present reigning dynasty and providing an additional guarantee of peaceful progress for Spain.

The debate in the Spanish Cortes upon the address in reply to the speech from the throne has been concluded. The Government won a decisive victory.

In the Spanish Chamber of Deputies, on Tuesday, Premier Sagasta, in replying to Señor Robledo, declared that the Cabinet would remain true to the Liberal programme. He said it preferred a monarchy like that founded by Victor Emmanuel to one on the Neapolitan model.

The Conservatives in Havana have sent a congratulatory despatch to the Minister of the Colonies at Madrid, thanking him for repudiating, in a recent speech in the Chamber of Deputies, the proposition of autonomy for Cuba.

The Budget Committee of the Spanish Cortes has approved the Ministerial Conversion Scheme, and has granted Señor Comacho, the Minister of Finance, authority to enter upon negotiations with the bondholders.

The recent visit of King Humbert to the Emperor Francis Joseph has given rise in European diplomatic circles to many comments and speculations as to its signification. The representatives of Italy and Austria have been empowered to give the various governments to which they are accredited "identical and most satisfactory assurances in regard to the interview."

Disturbances continue in Ireland, but the successful working of the Land Act is gradually creating a better feeling among the people. The land courts are receiving a large amount of business. The court which sits at Belfast has caused consternation among the landlords by reducing the rental on two estates by one-third. It has also laid down the principle that improvements on estates shall be presumed to have been made by the tenant unless the landlord can prove the contrary, disregarding even express contracts between the landlord and tenant by which the improvements became the landlord's property. The result is that such improvements will not be considered as part of the capital upon which the landlord is entitled to receive rent. Justice O'Hagan has defined fair rent as such a rent as will enable the tenant to live and thrive. It is said that the Land League, finding that it is unable to prevent tenants from resorting to the land courts, is now encouraging litigation with the object of causing a complete block in its operations through an excessive amount of business. Miss Parnell, wishing to test the legality of the proceedings of the Ladies' Land League, publicly announced in the newspapers of Wednesday that a meeting of the League would be held on that day. No attempt was made to interfere with the meeting.

There will probably be many appeals from the decision of the Sub-Commissioners under the Land Act to the Central Court at Dublin. Many of the landlords apprehend that if the present system of sweeping reduction is carried out, their property will be confiscated to a large extent and many of them ruined.

On account of the great expense necessitated, it is said that there will be only three more Sub-Commissioners under the Land Act for the present. Nine additional Commissioners have been appointed for one year only, the Government believing that by the expiration of that time the undue pressure of the work will have been removed.

The Right Hon. Hugh Law, Attorney-General for Ireland, has been appointed to succeed Lord O'Hagan as Lord Chancellor of Ireland. William M. Johnson, Member of Parliament for Mallow and Solicitor-General for Ireland, will succeed Mr. Law as Attorney-General.

The London *Times* has replied to the arguments of the Fair Traders by printing a long statement showing that the increase in the trade of Great Britain has been greater than that of the United States. The *Times* estimates the loss to America through the decline of her shipping at £16,000,000 a year. The article states that the increase of American exports is principally in such articles as grain, to which she gives no protection.

A gigantic strike is said to be imminent in the Staffordshire potteries in England. All the men connected with operative associations have resolved to cease work on Thursday next unless an increase of wages is granted. The strike will affect 50,000 employees. At a meeting on Monday the employers pledged themselves to refuse an advance.

The trial of Arthur Lefroy for the murder of Mr. Gold in a Brighton Railway carriage, which has excited very great interest in England, came to a close on Tuesday. The prisoner was found guilty and sentenced to be hanged.

It is stated that the city government of Venice has determined to fill up the smaller canals and convert them into streets. In addition to this the gondolas are threatened with extinction, owing to a recent concession to a steamboat company on the Grand Canal.

The King of Greece has dissolved the Chamber of Representatives. The general elections for the new Chamber, in which the provinces recently added to the kingdom will participate, will take place on the 1st of January.

The Grand Cordon of the Order of the Redeemer has been conferred by the King upon Mr. Reed, formerly American Minister at Athens, in recognition of the eminent services he has rendered to Greece.

A statue of Lord Byron has been unveiled at Missolonghi, where he died. The ceremony was attended with great popular enthusiasm.

Affairs seem to be growing more and more gloomy in Russia. Riots are feared in consequence of the increasing dearness of provisions, and circulars are being distributed charging the Czar with being the cause of all the trouble.

The correspondent of the London *Daily Telegraph* at Constantinople states that the Russians will shortly occupy Merv, and that one of the chiefs of the Tekkes has arrived at Merv to negotiate on behalf of Russia for the submission of all the Turkomans.

A despatch from Buenos Ayres, by way of London, states that the United States Minister at Santiago had informed the Chilian Government that the United States would not interfere in the negotiations for a treaty of peace with Peru.

Señor Altemerano, Mayor of Valparaiso, has been appointed Civil Governor of the Peruvian territory now occupied by the Chilians. A Santiago newspaper says that the rumor increases in strength that the Chilian Government intends to prolong indefinitely the occupation of Peru and to organize its administration on a firmer footing than at present. A civil government is to be substituted for the present military one, but it will be sustained by a military force sufficient to crush all armed resistance. It is stated that every effort has been made in Peru to create a belief in the public mind that the United States contemplates an armed intervention on behalf of the Calderon government, and General Hurlbut's letters have been widely circulated.

The Mexican Senate has approved the law abrogating the authority of the President to grant railway concessions. He is still authorized, however, to alter existing concessions and to transfer those that may become forfeited.

Great indignation has been caused among the native and foreign merchants in Panama by the resolution of the State Government to increase their taxes twenty-five per cent. The taxes are to be assessed arbitrarily, and are based upon the amount of business which each merchant is supposed to have transacted.

TUESDAY, November 8, 1881.

IS THE CAUCUS PERFECT?

MR. ADIN THAYER, a prominent and very respectable politician of Massachusetts, has been reading a paper to the Massachusetts Club on "The Caucus System," which pleased his fellow-members so much that they have printed it for publication in pamphlet form. The caucus has of late years been so much denounced by reformers, and so many of the ills of the body politic are ascribed to its working, that a formal defence of it by a respectable politician can hardly fail to be interesting reading. We have read Mr. Thayer's pamphlet attentively. He discusses in eloquent language the failure of all republics preceding ours, but believes, nevertheless, that ours will succeed, and meets the talk of "educated simpletons of the inadequacy of republican institutions," by telling them that "he hears it with unutterable disgust"—a frame of mind, let us observe, in which an adversary's arguments are hardly likely to receive due consideration. That the talk of "the educated simpletons," however, makes some impression on him, we are led to infer from his admission a little further on, that, in view of the numerous failures of republics both in ancient and modern times, "surely we ought to indulge in no overweening confidence in the success of our own experiment; that no weak optimism should lead us to relax that vigilance which is forever the price of liberty." In fact, on a calm view of the situation, he says he should be inclined to despair, along with the "educated simpletons," if it were not for the existence of "certain institutions, which are to a great extent peculiar to this country"—namely, "the common school, the free press, the town-meeting, and the caucus," the latter term including the political convention. He confines his defence, however, to the caucus, the influence of the others, he says, being "fully appreciated," and therefore needing no defence.

The caucus, he tells us, was invented by Sam Adams, in consequence of his having found the press and the town meeting "insufficient for his purpose of establishing liberty regulated by law." The experiment has, Mr. Thayer continues, "been tried and has proved an abundant success." Nevertheless, it evidently has not proved such an overwhelming success as to silence all cavillers, for it appears that in spite of its having received "the approval of Hancock, and Otis, and Warren, and the Adamses," it is made by "some of our doctrinaires" the object of "flippant denunciations." This is not all, however. "Thousands yes, hundreds of thousands of intelligent men," Mr. Thayer says, "to-day pride themselves on their indifference to politics; and the number is constantly increasing." In other words, they do not attend the caucus or respect it. "There is danger," Mr. Thayer truly remarks, "in the situation." He also admits that if the Massachusetts judges were to attend the caucus, "a morbid and sickly sentimentality would declaim against dragging the judicial ermine in the mire of politics." He uses the clergymen as an illustration in the same way; shows that it was the refusal of the property-holders, "the conscience, the wealth, and the intellect" of New York, to attend the caucus, which made possible the robberies of the Tweed Ring, and that even in Massachusetts a "portion of her culture and scholarship derides the caucus." He sums up by saying that "the continued neglect of the caucus will work the ruin of the republic, for it means in the end the ruin of all real interest in public affairs," and he enforces this dismal prediction by pointing to the fate which overtook Greece and Rome.

Now, we are far more hopeful about the republic than Mr. Thayer is, although he evidently thinks himself a great optimist. We do not believe, as he evidently does, that its fate is at all dependent on the preservation of the caucus in its present shape. He is one of that class of active politicians, in our day, who have taken so large a part in creating the existing machinery of party management, and have acquired so much skill in using it—we do not say this by way of depreciation—that they have, being mostly past middle life, come to look upon it as the last step in political progress and the last word in political philosophy. From the account he gives of Sam Adams, the inventor of the caucus, one would suppose that the union of liberty and law had not been thought of before his time. But the fact is that Sam Adams, like nearly all men of his day, inherited his fundamental political ideas, and he invented the caucus for the use of a people already free and used to self-government. The race had been steadily advancing, politically as well as in other ways, from the time of the Heptarchy up to Sam Adams's time. The greatest political invention of the modern world, representative legislatures, was hit upon centuries before Sam Adams was born. This in no way detracts from his merits either as a thinker or statesman. It simply denies him the credit which Mr. Thayer claims for him, and to which no man except Moses or Mohammed is entitled—the credit of having invented something in politics which it is not possible to improve and not safe to discard. There is no such thing. There never will be any such thing. Political machinery has been improving ever since cannibals made the regulation that the victim's head should always be kept for the chief. It will continue to improve to the end, by being adapted to the changing needs of society. Kings, parliaments, municipal governments, codes of law, rules of procedure, the organization of courts, all change. Within our own time the greatest change made since the introduction of representation has occurred in the establishment of universal suffrage. There is not a State in the Union, or in Europe, which is not to-day trying new experiments in its political organization and in its legislation, with the view of meeting new political wants and diseases. There is no more justification for or more possibility of stagnation or repose in the political art than in the mechanic arts. The inventor of candles was a good man and a useful man, but reverence for his memory does not forbid us to try gas and electricity. So also the caucus was a good thing, as Sam Adams established it, for the needs of the society into which he introduced it. Mr. Thayer now admits that it does not give satisfaction; that a very large class, and a very valuable one in some ways, and whose arguments he meets with epithets, distrust it, and refuse to use it, and that in consequence of this refusal the Government runs some risk of falling wholly into the hands of the ignorant and corrupt. In every other field of human activity the state of things which Mr. Thayer describes would suggest improvements calculated to remedy the revealed defects. In all branches of art, inventors and manufacturers, when they find the public will not use their machine or implement, try to find out what it is the public wants, and make such changes as are necessary to meet the want. They do not take the stump and begin to denounce the public for not liking what was good enough for their great-grandfathers in the last century. But in politics men who have once mastered the arts by which voters are managed in any given year, apparently find no difficulty in persuading themselves that their last little device is one of the eternal forces of nature, to which it is the duty of man to adapt himself as he adapts himself to the climate, or to the law of gravitation.

Now, we are among the number of those who believe the caucus was a good thing when Sam Adams invented it; that it is a good thing in many parts of the country to-day just as he left it; that to the altered condition of society in many parts of the country, and particularly the great cities, it is now wholly unsuited; that it needs, as a method of nominating candidates, serious changes; that these changes must and will be made before long, under the great law of progress which was in operation one thousand years before the Massachusetts Club turned its attention to politics, and will save the human race one thousand years after the Club has been forgotten; that those who demand such changes are not all "simpletons" or "flippant doctrinaires," and that neither Mr. Thayer nor anybody else can avert them by calling names. The narrowness of his experience in the matter is curiously illustrated by the fact that under his definition of the right of bolting, which even he reserves for himself under certain circumstances, he would not be permitted to take part in any Republican caucus in this city.

In short, the caucus, like government in general, was made for man, and not man for the caucus. Moreover, American society, like all human society, is made up of various elements, and the best system of party nominations is that in which it is easiest for the most intelligent, and the laziest and most indifferent to take part. The eager, and interested, and patriotic, and rough-and-ready will participate in the working of any system. What is needed is a system in which the most refined and sensitive and fastidious and scholarly and rich will find no difficulty in participating. And we would warn Mr. Thayer and his friends that if the ruin of the republic is to be feared, as he says it is, from the reluctance of this class to share in the work of selecting candidates for office, nothing can be more important than overcoming this reluctance. But it is not to be overcome by declamatory abuse of this any more than of any other class, but by doing what Sam Adams did—namely, adapting your

machinery to the times you live in and the people you have to work with. What the changes in the nominating system should be we propose to discuss hereafter.

WHICH RAISED MOST MONEY FOR THE CANVASS?

As usual at the close of a canvass, a dispute has arisen as to which of the two parties has spent most money. Each maintains stoutly that it has spent hardly anything, while the outlay of its opponents has been lavish, and exhibits a kind of loathing for the practice of using money for elections. At the beginning of a canvass, however, the tone of the managers is very different. Then they say that without money, and plenty of money, success is impossible; that money is the sinews of politics as well as of war, and that nobody but mollycoddles and theorists objects to the raising and spending of it in rousing voters to a sense of their duty. The duty of officeholders to make up contributions is also dwelt on with much emphasis by the Republican leaders at the outset of a struggle, not—Heaven forbid—as a means of saving themselves from the displeasure of their superiors, but in order to keep the Democrats from getting possession of the Government, and thus destroying the only chance we have of genuine civil service reform.

At the close both parties play a totally different tune. We are now told that the Republicans have expended very little money. "No attempt has been made to collect regular assessments from the employees of the Government." "Not one-third of the employees of the Government," says a member of the Executive Committee, in the columns of the *Tribune*,

"have contributed a single cent, at least through this committee, to the expenses of the campaign. On the other hand, the employees of the city departments have contributed, almost without exception, 2½ per cent. of their salaries to the Democratic campaign fund. The clerks in the Mayor's office made similar contributions, and the Mayor himself, to my personal knowledge, gave a very liberal percentage of his own salary, notwithstanding his cheap attempt to gain political capital out of a letter deprecating assessments. He will undoubtedly say that these contributions were not compulsory; but if a head of department subscribes 2½ per cent. on a list and then sends a man to collect subscriptions on the same list from his employees, how many of them will dare refuse to follow his example? Well, that is just what was done, and by this means the Democrats have been very liberally supplied with campaign funds."

Now, in the first place, the assertion that no attempt has been made to collect regular assessments from the employees of the Government is not only untrue, but impudently untrue, as the attempt was made through printed circulars. If it be true that only one-third of the employees paid anything in response to the circular, it shows simply that the attempt failed. Hugh Gardner's attempt, in his shirt-sleeves, on behalf of the Republican Committee, to fleece the unfortunate letter-carriers by levying a regular assessment on them, at the Astor House, was as public and brazen as that worthy politician could make it. If it was only partially successful, so much the better; but its authors really ought not to come forward and produce its failure as a proof of their own virtue. When a burglar finds a window-fastening too much for him, he does not go about and brag of it as a proof that he is leading an honest life.

The question which this wretched business now suggests to be put to the Republican managers is, why, if they get so little from the officeholders as they say they do, they do not give up levying assessments, "regular" or other, altogether. What they receive cannot, according to their own account, possibly compensate them for the scandal and odium which the attempt excites. A larger and larger portion of the party is every year disgusted by these efforts to make a body of very poor and hard-worked men pay the principal part of the expenses of the canvass of a party whose members possess more than half the wealth of the country, and "claim" to possess two-thirds at least of its patriotism.

It may or may not be true that the Democrats have levied 2½ per cent. on the salaries of the city employees. They are certainly quite capable of it, and as they do not even pretend to be as pure as the Republicans, it would be hard for a Republican to find fault with them for following the Republican example. But it is to be observed that under the existing State law, as interpreted by the Court of Appeals, city employees enjoy a security of tenure which makes it perfectly easy for them to refuse to pay assessments if they choose, and which we are thus far vainly trying to procure for those of the Federal Government. A clerk in the City Hall who pays money for elections is either an improvident person, or an ambitious politician who wants to keep his footing good in the various wigwams and halls of the party, and deserves no sympathy.

ENGLISH LIBERALS AND IRISH COERCION.

It looks now as if the Land agitation in Ireland would be taken up, in part at least, by the friends of woman suffrage, both in Ireland and England, owing to the apparent unwillingness of the Government to interfere with the meetings of the female branch of the Land League. Miss Helen Taylor, the step-daughter and literary executor of John Stuart Mill, has gone over to Ireland and joined Miss Fanny Parnell in keeping up the work of the League, but seems to be mainly interested in the matter of the arbitrary arrests, which is undoubtedly trying the souls of a good many of the English Liberals a good deal. It is not improbable, indeed, that it is going to lead to considerable Liberal losses in coming elections. Mr. Gladstone will probably suffer from that very condition of English opinion about Ireland which gives the cause of Home Rule all the strength it has. The normal condition of the ordinary middle-class English mind about Ireland is one of almost complete ignorance, coupled with extreme dislike of the Irish, as, to use Mr. Walter's words, "a fractious and turbulent people." As far back as the ordinary Englishman can remember there has been trouble in Ireland, and his father has told him that as long as he can remember the same state of things existed. Moreover, he can recall no time when the necessity of governing Ireland by martial law did not every now and then seem plain enough in English counting-houses and clubs; and the excuses made by the Irish for their rows struck him as impudently amusing. That people should be discontented on account of what they say happened fifty or one hundred years ago—not one-quarter of which he believes—he thinks very absurd indeed, and he accounts for it by the theory, which he firmly holds, that the Irish mind is so constituted that it can comfortably contain two contradictory propositions lying side by side. When, therefore, Irish disorder reaches a certain point he becomes very angry, and in his rage thinks the proper remedy is "troops," and abuses the Ministry for not applying it. When the Ministry does apply it, however, and the arrests are made, and the agitators are lying silent in jail, and the meetings have been dispersed, Russian fashion, by the police, there comes to him a period of cool reflection the results of which are apt to be painful. He remembers that the Irish are his fellow-subjects, that they live under the same Constitution with himself, and that he has been for many years preaching to the King of Naples, and the Czar, and the Emperor of Austria the doctrine that there is no such thing as causeless popular discontent; that when there is discontent, it is best that its manifestations should be open, and that anyhow force is no remedy. Then he feels a little ashamed of his course in the Irish affair. The criticisms of foreigners trouble him. He looks about for somebody to bear the blame of his folly, and easily works himself into the belief that it was the Ministers who did it; that they ought to have been more calm and patient, and not to have minded what he said. And then he appears once more as a friend of freedom, and, like Mr. Cowen, who sympathized warmly with the Turks against the Russians after the Batak massacres, he turns round and asks himself, when such things are permitted in Dublin, how long it will be before he sees them in London.

Neither Miss Helen Taylor nor any other English Liberal, however, seems as yet to have fully got at the root of the Irish difficulty. Force is not a remedy, but the application of force is often necessary as a palliative in order to give the remedy time to work. Moreover, no people in the world probably have less natural objection to the use of force at a crisis than the Irish. But they, like every other people in the world, cannot bear to see force, even when they admit its necessity, applied by a foreign hand. Now, Mr. Gladstone's hand, however benign, is a foreign one, and so is Forster's, and the majority which passed the Coercion Bill was a foreign majority, and it is this which makes its working unbearable. So that really what the Irish crisis calls for is not so much freedom of speech as the exercise of the powers of government by persons whom the bulk of the population do not look upon as aliens in feeling and traditions.

The Irish question is full of anomalies, but the most striking of them all is the extent to which the part of the population which has national feeling and national aspirations is bereft of leaders of education and social position. This accounts in a large degree for the spirit of childish mischief which seems to characterize Irish agitation, and which exasperates

Englishmen so much. The old Catholic gentry were driven out of the country with extraordinary completeness after each of the civil wars, and the new gentry who succeeded them not only belonged to a foreign race and to a foreign church, but, unlike the earlier Norman invaders, never amalgamated with the people. It is not true of the Cromwellian and Williamite settlers, as it was of the Normans, that they became "more Irish than the Irish themselves." On the contrary, they have remained more English than the English themselves. There is more old-fashioned English Toryism, Jingoism, and Anti-Liberalism of all sorts to be found among the Irish Protestant gentry to-day than among the corresponding class in England. They are as loyal to the British Crown as, and more firmly attached to the Union than, Englishmen themselves. They serve in proportionally greater numbers in the army, and hold the Irish nationalist agitation in greater horror. All the distinction they win in any field—and they win a good deal—is set down to the credit of England: that is, they win it as Englishmen and not as Irishmen. How few people ever think of Burke, or Castlereagh, or Wellington, or the Marquis of Wellesley, or Canning, or Palmerston, or Sir Henry Lawrence, or Lord Gough, or Lord Mayo, or General Nicholson, or Sir Garnet Wolseley, or Sir Frederick Roberts as Irishmen; and yet they were or are all more Irish than Parnell. The result is that when the Catholic population wishes to show its discontent, it has no proper organs for the purpose. It is ignorant and poor, and bred in the habit of looking at the Government, not as its servant, but as its enemy and oppressor. It therefore makes its wants known through paltry agents, and through the outrages, tumults, riots, and crimes which, as unhappy experience has taught it, are the only means by which it can reach the ear of the English Parliament, of which nearly five hundred out of six hundred members have probably never been in Ireland, and consider Irish questions a bore.

The great work of pacifying Ireland will consist in making Catholic and Nationalist masses believe that they, or persons in whom they have confidence, have a share in governing Ireland—that the Government is in fact their Government, as well as that of Englishmen and Scotchmen; and this can only be done by putting in the Cabinet men selected for the place by Irish opinion, just as Mr. Chamberlain was selected by English Radical opinion, or the Lord Advocate by Scotch opinion. It is put further off than ever by the appearance in Ireland of an Englishman like Mr. Forster, charged with the administration of military law as a remedy for discontent. The most reasonable people in the world would be exasperated by this, the most unreasonable rendered more unreasonable still.

SCHOOLS OF FORESTRY.

A GENERAL idea pervades the public mind that the forests of the United States are being too rapidly consumed, and that something ought to be done to protect and restore them. Forestry is expected to accomplish much in this direction —the very vagueness, to most American minds, of the term forestry only adding to its supposed power to accomplish wonderful results. Forest schools have been found useful in many of the countries of Europe in training young men to become practical foresters, and the desire to establish here similar schools has taken possession of various public-spirited individuals in widely different parts of the country. A few years ago we were told by other public-spirited citizens that State agricultural colleges were needed to place American agriculture on a firm scientific basis. They were accordingly founded at great expense, and in great numbers; their success, however, has not, we believe, been great. But this is not the occasion to discuss the advantages such schools afford for obtaining a sound agricultural education. We shall, perhaps, at some future time find an opportunity to examine this subject more fully, and to explain why, in our opinion, the Agricultural Experimental Station is, in the present condition of American agriculture, of far greater value to the community than the Agricultural College as at present organized.

Schools of forestry, on the European plan, will hardly command a greater success here at present than have American agricultural schools. In Europe the growth of the school of forestry has been natural. Its origin may be traced to the great entailed forests, the property of the crown and the nobles. The revenues derived from these forests have always been an important source of income to their owners, and the necessity of properly managing them has gradually developed in Europe a science of forestry, and has produced the trained, scientific forester. The European forester is a recognized member of society, whose duties are clearly defined, and whose services are in constant and certain demand. Graduates, therefore, of European forest schools are sure of well-paid and immediate employment, with fair prospects of promotion. It is evident that such schools, teaching the lessons acquired through centuries of practical forest management, and being in a position to secure for their graduates remunerative employment, are in a healthy and natural condition, and capable of playing an important part in industrial education. In the United States the conditions under which schools of forestry could be established, at the present time, are very different. We are without tradition or experience of sound forest management on which to base any system of instruction in forestry, while every European country differs so widely from our own in climate, soil, and especially in the tenure of land, that little of practical value to the people of the United States is to be gained from a study of the various systems of forestry practised in Europe. A greater difficulty in establishing successful schools of forestry here lies in the fact that the graduates of such schools could not find employment in the profession for which their education had prepared them. There is not yet any demand for educated foresters in this country, and until such a demand exists there can be no inducement for young men to devote several years of their lives to obtaining a special training for that which has no market value. If there is no demand for what the school can teach, there is no demand for the school.

Schools of forestry, however, must not be confounded with arboretums. The Arboretum, if properly directed, should bear the same relation to the school of forestry that the Agricultural Experimental Station should bear to the school of agriculture. Its functions should lie in the direction of experiment and the general dissemination of knowledge; and, as an experimental station, it is capable of taking an important position in preparing the way for schools of forestry when the demand for trained foresters shall have made their existence possible. The planting and management of forests is a practical occupation, and to be successful it must be conducted on purely business principles. In parenthesis we hazard the query—and we approach this subject, it must be confessed, with very considerable misgivings as to the punishment which is in store for us—Why does the American citizen break forth in song when he feels called upon to discourse on trees? Trees, in their economic aspect at least, are as prosaic as other vegetable productions—the cotton-plant, or the cabbage, for example; and until sentiment and fine writing can be dispensed with in treating the economic questions of forest management there is little hope that sylviculture can become a profitable branch of agriculture. That the cultivation of trees, if undertaken under proper conditions and on a sufficiently large scale, can be made profitable at the present time both in the Eastern and Western States, we firmly believe. Unless such an enterprise can be made to pay a fair return for the capital invested, it is useless to consider the subject of forestry at all—except sentimentally; but if it can be demonstrated that money invested in the formation and care of forests can earn a proper rate of interest, capital will be eager to engage in this new form of industry.

This can only be proved by actual experiment. The difficulties to overcome at the outset of such an enterprise are considerable. A planted forest to be profitable should be of considerable extent; the first outlays are large, and years must elapse before the first crop can be harvested. Here is the principal difficulty in the whole matter; few persons can invest a large sum of money in such a manner that they cannot themselves, unless under exceptional circumstances, hope to see any return from their investment. If the experiment is to be tried at all on a large scale, and with a reasonable hope of success, it must be tried by a corporation—either a railroad with unoccupied lands suitable for the purpose, or, better, by a company specially chartered to hold and manage forest property. Such a corporation, with its capital stock divided among a large number of small investors and managed with business sagacity, might carry on its operations on a large scale without imposing excessive individual burdens, and with very considerable prospect of success and future large profits. Such an enterprise should clearly demonstrate whether capital could safely and profitably engage in the cultivation of trees; and as the cotton-mill and the machine-shop are the best schools in which to acquire the training necessary to become a successful cotton manufacturer or machinist, a forest conducted on purely scientific principles would give young men the best possible opportunity to learn the practical details of forest management. Such forests, if sufficiently multiplied, would require trained managers, and would naturally create a demand for fully equipped forest schools, in which a knowledge of the theory of the subject as well as of the practice could be acquired. The first steps towards the establishment of such an enterprise will naturally encounter certain obstacles; but, once taken, and taken wisely, results can be obtained which may lead to the successful development of a great industry.

PERNICIOUS READING IN OUR PUBLIC LIBRARIES.

MR. J. M. HUBBARD has for some time been protesting against the character of the fiction supplied to children by the Boston Public Library—at first in the Boston *Herald*, then by means of a memorial to the city government, and finally in a pamphlet of twenty-three pages published by A. Williams & Co. In the memorial he pre-

sented a list of about one hundred objectionable books circulated (often in many copies) by the Library, with evidence as to their character in the shape of extracts from reviews in the *Athenæum*, *Academy*, *Spectator*, *Saturday Review*, and *Nation*. A committee of the City Council laid the list before the Trustees, who in their last annual report defended their course on the ground that "it would be highly improper for the Trustees to exclude such authors as these, whose works are read in every circle of society, and which the public, who are taxed to support the institution, demand. While they carefully exclude from circulation, especially among the young, all books of an immoral influence, they do not consider themselves in the position of parents or guardians to the community, bound to select for it only such books as suit their own tastes." This was said originally of a list of authors differing in part from the one given in the memorial, but in a note it is made to refer to the memorial list also. Thereupon Mr. Hubbard, having different ideas as to what are "books of an immoral influence," has published the list, somewhat enlarged in the number of criticisms quoted, though not in the number of books mentioned.

It is a literary curiosity. Few people, we imagine, were aware that there are so many so bad books belonging to the literature of the last twenty years and "read in every circle of society." We may not be fit judges of the value of the criticisms, for many of them are taken from our own columns; but the majority are derived from the *Academy*, *Athenæum*, and *Saturday Review*, which have never had the reputation of being over nice. "Vulgar" is the mildest epithet. "Maudlin sentiment," "nauseous," "fleshly taint," "unwholesome," "unnatural vileness," "broadly delineated passion," "uncleanness," "reeking with sin," "sniggering suggestion," are the flowers of criticism which may be gathered on every page. Unintentional bigamy, seduction, adultery, are the subjects of a large part of these hundred novels. "The great object of books like these," said the *Athenæum* in 1867, "is to teach immorality by presenting it in an interesting and seductive form, and by making good people, who live according to the ordinary laws of decency, appear tame, stupid, and despicable. . . . It is time for critics to speak out boldly, and to declare in plain language what they think of the tendencies of these books, and see by so doing whether they cannot put a stop to their production."

Critics must have seen by this time that they can do no such thing. Mr. Hubbard apparently hopes to put a stop to the circulation of this literature, in which we fear he will equally fail; but possibly a certain repressive influence may be produced by this massing of testimony which could not be expected from single, dispersed outcries. Parents and guardians may be induced to reassume their disused duties, and supervise their children's selection of books or keep them away from the Library altogether.

There is certainly occasion for more care. There has been a great change in American customs in this respect in the last fifty years. Formerly, in many families, to read novels at all was considered not merely a waste of time, but a sin. Now in the same families everything is read. Unfortunately, while this change has been coming about, a great wave of French influence has been sweeping over English authorship, and has almost entirely submerged not merely its former prudishness, which would be no great loss, but a large part of its former purity. The spirit of the opéra bouffe has penetrated fiction as well as the stage. In France this literature of adultery is considered to belong to the kind "dont la mère ne permettra pas la lecture à sa fille." In America, unluckily, the mother's permission is not asked for her daughter's reading. We do not know that any harm has yet come from it. We cannot put our finger on any specific evil that can be traced to "La Belle Hélène" on the stage, or to Ouida and Broughton and Zola in literature, or the Beecher trial in real life. It never is easy to trace the result of moral agency for either good or evil. But one thing is certain: if this stuff has no bad influence on the age, then the preaching of Christianity can have no good influence—the age must be utterly unimpressionable. It is incredible that so much pitch should not defile, that the tone of public feeling should not be in the end lowered by constant familiarity with such perverted thought.

We are not now speaking especially of the vulgarity and bad taste of these books, nor even of their occasional indecency; these are largely matters of convention, and, though they may offend, will not of necessity seriously hurt readers. Indeed, it may be well that these writers should display enough of both these qualities to drive away some readers in disgust. The real evil is the thoroughly unchristian, because selfish, spirit that is in them all; and the idea which pervades almost all that we have either read or read about, that passion is rightly lord of all. The very least the most indulgent critic can say is, that books saturated with this spirit will not have an elevating influence, and that it is not worth while to take any especial pains to put them within the reach of everybody; that in doing it no institution does any good or deserves any praise; and that if any appreciable proportion of the fiction circulated by the Public Library, at an annual cost of $20,000, consists of such novels, the money could be better spent.

We may even confess that after reading Mr. Hubbard's extracts, we were not so much surprised as we had always been at the remark of the head master of one of the Boston schools who had given some attention to his pupils' reading: "The Public Library is a curse to the school children." But we are not concerned with that library now. It would be hazardous for a journal in another city to criticise the action of its Trustees taken deliberately in view of circumstances best known to them. We have mentioned this pamphlet chiefly to call to it the attention of the authorities of our city and town libraries. It may lead some who have been liberal or careless in their purchases of fiction to consider whether, after all, it is worth while to spend any considerable part of their limited funds in the purchase of such rubbish as is here characterized, and whether, again, the public as a whole really do "demand" such reading, and whether if it is necessary to furnish some, it is necessary to furnish so much. To a small library the argument derived from the odium of a censorship does not apply. The great library, it is thought, must buy everything, because it has money enough to buy everything; but the small library is under no such compulsion. Even if it would like to purchase everything, it cannot. It *must* select. There are enough good books—interesting good books—to use up all the income of most town libraries. The question then is, Shall it buy doubtful morality and undoubted vulgarity, and by so doing incapacitate itself for buying wholesome and refining literature, or shall it get the better class of books, and have the excuse of "no funds" at its service when it is asked to procure undesirable works?

The question does not seem to need any long discussion. Of course it is difficult to draw the line. It is a question of degree. First, there are the disgusting books, which everybody would exclude, as every one would consent that the sale of poisons and drugged whiskey should be placed under restrictions; then there are the doubtful books, ranging, as we may say, from brandy to lager-beer, about the prohibition of which there is every variety of opinion; and, finally, there are the unobjectionable novels—cream, milk, and milk and water—which a trustee can supply without any qualms of conscience. (He may have doubts about the last, but we believe he will find infant stomachs that cannot endure anything stronger.) General consensus of all readers marks off the lowest class. A nearly general consensus of critics marks off the lowest parts of the second class. It is here that Mr. Hubbard's pamphlet becomes valuable to trustees who have not the critical journals at hand, and who cannot read all the books offered for purchase, or who cannot decide when they have read. It is in a way a combination of Allibone and the Index Expurgatorius. It would be well to keep it locked up in the trustees' desk, as a teacher locks up the key to his arithmetic or his Greek exercises: an index expurgatorius is too apt to be used by certain tastes to guide their reading in the way it should not go. But if this precaution be taken, the pamphlet may render considerable service, and there may be even a call for the publication of that "similar evidence" which Mr. Hubbard says he possesses "in regard to many other novels in the Library," and likely to be in or to be offered to our town libraries.

GLADSTONE'S IRISH POLICY SUSTAINED.

London, Oct. 26, 1881.

The most prominent object in the political horizon is again Ireland. The decided action of the Government in arresting Mr. Parnell and his associates, and in proclaiming the Land League as an illegal association, is in all men's mouths, and has thrown every other political topic into the shade. Public opinion has, with striking unanimity, backed up the Government. Not a single member of Parliament for England or Scotland who has spoken on public affairs since this new departure has, as far as I am aware, expressed disapproval of it, while a recognition that decided steps had become a regrettable necessity has come freely even from the advanced party, and from such thoroughgoing representatives of the working classes as Mr. Burt and Mr. Broadhurst. As to the Conservative party, their only complaint is that the repressive measures were not adopted sooner. Turning to the press, we find, with few exceptions, the same consensus of opinion both among the London and provincial journals. One of the exceptions is to be found—it is almost needless to say—in the Newcastle *Chronicle;* but those who followed the political vagaries of Mr. Cowen, one of the members for Newcastle, during the last few years, from his advocacy of the abandonment of Gibraltar in 1874 to his pronounced phase of Jingoism during the last Parliament, and his alliance with the Obstructionists this session, will not attach much weight to the opinions of the Newcastle paper. Another exception, more worthy of attention, is to be found in the *Statist*, a weekly paper of high repute and ability, whose utterances justly carry weight with thinking men. Apart from these few discordant notes, public opinion may be said to be practically unanimous, and there can be no doubt that the Government have been completely successful in carrying the country with them.

It may be worth while to glance for a moment at the position of the dissidents, particularly as the reasons which now weigh with them have up to the present crisis so effectually weighed with the Government as to prevent its using

to the full the powers of coercion at its command. It is obvious that the problem before us is how to reconcile the more active spirits in a great part of Ireland to the English connection, and to make them look to action in and through the united Parliament for such redress of grievances and changes in the law as they may require. Each fresh instance of exceptional treatment of Ireland by the use of exceptional powers, even though sanctioned by Parliament, leaves behind it a bitterness which must stand in the way of anything like this permanent reconciliation. And there can be no denying that they are most exceptional powers which enable the executive to imprison without trial the most prominent leaders of a popular movement, many of whom are legally elected representatives in Parliament, and who, in case of vacancies, would be re-elected again and again. The case is even worse when these measures come from the political party which has always been opposed to them in principle, has more or less denounced them when they have been adopted by the opposite party, and has proclaimed loudly its trust in remedial measures; for it must never be forgotten—though the advocates of repression habitually forget it—that the very people we are now repressing are those through whom we must ultimately govern; that in a popular system of government like ours the governed are associated with the Government in a variety of ways, in the administration of justice through the juries, in the various local bodies, and, lastly, in the Parliamentary elections; and that if we make these people irreconcilable, our chances of the country permanently settling down are hopelessly gone. Besides these objections, there is the risk of passive resistance—the risk that the advice of the Land League may be taken, and a strike against all rent carried out throughout half the country. Then we should have a state of things resembling the Tithe War, with which the military and police forces would be powerless to cope. As the *Statist* puts it: "It is quite clear that if the Irish tenants are staunch, no power on earth can compel them to pay. Of what use is it to seize crops and stock if no one will buy? Or how will it benefit landlords to evict tenants if they can neither cultivate nor let the lands?" There is also the further risk of driving the agitation inwards, and finding ourselves grappling with secret conspiracies, with their many ramifications and their policy of dynamite.

In spite of all this and a great deal more which might be urged in the same sense, I think public opinion will continue to approve the course which the Government have adopted. It is well known that no Cabinet has ever been in power which was so averse to the use of coercive measures, and so bent upon giving a full and unfettered trial to remedial measures, as the present one. If, therefore, they have finally resorted to the policy they dislike, there must, it is argued, be grave reason for it, and they must have been in possession of information which compelled them to act at once. But apart from this, it is universally felt that the Land League had long ceased to answer to the idea of a legitimate reform agitation, carried on by fair argument and persuasion, and which men were free to join or not as they pleased. The methods employed, or at least countenanced, and most certainly not repudiated, by the League, were not the methods by which such a measure as—for instance—the repeal of the corn laws was carried. Boycotting, intimidation, and outrage of all kinds were freely made use of, and the notion that he had any freedom of action left would have been ridiculed by the shopkeeper or tenant-farmer in remote districts. Besides this, it had become obvious that the ostensible objects of the League were no longer its real ones; that while it was posing as counsellor and adviser to the farmers as to the cases they should take into court, it was really bent upon throwing discredit upon the act, and depriving tenants of their freedom to use it as they wished. That the tenants are sensible of the advantages of the act there is ample evidence. One curious fact I have on good authority: a rumor got wind that a Cabinet council was to be summoned to consider the expediency of repealing the Land Act; whereupon two hundred tenants in one place forthwith came forward and paid their rents, and my informant adds that if the rumor could have circulated a few days longer, a large number of rents would have been got in. As to passive resistance, there is no likelihood of its being adopted—the evidence is all the other way; and the distinct condemnation of this policy by so firm a friend of the League as Archbishop Croke, together with the attitude of the rest of the Roman Catholic clergy, leaves little doubt on this score. In any case the feeling is that it is better to run the risk than to continue to sanction the state of anarchy into which Ireland has fallen. The condition of things has long been felt to be a disgrace to civilization, and has deeply offended the whole neutral mass of non-politicians—those who do not profess to know much about the principles of government, but have an idea that Government should govern, and at least preserve life and property.

With the differences of opinion as to the time which the Government chose for their action, I have not troubled your readers, as it is a question which is merely a matter of party warfare. The general result I take to be that the Government will have greatly strengthened their position in the country. H.

Correspondence.

THE KING'S MISSIVE.

To the Editor of The Nation:

Sir: In an article under the above heading, published in the last issue of the *Nation*, you refer to several letters of Rev. Dr. George E. Ellis, bearing upon the historical accuracy of certain illustrations which are inserted in the Memorial History of Boston, vol. i., in connection with the poem of Mr. Whittier.

If the article is intended as an analysis of the papers on the subject in the proceedings of the Historical Society, it is very wide of the mark. I have read those papers, as I had such of them as had been previously published in the journals.

I notice that three times in his communications Dr. Ellis tries to persuade Mr. W. to abandon the general subject of the treatment of the Quakers, which was clearly foreign to the discussion, and to concentrate his attention on the sole point of the fidelity of his poem and its illustrations to the truth on the court records.

Your article runs off largely in the same way to the general subject, and strangely enough omits all notice of the points made by Dr. Ellis, such as these:

1. The court records show that capital proceedings against the Quakers had been dropped *before the arrival of the King's letter.*

2. The jail delivery had taken place *before that letter was received.*

3. Not a single Quaker prisoner was sent by process to England in answer to the King's letter.

4. So far from being afraid lest their victims should go to England to testify against them, as Mr. W. suggests, Dr. Ellis shows from the records that the jail delivery had been made on the express agreement that they would voluntarily go to England on a vessel in the harbor.

5. There was no such jubilation meeting on the Common as pictured by Mr. W.

6. The article in the *Nation*, while printing at length the King's first letter, which is supposed to have befriended the Quakers, omits all notice of the King's second letter, quoted by Dr. Ellis, which says: "We cannot be understood to direct or wish that any indulgence should be granted to those persons commonly called Quakers, whose principles being inconsistent with any kind of government, we have found it necessary, by the advice of Parliament here, to make a sharp law against them, and are well contented that you do the like there."

The character of illiteracy or indecency in these disturbers of the old Puritans, which is discussed at some length by the writer, although abundantly established by the authorities (see as to the former the thorough presentation of the subject by Dr. Palfrey in his 'History of New England'), is not involved in the points raised by Dr. Ellis and subsequently discussed at the meeting of the Historical Society. A. B. E.

Boston, Oct. 31.

[We understood the "treatment of the Quakers" to be the real subject discussed in the 'Proceedings' of the Historical Society. The "illustrations" (known to have been imaginative) were barely alluded to by Dr. Ellis, and not once by Mr. Whittier. In the article entitled "The King's Missive," an omission to notice the points made by Dr. Ellis in his discussion with Mr. Whittier must be attributed to the circumstance that these points had not been then so clearly presented as they are now by our correspondent. We can now supply the omission.

(1.) We cannot admit that Dr. Ellis established this point. The paper which he read before the Massachusetts Historical Society contains an abstract of the law of May 22, 1661, and in saying that under that law, "for incorrigible pertinacity the penalty of death was in reserve," we quote his own words. In June sentence of death was passed upon Wenlock Christison. And surely if the capital laws, as they applied to Quakers, had been "dropped" before the arrival of the King's letter, the General Court would not have sent agents to England (as it did) to represent to the King that the suspension of the execution of the laws against Quakers "respecting death or corporal punishment" was in observance of his letter "requiring us to forbear their punishment."

(2.) The "jail delivery" insisted on by our correspondent took place in June, 1661, when the court ordered that "all the Quakers now in prison be forthwith acquainted with the new law made against them and forthwith released from prison and sent from constable to constable out of this jurisdiction, Judah Brown and Peter Peirson being, for their contempt in court, tied to the cart's tail by the executioner and whipped through Boston with twenty stripes apiece, and then sent with the rest; and if any of them be found after twelve hours within this jurisdiction, he or they shall be proceeded with according to the law made this present court." Only by a stretch of terms can this be called a "jail delivery." The order was carried out to the letter. Brown and Peirson were whipped, and all were driven out of "this jurisdiction" into the wilderness country. And afterwards, when two of the

"delivered" ones attempted to reach their home in Salem, they were stopped by Mr. Bellingham, the Deputy Governor, and sent back to prison. The order of December 9, however, following the arrival of the King's letter, called in unequivocal phrase for a "jail delivery." "You are required, by authority and order of the General Court," writes Secretary Rawson to the Boston jailer, "forthwith to release and discharge the Quakers who at present are in your custody. See that you don't neglect this."

(3.) We do not regard this as a material "point." If, at the time of the arrival of the mandamus, there were any imprisoned Quakers "condemned to suffer death or other corporal punishment," or that were "obnoxious to the like condemnation," and they were not sent over to England, then the King's command, in that regard, was not obeyed. But it does not follow that because no Quakers were sent to England, "in answer to the King's letter," no Quakers were in prison. Quakers were imprisoned for not attending Congregational meetings, and they were imprisoned for attending their own meetings, for bringing Quakers into the colony, for "entertaining" Quakers, etc., etc. They were first heavily fined for these transgressions of law (in some instances £10) and then imprisoned for nonpayment of the fine. It was not required that these offenders should be sent to England.

(4.) For this "jail delivery," made on the "express agreement" that the prisoners would "voluntarily go to England," our correspondent must go back to the action of the General Court in October, 1660, when it was "judged meet to declare" that all the Quakers then in prison should have liberty to depart for England, "so as they solemnly engage, under their hands, delivered by them to the Governor or Deputy Governor, that they will not return into this jurisdiction without leave from the Council or General Court first by them obtained." For some this "jail delivery" was clearly "banishment on pain of death." Mr. Whittier's suggestion, that prisoners were not sent to England for the reason that the authorities were afraid their victims would testify against them, had reference to a state of things (created by the King's letter) not existing until more than a year after the "jail delivery" here described.

(5.) Perhaps not. The Quaker accounts represent that after the delivery of the King's letter to Governor Endicott, Captain Goldsmith's passengers came on shore, and, with their Friends of the town, had a religious meeting with praises for "this wonderful deliverance." In the absence of all evidence as to the precise place of the meeting, the poet should not be censured for locating it on the Common. And the Common was a likely-enough place for the "jubilation," inasmuch as it contained the graves of the Quaker martyrs.

(6.) The King's "second letter" bears date June 28, 1662, nearly ten months after the issue of the "first letter," which commanded the colonial authorities to "forbear to proceed any further." The permission to make a "sharp law" against the Quakers was improved by the General Court on the 8th of October, 1662, when the "gracious letter" was read to that body and the law of May, 1661, ordered to be henceforth in force. No fact in history is clearer than this, to wit, that between the arrival of the so-called mandamus or "first letter" and the King's "second letter," the execution of the laws against Quakers (so far as those laws respected "corporal punishment or death") was absolutely suspended. If we omitted "all notice of the King's second letter," it was because that letter had no direct bearing upon "The King's Missive."

Most certainly "the character of illiteracy or indecency in these disturbers of the old Puritans" was involved in the discussion which grew out of "The King's Missive." The "indecency" of the Quakers was dwelt upon by Dr. Ellis, and Mr. Whittier occupies a page of the Historical Society's 'Proceedings' in a refutation of the charge. As to the "illiteracy" of the sect, it is Dr. Ellis who calls attention to the 'Memorial History of Boston,' where, in an article contributed by himself, "all of them" are characterized as "illiterate."—Ed. Nation].

Notes.

In January, as we are informed from Bangor, Maine, a *Q. P. Index Annual* will be published, being an index for 1881 to the periodicals already indexed by the Q. P. I., as well as to *Harper's*. The *Nation's* indexing will begin at the end of the old index (Sept., 1880), and "will be minute to this extent, that names of persons mentioned in 'The Week' and 'News Summary' will be entered as often as they occur, articles being distinguished from references by the conventional sign *a*." A running foot-note on each page will serve as a key to the various other symbols. Such an *Annual* will be alike novel and serviceable to a wide circle of readers.——Mr. Benjamin Franklin Stevens, 4 Trafalgar Square, London, owning the stereotype plates of the late Jared Sparks's 'Works and Life of Benjamin Franklin,' in ten volumes 8vo, formerly costing $2 50 a volume, now purposes issuing the work between Feb. 1 and the middle of June, 1882, at half the cost to the first two hundred subscribers before Dec. 20, 1881, after which date the price will be raised to $1 50 per volume. We have given the price of the cloth binding, but other styles proposed by Mr. Stevens will cost as high as $3, according to taste. We believe the copyright has expired on this work.——Chas. Scribner's Sons have nearly ready the 'Memoirs of Count Miot de Melito,' edited by Gen. Fleischmann. They cover the period 1788–1815, and possess an unusual degree of interest and authority.——D. Appleton & Co. will shortly publish a work on 'Suicide,' by Dr. Morselli, of Turin. Colored maps will illustrate the ghastly statistics of the subject.——The Century Co. have procured an engraving to be made for their magazine for December of a mask taken from the living face of Abraham Lincoln.——'A Year of Miracle,' "a poem in four sermons," by the Rev. Wm. C. Gannett; 'Tender and True,' a collection of love poems by the editor of 'Quiet Hours'; and 'Ecce Spiritus,' are in the press of George H. Ellis, Boston. Mr. Ellis has lately put in cheap form Miss Cobbe's lectures on 'The Duties of Women,' already reviewed in the *Nation*.——A. D. F. Randolph & Co. issue immediately a Bunyan Memorial—a new edition of the 'Pilgrim's Progress,' with a biographical sketch and numerous illustrations. The oak wood from which the covers are made was taken from Elston Church previous to its restoration in 1880. The same firm announce 'St. Paul's Vision,' sermons by the Rev. Eug. Bersier, the eminent Protestant preacher of Paris, translated by Miss Stewart.——An American edition of 'Through Cities and Prairie Lands,' by Lady Duffus Hardy, a book of travels in Canada and the United States, is in preparation by R. Worthington.——Robert Clarke & Co. will presently publish 'Thomas Corwin, a Sketch,' by A. P. Russell. A portrait of the Ohio statesman will accompany it.——The Minnesota Historical Society have in mind a reprint of 'Tales of the Northwest,' by William Joseph Snelling, a Boston littérateur of the last generation, for some time a resident of the present State of Minnesota. A sketch of Mr. Snelling, who had a varied career as a journalist, author, and public speaker, is to be prefixed to the work. We are glad to learn that the damage to the Society's building by the late fire is being rapidly repaired.——A. S. Barnes & Co. have issued in a very limited edition the Rev. B. F. De Costa's recent papers on Verrazzano contributed to the *Magazine of American History*. —— George Barrie, Philadelphia, promises "*de luxe* editions" of Boccaccio's 'Decameron' and 'Heptameron,' with etchings by M. Flameng; and 'Études in Modern French Art,' another holiday publication, freely illustrated with engravings. ——A. R. Smith, of London, on issuing part i. of his Catalogue, announces: "Any buyers from it who think it worth preserving, on forwarding me their parts on its completion, I will bind them gratis, with Title and Index." We do not know whether English buyers are accustomed to be bound with title and index. American buyers would probably object to the proceeding, and prefer not to be bound at all. ——We understand that Mr. Bernard Quaritch, of London, will almost immediately publish a volume by Mr. Charles Elton, of Lincoln's Inn, Barrister-at-Law, author of 'The Tenures of Kent,' on 'The Origins of English History.' Notable will be the author's theory of the chronological succession and geographical distribution of the races of man in the British Islands, and his discussion of the origin of the curious custom called "Borough-English," or "Junior-right," to which a chapter is devoted. The book concludes with the conversion of the Anglo-Saxons to Christianity.——Paul Lindau, it is reported, intends issuing a new weekly paper called *Die Zeit*.

—Chas. Scribner's Sons have begun a tasteful reissue of the late Dr. J. G. Holland's works, uniform in style and in price per volume. 'Gold-Foil Hammered from Popular Proverbs,' 'Bitter-sweet,' and 'Titcomb's Letters to Young People,' are the first to appear. They have also brought out anew Dr. Noah Porter's 'Books and Reading,' which has already passed through many editions. A new feature is the appendix of select works in a wide range of topics, specially prepared by Mr. James M. Hubbard, late of the Boston Public Library.——The solid and elegant "Geoffrey Crayon" edition of Irving's works in process of publication by G. P. Putnam's Sons now includes the 'Biographies and Miscellanies' and the first of the five volumes of the 'Life of Washington.' The same publishers announce that the original edition of Prof. M. C. Tyler's 'History of American Literature,' in two volumes, will hereafter be known as the "Bradstreet"; and at the same time they have done the general reading-public the great service of combining the two in a single volume, under the name of the "Agawam" edition, sold at a much lower price, while typographically little inferior to the "Bradstreet," and exceptionally tasteful in binding. In this latter respect, indeed, it is a model.——Admirers of Prof. Ebers's 'Uarda'—and they are by good right many—will be inte-

rested to learn that there is a fresh edition, "revised, corrected, and enlarged from the latest German." Moreover, it is authorized, though Mr. Gottsberger translates rather intensively Ebers's autograph—"Die anderen in America erschienenen Ausgaben dieser Werke sind gegen meinen Willen erschienen im Nachdrucke"—by "... are *piracies* issued against my wishes."——Of the new edition of Prof. J. P. Lesley's 'Man's Origin and Destiny' (Boston: Geo. H. Ellis) it is only necessary to say that the omission of the chapter on Arkism will save a good deal of respect for the author (intellectually speaking), and that in the newly-added chapters the reader will find the same cheerful dogmatism, the same discursiveness, and the same philological aberration which characterize the earlier.——With commendable punctuality the third volume of Von Holst's 'Constitutional and Political History of the United States' follows in the American translation the appearance of the original German (Chicago: Callaghan & Co.). The *Nation's* review of this instalment of a work which every student must needs possess in its entirety, appeared in the number for April 21 (p. 280, vol. xxxii.).——An endeavor to settle the dispute as to Columbus's landfall has led to the curious "Notes on the Historical Hydrography of the Handkerchief Shoal in the Bahamas," by Wm. H. Tillinghast, which form No. 14 of the Bibliographical Notes of the Library of Harvard University.——The October number of the *Portfolio* is noticeable for an etching, in red-chalk fashion, produced by a new French mechanical process, in which the drawing is made with a black lead-pencil on a piece of finely-ground plate glass, which then serves as a negative to the sensitized copper below. Biting does the rest. What is singular is that the lines thus produced are not obviously granulated.——Brehm's 'Thierleben' is about to be reissued in an edition with colored plates besides the usual woodcuts in the text. Extraordinary pains have been taken to give a highly authentic character to these plates, of which one or two will accompany each of the 140 parts contemplated. The cost per part will be, in this country, 36 cents, post-paid. B. Westermann & Co. have received No. 1 (of Birds), whose two chromolithographs give a favorable idea of the execution of this part of Brehm's standard work.——Eight of the ten colored lithographic plates in part iv. of Reiss and Stübel's 'Necropolis of Ancon in Peru' (New York: Dodd, Mead & Co.) exhibit specimens of Peruvian art in the manufacture of cloth. They reinforce the impression already made by previous plates of the remarkable progress in design and color attained by this South American people. Many of them are described in the text as in the "Gobelins style," which is true in more than a textile sense. The patterns are still prevailingly borrowed from the human figure, and show by grotesque transitions the connection between this and forms which, taken by themselves, would be regarded as purely conventional. Some of the borders are quite Greek in appearance.

—The scientific notes of the current Harvard Bulletin (No. 20) confirm the report that the Mammoth Cave is to be used for the propagation of mushrooms; but probably only a part of "Audubon Avenue" will be used for the purpose, and this will take away nothing from the charm of the cave, as the avenue is not included in any of the regular routes of visitors, and there is nothing of special interest to be seen in this part of the cave. Mr. Francis Klett is the present superintendent of the more than one hundred and fifty miles of subterranean passages and chambers, and is now making a scientific survey of the cave. Mr. Klett was formerly an assistant with Lieut. Wheeler on the Government surveys west of the 100th meridian, and is said to be fully competent for the work. New chambers and passages are occasionally opened to visitors, and two beautiful little chambers leading off from a new avenue have been named for Mr. H. C. Hovey and Mr. F. W. Putnam, both of whom have a reputation in connection with researches in the cave. Mr. Putnam's special work in relation to the geology of this and other caves was in 1873, when he was connected with the geological survey of Kentucky under Prof. Shaler. He then spent ten days in a thorough exploration of the waters of the cave. Mr. M. E. Wadsworth has a note on the "Trachyte of Marblehead Neck," which goes to refute a theory of the formation of Marblehead Harbor developed by Mr. W. O. Crosby. The astronomical note says that six comets have been observed the present year, and remarks that an interesting analogy between the spectra of comets and stars is very much strengthened by the spectrum of comet *b*, the great one which appeared towards the end of June. We observe with interest that a lady graduate of Smith College, who had applied for admission to the degree of Doctor of Philosophy, received the reply that "the Corporation are not prepared to admit women as candidates for a degree." This seems to imply that the Corporation have the authority and power when they are so minded.

— The topic of most universal interest in the latest report of the Massachusetts Board of Health is intermittent fever. Concerning the progress and extent of this comparatively new disease in Massachusetts a great mass of information is given in a paper by Dr. J. F. Alleyne Adams, of Pittsfield. The salient facts are, that outbreaks of the fever have occurred at intervals of a generation in the towns lying along the Housatonic and Connecticut rivers; viz., between 1793 and 1799, in 1836, and in 1870; that the latest formed part of a visitation which Connecticut received by way of New York in 1850, so that the fever was twenty years in crossing this narrow State; that in the past ten years it has reached North Adams and Greenfield, Mass., but has not crossed the border into Vermont or New Hampshire; that it is of very infrequent occurrence in the eastern part of Massachusetts; that it is usually associated with water courses or bodies of water subject to fluctuations of level; and that its intensity corresponds measurably to low stages of water caused by drought. It is also clear that however favorable may be the local conditions, there is a something imported (from the south) which has made them fever-producing now and not prior to 1870. That something has apparently come to stay, however much it may be guarded against and its effects limited by drainage and prudence in the use of drinking water. The growth of population has, to our mind, been the least factor in the problem; the growth of manufactures, by multiplying dams and overflows (as in the recent Lenox outbreak), has created or intensified the necessary conditions; but in all probability cosmic influences, assimilating these northern latitudes to the southern haunts of malarial disease, are chiefly responsible for the disagreeable invasion of Connecticut and Massachusetts. Whether the drying up of the earth is going on apace, or whether we are merely in the middle of a droughty cycle, as some of our local meteorologists think, we may safely throw the blame on the spotty luminary whose activity is now the object of so much scientific scrutiny.

—The memory of a painstaking and intelligent lexicographer, the late William A. Wheeler, is pleasantly revived in a little volume called 'Who Wrote It?' just published by Lee & Shepard. None of the readers' handbooks that have appeared of late years has quite the scope of this, which is pretty strictly confined to the implication of its title. It reverses the order of author-dictionaries, scattering the works of Dickens, Scott, Reade, and Cooper—to take examples in one field of literature—under their respective alphabets, with the author's name subjoined in every case, and the term of his life in brackets. The analysis is carried still further when we find the "Nonne Prest his Tale," the "Knightes Tale," etc., with references to the "Canterbury Tales"; and yet further, when "Houyhnhnms" is made a catch-word for "Gulliver." In like manner, "Ring out, wild bells" leads up to "In Memoriam," and first lines of famous poems nameless like sonnets are entered in their proper places. A chance catalogue of titles will best display the compiler's method and comprehensiveness: — Anabasis, Andromaque, Anti-Jacobin, Country Parson (Recreations of a), "Cromwell, our chief of men," Demi-Monde (Dumas's), Émile, Fors Clavigera, Frogs (of Aristophanes), Gerusalemme Liberata, Gesta Romanorum, Imitation of Christ, Land of Cockayne, Lillibullero, Mare Liberum (Grotius's), Margaret (Judd's), Martinus Scriblerus, Namouna (De Musset's), Nasby Papers, Nibelungen Lied, Niccolò di Lapi, Œdipus Coloneus, Ozymandias, Panchatantra, Pandects, Sam Slick, Subjection of Women, Vicar of Bray, "Woodman, spare that tree," Xenien, Yankee Doodle. Mother Goose is not overlooked, but the present editor, Mr. Chas. G. Wheeler, would have been justified in omitting the exploded Boston theory of Elizabeth Vergoose, of which his brother was the earliest partisan. So, if we were to have 'Middlemarch' and 'Daniel Deronda' added to Mr. Wheeler's posthumous MS., we might have expected some of Turgeneff's masterpieces of even or of earlier date to have been admitted. But completeness is not claimed for this little "conversation lexicon." The work is made interesting by foot-notes like those of Allibone, quoting the judgments of critics, and no pains have been spared to open up the contents by the aid of cross references. Examination reveals a surprisingly large number of topics, considering the compactness of the volume.

—"Goody Two-shoes," says Mr. Wheeler, is ascribed to Oliver Goldsmith. Readers of the London *Athenæum* will have noticed lately the controversy on this subject growing out of a communication to that journal from Mr. Charles Welsh, who takes the same view of the authorship, and enforces it with the opinions of others as well as with some probable arguments of his own. Mr. Giles Jones, grandfather of the late Mr. Winter Jones, of the British Museum, is a rival claimant through his posterity, on grounds neither very precise nor very weighty. However, it has pleased Messrs. Griffith & Farran, successors at the old stand in St. Paul's Churchyard of J. Newbery, the publisher of "Goody Two-shoes" and of numerous other classical children's books, some positively identified with Goldsmith, to publish a fac-simile of the third edition (of 1766), which is substantially that of 1765. Mr. Welsh has prefixed to the reprint the gist of his *Athenæum* article and of the controversy, and has done so in a spirit at once frank and free from dogmatism. The result is a typographical gem, well fitted to be a gift to children, both for its contents, and as a sample of the printer's and engraver's art in pre-Bewickian days, while their elders will prize it as a near equivalent to the rare original.

—The fiftieth volume of the 'Journal of the Royal Geographical Society,' recently issued, completes the series. Hereafter the 'Proceed-

ings,' published monthly, will take its place as the Society's principal publication, though supplementary volumes containing "elaborate papers of more than ordinary length and great value" will occasionally be issued. The first and by far the most important article is on "The Fifty Years' Work of the Royal Geographical Society," by the secretary, C. R. Markham. Beginning with a reference to the work of the early English geographers, Eden, Hakluyt, Purchas, and Hexham, he sketches the geographical work of the Royal Society and the African Association founded by Sir Joseph Banks in 1788. "The first person who was selected for employment by the Association was Mr. Ledyard, an American by birth." There follows an interesting account of the Raleigh Club, out of whose meetings grew the present Society. Its chief object was and still is, under the name of the Geographical Club, a dinner to which members were invited "to present any scarce foreign game, fish, fruits, wines, etc., as a means of adding greatly to the interest of the dinners, not merely from the objects of luxury thus afforded, but also for the observations they will be the means of giving rise to." On the table at the first dinner were a "haunch of reindeer venison from Spitzbergen, a jar of Swedish brandy, rye cake baked near the North Cape, a Norway cheese, and preserved cloud-berries from Lapland." Several chapters are devoted to brief sketches of the presidents and secretaries, and more detailed accounts of the travels of those persons who have received the Society's medals or been assisted by grants of money. Among the recipients of the gold medal, the gift of the English Crown "for the encouragement and promotion of geographical science and discovery," are the names of seven Americans—namely, the Rev. Dr. E. Robinson, of New York, for his 'Biblical Researches in Palestine'; Com. Wilkes, Gen. Fremont, Dr. Kane, Prof. Bache, Dr. Hayes, and H. M. Stanley. Two women, Lady Franklin and Mary Somerville, have also received the gold medal. The article concludes with a most interesting, though very brief, "Comparative View of Geographical Knowledge in 1830 and 1880, with a Notice of the Work that still Remains to Be Done." The original object of the Society—the collection and publication of interesting geographical facts and discoveries, the formation of a library, and the assisting of explorers—remains unchanged, though the sphere of its labors has been somewhat broadened. In 1869 it established an annual examination, open to the pupils of the public schools, on certain geographical subjects, each to be treated either in its physical or political relations; and two medals are given to the best competitors in both departments. More recently medals have been awarded to the scholars who have received the highest marks in geography in the Oxford and Cambridge local examinations. The subjects for the years 1880-82 were Western Africa, Polynesia, and Australia. Two years ago a school of instruction in "nearly all the problems in practical astronomy and surveying" was opened for intending travellers. This appears to have been highly successful, the students having included "civil engineers, naval and military officers, surgeons, magistrates, botanists, missionaries, and one bishop." An appendix to Mr. Markham's article gives various lists of officers, explorers, papers, and maps published in the 'Journal' and 'Proceedings,' etc. The largest single grant of money made by the Society was £1,778, in 1874, for the "Livingstone search and relief fund," though £2,500 in all was contributed to the expedition of Lieut. Cameron for the same end.

—The September number of the *Antiquary* (J. W. Bouton) contains two short articles upon points of great interest connected with the primitive tenure of land in village communities. Mr. Gomme, author of 'Primitive Folkmoots,' gives an account of some peculiar usages in different parts of Scotland, illustrating the customs of the burgh of Lauder, described by Sir Henry Maine in his 'Village Communities' (p. 95). None of them are so complete as those of Lauder, but, taken separately, they afford examples of the arable mark cultivated under rules prescribed by the town council (in the "birley" court, in which each proprietor of a "freedom" had a vote); of the assignment of parcels in this area by lot; and of the right to land for tillage being connected with the ownership of plots of land in the town. The other article is by Mr. Fenton, whose 'Early Hebrew Life' was reviewed not long ago in the *Nation* (Sept. 8). His article is upon the "right of pre-emption," by which the members of these communities had the first right to purchase land that was offered for sale, and thus to prevent the land from passing into the hands of strangers. Mr. Fenton traces this right, in an attenuated form, in the Mohammedan law (where it is confined to actual partners), in the Talmudic law (where it is extended to the owners of adjoining land), in Orissa, and even in ancient Assyria. In the last two cases the primitive rights are recognized to a certain extent as existing, but are prevented from asserting themselves by special prohibitions and penalties. The survivals of the village-community system in New England are traced in two interesting papers by Dr. H. B. Adams, of the Johns Hopkins University, read by him this last summer at public meetings in Salem and Stockbridge, and printed in the local newspapers. In these papers he describes, with some detail, some remarkable instances of community in land still surviving in Sandwich and Salem, and one or two other places, quite similar to that described in the *Nation* of Jan. 10, 1878, as existing in the island of Nantucket. Dr. Adams has for several years been engaged in investigating this subject, and has found material for a volume which he hopes soon to publish.

—The production of the "Verwunschene Schloss" ("The Haunted Castle") at the Thalia Theatre last Thursday was a great success. Carl Millöcker, the composer, may be said to be absolutely unknown in New York, and the score is in some respects a musical novelty, for it aims at introducing, in a somewhat humorous contrast, the peasant melodies of the Tyrolese Alps with the waltz and operatic music of what may be called the aristocratic type. This contrast is carried out in the drama, in which we follow the adventures of two peasants, who find their way to a castle, supposed to be haunted, but really tenanted by ladies and gentlemen of a very old theatrical school, who, while masquerading as spirits for the benefit of the inhabitants of the plain below, are really devoting their energies to getting as much as possible out of life in the way of dancing, drinking and love-making. The chief lady among these revellers is *Coralie* (Frl. Seebold). She sings with great spirit, and her voice, which has a remarkable range, was in excellent condition. She was encored again and again; her acting was very nearly as good as the singing, and as the part is only second in importance to that of *Regerl*, taken by Marie Geistinger, the hit made by the opera may be put down in great measure to her credit. As *Regerl*, Geistinger displayed once more her extraordinary versatility, and showed at the same time how much better adapted to her are German types than those of the French stage, in which she seems to us never more than half at home. *Regerl* is a buxom—very buxom—country wench, ignorant, superstitious, coarse, and good-humored, in love with *Andredl*, who is the corresponding male type. The parts of these characters and of *Regerl*, as well as *Sepp* (very weakly and ill sung by Herr Walter) are in patois, and, of course, replete with humor. Herr Klein as *Andredl* showed himself to be a thoroughly competent actor; and while his singing is not remarkable, the fun which he managed to infuse into everything he did would have carried him through with a much worse voice. His sleeping song, during which the infatuated *Regerl* watches him, and explains to the audience the contortions of his countenance and the writhing of his limbs as being due to the fact that he is "dreaming about the angels in heaven," was a masterpiece. The song, however, which was perhaps most perfect in its way was *Regerl's* in the fourth act, each verse ending with the refrain, now naïvely, now slyly, now broadly comical:

'S is a bisserl Liab und a bisserl Treu
Und a ganz kloan's bisserl—Falscheit dabei.

The theatre was crowded and the audience greatly amused and pleased from first to last. A visit to the Thalia now is a visit to Germany itself. No attempt, apparently, is made to attract Americans. No libretto or programme in two languages makes its appearance, and very few but Germans are to be seen in the house. The theatre is one of the best for seeing and hearing in this city, and to enjoy such an operetta as the "Verwunschene Schloss," very little knowledge of German is required. By those who care for musical ingenuity and inventiveness the contrasts introduced by the composer will be found entertaining and novel.

—A large audience assembled at the Academy of Music on Friday night to hear Rossini's "Barber of Seville," an opera which at the present day requires the united efforts of half a dozen good artists to make us understand how it ever could have attained its former popularity. There is an abundance of lively rhythm in it, but this rhythm is usually of a purely mechanical description and very superficial, owing to the absence of varied harmonies and the scarcity of good melodies. Indeed, the opera would long since have disappeared from the stage were it not for the fact that the plot is rather interesting, and affords opportunities for some good comic acting. These opportunities were not neglected, and the result was that Friday's performance was perhaps the most satisfactory of the present season. Signor Del Puente is perhaps as good a *Figaro* as walks the stage, and he was ably seconded in his efforts to bring out the funny points by Signor Corsini (*Dr. Bartolo*) and Signor Novara (*Don Basilio*). Signor Ravelli's *Conte Almaviva* was also acceptable in every respect, and if we add that the orchestra and chorus were equal to their work, we shall have omitted only one of the features that contributed to the success of the performance. This feature was the début in this country of Mlle. Vachot, a young lady of twenty-one years, who has already sung with success in Brussels, Paris, and other French cities. She is of medium size, light, graceful, and rather pretty, her features being characterized by that intellectual charm and brightness which among French ladies usually take the place of the highest physical beauty, and which make it so comparatively easy for them to become good actresses. Thus equipped for her task, Mlle. Vachot could not fail to be received with applause on first coming on the stage, although there could hardly have been half a dozen people present who had heard her before. But everybody felt instinctively as she came forward that she would at least prove a vivacious actress, and this counts for more in the "Barber of Seville" than in most Italian operas. On Mlle. Vachot's

singing we cannot bestow the same unqualified praise as on her acting. Her voice is naturally pure and sweet, although not powerful; but its purity and sweetness are too often marred by the *vibrato*, which she owes to the method of her teachers, and which she will have to overcome before she can claim the name of a great vocalist. Nor is her intonation always as correct as it should be—a peculiarity which is revealed less in the florid passages, which she sings with agility and no great apparent effort, than in cantabile passages. We admit that these faults are not very serious in her case, and can be easily overcome by one so young and intelligent as Mlle. Vachot; but as long as they exist they must be pointed out, not only because nothing is so injurious to a young artist as injudicious and exaggerated praise, but because a few years later it will be too late to overcome faults which at present can be easily remedied. Mlle. Vachot, we must add, received some very tasteful floral tributes and much applause throughout the evening; and everybody will now be anxious to hear and make her acquaintance in some other rôles.

—The first half of the second volume of Herr Robert Prölfs's 'Geschichte des neueren Dramas' (Leipzig: Bernard Schlicke; New York: F. W. Christern), filling five hundred pages, is devoted to the history of the French drama from its origin to the present time. Herr Prölfs first describes the awakening of the national spirit and the beginnings of the drama in France, and then takes up Corneille, Racine, and the other tragedians, and Molière and his rivals and followers; next he gives an account of the rise of French opera, and finally, in three chapters, he considers comedy and tragedy up to the beginning of this century. In the chapter on "Tragedy in the Nineteenth Century," he discusses the works of Hugo and the elder Dumas, and in another chapter, rather hastily, the comic dramatists of the present time—or rather all the dramatists who are not tragic; and he concludes with a glance at the chief actors and actresses of the past hundred years. The book is useful, in a way, and is not ill done, but it is very unequal. The chapters on Corneille and Molière are by far the best. The account of their successive plays is intelligent, and shows a use of much of the material recently brought to light. The author's weak point is his criticism of the contemporary drama. Herr Prölfs writes a little as though he had only read about the plays of which he treats, without having ever seen any of them acted, or having even read the most of them. He looks at plays, in short, from a literary point of view, and not from a dramatic. It is this want of familiarity with the actual characteristics of contemporary French dramatists which allows him (p. 473) to attribute M. Labiche's amusing farce, "Le Chapeau de paille d'Italie" to M. Sardou, and to say (p. 468) that it was a play of Mme. de Girardin's, instead of M. de Girardin's, which M. Alexandre Dumas, *fils*, worked over into the "Supplice d'une Femme." This same lack of acquaintance with the details of modern dramatic lore lets Herr Prölfs call Casimir Delavigne's "Comédiens" the "Comédiennes," and M. Demery's "Bohémiens de Paris" the "Bohémiennes de Paris," and the elder Dumas's "Madame de Chamblay" "Mlle. de Chamblay." These, of course, are trifles, but they tend to show how imperfect is Herr Prölfs's familiarity with recent French drama.

—The rapidity with which our foreign elements are assimilated and Americanized, while contributing to our political strength, is perhaps to be regretted from a purely literary point of view. In spite of some notable exceptions, our German brethren, considering their number and importance, have done little to enrich the literary treasure of their fatherland, or, indeed, to assert their nationality in the domains of science. Francis Lieber, among others, wrote exclusively in English, after having made America his home. Of late, however, there have been indications of an increased intellectual activity on the part of our German population as such. Thus the project of a great German university in the West, so eloquently fathered by Bodenstedt, has found in this country interested advocates. German periodicals are everywhere multiplying, and within the past few weeks we have received four specimens of the literary work of German-Americans. Of these, the *Wissenschaftliche Wochenblätter*, published by Chr. Schmidt, New York, is the most important. It is an illustrated weekly, of respectable appearance, devoted to science in its widest range, as is evident from the contents of the first two numbers. Thus far speculative and economic topics seem to predominate, but there is a liberal supply of miscellaneous matter on technical and hygienic subjects, culled mainly from European periodicals. In fact, in spite of the large number of domestic writers whose co-operation is expected—we may mention among them Prof. Wm. Grauert, Gustav Körner, Dr. A. Douai, Judge Stallo, etc.—it is evident that the new weekly will have to rely for its value chiefly on European sources. The most prominent scientists of Germany are thus to be "represented," among whom the prospectus mentions—we presume inadvertently — the botanist Schleiden (lately deceased), and the essayist Bogumil Goltz, who has been dead these ten years, and whose right to appear in a scientific publication might at any time have been questioned. The series of illustrated biographies of scientists, begun in the second number with Lieut. Wheeler, does not open auspiciously either as regards text or illustrations.

—The contributor of the article, "Ueber die volkswirthschaftlichen Fragen in den Vereinigten Staaten" (on economic questions in the United States), Mr. J. Schoenhof, is also the author of the pamphlet before us entitled "Deutsche Urtheile über Amerika" (German opinions concerning America), published as No. 156 of the well-known Holtzendorff series of "Deutsche Zeit- und Streit-Fragen." It is a lively protest against the ignorance of American institutions still prevailing in Germany, and more particularly against the atrocious misstatements of Friedrich von Hellwald, whose 'Culturgeschichte,' in so far as it treats of the United States, has never met with the condemnation it deserves. The subject of the misconceptions of German journals in regard to this country was discussed in our columns some time ago; we cannot say that the increased attention recently bestowed on American affairs has revealed any decided improvement. Thus, even so well-informed and able a journal as the Vienna *Neue Freie Presse* persists in speaking of the German parentage of President Garfield, and holds the Stalwarts, as led by Conkling and "Merrytt," responsible for the promulgation of the doctrine, "To the victor belong the spoils."

—'Klänge aus vergangenen Zeiten' (echoes of the past), by Philipp Wagner (New York: L. W. Schmidt), is a slender volume of verses, some of which, such as "Quantität und Qualität" and "Stille Lieder," are of more than average smoothness, and breathe the patriotic fervor which probably led to the author's "banishment," of which he speaks in the preface. He looks back upon seventy years of a life of hardship and disappointments. The songs wrung from the heart of the exile by the unstilled longing for his fatherland are seldom heard here—a fact suggestive of the prosperity which generally awaits the German transplanted to these shores. The decided poetic ability possessed by half a dozen German-Americans whom we might mention spends itself in occasional trifles and humorous productions, such as Asmus's clever 'Skizzebüchle.' Even the grandeur and diversity of American scenery, so powerfully felt by a Lenau, and so quickly seized by Bodenstedt, fails to rouse our German friends to more serious efforts.

—'Studien und Plaudereien im Vaterland' (studies and talks in the fatherland), second series, by Sigmon M. Stern and Menco Stern (New York: Henry Holt & Co.), though intended merely as a German reader and help to teachers, invites criticism as a literary performance from the fact that the authors have composed all the matter contained in the volume excepting a few appended poems. Their plan of teaching by conversation is the most comprehensive we have ever heard of: "All there is in this world worth being thought of or spoken about, all that is great, good, and beautiful, we draw into the circle of our studies"; and we must say they are as good as their word, for in the 'Studies and Talks' Alexander the Great and Lessing, a prose version of "Reinecke Fuchs" and an apotheosis of Bismarck, old anecdotes and the Bible, and heaven and earth in general, follow each other in uninterrupted and startling succession.

A NOVEL OF THE REBELLION.

The Bloody Chasm: a Novel. By J. W. De Forest. New York: D. Appleton & Co. 1881.

THE difficulties which beset the producer of American fiction are made even more distinct by the successes than by the many failures with which his path is strewn. To any one not familiar with them, the scene, time, and characters selected by Mr. De Forest would seem singularly well adapted for the novelist's purpose. The scene is laid partly amid the ruins of Charleston at the close of the war, and partly in the American colony at Paris; the heroine and hero are Miss Beaufort, the last survivor of an old South Carolinian family cut to pieces in the war, and a Northern officer who marries her. The period, though it only carries us back fifteen years in time, is already removed from us in thought and feeling by a generation; the vast social changes that have taken place since the surrender of Lee have made the old South, even to a greater degree than the old North, already belong to the past, so that it would seem as if slavery, the war, the freeing of the blacks, and the final and overwhelming victory of the North would already be immersed in the soft legendary light so well adapted to fiction and romance. Yet no one can read Mr. De Forest's book without perceiving that for some reason there is wanting that illusion both in the characters and in the story which is as necessary in a novel as in a play for complete success.

The story opens with the appearance in Charleston of Mr. Silas Mather, a rich Bostonian and old-fashioned Puritan, with a strong detestation of the South, as being responsible for slavery and the war, and also of the Catholic Church. In early life he married a Southern woman, and has come to the South to look up his wife's relations. He is a stern old gentleman, though kind at heart, and, as a Northern type of the time, perhaps not an impossible creation. It was a good idea, too, to introduce him in Charleston at the close of the war, moralizing among the ruins over the doom of slavery and treason and unprovoked rebellion. The following is the account given of Mr. Mather's first interview with a former acquaintance, General Hilton, of the Rebel army:

"He ended his soliloquy because he became conscious that some one had overtaken and was slowly passing him. Glancing sidelong, he noted that the person was evidently a Southerner—a superbly tall and stalwart man, of middle age, with a grave and almost grim aquiline countenance, and an air of dignity which contrasted strangely with his seedy suit of gray homespun. Mr. Mather looked carelessly at the worn face; then he suddenly leaned forward to peer at it eagerly; then he made an effort to get abreast of the stranger. Touching him gently on the arm, he said, in a clear, hard, emphatic voice: 'As I was saying, sir, it can't be done.'

"Both men halted and gazed at each other in silence. The Southerner had an air of non-recognition and of amazement. After a moment he remarked in a deep, mellow bass, and with a singularly collected and courteous demeanor, considering the oddness of the situation: 'I beg your pardon, sir. You have the advantage of me. I really beg your pardon, sir.'

"'Four years ago,' said Mather slowly, 'in my office in Boston I told you it could *not* be done.'

"'Boston? Your office?' queried the other. 'Oh! God bless my soul! Is it—is it Mr. Mather? God bless my soul! I remember you now.'

"'And our conversation?' insisted the Northerner.

"'God bless me! I *had* forgotten it. I recollect it now,' admitted the Carolinian with a faint smile. 'What a memory you have! Yes, I recall it. I said that the South *would* go out, and you said—"

"'That it could *not* be done.'

"'I see it can't,' bowed the Southerner. He laughed, but not blithely, and then shook his head very sadly. 'We did our best,' he added.

"'Or worst.'

"'Oh! sir, you are victors.' This was uttered with a sigh. 'You have the right to exult. I would simply ask, my dear sir, is it magnanimous?'"

Mr. Mather finds in Charleston, as the only survivor of his wife's family, his niece, Miss Virginia Beaufort, who, reduced to the last stages of poverty, is living in a sort of hovel with the faithful Aunt Chloe and Uncle Phil, and gaining a precarious livelihood by washing and ironing. Mr. Mather also has a Northern nephew, who has served in the Union army through the war, and is infatuated with a poor Catholic girl. The uncle is determined to break off the match, and in order to do so conceives the idea of making a marriage between him and Miss Beaufort. Miss Beaufort, however, is a type of the unreconstructed Southern woman; having lost in the Rebellion friends, family, and home and country, she is embittered against everything Northern with a bitterness which no man could ever dream of feeling against anything. Northern money (of which Mr. Mather has plenty); Northern hospitality; Northern friendship; Northern affection; and, most of all, Northern love, are all odious to her, and there is naturally some difficulty in bringing about a marriage. Finally, when she does consent to it, after Mr. Mather's death, it is only on condition of an immediate separation. She is to go through the ceremony, and then see her husband no more. Young Underhill, meantime, gets over his interest in Miss Norah MacMorran, and falls in love with his wife, and determines that in the end she shall be his wife in fact as well as in name. For this purpose the scene changes to Paris, where Underhill appears slightly disguised as Col. Peyton, a Virginian and ex-rebel. His wife had never seen him but once, when the marriage ceremony was performed, and then only in a half-lighted church, so that she is not at all familiar with his face. The effect of her life in Paris is to soften the bitterness of her heart, and to make her take less interest in the past and its tragic memories, and more in the present, and all the pleasant things it gives her. She is known in Paris by her maiden name, and she soon falls in love with Col. Peyton. The end can easily be guessed. She sees a horrible abyss opening before her, and resolves to save herself. The protection of her husband and her husband's name has become a necessity, and as she grows interested in Col. Peyton the impossibility of keeping up her false mode of life becomes more and more apparent. Finally, the crisis comes when he tells her that he loves her, and she, in an agony, informs him that she is married. Of course he now reveals himself in his true character, and the curtain falls upon a reunited and happy couple.

It will be seen that the tale does not make any severe drafts upon the reader's credulity. Neither the situations nor the *dénouement* are out of nature. The disguise of the hero as Col. Peyton is perhaps a little theatrical—in fact, the whole story could be made into a play without much difficulty—but the circumstances of the marriage are so peculiar as to bring this feature of it quite within the bounds of possibility. Yet, when all this is admitted, 'The Bloody Chasm' can hardly be accepted as the typical American novel for which we have been so long looking. We fear, as we suggested at the outset, that the difficulties are inherent in the subject. Though the period which separates the present time from that of the close of the war seems enormous, it has not as a matter of fact made the events of that time romantic to us. The only people who ever succeeded in extracting much romance from the struggle were the English Conservatives, who, knowing little or nothing about any part of the country, conceived the idea that the South was the home of chivalry and feudalism; that negro slavery was a patriarchal institution which greatly conduced to the happiness of both races; that the Southerners were all gentlemen and ladies, who were being invaded by a barbarous horde of bricklayers and hod-carriers. Of course it was only natural that the South should like to keep up this feeling as long as possible, and it was possible just as long as its peculiar institutions shut it off from the rest of the world, and kept it unexplored and unknown except by a few travellers who saw nothing of it beyond the lavish hospitality which the great slave-owners dispensed. So far as the North, and all the rest of the world outside of what may remain of foreign Southern "sympathizers" are concerned, these illusions have been supplanted by a totally different feeling. It is impossible now for us to think of the old South except as a provincial community, with barbarous institutions, without literature and without art, and, worse than all, filled with a provincial self-satisfaction the recollection of which is only laughable. No doubt this feeling has been exaggerated. We are all one people, and it is unlikely that any of the vices which the war revealed in the South had not their counterparts in the North. But, however that may be, the old romance about the South which found expression in such literary products as the 'Octoroon,' and which to a certain extent pervades even such an anti-Southern book as 'Uncle Tom's Cabin,' is completely dissipated, and we doubt if it is in the power of any novelist to revive it. Miss Virginia Beaufort is a romantic character; yet even Miss Beaufort represents the type of "unreconstructed rebel" in which we are most inclined to detect a ludicrous combination of tragic affectation with repellant insolence. In fact, all Southern types had assumed, towards the close of the war—partly through the mere effect of disillusion, and from the very fact that we had once believed in their reality—a comic aspect. The "first families," the "high-toned Southern gentleman," the Southern "chivalry," had become every-day jests and by-words. The country has never got over this, and we fear, to the lasting loss of romantic literature, never will.

Mr. De Forest will perhaps say in reply to all this that he does not call 'The Bloody Chasm' a romance, but a novel. But it makes no difference what it is called. The materials, or most of them, are used in a romantic manner; the sentiments and incidents are not those of every-day life, and the general effect produced is that of romantic motive. It sometimes seems as if there were no solid ground for the American writer of fiction in the present day and generation, except the consciously humorous. Who has written an American novel as to which there is any common agreement that it is an actual representation of American life, except Howells, whose pictures of it are always half humorous, even when most serious? 'Democracy,' which, to our mind, is by far the best of all recent attempts, produces an effect of unreality. Hawthorne, by dint of cutting himself loose from the American life of his own day and taking his characters from the past, or from the no-man's-land of his mind, succeeded in writing American romances, and the love of romance is so deep-seated in the human mind that it would perhaps still be possible for an American to write romance in the same way; but in writing fiction of any other kind he really comes in conflict with a formidable rival whose power is continually on the increase. The picture which each one of us gets of the life of to-day is furnished by the newspaper. It is realistic, bald, and at the same time consciously comic. The American novelist, if he alters the lines or colors of this picture much, excites revolt in our minds; if he attempts to stick closely to it, he finds it very difficult to keep out of a quagmire of vulgarity and commonplace in which fiction must always be swamped. Humor is his only resource; but to be humorous and a novelist is not given to every one. We ought to say, in conclusion, that Mr. De Forest shows in Aunt Chloe that he has substantial resources in the way of humor on which he would do wisely, in our opinion, to draw more liberally.

GARDINER'S ENGLISH HISTORIES.

English History for Students: Being the Introduction to the Study of English History. By Samuel R. Gardiner. With a Critical and Biographical Account of Authorities, by J. Bass Mullinger. New York: Henry Holt & Co. 1881. 8vo, pp. 424.

English History for Young Folks. B.C. 55–A.D. 1880. By S. R. Gardiner. Edition revised for American Students. New York: Henry Holt & Co. 1881. Small 8vo, pp. 457.

These two books may very well be considered together, as they proceed from the same pen, and appear to belong to one plan. The history "for young folks" must not be understood to be a child's book. It is written in a sober, rather dry style, with very little grace of narrative, but with a masterly power of condensation, and a clear understanding of just what it is, in the history of England, that young people most need to know. Being the work of a man who is confessedly the highest living authority on one period—and that perhaps the most important—of English history, and second to none in his familiarity with the whole field, it is a work of the greatest value. Children will not be attracted by it, but young students will find in it just what they need, and even mature scholars will be glad to consult it, in order to know the opinions and conclusions of a master.

We have said that the two books appear to form part of one plan. At any rate they supplement one another admirably. The other volume, the 'Introduction,' is designed "to provide some help for students who, having gone through the ordinary school course, wish to devote themselves to the special study of some part of the

history of England." For such a person we cannot help thinking that the smaller book will serve as a very convenient aid, containing an excellent compendium of facts, which the student may consult before taking up the larger work. The assistance for special students contained in the 'History for Students' is naturally of two kinds—a list of authorities, and a guide to their use; Mr. Gardiner has prepared the former, Mr. Mullinger the latter. Of Mr. Mullinger's part of the work, which Mr. Gardiner pronounces "the kernel of the volume," we need say very little. It commends itself. Every student, especially of modern history, knows how bewildering is the mass of authorities to be consulted, and how difficult it is to find a safe guide to what is best and most trustworthy. Within his brief limits Mr. Mullinger has done this as well as could be desired. Mr. Gardiner's work, in the "Introduction" proper (of one hundred and ninety-nine pages), is less easy to characterize. It may perhaps be best described, in his own words, as "an attempt to trace the life of the English nation by one who has at all events given much of his time and thought in an attempt to realize to himself what that life has been." It is discursive in its nature, an analysis, in successive chronological divisions, of the forces and influences at work in forming the English nation and bringing it to its present condition. Of course a discussion of this sort —itself the fruit of long study—can only be understood and appreciated after long study. The student who approaches this work from the school-study of history will get hints and suggestions for his special period; but he will only realize its value when he comes back to it at the close of his special investigation, and reads it again in the light of his now more complete and accurate knowledge. Indeed, designed though it be as a guide to study, in order to assist in tracing the chain of cause and effect, and comprehending the relations of some one age to what came before and what came after, its chief value, after all, will be for those who have already accomplished these special studies, or read largely upon the several periods of English history.

It consists of eleven chapters—the first upon "The Ancient World," the others dividing the history of England into ten chronological periods. As might be expected from the special reputation of the writer, the treatise increases in interest until its culmination in the history of the fifteenth and sixteenth centuries. The political history of England in modern times is sketched with power and with an unequalled fulness of knowledge. Nothing could be fairer or better than the analysis of the English Reformation, with its results as traced down to the great contest of the seventeenth century. We are surprised, however, to find hardly anything upon the social history, which was never a factor of more importance than just at this period. The abolition of serfdom is fairly dwelt upon in the earlier chapters, where the view given is essentially the same as that of Mr. Rogers and Mr. Seebohm; but the effects of this in building up the great landed aristocracy of England, the divorce of the peasantry from the land, the wonderful industrial development of the sixteenth century, and the influence of all these events upon the struggle against the Stuarts—these topics are not entirely neglected, but they do not receive an amount of attention proportioned to their influence in bringing into existence the England of the nineteenth century. The same remark applies to more recent times, and the book must be pronounced imperfect from this point of view.

It will be urged—and we agree to it heartily—that political history should come first; that this is the indispensable foundation of all historical study. In truth, the chapters on "manners and customs" in some modern histories are dreary and unedifying reading; and the attempt to trace the life of a *people* without distinct and constant reference to the life of the *nation* results only in vagueness and confusion. An exact chronology is the skeleton of history, and territorial and dynastic relations necessarily come first after the chronological outline. But Mr. Gardiner's treatise, even for young students, belongs a step higher; and such social facts as we have instanced have too powerful and direct an influence upon political history to be passed over in silence.

Mr. Gardiner's point of view is that of a hearty sympathy with the religious and constitutional reforms of the nation, which is never allowed to degenerate into partisanship. He appears as impartial and as sound in his judgments as Mr. Hallam, while his conclusions, drawn from researches in a narrower field, and therefore in all likelihood more profound, are on the whole more favorable, we should think, to the policy actually followed by the English nation in this great crisis of its history. It is, we confess, very gratifying to find what we have been accustomed to look upon as the right cause receive such hearty support from him; many recent writers, in their efforts at impartiality, have almost seemed to lean over to the side of prerogative and reaction.

We cannot give a better notion of the style of this book and its leading tone of thought than by a few extracts. They will illustrate as well the strength of the author in generalization as his sagacity in commenting upon individual characters and events.

"Richard II. had this special failing, that he stood on neither side of the great controversy of the age. He had not the large-heartedness and the heroism to place himself at the head of the peasants, excepting in one brief moment of excitement, and thus to obtain at least some consideration for their just demands. On the other hand, he had no real sympathy with the ruling classes. Fitful and uncertain in action, he strove, with long intervals of inertness, to maintain or acquire authority over them without regard for the conditions on which alone authority can be wielded" (p. 96).

In speaking of Henry VII.:

"The strength which a government acquires by being armed against anarchy is short-lived. Its very success brings such strength to an end" (p. 103).

Of the time of the first Stuarts:

"The decadence of the courtly literature of the time was the index to the decadence of moral and intellectual strength. The remaining dramatists of the Elizabethan school died, leaving no successors but the sweet and honey-tongued singers of a world of grace and beauty, where earnestness of heart counted for nothing —the Herricks, the Carews, the Cucklings, who could tell of the loveliness of soft glances and warm kisses, but who knew nothing of the fidelity of Imogen or the bright womanliness of Rosalind. Literature, in the person of Milton, passed to the side of the Opposition" (p. 137).

"It is not likely that a government which disregards the ideas of its subjects will pay much regard to their interests" (p. 140).

"The struggle of the Civil War was in the main a struggle between the enfeebled spirit of the Renaissance and the spirit of Protestantism raised to its highest pitch" (p. 147).

"It was on the side of Chatham's ideas rather than on the side of Burke's that the hopes of the future lay, if it were only for this reason: that Burke's principles excluded the popular leadership of Chatham, whilst Chatham's principles would find ample room for the intellectual guidance of Burke" (p. 185).

PALESTINE: EAST AND WEST.

East of the Jordan: a Record of Travel and Observation in the Countries of Moab, Gilead, and Bashan during the Years 1875–77. By Selah Merrill, Archæologist of the American Palestine Exploration Society. With illustrations and a map. New York: Charles Scribner's Sons. 1881.

The Ride Through Palestine. By the Rev. John W. Dulles, D.D. Philadelphia: Presbyterian Board of Publication.

FROM Beirut, during 1875–77, Mr. Merrill, as the archæologist of the American Palestine Exploration Society, made four different expeditions into the interior. Of these, however, the journals of but two are given at length in the present volume, and these are rather an account of the journeys than a record of results achieved. Mr. Merrill's "'Topographical Notes on Eastern Palestine,' in which he gives, in a concise and scholarly manner, the results of the explorations already made, withheld from publication for the present for reasons which need not be detailed, will appear in due time," writes Dr. Hitchcock in his Introduction. In the present volume there is, therefore, at times a somewhat tantalizing vagueness. Sentences like the following are not uncommon: "It is very difficult of access from any direction, but possesses some large stones, some columns, one arch, and a great supply of cisterns." Again, in one of his reports the author writes: "We have paid special attention to the archæology, botany, geology, and natural history of the region visited. Every fountain, stream, and ruin, and almost every wady, in the valley and hills immediately east of the Jordan, from the north end of the Sea of Galilee to the Dead Sea, has been visited, and a large amount of material collected" (pp. 311, 312). Many unimportant details might have been omitted, and more of this "material" introduced with advantage into the book, were the question merely one of space.

"Among the Cities of Bashan" is the title of a brief narrative of a journey into the Hauran, in the course of which the author explored the more important of its ruined cities, including Um El Jemal, heretofore practically unknown to European or American travellers. An interesting chapter is added on Hauran Architecture, compiled from the preface of De Vogüé's 'Syrie Centrale,' whose conclusions Mr. Merrill has adopted with some slight modifications. This is followed by a detailed account of a three-months' expedition to the East Jordan Valley, the Gilead region, the Dead Sea and Moab, and an exploration of the Lower Zerka or River Jabbok. A prominent feature of the narrative is the identification of particular Biblical and historical sites, in which tradition is not always followed. The "Cities of the Plain," *e.g.*, Mr. Merrill holds, were neither totally nor partially submerged. Their site he finds at the northeast, not the south end of the Dead Sea, where ancient ruins still remain. Pisgah he regards as a common, not a proper name; and Mt. Nebo he identifies with the modern Jebel Neba at the extreme north end of the mountain range east of the Dead Sea, which stretches southward from Wady Hasban. It is Gerash, not Es Salt, as many have supposed, that fully answers the description of Ramoth Gilead, and at Khan Minieh, or 'Ain et Tîn, not Tel Hûm, are the ruins of Capernaum.

If the effect of the present volume, however, be to raise the expectations, rather than to satisfy the curiosity, of archæologists, as a book of travels it takes high rank. Mr. Merrill's sketches of the land, the scenery, and the people east of the Jordan are fresh, vigorous, and full of life, and in this respect his book is never dull. He is

constantly impressed with the natural fertility of the soil and its latent possibilities. "The American farmer," he writes, "would look with envious eyes upon any of the fertile portions of this valley, and one has but to see them to account for the interest which Lot felt in the rich plains far to the south" (p. 139). Of the plain of Bashan he adds: "The natural wealth of the soil here is a constant surprise to me. I have seen men on this plain turning furrows which were nearly one mile in length, and as straight as one could draw a line" (p. 333). The milk and the honey, however, were not visible; for here, too, he tells of the blighting curse of Turkish tyranny which is desolating some of the fairest portions of the earth. "A civilized man," he writes in righteous indignation, "cannot help blushing whenever he applies the word government to the barbarous system of robbery and oppression under which the people of the Turkish Empire drag out a miserable existence in poverty and wretchedness" (p. 358); and he adds (p. 417): "My real wonder is that the poor, oppressed, miserable inhabitants of this land, both those of the towns and those of the desert, do not rise and massacre every official that rules in the name of the Turkish Government." Even the slave-trade exists in all its hideous deformity, notwithstanding the specious assurances of the Turkish Government and officials to the contrary.

"As nearly as I can ascertain," says Mr. Merrill, "as many as fifty or sixty, and sometimes eighty slaves—an estimate which is probably too low—chiefly boys and girls, are brought back to Damascus every year by the returning Mecca pilgrims and merchants. For these a ready sale is found. I have a friend in Beirut, and one of his customers residing in Damascus makes the pilgrimage to Mecca every year, and brings back regularly a lot of slaves. In the year 1876 he brought twenty, all females. He was very frank to admit that it was quite common for the Moslems to exchange the merchandise which they took with them for slaves, because in that way they could realize two or three times the value of their goods" (p. 342).

Mr. Merrill was fortunate in entering into friendly relations with the Bedawin. He passed from tribe to tribe unmolested, and thus enjoyed exceptional advantages for studying their institutions and modes of life. His three chapters on "Arab Life in the Desert" are therefore not the least valuable portion of his book. In brief compass he gives some vivid pictures of Arab life, and trustworthy information on many points of interest. Here, *e.g.*, is a graphic sketch of a tribe upon the march:

"The procession or caravan was strung along over three or four miles. They had camels and cattle, and several flocks of sheep and goats. The camels, however, were few, showing that they did not belong to the interior of the desert. All the camels and some of the other animals were loaded. The goods, consisting of tents, cooking apparatus, bags, rugs, mats, baskets, and even cradles, had been hustled together into bundles, tied with strings and ropes, and loaded promiscuously on their beasts of burden. Men, women, children, and babies made each their proportionate element in the procession. There were the 'first families,' and others which, by their dress, or rather by their nakedness and rags, looked as though they might be the 'last families.' The flocks of sheep and goats were mostly driven by small children. Sometimes there were flocks of lambs and kids driven by children not much older, relatively, than the lambs and kids themselves. Some of the men had in their arms two, three, four, or a whole armful of kids and lambs that were too young to walk; and among some cooking utensils there was a large saucepan, and in it was a pair of small kids that were too young for the journey. On the back of a donkey was a bed of blankets, and on that a sleeping child had been tied, whose bare legs hung down the donkey's side. At one point of the procession some women had stopped and were trying to rearrange a load which had fallen off from their donkey. There were small bundles in the path, and one large one by the side of it; my horse picked his way through the small ones, but shied around the large one, for just as he approached it gave a squeak which startled him. I thought it was a box filled with kids too young to walk, but it proved to be an orthodox cradle, which no doubt had been stolen from somewhere, covered with a blue cloth for a curtain, and in it were a pair of lively babies. Many of the women were bareheaded, it being too warm, probably, to wear the blue rag which is the universal headdress; and of their toilets otherwise the less said the better" (p. 473).

Arab children he found always interesting. In reply to a question as to his ideas of life,

"'the little fellow said that he was going to [illegible] up his money and buy a few goats, and after that he should keep on saving his money, and buy two or three cows.

"'What will you do then?' I said.

"'Well, I would sell the goats and the cows, and buy two or three camels.'

"At that his face brightened, as if to own some camels would make a man of him.

"'And after you get your camels what will you do?'

"'Why, then,' said he thoughtfully, 'I shall get married.'

"'And after that what will you do?'

"'Well, I suppose,' said he, after a little pause, 'after that I must get ready to die'" (p. 502).

We permit ourselves one further extract:

"The lot of an Arab woman is a hard one. As a girl she is valued for the price she will bring when she shall be sought in marriage; as a woman she is regarded as a menial, and her life is wretched; if she arrives at old age—and forty or fifty years is considered an advanced age—she becomes wrinkled and haggard, without a single comely or redeeming feature, one of the most disgusting objects that mortal eyes ever looked upon bearing the name of woman" (pp. 506–7).

Mr. Merrill writes in an attractive style, and his descriptions of scenery are especially good. His book is beautifully illustrated throughout, largely from drawings made by himself.

Little can be said of Dr. Dulles's 'Ride Through Palestine,' which deals with the country westward of the Jordan. It is difficult to see what special ground there was for another addition to the number, large enough already, of commonplace books all going over the same ground and repeating the same story. The route here described has been described a hundred times before, and there is nothing in the experience of the travellers to impart life and interest to the narrative.

NUMA ROUMESTAN.

Numa Roumestan: Mœurs Parisiennes. Par Alphonse Daudet. Paris: G. Charpentier; New York: F. W. Christern. 1881.

For English and American readers the last novel of Alphonse Daudet can hardly be said to possess the interest of his former stories. It has, like the 'Nabab,' a political character, but this is so entirely local that to say of the ordinary foreigner that he knows nothing of it, is to understate the case. It is so wholly out of his range that he has not even misconceptions or prejudices about it. The phrase of Numa Roumestan's which appears on the title-page, and furnishes the key to the political part of the tale—"Pour la seconde fois les Latins ont conquis la Gaule"—cannot convey much meaning to any but Frenchmen, and the moral of the story is worked out in such an extraordinary way that it can hardly have much profound significance for them. A few years ago the case might have been different. Numa Roumestan is a native of Provence, and represents the south of France—the south in which traces of the old Roman language and blood still linger, although they seem, if we are to take M. Daudet's word for it, to produce effects strangely un-Roman. It would be difficult to make out in the Provençal as he appears in the pages of this novel—hot-blooded, impulsive, irrational, rhetorical, superficial, and false—any of the traits which we are accustomed to associate with the Roman conquest of Gaul, and hardly less difficult is it to understand why, in contrast with this type, there is offered to us, as a representative of the cold, reflective, and moral north, a Parisian wife. The character of Rosalie de Quesnoy, admirably as it is drawn, is one which *à priori* we should say represented a latitude a good deal to the north of Paris; and it is certainly a novelty in a French description of Parisian manners to find our old Anglo-Saxon superstition on the subject of Parisian conjugal infidelity rudely shattered by so good an authority with regard to Parisian life as M. Daudet. The political moral of the book, however, is quite clear: it is the south against the north—the Roman against the Gaul—ending in a second conquest.

The story opens with a great fête in the old Roman amphitheatre at Aps, the birthplace of the hero, Numa the deputy, Numa the leader of the Right, the faithful follower of Henry V. and the white flag, now for ten years the bulwark of religion and country against the onslaughts of socialists and atheists—the great orator and statesman, Numa Roumestan. He is the centre of the fête—almost the fête itself. He has come down from Paris with his wife and her sister, Hortense. With a few wonderfully clever strokes, the author makes the character of the man and his position, his relation to his wife and her relation to him, all clear. Numa is a man of the people, known and beloved by everybody, high and low; and on this great day he has a kind word, a grasp of the hand, or a slap of the shoulder for everybody who can get near him. To be sure, the interview does not last very long; the great man hears with one ear, and while talking to the first-comer gives his hand to the second. But with such a crowd, and such kind words, who could ask any more? The requests of the honest constituents are generally for tobacco privileges, and if he notices that any one is keeping back, he encourages him to ask. There is nothing that he enjoys better than the pleasure of promising. His words, distinct and clear, come from his lips like pieces of money newly coined, and every friend and acquaintance goes off with a few of them as happy as a schoolboy with a prize. But the most delightful thing of all is to see how the great man falls into the tone, gesture, and manner of the person to whom he is speaking, and all in the most natural and unconscious way in the world. See him with M. le Président Bédarride, his arm magisterially extended, "comme s'il sécouait sa toga à la barre"; then look at his martial air as he talks to Colonel de Rochemaure; and after that notice him with Cabantous, his hands in his pockets, his rolling gait, and general air of an old tar. His sister-in-law asks him, with a laugh, where in the world he is going to find all the tobacco-shops he has promised; to which the statesman philosophically replies, "They are promised, my dear sister, not given"; and then, noticing the reproach conveyed in the silence of his wife, he goes on:

"'Do not forget that we are in the south, among compatriots of the same tongue. All these brave fellows know what a promise is worth, and do not hope for their tobacco-shop with any greater definiteness than I count on getting it for them. But they like to talk about it; it amuses them and fires their imagination. Why deprive them of this pleasure? Among southerners words never have more than a relative meaning.' . . . ."

His wife, however, is not convinced—

"'Nevertheless, words signify something, after all,' she says, as if speaking to herself.

"'My dear,' replies her husband, 'that depends on the latitude.'"

There are one or two of his constituents who agree with his wife as to the meaning of words, both of them destined to give them a great deal of trouble in the sequel, one of them the old Cabantous, the other Valmajour, a Provençal tambourine and flute-player, whose music makes such an impression upon Roumestan that he brings him and all his family to Paris, where they are destined to be the cause of much misery to themselves and others. Those who are curious about matters of literary workmanship will be interested in noticing in the thread of the Valmajour story the characteristic use which the author makes of his musician's account of the flute with three stops. In all his stories there has been something to remind us in a puzzling sort of way of Dickens, and there is nothing more characteristic of Dickens than his melodramatic use of pathetic "points," by the sudden reintroduction of a phrase or expression which he has already associated in our minds with pleasant ideas, at some pathetic crisis, where it has the effect of heightening the pathos by the contrast of emotion. It is of course a device which was not invented by Dickens; it is probably as old as literary art itself. It is very common on the stage in melodrama and the "emotional" drama; and that it may be used with success in music, Gounod, to say nothing of other composers, has demonstrated very effectively in the well-known waltz air in "Faust." But it is, after all, a trick—a purely mechanical way of producing a literary effect—which, when it is once explained, any one can learn and perform. We associate it generally with some of Dickens's books, because he was a master of it; and in French fiction there is no one who employs it with anything like the gusto and frequency that M. Daudet displays. In the case of Valmajour, the interest of the character is not sufficient to warrant much pathos. He is at bottom a stupid lout, without either heart or mind. Our sympathies are entirely enlisted on the side of Hortense, whose romance about him is destined to be shattered to fragments. With wonderful cleverness, therefore, M. Daudet refrains from any attempt to make Valmajour himself pathetic, but at the same time makes an effective point of his parrot-like repetition of the story of the flute. He tells it whenever his playing comes to an end; and that it contains an idea pretty enough for a "point" no one will dispute. "It came to me," he explains in his native patois at the moment of his triumph in the Roman amphitheatre, "in the night, while I was listening to the song of the nightingale. I thought to myself, How then, Valmajour? There is the bird of God above, and his throat is enough for him to make all his *roulades* with. What he does with one stop, you cannot do with your flute and three." And when, at the skating-rink in Paris, the unfortunate Hortense, her romance about him quite dispelled, herself doomed to an early death, is dragged by his sister to witness his final and complete failure, when his flute and tambourine have fallen flat, and his audience have let him know their feelings about his music only too plainly, again we see his lips move, and hear for the last time (this is the third occasion on which this little piece of "business" is made use of): "It came to me . . . one stop . . . three stops . . . the bird of God above." His gesture of despair is understood by the orchestra. "And this was Hortense's romance! This was what Paris had made of it."

The first scene at Aps prepares us for the next two chapters, which give an account of the previous life of Numa: his study of law; his career in the Latin Quarter; his determination never to go back to Provence, but to seek his fortune in Paris; his apprenticeship to a distinguished Parisian lawyer; the revelation of his natural gift for oratory; his marriage, and the discovery of his true character by his wife. These two chapters make a complete story by themselves, and the only fault to be found with the rest of the book is that, so far as he and she are concerned, it is very like a repetition of them, modified by the introduction of some new characters. This furnishes the occasion for the sad story of Hortense, and her untimely death, and for an entertaining account of the political life of the great man in Paris, and of the many troubles into which his amiable but superficial and false character gets him. But we foresee from the first that his wife's pardon of his first infidelity is not going to change him; indeed, nothing can effect a radical change in him, for no deep or lasting impression can be made upon his character, and the appearance of the little Bachellery on the scene indicates what the end must be. He is clearly destined to repeat his offence, and there was hardly any other way to finish the story than to bring about a second condonation scene over the death-bed of Hortense. The conclusion is, however, necessarily tame, and in the hands of any one but M. Daudet would have been flat. In fact, no more conclusive proof of his great cleverness could have been given than his managing to keep up the interest of such a plot to the end. If it could have had a tragic termination; if the character of Numa had brought him, as by a natural process it might have been made to do, to his ruin, it might have been a great novel. The analysis of his mobile and inconstant disposition is wonderful; but we resent instinctively the disproportion between the analysis and the *dénouement*. The second conquest of France by the Romans does not explain itself, and the sum and substance of the story as a whole is perhaps best put in the words of the Provençal proverb with which the melancholy chapter of Rosalie's domestic unhappiness closes: "Gau de carriero, doulou d'oustau—Joie de rue, douleur de maison."

Nordens Forhistorie. Efter samtidige Mindesmærker af I. I. A. Worsaae. Copenhagen. 1881. 200 pp., with a map.

MR. WORSAAE is the acknowledged chief among Scandinavian archæologists. As early as 1854 he showed that the iron age must be divided into two (later into three) epochs, and in 1859 he published a work in which he distinguished between an elder and a younger bronze age. He has also discriminated between an elder and younger stone age, making the kitchen-middens belong to the former, and the cairns and cairn sepulchres to the latter, although this division of the stone age into two epochs has been zealously contested by Mr. Steenstrup. Mr. Worsaae has the honor of having successfully combatted Forchhammer's and Finn Magnusen's notion that Runamo contained a runic inscription. Runamo is a rocky wall in Bleking covered with lines and figures, which by Forchhammer and Magnusen were held to be runes, and interpreted as a prayer by Harold Hildetand to the gods for victory in the battle on Bravalla Heath, and a curse upon his enemies, but which Worsaae showed to be a mere freak of nature.

In the present work Mr. Worsaae gives first a general statement in regard to the present status of archæological studies in other countries, and then proceeds to discuss in some very interesting chapters the various prehistoric ages of Scandinavia. The elder stone age is put by Worsaae at 3,000 years B.C., at least, while the younger stone age is made to embrace the epoch from 2,000 to 1,000 B.C. The elder bronze age begins at about the year 1,000 and ends about 500 B.C. It is followed by the younger bronze age from 500 B.C. to the Christian era. Then come the elder iron age (from the birth of Christ to 450 after Christ), the middle iron age (from 450 to 700), and the younger iron age (from 700 to 1,000). For all of these epochs the various finds, with their uses and significance, are fully set forth.

The most striking part of the work is Mr. Worsaae's interpretation of the inscriptions and figures on the two famous gold horns found near Gallehus in 1639 and 1734, and never before satisfactorily explained, although many celebrated archæologists have made elaborate attempts. The actual money value of the two horns was 1,870 ducats. It is acknowledged on all hands that they belong to the middle iron age—that is to say, to the epoch beginning 450 and ending 700 after Christ. George Stephens places them at about A.D. 400. The author had ascertained that many of the finds from the bronze ages were connected with religious customs, and in his studies of the gold bracteates,* from the elder and middle iron ages, he found a number of images representing Odin, Thor, Frey, Sigurd, the Volsung, and other gods and heroes described in ancient literature. Then came the discussion concerning the age of the Edda-lays and of the most important Teutonic myths. Bugge and Bang in Norway contended that they were brought to the North in the eighth and ninth centuries. They insisted that the Balder myth especially, which forms the kernel of the asa-faith, and the representations of the Midgard-serpent and Ragnarok, were an importation of Christian legends, while other myths were of classic origin brought to the North during the Viking expeditions, notably from England, Scotland, and Ireland. Odin himself was no older. These views contained a serious attack on the old Norse literature and on the whole preceding estimate of Teutonic antiquities. It is true these ideas were intrinsically not at all probable, for the Viking age was an age of decline and disintegration in religious respects. There was not enough of faith left in the North to accept and embrace new and important myths. It therefore seemed proper to examine this subject from an archæological standpoint. There were a multitude of pictures on the two famous gold horns from the middle iron age, on the bracteates, and on runic stones as well as on other finds, and it was discreditable to the archæologists that they made no attempt to explain them.

The suggestion came from France. On a visit to the Museum in St. Germain, Mr. Worsaae saw a department in which Gallic idols from every part of France were arranged. He saw there gods both in sitting and standing postures—a mixture of Roman and Gallic divinities—and among these not less than fifteen three-headed idols, a part of which had their legs crossed in genuine Buddha fashion. This led him to make a new and careful study of the gold horns from Gallehus. Suddenly it flashed upon his mind that the one must have reference to the serpent-filled abode of Hel (the Goddess of Death), and the other to the star-lit Valhal. Here the key was found. He then took the figures separately and compared them with the representations on the gold bracteates, and soon found that the *whole Odinic religion* was pictured on the gold horns, with Valhal and Hel and the myth of Balder as the basis. In successive rings on the horns nearly all the myths found in the Eddas are represented by pictures showing conclusively that all the elements and details of the asa-faith

* Bracteates (from the Latin *bracteæ*) are a kind of coin of thin, hammered-out silver (sometimes gold), once very common throughout northern Europe in prehistoric times. They were frequently used as ornaments. The oldest were engraved on both sides, but the later ones were hammered out so thin that they could be engraved on one side only. They are found in great numbers in Germany and Scandinavia, but Denmark is the only country in which gold bracteates have been found. The word has not yet found its way into our English dictionaries.

existed in the North long before the Viking age. The horns might be compared to a fully-illustrated Bible, and were probably kept in a temple to tell the story of the old religion. They are a unique relic of the past, of inestimable value, not only to the North, but also to all the other Germanic countries. Comparison with the bracteates and other relics shows beyond a doubt that the horns belong to the sixth century.

Mr. Worsaae has thus demonstrated in the most satisfactory manner that the basis of Norse mythology is not, as maintained by Bugge and Bang, a recent importation from the British Isles, but dates back to an early period, and is connected with religious ideas that have been common to all Teutons. He has demonstrated that finds in the archæological collections establish the antiquity of the Edda myths, and the trustworthiness of the Old Norse literature in this respect. His book marks a new era in the study of Teutonic antiquities. Many of the old views and theories, and many old interpretations, will have to be set aside. But archæologists and scientists may take comfort from one of the pictures found on the Gallehus gold horns. The heroes in Valhal ride out into the court every day, and there fight until they fall; but the next day they rise again, remount their steeds, and return to Valhal, where they drink mead with Odin from golden horns.

Madame de Sévigné. By Miss Thackeray (Mrs. Richmond Ritchie). [Foreign Classics for English Readers.] Philadelphia: J. B. Lippincott & Co. 16mo, pp. 181.

Miss Thackeray is a genial and appreciative biographer of Madame de Sévigné, and has made a very charming book—an entertaining life of her heroine, enlivened with copious extracts from her letters, and all together forming a graphic and interesting picture of the times. The introductory chapter contains an admirable passage descriptive of the personality of Madame de Sévigné and her relation to the world about her:

"Madame de Sévigné's voice rings very true and sweet and playful amidst the hideous discords of her time, and her apparition is indeed a gracious vision among the reckless phantoms of her age—those subjects of that Grand Monarch whose god was his belly, and whose good breeding was the admiration of Europe. While his people are starving, and his mistresses stringing diamonds; while his unwilling armies are invading inoffensive nations, and his courtiers are conniving at every mad wickedness — Saint Simon dwells, in an ecstasy of contemplation, upon the extraordinary grace, the irresistible admixture of dignity and respect, with which the King would half rise from his seat at table to salute the tardy entrance of some belated dame of honor, at the same time storing in his memory a record of the lady's fallibility, to be resented at the first convenient opportunity. Madame de Sévigné, in her youth, was no less enthusiastic about him than the rest, but as years went by her judgment became more just. Hers was a curious morality; she laughed where others might have wept; she seemed to take the times as she found them; she attempted no reform, though she could see wrong plainly enough where it existed. It was a sweet and happy temper, a mind that played lightly even with sorrows and wrong-doing; and yet this bright and apparently unconcerned existence was a protest in its way against the insincerity and abject selfishness of the court. She at least did her best to make those about her happy. . . . In a court where lies and intrigue were as daily bread; where modesty was rare, and every standard of right and wrong overthrown by the brilliant and witty and well-dressed vices crowding in—this beautiful young woman, surrounded by flattery of every sort, by high living and low thinking, kept her dignity intact, her name pure and respected. She did not profess any special virtue, nor hold her garments back lest they should be soiled by contact with the petticoats of her more frivolous sisters. She was (to earnest minds perhaps) far too lenient in her tolerance for others, and especially where those she loved were concerned; but the whole tenor of her life was just and self-respecting."

Armstrong's Primer of United States History, for School and Family Use. With maps. New York: A. C. Armstrong & Son. 1881. Pp. 128.

We are inclined to doubt whether the next generation will think as highly of the "primer system" as the present, and if the system does survive the present fashion, we think it will be (as with the lecture system) in so far as it aims not to instruct, but to inspire and suggest. The attempt to crowd the history of any nation into the compass of a hundred pages or so must result either in a very incomplete statement or a mere catalogue of names and events; but a hundred pages of what is most essential in facts and commentary, the secondary facts and every proper name that is possible being omitted, may be very useful. Some of the primers of history are models in this respect, especially for the purpose of review. The book before us is not uniform in method. In some parts—for instance, the story of Columbus, and Burgoyne's invasion—we have an account very complete and good for the space devoted to it; while other parts, especially towards the end, are meagre, confused, and crowded with unimportant names and dates. It seems as if the author began on a larger scale than his space would warrant, and was compelled to crowd some of the closing chapters with more facts than they would well hold. The Colonial period is perhaps too brief, but rather from omission than compression. The arrangement here is not always good. On what principle are New York, New Jersey, and Delaware grouped together (chap. vi., part 1), and Maryland, Pennsylvania, and Georgia (chap. v., part 2)? The maps are, we think, the best we have ever seen in a school history of the United States, but they are not numbered. In the map of the acquisition of territory (p. 64) we think it is clearly incorrect to include Oregon in the Louisiana purchase. In the map of the Colonies (p. 16) the three divisions into which Maine fell historically ought to be indicated. On page 80 the Dorr rebellion (1842) is said to have arisen out of a "quarrel over a new charter"!

A Short History of Art. By Julia B. De Forest. Illustrated. New York: Dodd, Mead & Co. 1881.

One of the results of the new and wide-spread interest in art, and art education, which has arisen within the past few years in America, is the production of popular treatises on the subject. It is natural that these treatises should generally correspond in character with the new interest itself, which, though it contains some hopeful elements, is yet hardly of the character that we ought to desire. We are going on much too fast in these matters. Our work is not yet modest, patient, and thorough enough to serve as a sound foundation for real progress. Everywhere, in the popular arts of the time, we see the signs of undue haste, of undisciplined feeling, and of effort to produce what shall be showy rather than excellent. And all this is reflected perfectly in the art literature which springs up along with it. There are exceptions; but they are not too frequent to prove the rule.

The work before us purports to be a brief outline of the general history of the arts in all ages and countries. Brief outlines of great subjects may be very useful, no doubt, if they are made by thoroughly competent persons, who not only know their subjects perfectly, but possess also the faculty of seizing significant points, and of presenting them in true and vivid order. Such outlines enable a beginner to lay hold of a subject as he otherwise could not, and give him an interest in following it up by more particular and more extended study. But unless an outline of a subject is full enough and accurate enough to convey real and significant information in every part, it has little if any value. It is a fault of this book that it is in many parts too brief to be intelligible, and is frequently inaccurate in its statements. For instance, the subject of sculpture in Italy, from 1200 to 1400—one of the most important in the whole range of art history—has a little less than two pages assigned to it. So great a man as Andrea Orcagna is disposed of in two lines as follows: "Andrea Orcagna (1329–1368) also deserves mention. He was a man of universal genius, painter, sculptor, and architect." And not only is the treatment of important subjects frequently thus so very brief as to be of hardly any use at all, but the authoress often so misconceives the spirit and character of the art she is speaking of as to be very misleading. An instance of this occurs in the closing paragraph of this same chapter. She says:

"Mediæval traditions were followed in Venice longer than in other parts of Italy; but the whole country, as if it recognized an old friend in the revived classic spirit, shook itself free from the trammels of northern art in a very brief space of time. The next step was to conquer those countries which, for a little, had imposed their artistic canons upon the heirs of the treasures of Greece and Rome."

Herein the failure to recognize those most living and salutary elements of northern art which animated what remained, or was revived, of classic tradition in Italy, and gave controlling impulse to the arts of the Early and Central Renaissance, leaves the impression on the mind of the reader that there was nothing in northern art which could not be spared and was not better out of the way. It would be hard to imagine a graver misconception of the character of northern art, or a more untrue notion of the Early and Central Renaissance art of Italy than is conveyed by the implication that it was merely a revival of the antique. The book embraces an account of Primitive art, Egyptian art, Chaldean art, Persian art, the arts of Syria and Asia Minor, Greek art, Etruscan art, Roman art, Christian art, the arts of the Renaissance, Pagan art in the Christian Era, and art in the nineteenth century. It is profusely illustrated by woodcuts, but the illustrations are all of an extremely coarse character.

The Story of the English Jacobins. By Edward Smith, F.S.S., author of 'William Cobbett: a Biography,' etc. [Cassell's Popular Library.] New York: Cassell, Petter, Galpin & Co. 32mo, pp. 184.

There is no more interesting episode in English history than the last effort made by Prerogative to crush the spirit of free institutions in the Treason Trials of 1794; and there is no more inspiring eloquence in the noble volume of British oratory than those speeches in which Erskine successfully defended popular rights against the assaults of the Government. The story of these events is told in an interesting manner in Mr. Smith's little volume, which will well repay the reading.

While our sympathies are heartily with the heroes of the book, and we regard the acquittal of Hardy and Tooke as no unimportant step in the progress of English liberty, we cannot help seeing that there were many features of the popular movement which justified a certain degree of alarm. The actions of the "conspirators" appear to have been wholly free from reproach, and it is well shown (p. 65) that all the disorders of the time were the work of the partisans of "law and order." But the reformers

were not as careful to avoid every appearance of countenancing the excesses of the French Revolution as, in the light of history, we should have expected them to be. It must have appeared to the average Englishman an ominous reminder of Louis Philippe Égalité when "'Citizen' Stanhope's health is drunk 'with thundering applause'" (p. 115). No doubt the horrors of the Reign of Terror made less impression in the excitement of the time; probably, too, they really occupied a smaller proportionate space in men's minds than they do now, with the glare of ninety years thrown upon them. For all that, it seems incredible that calm English reformers should send gratulatory commissions to France in the midst of those events; just as the Genet episode in our own history is hard to realize at the present day.

BOOKS OF THE WEEK.

Adams, W. D. The Eastern Archipelago. New York: T. Nelson & Sons. $2.
Ballantyne, R. M. The Giant of the North; or, Pokings Round the Pole. New York: T. Nelson & Sons. $1 50.
Brockhaus's Conversations-Lexikon, Parts 1, 2. 13th ed New York: L. W. Schmidt.
Cassell's Book of In-door Amusements. New York: Cassell & Co. $1 50.
Clement, Mrs. C. E. Eleanor Maitland: a Tale. Boston: J. R. Osgood & Co.
Corbett, Mrs. C. T. Three Wise Old Couples. New York: Cassell & Co. $1 50.
Dahlgren, Mrs. M. V. South Sea Sketches. Boston: J. R. Osgood & Co. $1 50.
Daudet, A. Numa Roumestan. 22d thousand. New York: F. W. Christern.
Dickens, C. Letters. Vol. III. 1836-1870. New York: Chas. Scribner's Sons. $1 50.
Doehn, Dr. R. Beiträge zur Geschichte der Nordamerikanischen Union. New York: B. Westermann & Co.
Drake, S. A. Around the Hub: a Boys' Book about Boston. Boston: Roberts Bros. $2.
Ebers, Prof. G. Uarda: a Romance of Ancient Egypt. 2 vols. New ed. New York: W. S. Gottsberger.
Edwards, Dr. J. F. Malaria: What it Means, and How Avoided. Philadelphia: Presley Blakiston. 75 cents.
Engle, Alice B. Story of Four Acorns. Boston: D. Lothrop & Co. $1.

The Nation.

NEW YORK, THURSDAY, NOVEMBER 17, 1881.

The Week.

THE result of the election in this State has dispelled some impressions which had been carefully cultivated by Republican Machine politicians and their sympathizers on the Democratic side. One of these impressions was that the Republican party would inevitably be defeated unless the "regular Machine" were entrusted with the conduct of the campaign. The success of the Republican nominees for the State offices (with one exception) proves that the Republicans may be successful not only without Machine leadership, but without any leadership at all, for in the recent campaign there was certainly not much of it. Another impression, or rather pretension, was that the "Stalwart" element was the most numerous and potent in the Republican ranks in this State. It appears from election returns that among the State Senators and members of the Assembly of the next Legislature the Stalwart element will be almost invisible. The rank and file of the party have evidently had their own way in a large majority of the election districts. The current has been decidedly against Machine influence—so much so, indeed, that the most successful candidate in this whole campaign was Mr. Seth Low, the man whose nomination was forced upon the Republican Machine by an independent citizens' movement, and who then beat the Democratic Machine in the election by a frank and candid appeal to the public. These things may be remembered with profit.

The success of the combined Republicans and Readjusters in Virginia under Senator Mahone's leadership has been decided and sweeping. The coalition has won complete control of the State Government in all its branches. As to whose victory it was there can be no doubt. It was not the victory of the Republicans, for the Republican party of Virginia had not only abdicated its identity as an organization, but, in combining with the Readjusters, very seriously compromised those of its principles fidelity to which had of late more than anything else won for it the confidence and support of the country. The victory is unquestionably General Mahone's, who not only succeeded in making the Republicans follow his lead at the sacrifice of much they had held dear, but who has succeeded also, with the coalition so formed, in overthrowing the so-called "Bourbon Democracy" of Virginia. The ground upon which Mr. Mahone has been supported by a large part of the Republican journals and politicians in the North was, that the movement under his leadership represented the liberal and progressive aspirations of the South; that it was mainly supported by the active and ambitious young men; that its success would give security to the colored people in the exercise of their suffrage, and so break up the "solid South" and virtually dispose of the so-called "Southern question." That there is much truth in this will scarcely be denied. On the other hand, it is also true that the open repudiation of a part of the State debt is one of the prominent features of the Readjusters' platform, and that the whole movement is affected with the taint of dishonesty in the matter of public obligations.

It is a question which conscientious Republicans should reflect upon, how intimate the party can permit its alliance with Mr. Mahone to grow without serious injury to political morals generally. Mr. Mahone had the active support of the Administration in the distribution of patronage during the campaign. The victory being won, his ambition is said to expand. He is not only looking out for a fit associate in the Senate of the United States, a sort of an "assistant Senator" from Virginia, but he is credited with a strong desire to be "represented in the Cabinet"—aspirations which so far have belonged exclusively to the domain of the great party bosses. In one word, Mr. Mahone's attitude seems to be no longer that of a mere ally and beneficiary of the Republican party, but that of one of its chiefs and leaders. It is worth while to consider what that kind of leadership may lead to. That the repudiating tendency of the Mahone movement, unless speedily and honestly abandoned after its triumph in Virginia, will seriously affect the credit of the Republican party, as far as the latter stands sponsor to the Mahone movement, need scarcely be repeated. But there is still something equally significant behind this. We are told that the breaking-up of the "solid South" on the Mahone plan will result in making the Republican party independent of a united North; in other words, it will have of the votes of Southern States enough to win Presidential elections even if the reformers and malcontents in the party should here and there revolt and deprive it of this or that of the Northern States. This reasoning seems to please especially our Stalwart friends. And there is method in it. By organizing a goodly number of Southern rotten boroughs the party may indeed to some extent emancipate itself from the influence of the critical public opinion which prevails in Northern communities; a condition of things which would call back the liveliest reminiscences of the Grant régime, and thus become particularly inspiring to the Stalwart mind.

The impression which seems to prevail at the North that the success of Mahone will be followed by immediate repudiation is a mistaken one. Though the Readjusters have now apparently the power to pass the Riddleberger bill over again, any such measure would be resisted by the creditors of the State, who would carry the matter into the courts. It has been already taken up to the Supreme Court of the State once, and this tribunal would have to be packed before the repudiators could have full swing, while even in that case it would probably be still further appealed, at least as to the receivability of coupons for taxes, to the United States Supreme Court. This would mean a protracted litigation and the postponement of any settlement for years. The Mahonites, however dishonest they may be, are shrewd politicians, and they are already beginning to see that the path of the successful repudiator is not strewn with roses. A compromise, not merely with the creditors, but with the "Funders," would seem to be the natural result of this condition of things, and the Richmond *Dispatch* thinks that while a Riddleberger Bill may be passed by the Legislature, it will be "little less than impossible" to pass the old Riddleberger Bill, either as it was when Riddleberger first drew it up or as it was when Governor Holliday vetoed it.

The most significant incident of the recent campaign in Pennsylvania was the vote cast for Mr. Charles G. Wolfe, Independent Republican candidate for State Treasurer. That a man nominated by himself, on the simple platform of resistance to boss dictation in the matter of nominations for office, should come out of the contest with a following of more than 50,000 voters, is a circumstance unprecedented in the politics of that State, or, indeed, of any State. It indicates a very intelligent interest and belief in Mr. Wolfe's declared programme of reform inside the party and outside the organization. The suggestion, on the part of the managers, that the only proper way was to work for reform inside the organization, was sufficiently answered by one of the Wolfe speakers, who stated as his first objection that you couldn't get in—which dispensed with other reasons. Mr. Wolfe's campaign was conducted after the manner of Peter the Hermit's: he personally traversed the State, defending his dogma before the assembled citizens, and, without the aid of organization, or machinery, or money, certainly attained a surprising result, and one which will have an important bearing upon the future of Pennsylvania Republicanism.

The National Tariff Convention to be held in New York in the last week of this month announces a very remarkable and not very consistent programme. The delegates expect to prove to the people of this country that protection has reduced the cost of manufactured goods, and that it has increased the price of labor. If they can prove the first, they cannot prove the second; nor can they prove the second without disproving the first. What is the price of labor but the wages that are paid for it? and what is the chief element of the cost of production but the amount of wages paid to the laborers engaged in production? Thus, Mr. Mill says (Book iii., chap. iv., § 1): "What the production of a thing costs to its producer, or its series of producers, is the labor expended in producing it. If we consider as the producer the capitalist who makes the advances, the word 'labor' may be replaced by the word 'wages.' What the produce costs to him is the wages which he had to pay." If the Convention has no better programme, it might as well save itself the trouble of assembling.

Guiteau's case is creating such a powerful presumption in the public mind against the existence of insanity in criminals that the poor lunatics who commit crimes during the next few months are likely to have a hard time of it. The latest criminal who "claims" to be insane is the man who has been threatening Jay Gould's life in order to compel him to give him "points" in stocks, but he literally ruined his case when arrested by showing manifest signs of fear and mortification. This no genuine and irresponsible lunatic would do, and the incredulity with which this man's claim to insanity is received should be a warning to all others whose affairs are in disorder, and who are casting about for the means of righting them. A really irresponsible lunatic does not mind being arrested, and in fact rather likes it. Guiteau, unluckily for himself, made arrangements to run away after the murder. But the experiment of an eminent alienist, we believe, in Hartford, made some years ago, throws doubts on the propriety of letting every mischievous lunatic go unpunished, for he found that a patient much addicted to assault and battery was cured by having his tobacco stopped.

While Guiteau's "speech" may illustrate his morally and mentally vicious condition, it does not establish his insanity. There is a certain consistency in insane impulses which is lacking in his case. If he really believed that he shot President Garfield in obedience to a divine command, he would rejoice in the consequences of the inspired act as well as in the act itself. He would take credit to himself not only as a providential agent in contriving to kill the President, or to "remove" him, to use his own word, but also as a successful agent in actually accomplishing the killing or removal. He does not do this. In respect to the shooting—a fact as to which there can be no dispute—he insists that he acted under divine orders; but when he comes to the cause of the death of the President, as to which he hopes a question will be raised, he argues that it was caused by the doctors, and but for their mismanagement the President would not have died. An honest madman would glory in the whole business, and would insist that the shooting and the death were both the work of "the Lord," and of himself as a divinely appointed agent.

The miscarriage of the Star-route prosecution by the dismissal of the criminal information by Judge Cox, appears to be plainly the result of District Attorney Corkhill's singular behavior with regard to the Grand Jury. He adjourned it without notice to Mr. Cooke, who had been retained by the Attorney-General to conduct the prosecution, and adjourned it when he must have known that it could not be got together again in time to deprive the defendants of the benefit of the statute of limitations. There is still hope that new indictments can be sent in which the statute of limitations will not cover, but this does not make the conduct of the District Attorney any the less extraordinary. The truth is that there is a sort of contagious apathy in Washington about all prosecution of political criminals who have held high office, or in fact any office. There is in the first place much doubt whether the prosecution is seriously undertaken, and then whether anything will come of it, and whether anything had better come of it. This feeling is so strong that nothing short of a very determined attitude on the part of the President is sufficient to dissipate it. There is evidently a strong disposition in Washington now to treat the escape of these particular criminals as a foregone conclusion, and to throw the blame of it, not so much on District Attorney Corkhill, who failed directly in his duty, as on Mr. McVeagh, who refuses to stay in the Cabinet for the sole purpose of watching over the prosecution.

The *Herald* published on Friday a history of the attempt by our Government to get possession of assets belonging to the Confederate Government abroad. These assets are the same as those on which the recent speculation in Confederate bonds was based. Various contracts appear to have been made at Washington within the past twenty years to pay liberally for any such property recovered and turned over to the United States, but as the net result to the Government has thus far only amounted to $5,000, the "fund" applicable to the payment of the bonds can hardly be a large one. The recovery of even this $5,000 required a gigantic effort, a fifty per cent. contract, the services of a "Commissioner," and a Treasury agent, who between them collected Confederate property which brought in $100,000. From this they were obliged to deduct $95,000 for the expenses of collection; and a rival contractor is said to allege that this recovery was made on evidence for which he is entitled to be paid, so that it is too early yet to feel sure how the Government is going to come out in the end. The inventory of the assets "shows that there are $29,000,000 in Europe and $11,000,000 in the United States, or $40,000,000 in all." Of this $11,000,000 is in good hard money, "deposited to the credit of the rebel Government in Vienna, Brussels, Frankfort-on-the-Main, Amsterdam, Paris, and London." The Secretary of the Treasury ought to send for this at once. It is of course a little strange that with twenty years of searching and contracting none of it should ever have turned up, but this, we suppose, was because the contractors kept devoting their attention to the other assets, such as item No. 24, "Eighty chronometers, spoils of the *Florida* and *Alabama*," and item No. 27, "Postage stamps, a portion of which are now in a bank in Canada."

Mr. Kasson, our late Minister to Austria, has an article on "The Monroe Doctrine in 1881" in the last *North American Review*, in which he makes a suggestion with regard to the Isthmus Canal which should have appeared in Mr. Blaine's recently published despatch, and which is really needed to prevent Mr. Blaine's position having an air of serious inconsequence. He says:

"The connecting water-line between our Atlantic and Pacific coasts can, no more than the Pacific Railroad, be allowed to come under European control. The communication should be opened on a line approved by the United States by a company chartered by, or with the formal approval of, the United States, and sanctioned by the local government; constructed, if necessary, by the financial aid of the United States; and opened on equal terms to the use of all foreign nations, but under the control of none of them. The charter should provide that none of the proprietary rights of the company should ever be transferred to any foreign government, nor any lien upon its rights, franchises, or possessions be conveyed, directly or indirectly, to any foreign government. No chance should be left to convert a weak Central American state into another distracted Egypt by means of foreign possessory rights in another isthmian canal."

Nothing can be more reasonable than to say: "We mean to make this canal ourselves, or assist in making it, with American money, as we made the Pacific Railroads, and then keep control of it, as our own line of communication with our own territory." Nothing more unreasonable, on the surface at least, than to say to Europeans, "You make this canal with your money, and when you have it finished it shall be our canal, and we shall decide under what conditions we will let you use it."

If the interest of this country in the Peruvian complication were as deep as it is from time to time represented to be by a certain portion of the press, we should undoubtedly be now engaged in a South American war. But the fact is, sad as the truth may be, that Europe has really a much deeper material stake in Peru than we. In 1878 the total exports from Peru were $49,475,000, of which Great Britain took $26,161,525; while the exports through the port of Callao to the United States were $1,203,602, and the imports $1,876,000. But Peru is closely connected with Europe by a yet more binding tie. The public debt, most of which was taken up by the same class of "prudent investors" in England and France who went so heavily a few years ago into "Turks" and "Egyptians," stood in 1879 at the nice little figure of $226,340,516; and to what amount this has since been swollen by the war with Chili no one knows. An idea of the solvency of the country may be gathered from the fact that a year or two ago the French bondholders made a proposition for the "readjustment" of the debt, offering to let the principal be cut down some $70,000,000, and to give up all claim to back interest, amounting to $57,000,000 more, in exchange for some substantial security for the rest. The Government has a monopoly of the guano trade, and after providing for some settlement of the debt there would probably not remain enough of surplus to do more than pay official salaries. The danger of having to assume this debt is probably to Chili an argument against hastily absorbing Peru quite as potent as any that could be suggested; but the interest of the United States in the matter is obviously merely one of a spectator friendly to both parties, having no important material stake in their quarrel, and only desirous that peace should be restored on a fair basis. This, we believe, is the feeling of ninety-nine Americans out of a hundred on the subject, where, indeed, they have any stronger feeling than curiosity to know on what principle of law or diplomacy Mr. Hurlbut is carrying on his operations.

The news that Admiral Montero of Peru has accepted the office of Vice-President under President Calderon has as yet attracted but little attention in this country, because of course we all knew it must turn out so. In our enumeration, last week, of the Governments now operating in Peru, we omitted the Montero Government—not inadvertently, but because we foresaw that there was really nothing left for the Admiral to do but to take a Vice-Presidency, and there was no other Vice-Presidency to take except that under Calderon. The Government carried on by the Chilian admiral, Don Patricio Lynch, presents no openings to Peruvians. And besides that, the Lynch establishment being entirely military, there is no need of a Vice-President at all. Mr. Hurlbut's Government, being avowedly based on the model of our own, ought to have a Vice-President and a Cabinet, as well as the usual division of functions between the executive, legislative, and judicial departments, each distinct and independent within its own sphere. But Mr. Hurlbut has had little time to organize his Government properly, and there is apparently no Vice-Presidency under him.

Less than $150,000 in foreign specie arrived during the week, and the receipts since the first day of August are only $22,981,000, against $47,432,800 in the corresponding time a year ago. The rates for foreign exchange were also advanced during the week, the decline in the prices of breadstuffs and provisions not having been sufficient to stimulate exports of these commodities and thereby increase the supply of commercial bills. There appears yet to be a fairly good demand in Europe for American securities, and the amount going abroad considerably exceeds that returning. Undoubtedly the country at large is prosperous; the Clearing-House returns show an enormous volume of business, as do also the traffic returns of the railroads. The trunk-line railroads are advancing rates, each for itself; the result is an important increase in receipts, which will do something to offset the unprofitable through-business of the summer and the large increase in operating expenses. At the Stock Exchange it was a dull week, and the business was chiefly in what are called "pocket specialties"—that is, in stocks which are controlled by one or a few individuals, and the price of which can be marked up or down at will. United States bonds were in demand, and prices advanced ⅛@⅜. On Monday Judge Folger assumed the duties of Secretary of the Treasury, and it is expected that he will make the same disposition of surplus revenues that his predecessor has done—that is, that he will buy 3½ per cent. bonds.

Secretary Hunt said in Boston the other day that "the navy was inseparable from the mercantile marine." In our own case this is unfortunately too true: they are inseparable; our navy and our mercantile marine have disappeared together. The argument for a strong force of armed vessels, that they are needed to protect our merchantmen on the ocean, loses its weight when we remember that we have very few ocean-going ships to protect. It used to be truly said that the mercantile marine was the nursery of the navy. That our naval children have become feeble and sickly or have died, may be largely ascribed to the fact that the nursery no longer exists. The best way to restore the navy would be to restore our merchant shipping. If Congress would adopt measures to this end—by passing laws allowing American merchants to buy and own ships instead of prohibiting their doing so—more good would be accomplished than by spending an indefinite number of millions of dollars in building a fleet of cruisers. It is not pretended that these would protect our harbors. If it is said that they would protect our foreign commerce, the obvious question occurs, Where is the foreign commerce?

It is curious to see how little interest some of our esteemed contemporaries take in the trial of West Point and Colonel Shafter, which is now in progress down in Texas in the Flipper matter. When one contrasts this apathy with the trial of West Point in the Whittaker case it becomes inexplicable. Flipper's charge against West Point and his commanding officer is almost the same as Whittaker's, and the defendants are trying to meet it in precisely the same way—that is, by making the most shameful accusations against a poor colored boy. Whittaker had the uproarious support of some of our most esteemed contemporaries, and the services of one of the most stentorian lawyers in the world at Government expense, while Flipper is left to push his case himself, and, as far as we can see, has no newspaper backing but that of the *Evening Post* and the colored *Globe* of this city. There is something very mysterious in this silence. So is there also in the long delay in promulgating the finding of the court-martial in the Whittaker case. It was sent in six months ago, and nothing is heard of it. If West Point has been found guilty, the world ought to know of it. If it has been acquitted, Whittaker ought to have his pay stopped and be released from the United States service for some larger field of usefulness.

M. Gambetta's Ministry which has now been announced, appears to have produced general disappointment. There was a not unnatural expectation that a great man would surround himself with great men, and that the result would be a great Cabinet; and in such cases, no one troubles himself to inquire where so many great men are to be found. Now that the names are published, they are seen to be those of second-rate men, and there is much surprise. But as French politics go and have long gone, it was useless to expect from Gambetta a ministry of "all the talents." He is too strong a personality to be surrounded with eminently able men anywhere, and above all in a country in which free institutions are only ten years old. Gambetta came out of the war with his reputation made, and was the only man of note on the Republican side, except M. Thiers, of whom that could be said. All the others were either damaged by it or disappeared in it. It must be said, too, of Gambetta, as it is said of Gladstone, that he is not the man to train up successors or possible rivals. Nor is France a country in which great men appear in batches or groups. One great man at a time is the rule and tradition of French politics, and Gambetta shows no mawkishness in recognizing the fact. But even if he were anxious to surround himself with notabilities, he could not find the means of doing so. There is something almost naïf in the recognition of his own position which Gambetta makes in giving seats to two editors of his own paper, the *République Française*.

The only "illustration," to use the French term, in the Cabinet, apart from Gambetta himself, is M. Paul Bert, the well-known physiologist, but he can hardly be considered a source of strength. Outside his science, in which he has made himself odious to many as a vivisector, he is best known as a passionate hater of the Catholic clergy and, indeed, it may be said, for that matter, of the Christian religion itself. Some of the wildest scenes in the Assembly in the old days of the Monarchists were caused by his attacks on clerical teaching, which he supported by extracts from clerical schoolbooks, the folly and indecency of which at first seemed incredible. If he stopped here, this might pass. But he is also a passionate advocate of pure and undiluted secularism in teaching. The world he lives in and the worlds he can see are the only worlds about which he would have a child know or care. To put such a man in the Ministry of Public Instruction in a country in which the Minister is so powerful as in France, is the strongest form of defiance to the religious portion of the community on which any public man has, since the Revolution, ventured in any European state. It would, five years ago, have been pronounced madness by most foreign observers. But foreign observers were so egregiously mistaken about the effect of the execution of the decrees against the unauthorized religious orders, that it is not unlikely that they would be mistaken in thinking that the only portion of the French public about which a French politician need care was not prepared for this, too.

M. Gambetta has produced his programme in the Chamber, but it is not very much of a programme after all, for it is, he says, simply what France herself has demanded, "a Constitution and a united government, exempt from all the paltry conditions imposed by dissension and weakness." In addition to this, however, he announced in somewhat obscure terms an attempt to revise the Senate in the Democratic sense, a reduction of the army and navy, a diminution of the taxes on land and the general stimulation of industry. The late Ministry was, however, in favor of all these things except the revision of the Senate. In fact, it made public improvements and the stimulation of industry its great hobby. The truth is that M Gambetta is his own programme. He has come into office not because he has something new to propose, but because he is Gambetta. What he now announces, therefore, excites comparatively little attention. It was, however, triumphant over Clémenceau and the Extreme Left in a first passage at arms.

SUMMARY OF THE WEEK'S NEWS.

DOMESTIC.

ELECTIONS were held in eleven States on Tuesday, the 8th. The officers voted for in the respective States were as follows: Colorado, judicial and county officers, with a vote as to the location of the State Capital; Maryland, a State Comptroller, half the Senate, and a full House of Delegates; Massachusetts, a Governor, all the other State officers, and the Legislature; Minnesota, a Governor and other State officers; Mississippi, a Governor, other State officers, and Legislature; Nebraska, a Judge of the Supreme Court and regents of the State University; New Jersey, part of the Senate and a full House of Representatives; New York, six State officers, a full Legislature, and four members of Congress; Pennsylvania, a State Treasurer and county officers; Virginia, a Governor, other State officers, and a full Legislature; Wisconsin, a Governor, other State officers, half the Senate, and a full House of Representatives.
